This is the first place on the Spare Checkbox Properties setup page where a system operator can make any adjustments to the field. The checkbox is called "Spare checkbox" by default. To change the name of the checkbox, delete the text from this field and enter the name you would like to change the checkbox to.

Hidden:

*No*

"No" must be selected in order for system operators to see this checkbox and the information it contains on the Service tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view this Spare checkbox on the Service tab of the volunteer record, you can select "Yes" from the drop down list. When a checkbox is hidden, System operators will not see the checkbox or whether or not it was marked before the field was made hidden, but if the checkbox was marked before it was hidden, it will still be marked if you later unhide the checkbox.

Default entry:

*Checked*

If you want this checkbox to be checked by default, you can check the box here.

*Include as a grid column*

Mark this checkbox if you would like the spare checkbox field to be listed in a column within the Assignments box on the volunteer Service tab.

**System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

Volgistics Administrators

## Assignment Field Properties Setup Page

Help topic 2097

Added or revised 10-31-2008

---

You can use the Assignment Field properties setup page to configure the Assignment field in the Service box on the Service tab in the volunteer record. To get to the Assignment Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Service tab, and then choose Assignment under Service box.

Field location:

This section indicates where the Assignment field you are working with is located. In this case, the Assignment is on the Service tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Assignment field is an Assignment list field. Note that this is a "system field," and as such you cannot customize certain field characteristics, including the field name.

### Require an entry:

*No*

If you select "No" it will be possible for the Assignment field in the Service box on the Service tab to be left blank in Volgistics, as well as at VIC.

*Always*

If you select "Always" it will not be possible for the Assignment field in the Service box on the Service tab to be left blank in Volgistics, or at VIC.

*Include as a grid column*

Mark this checkbox if you would like the Assignment to be listed in a column within the Service box on the volunteer Service tab.

## **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

## Preference Fields

Help topic 2130

Added or revised 01-07-2015

---

Preference fields are powerful, customizable fields for collecting information about the assignment(s) – or kind of assignment(s) – volunteers or applicants are most interested in. Volgistics uses preference fields to help you match volunteers and assignments.

Here are some examples of the different ways you can use preference fields:

- To list assignments by name so volunteers or applicants can choose the assignments that appeal the most to them.
- To list the different Sites or Places that have assignments so volunteers or applicants can choose the location that most appeals to them. For example, a volunteer center can use a preference field to ask a prospective volunteer to choose the organization where they would like to serve. Or, a multi-county agency can ask applicants which county they would like to serve in.
- To ask volunteers or applicants to indicate their preference for assignment characteristics such as these:

- Assignment duration (e.g. one time or ongoing)
- Type of service performed (e.g. tutoring, clerical, fund raising, etc).
- If use of their personal vehicle is required
- Degree of interaction with others (e.g. work alone, work with others, etc.)

While your Volgistics system may come with one or two preference fields already setup, you can create up to twenty preference fields to suit your own needs. When you create new preference fields you give the field a name (e.g. 'Type of service performed') and establish the options that are available to volunteers (e.g. 'one time,' 'ongoing'). When you setup preference fields you can also choose if volunteers should...

- simply check their preference(s)
- rank their preferences in order of choice (e.g. 1st, 2nd, 3rd choice)
- rank their preferences in order of importance to them

To setup a new preference field:

1. From the [menu \[pg:0215\]](#), choose 'Setup'
2. Select 'Field options.'
3. Click 'Profile tab (for volunteers)'
4. Scroll down to choose 'Add a new preference.'
5. Complete the [Field Properties \[pg:0585\]](#) window.
6. Click the **Save** button on the 'Field Properties' window.

You can use preference fields:

- On volunteer application forms so new applicants can tell you their preferences.
  - With a Volunteer Information Center option (VicNet or VicTouch) so volunteers can update their preferences online or at an on-site kiosk.
  - Manually by entering or editing a volunteers preferences on the Profile tab in their volunteer record.
- No matter how you choose to collect volunteer preference information, you can always view or edit a volunteer's preference on the Profile tab in their volunteer record.

If you have a preference field that asks applicants to rank their choice, the field will appear similar to this on the application form...

### Assignment Preference

The following volunteer assignments may currently be available. Please choose your first, second, and third assignment preference.

Assignment Preference:

1st choice:	<input type="text" value="Transportation Driver (Client Services)"/>
2nd choice:	<input type="text" value="Info Desk (Administration)"/>
3rd choice:	<input type="text" value="Choose"/>

If you have a preference field that asks applicants to describe the importance of a preference, the field will appear similar to this on the application form...

### Assignment Preference

Please tell us how important each of the following volunteer assignment characteristics are to you.

Time commitment:	Must be	Very important	Somewhat important	Does not matter to me	Must not be
One time :	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Ongoing:	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

---

## Setting Tab Rights

Help topic 2154

Added or revised 04-03-2017

---

Volgistics helps you keep your volunteer information organized by arranging it onto nine different [tabs \[pg:1849\]](#) in the volunteer record. Each tab includes a specific kind of volunteer information. For example, the Service tab includes the volunteer's current and past service information.

The nine possible tabs in the volunteer record are:

- Core
- Profile
- Service
- Schedule
- History

Contacts  
Notes  
Vic  
Docs

## Bailey, George

Volgistics allows you to control which of these tabs individual system operators can see and use when they login to the system. This capability is useful for:

- Hiding tabs you do not currently use at all in your organization so they don't get in the way.
- Preventing individual [System Operators \[pg:0065\]](#) from seeing or changing any of the information on a particular kind of tab.

You control tab rights by specifying which of these tabs a system operator can see, depending on their *user level*. There are three *user levels* in Volgistics:

Volgistics Administrators  
Power Users  
Basic Users

Every Volgistics System Operator has one of these three *user levels*. The account's [Volgistics Administrator \[pg:0052\]](#) determines a System Operator's user level by selecting [Setup \[pg:0887\]](#) from the menu, expanding the *System operators* link, clicking on an operator's name, and selecting a user level from the *User level* dropdown field.

To prevent operators with a certain user level from accessing a tab, the Administrator can follow these steps:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select *Field Options*.
3. Select the tab you want to block (note that you cannot block the Core tab, or tabs in records other than volunteer records). If the tab you want to block is the Docs tab, see the *Docs tab* information box below.
4. Click the [Tab Rights \[pg:0933\]](#) link.
5. Set the tab rights, and then click the **Save** button.

### Docs Tab

The [Docs tab \[pg:1630\]](#) of the volunteer record has additional options for tab rights that are not available for other tabs. For information on changing the tab rights for the Docs tab, see [help topic 2553 \[pg:1319\]](#).

When you hide a selected tab for System Operators with a specific user level, those operators will never see the hidden tab when they work with volunteer records. Hidden tabs are hidden in all volunteer records, including [archived \[pg:0709\]](#) volunteer records, for these operators. Hiding a tab does not remove any of the information previously entered on the tab. You can hide a tab, and later un-hide it.

**Please note:**

Hiding a tab does not prevent System Operators from printing reports that may include information from the hidden tab. If you hide a tab for the purpose of preventing some System Operators from seeing sensitive information, be sure none of your reports include that sensitive information (or, prevent these System Operators from printing reports altogether by changing the rights on their [System Operator record \[pg:1895\]](#)).

Don't forget that you can set

*field rights*

too. If you don't want to hide an entire tab, you can set field rights for the individual fields on the tab. In this case, System Operators with the restricted user level would have access to the tab, but not specific to certain fields on the tab. You set field rights under "[Field Options](#)" [\[pg:0957\]](#) in Setup.

---

## How do I add a field for tracking volunteer social security numbers?

Help topic 2155

Added or revised 12-18-2013

---

**Question:** How do I add a field for tracking volunteer social security numbers?

**Answer:** The Profile tab would be the best place to add a field for tracking social security numbers. To add such a custom field to the Profile tab:

1. Choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Choose *Field Options*.
3. Select *Profile tab (for volunteers)*.
4. Select any of the "Spare fields" that are currently hidden (e.g. Spare field 1, Spare field 2, etc).
5. Make the following changes to the field properties window for the Spare field you selected:
  - For *Field format* choose "Social security number."
  - For *Field name* enter "Social security number" (or whatever you want the field name to be)
  - Set *Hidden* to "No"
  - Set any special [System Operator \[pg:0065\]](#) rights you want for this field. See the *System Operator rights* section of [help topic 2017 \[pg:0957\]](#) for more information on this.
6. Click the **Save** button to save your changes.

Your volunteer Profile tabs will now include a field for a social security number. Most volunteer tabs support a number of custom fields that you can configure through the same steps.

---

## Automatic volunteer numbers

Help topic 2247

Added or revised 09-12-2013

---

If you use the [volunteer number field \[pg:1856\]](#), and you choose not to assign your own volunteer numbers, Volgistics automatically assigns a number to each new volunteer record you manually enter; receive through an online application form; or import from another database.

By default, Volgistics automatically assigns volunteer numbers that are between 4 and 6 digits long (numbers only), and that are *not* sequential (you'll learn why later in this help topic).

You can optionally change the way Volgistics assigns numbers automatically. To change this setting:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select Field Options.
3. Select Core tab.
4. Click on the Number field link. This opens the Field Properties page for the Number field.

Use the "Automatic PIN numbering" selection to change the way numbers are assigned automatically.

5. Click the **Save** button to save your changes.

Three methods of automatic numbering are supported:

### Random

Volgistics automatically assigns a volunteer number that is between 4 and 6 digits long. Numbers are assigned randomly, reducing the possibility that volunteers will have sequential volunteer numbers. This is the default and recommended selection for automatic numbering.

This is the recommended selection for these reasons:

If you use VicTouch, this number becomes the PIN number the volunteer will use to access VicTouch. VicTouch security is significantly reduced if you use sequential numbers because any volunteer can easily determine other volunteer PIN numbers simply by entering the next or previous number in sequence from their own PIN number. Further, if a volunteer makes a mistake entering their own PIN number, it's more likely that their mistaken entry will be another volunteer's PIN. For example, if a volunteer with PIN 1234 inadvertently enters 1342 there is a good chance that the mistaken entry will actually be another volunteer's PIN if sequential numbers are used.

Internally the system can assign numbers faster with this selection, making new record entry slightly faster.

### Home phone

When you choose this option, Volgistics attempts to use the last 7 digits of a volunteer's home phone number as their volunteer number. If no home phone number has been entered for the volunteer, or if another volunteer already has this number, Volgistics assigns a random number that is between 4 and 6 digits long.

### Sequential

Choose this option if you prefer that new volunteer numbers be assigned automatically in a sequential order. With this option selected, Volgistics will automatically assign the next highest unused volunteer number, starting with the lowest number already used. If no volunteer records have previously been added to an account, numbering will begin at 1000. To cause numbering to start with a number less than 1,000 enter the first volunteer record and manually assign that volunteer record the number you wish to start with (by entering the number in the Number field on the Core tab).

If you archive volunteer records, the archived records keep their volunteer number. So a volunteer number will not be reused as long as any volunteer record, archived or not archived, has that number.

This selection is not recommended for organizations that use VicTouch for the reasons described under the "Random" option.

Changing the way volunteer numbers are automatically assigned will not retroactively change the volunteer numbers in any existing volunteer records. The system does not currently provide any method for automatically changing existing volunteer numbers. However you can change existing volunteer numbers by editing the Number field in individual volunteer records.

## How do I add more States or Provinces to the State or Province dropdown

Help topic 2279

Added or revised 09-12-2013

---

The State (Province) field uses a "dropdown list." When you establish a new account, the dropdown list for the State or Province field will contain just your own state or province code.

To add more state or province codes to this list:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Expand the "Field options" link.
3. Select the "Core tab" (the Core tab is where the State (Province) field is located).
4. Select the "State" or "Province" Field. This opens the Field Properties page for the State or Province field.
5. Type a new state or province entry in the "Add a new item" field.
6. Click the **Save** button beside the field.

Repeat steps 5 and 6 for each new item you want to add to this field's dropdown list.

To add *all* of the state or province codes to this list in a single step:

1. Choose Setup from the [menu \[pg:0215\]](#).

2. Expand the "Field Options" link.
3. Select the "Core tab" (the Core tab is where the State (Province) field is located).
4. Select the "State" or "Province" Field. This opens the Field Properties page for the State or Province field.
5. Click the **Add all U.S. States** or **Add all Canadian Provinces** button located at the bottom of the list.

## Start and Stop Date Rules

Help topic 2314

Added or revised 02-14-2012

---

Volgistics tracks volunteer [start and stop dates \[pg:1890\]](#) automatically. By default, a volunteer's start date is the date their status becomes 'active' and their stop date is the date their status becomes 'inactive.' If a volunteer hasn't yet been marked active they will not have a start date, and until they're marked inactive they will not have a stop date. Volunteers who were active at one time, but are now inactive will have both a start date and stop date. These dates appear on the History tab in their volunteer record.

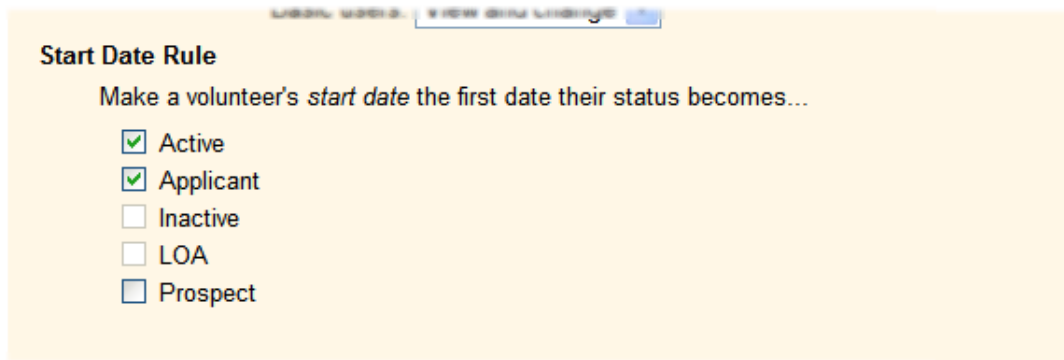

You can customize the way start and stop dates are triggered using the *Start date rule* and the *Stop date rule* under Field Properties in Setup.

#### Start Date Rule

Use the *Start date rule* on the Field Properties page for the Start Date field to customize the volunteer status (or statuses) that should be used as the basis for their start date. If you're not already on the Field Properties page for the Start Date field, you can get there like this:

1. Choose Setup from the menu.
2. Select 'Field Options.'
3. Select 'History tab' (the History tab is where the Start and Stop date fields appear).
4. Click the 'Start Date' link. This opens the Field Properties page for the Start Date field.

By default, the 'Active' status is the only volunteer status that start dates are based on. If you want volunteer start dates to be based on a status other than—or in addition to—the 'Active' status, check the appropriate status checkbox (or boxes) here. For example, if you have a volunteer status called 'Applicant,' and you want your volunteer start dates to be based on the first date a volunteer's status becomes either 'Applicant' or 'Active,' check both the 'Active' and the 'Applicant' statuses, as shown in this illustration:

With the setting shown above, volunteer start dates will always be the first date a volunteer's status was set to either 'Applicant' or 'Active.'

Status checkboxes that appear disabled here cannot be used as the basis for start dates because they are statuses currently used to trigger volunteer stop dates.

5. Click the Save button to save any changes you make to the Field Properties page.

If you make any changes to the *Start date rule* they are applied to your database as soon as you save the Field Properties page. This means that volunteer start dates throughout your database are adjusted automatically based on the status (or statuses) you check here.

### Stop Date Rule

Like the *Start date rule*, a *Stop date rule* lets you customize which volunteer status (or statuses) volunteer stop dates should be based on. You set the stop date rule on the Field Properties page for the Stop Date field. If you're not already on the Field Properties page for the Stop Date field, you can get there like this:

1. Choose Setup from the menu.
2. Select 'Field Properties.'
3. Select 'History tab' (the History tab is where the Start and Stop date fields appear).
4. Click the 'Stop Date' link. This opens the Field Properties page for the Stop Date field.

By default, the 'Inactive' status is the only volunteer status that stop dates are based on. If you want volunteer stop dates to be based on a status other than—or in addition to—the 'Inactive' status, check the appropriate status checkboxes here. For example, if you have a volunteer status called 'LOA,' and you want your volunteer stop dates to be based on the date a volunteer's status becomes either 'LOA' or 'Inactive,' then check both the 'Inactive' and the 'LOA' statuses, as shown in this illustration:

**Stop Date Rule**

Make a volunteer's *stop date* the date their status becomes...

Active

Applicant

Inactive

LOA

Prospect

With the setting shown above, volunteer stop dates will always be the most recent date a volunteer's status was set to either 'LOA' or 'Inactive.'

Status checkboxes that appear disabled here cannot be used as the basis for stop dates because they are statuses currently used to trigger volunteer start dates.

5. Click the Save button to save any changes you make to the Field Properties page.

## Program Field Properties Setup Page

Help topic 2335

Added or revised 10-31-2008

---

You can use the Program Field properties setup page to configure the Program field in the Mandatory Service box on the Service tab in the volunteer record. To get to the Program Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Service tab, and then choose Program under Mandatory Service box.

### Field location:

This section indicates where the Program field you are working with is located. In this case, the Program is on the Service tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Program field is a dropdown field.

### Field name:

This is the first place on the Program Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Program" by default. To change the name of the field, delete the text from this field and enter the new field name.

### Require an entry:

*Always*

An entry in the Program field is always required. Therefore, it will not be possible for the Program field on the Service tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if most of your volunteers are part of one mandatory service program, you might choose that program as the default so that you can pass by this field when creating a new volunteer record.

### **Drop down table items**

#### *Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

## **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

### Volgistics Administrators

#### *View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

#### *View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

#### *Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

### Power users

#### *View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

#### *View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

#### *Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

### Basic users

#### *View and change*

Select this option to permit system operators designated as Basic users to view and edit this field.

#### *View*

Select this option to permit system operators designated as Basic users to view this field, but to prevent them from making any changes to it.

#### *Hidden*

## Starting Date Field Setup Page

Help topic 2336

Added or revised 10-31-2008

---

You can use the Starting Date field setup page to configure the Starting Date field in the Mandatory Service box on the Service tab in the volunteer record. To get to the Starting Date field setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Service tab, and then choose Starting Date under the Mandatory Service box.

### Field location:

This section indicates where the Starting Date field you are working with is located. In this case, the field is on the Service tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is a Date field.

### Field name:

This is the first place on the Starting Date Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Starting Date" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

No

"No" must be selected in order for system operators to see this field and the information it contains on the Service tab of the volunteer record.

Yes

If you do not want system operators to be able to view the Starting Date field on the Service tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

No

If you select "No" it will be possible for the Starting Date field on the Service tab to be left blank in Volgistics, as well as at VIC.

Always

If you select "Always" it will not be possible for the Starting Date field on the Service tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain date to appear in this field by default, you can enter it here.

## **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

## Completed Field Properties Setup Page

Help topic 2339

Added or revised 10-31-2008

---

You can use the Completed Field properties setup page to configure the Completed checkbox in the Mandatory Service box on the Service tab in the volunteer record. To get to the Completed checkbox Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Service tab, and then choose Completed under Mandatory Service.

### Field location:

This section indicates where the Completed field you are working with is located. In this case, the checkbox is on the Service tab.

### Field format:

Information is stored in several types of fields in Volgistics. This section indicates that the Completed field is a Checkbox field.

### Field name:

This is the first place on the Completed field properties setup page where a system operator can make any adjustments to the field. The checkbox is called "Completed" by default. To change the name of the checkbox, delete the text from this field and enter the name you would like to change the checkbox to.

### Hidden:

No

"No" must be selected in order for system operators to see this checkbox and the information it contains on the Service tab of the volunteer record.

Yes

If you do not want system operators to be able to view this Completed checkbox on the Service tab of the volunteer record, you can select "Yes" from the drop down list. When a checkbox is hidden, System operators will not see the checkbox or whether or not it was marked before the field was made hidden, but if the checkbox was marked before it was hidden, it will still be marked if you later unhide the checkbox.

### Default entry:

If you want this checkbox to be checked by default, you can check the box here.

## **Notation (for Status dates) Field Properties Setup Page**

Help topic 2346

Added or revised 11-01-2008

---

You can use the Notation (for Status dates) field properties setup page to configure the Notations that will be used for Status date entries on the History tab in the volunteer record. To get to the Notation (for Status dates) field setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, History tab, and then choose Notation (for Status dates).

#### Field location:

This section indicates where the Notation (for Status dates) field is located. In this case, the field is on the History tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Notation (for Status dates) field is a Dropdown field.

#### Field name:

The Notation (for Status dates) field is called "Status Notation" by default. This name cannot be changed.

#### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the History tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Notation (for Status dates) field on the History tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require and entry:

*No*

If you select "No" it will be possible for the Notation (for Status dates) field on the History tab to be left blank in Volgistics.

*Always*

If you select "Always" it will not be possible for the Notation (for Status dates) field on the History tab to be left blank.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

### **Drop down table items**

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. Appropriate dropdown items for the Notation (for Status dates) field might include "Moved," "Resigned" or "Deceased." If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

Volgistics Administrators

*View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

*View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

### *Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

### Power users

#### *View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

#### *View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

### *Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

### Basic users

#### *View and change*

Select this option to permit system operators designated as Basic users to view and edit this field.

#### *View*

Select this option to permit system operators designated as Basic users to view this field, but to prevent them from making any changes to it.

To get to the Spare text field setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, History tab, and then choose the Spare text field.

### Field location:

This section indicates where the Spare text field you are working with is located. In this case, the field is on the History tab.

### Type of Field:

Information is stored in several types of fields in Volgistics. This section indicates that the Spare text field is a text field.

### Field name:

This is the first place on the Spare text field Properties setup page where a system operator can make any adjustments to the field. The field is called "Spare text" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the History tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view this Spare text field on the History tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for this field on the History tab to be left blank in Volgistics, as well as at VIC.

*Always*

If you select "Always" it will not be possible for this Spare text field on the History tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want certain information to appear in this field by default, you can enter it here.

**System operator rights**

## **Last Name Field Properties Setup Page**

Help topic 2359

Added or revised 11-11-2008

---

You can use the Last name Field Properties setup page to configure the Last name field on the Contacts tab in the volunteer record. To get to the Contacts tab Last name Field Properties setup page, choose Setup from the **menu** [pg:0215], click on Field options, Contacts tab, and then choose Last name.

#### Field location:

This section indicates where the Last name field you are working with is located. In this case, the field is on the Contacts tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Last name field is a Text field.

#### Field name:

This is the first place on the Last name Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Last name" by default; however, some organizations may want to use a different name for this field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

#### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Last name field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Last name field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Last name field. If you select the "At VIC" option, the system will not allow them to log out with a blank Last name field.

*Always*

If you select "Always" it will not be possible for the Last name field on the Contacts tab to be left blank in Volgistics, or at VIC.

Default entry:

The Last name field often contains no default entry. If, however, you want certain text to initially appear in the Last name field on the Contacts tab in all new volunteer records, enter it here.

**System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

## **Title Field Properties Setup Page**

Help topic 2363

Added or revised 11-11-2008

---

You can use the Title Field Properties setup page to configure the Title field on the Contacts tab in the volunteer record. To get to the Contacts tab Title Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose Title.

### Field location:

This section indicates where the Title field you are working with is located. In this case, the field is on the Contacts tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Title field is a Dropdown field.

### Field name:

This is the first place on the Title Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Title" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Title field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

### **Drop down table items**

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Examples of potential drop down items for the Title field include "Mr.," "Ms.," "Mrs.," "Dr.," etc. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item. You can also merge one Title into another. After you merge two dropdown items together, any records that had the first entry will have the second entry you choose instead. The merged item will no longer appear as a choice in the Status field.  
Note: Several minutes may pass before the merged values appear in your database.

### **System operator rights**

## **Street Field Properties Setup Page**

Help topic 2364

Added or revised 11-11-2008

---

You can use the Street Field Properties setup page to configure the Street field on the Contacts tab in the volunteer record. To get to the Contacts tab Street Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose Street.

### Field location:

This section indicates where the Street field you are working with is located. In this case, the field is on the Contacts tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Street field is a Text field.

### Field name:

This is the first place on the Street Field Properties setup page where a system operator can make any adjustments to the field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Street field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Street field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this Street field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the Street field on the Contacts tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain option to appear in this Street field on the Contacts tab in all new volunteer records, select it here.

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the City field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the City field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this City field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the City field on the Contacts tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain option to appear in this City field on the Contacts tab in all new volunteer records, select it here. For example, if your organization's volunteers are all or mostly local people, you might choose to enter the local city name in this field. This way, when creating a new volunteer record you can pass by this field if it already contains the correct information for that individual.

### **System operator rights**

## **State Field Properties Setup Page**

Help topic 2366

Added or revised 11-11-2008

---

You can use the State Field Properties setup page to configure the State field on the Contacts tab in the volunteer record. To get to the Contacts tab State Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose State.

Field location:

This section indicates where the State field you are working with is located. In this case, the field is on the Contacts tab.

Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the State field is a Dropdown field.

Field name:

This is the first place on the State Field Properties setup page where a system operator can make any adjustments to the field. The field is called "State" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

No

"No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

Yes

If you do not want system operators to be able to view the State field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

No

If you select "No" it will be possible for the State field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this State field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the State field on the Contacts tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if all or most of your organization's volunteers are from one state, you can choose it as the default so that you can pass by this field when creating a new volunteer record.

## Drop down table items

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

## **OK To Call Field Properties Setup Page**

Help topic 2370

Added or revised 11-11-2008

---

You can use the OK to call Field Properties setup page to configure the OK to call field on the Contacts tab in the volunteer record. To get to the Contacts tab OK to call Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose OK to call.

### Field location:

This section indicates where the OK to call field you are working with is located. In this case, the field is on the Contacts tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is an OK to call field.

### Field name:

The field is called "OK to call." This field name cannot be changed.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

Yes

If you do not want system operators to be able to view the OK to call field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Whether or not it is hidden can become very important for this particular field. Consider the following scenario: If an OK to call field is used and volunteers indicate that certain numbers are "OK to call" and others are not "OK to call," and then the field is hidden, Volgistics users will not know whether or not a volunteer should be contacted at a particular number stored in the system.

Default entry:

You can decide if the OK to call field on the Contacts tab is initially marked or unmarked in all new volunteer records by making the desired selection here.

**System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

## **Email Field Properties Setup Page**

Help topic 2376

Added or revised 11-11-2008

---

You can use the Email Field Properties setup page to configure the Email field on the Contacts tab in the volunteer record. To get to the Contacts tab Email Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose Email.

### Field location:

This section indicates where the Email field you are working with is located. In this case, the field is on the Contacts tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Email field is a Text field.

### Field name:

This is the first place on the Email Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Email" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Email field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Email field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Email field. If you select the "At VIC" option, the system will not allow them to log out with a blank Email field.

*Always*

If you select "Always" it will not be possible for the Email field on the Contacts tab to be left blank in Volgistics, or at VIC.

Default entry:

The Email field often contains no default entry. If, however, you want certain text to initially appear in the Email field on the Contacts tab in all new volunteer records, enter it here.

#### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Relationship field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

#### Require an entry:

*No*

If you select "No" it will be possible for the Relationship field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Relationship field. If you select the "At VIC" option, the system will not allow them to log out with a blank Relationship field.

*Always*

If you select "Always" it will not be possible for the Relationship field on the Contacts tab to be left blank in Volgistics, or at VIC.

#### Default entry:

The Relationship field often contains no default entry. If, however, you want certain text to initially appear in the Relationship field on the Contacts tab in all new volunteer records, enter it here.

#### **Drop down table items**

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

#### Volgistics Administrators

##### *View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

##### *View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

##### *Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

#### Power users

##### *View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

##### *View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

##### *Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

#### Basic users

##### *View and change*

## Employer field Properties Setup Page

Help topic 2380

Added or revised 11-11-2008

---

You can use the Employer Field Properties setup page to configure the Employer field on the Contacts tab in the volunteer record. To get to the Contacts tab Employer field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose Employer name.

### Field location:

This section indicates where the Employer field you are working with is located. In this case, the field is on the Contacts tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Employer field is a Text field.

### Field name:

This is the first place on the Employer field Properties setup page where a system operator can make any adjustments to the field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Employer field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Employer field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this Employer field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

### *Always*

If you select "Always" it will not be possible for the Employer field on the Contacts tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain option to appear in this Employer field on the Contacts tab in all new volunteer records, select it here. When creating a new volunteer record you can pass by this field if it already contains the correct information for that individual.

## **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

### Volgistics Administrators

#### *View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

## Spare Date Field Properties Setup Page

Help topic 2383

Added or revised 11-13-2008

---

You can use the Spare date field properties setup page to configure a Spare date field on the Contacts tab in the volunteer record. To get to the Spare date field setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose the Spare date field under the Assignment box.

### Field location:

This section indicates where the Spare date field you are working with is located. In this case, the field is on the Contacts tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Spare date field is a Date field.

### Field name:

This is the first place on the Spare Field Properties setup page where a system operator can make any adjustments to the field. Use the Field name field to give your spare date field a name.

### Hidden:

No

"No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

Yes

If you do not want system operators to be able to view this Spare date field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

No

If you select "No" it will be possible for this field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

Always

If you select "Always" it will not be possible for this Spare date field on the Contacts tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain date to appear in this field by default, you can enter it here.

### *Include as a grid column*

Mark this checkbox if you would like the spare date field to be listed in a column within the Assignments box on the volunteer Contacts tab.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

# Spare Field Setup Page

Help topic 2384

Added or revised 11-13-2008

---

You can use the Spare field setup page to configure a Spare field on the Contacts tab in the volunteer record. To get to the Spare field setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Contacts tab, and then choose the Spare field of interest.

### Field location:

This section indicates where the Spare field you are working with is located. In this case, the field is on the Contacts tab.

### Field format:

Information is stored in several types of fields in Volgistics. This section indicates that the Spare field can be customized to take the form any one of the following field types: Text; Date; Number (whole); Number (1 decimal place); Number (2 decimal places), or currency.

### Field name:

This is the first place on the Spare Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Spare field" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Contacts tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view this Spare field on the Contacts tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for this field on the Contacts tab to be left blank in Volgistics, as well as at VIC.

#### *At VIC*

This selection requires that users always enter information in this Spare field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

#### *Always*

If you select "Always" it will not be possible for this Spare field on the Contacts tab to be left blank in Volgistics, or at VIC.

#### Default entry:

If you want certain information to appear in this field by default, you can enter it here.

## How to Setup the Daily Availability Field

Help topic 2386

Added or revised 09-30-2016

---

The *Daily availability* field is an informational type field used by [System Operators \[pg:0065\]](#) to see when a volunteer is available to serve. It is found on the Profile tab of the [volunteer record \[pg:1849\]](#).

The *Daily availability* field is not linked with the [schedule \[pg:0746\]](#) fields for a volunteer. A volunteer can have a certain availability indicated, but they may or may not be scheduled for a corresponding time.

The *Daily availability* setup also controls what appears for the *Time needed* field on the Profile tab of [assignment records \[pg:0096\]](#). The *Time needed* field can appear on your [Opportunity Directory \[pg:0420\]](#), and on assignment descriptions on [application forms \[pg:1351\]](#) and in [VicNet \[pg:1724\]](#).

The *Daily availability* and *Time needed* fields also play a role in [Volunteer & Assignment Matching \[pg:0899\]](#) because the system looks for common selections on the volunteer and assignment records as part of what determines if the volunteer is a match for an assignment.

To get to the page where you can configure the *Daily availability* field:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Field options* link.
3. Select *Profile tab (for volunteers)*.
4. Select *Daily availability*.

At the top of the page, select whether to track availability on an ongoing basis, or between a date range. If you select to track availability on an ongoing basis, the intervals you set will be rows and you will have a column for each weekday:

Availability							
	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
Morning:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Afternoon:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Evening:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

If you select to track availability for a certain date range, each date in the range will be a row and the intervals will be columns. Here is how the field would look for a festival that takes place from Friday September 30th to Monday October 3rd:

Availability			
	Morning	Afternoon	Evening
Friday, September 30, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Saturday, October 1, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Sunday, October 2, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Monday, October 3, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

If you have enabled [Volunteer & Assignment Matching \[pg:0899\]](#) for your account, you will also see an option for *Use availability information when matching volunteers and assignments*. Check this box if you want the system to look for overlaps between the volunteer's *Daily availability* and the assignment's *Time needed* entries when calculating if the volunteer is a match for the assignment. Leave the box un-checked if you do not want the system to look at availability when it is determining if the volunteer is a match for the assignment.

**Track availability for these days of the week**

Check each day of the week where you want to track availability. Please note:

- If you select to track availability as ongoing, the weekdays will always be displayed with Sunday first. So even if you are only tracking weekend availability, the display will show *Sunday, Friday, Saturday* instead of *Friday, Saturday, Sunday*.
- If you select to track availability between a date range, the first date in the range will be displayed first and then each date after will be listed in the order the dates occur.
- If you select to track availability between a date range, the weekday that the date occurs on must be selected in order for the date to show. For example, if your range goes from Friday September 30th to Monday October 3rd, and *Sundays* is not checked, Sunday October 2nd will not show on the list.

**Track daily availability using**

Actual times

If you select

*Actual times*

the field will appear with dropdown lists to select the *From* and *To* times for availability. The time range and intervals in the dropdown lists are controlled by the [Hours of Operation \[pg:1395\]](#) and scheduling intervals set on the [Scheduling Ground Rules \[pg:1392\]](#) page.

Here is how the Daily Availability field will look with *Actual times* selected along with a date range:

Here is how the Daily Availability field will look with *Actual times* selected along with tracking availability on an ongoing basis:

These pre-set intervals

Instead of *Actual times*, you can create pre-set intervals to track availability. By default, the intervals are general (*Morning, Afternoon, and Evening*), but there are eight intervals available so you can get more specific. For example, if you need volunteers from 6:00 am to 10:00 pm, you could break the day into two hour chunks:

Availability	Monday	Tuesday	Wednesday	Thursday	Friday
6:00 am - 8:00 am:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8:00 am - 10:00 am:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10:00 am - Noon:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Noon - 2:00 pm:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2:00 pm - 4:00 pm:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4:00 pm - 6:00 pm:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6:00 pm - 8:00 pm:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8:00 pm - 10:00 pm:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Or, a festival may want to add descriptive information about the jobs that take place during the times:

Availability	Setup 10am- Noon	Info Booth Noon-5pm	Info Booth 5pm-10pm	Tear Down 10pm-11pm	Security 11pm-4am	Security 4am-10am
Friday, September 30, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Saturday, October 1, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Sunday, October 2, 2016:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

### Please note!

You can only use a [Set \[pg:0858\]](#) to query the database to find volunteers with certain availabilities checked if you use

*These pre-set intervals*

. The

*Actual times*

option will

**not**

allow you to search for all volunteers with certain times selected.

You can learn how to build a Set to find volunteers with certain availabilities checked in [help topic 2878 \[pg:0882\]](#) "Their Daily Availability Set Rule."

### Clear availability

There may be times where you want to clear all of the selections volunteers have for availability. For example, if you are changing from tracking actual times to using pre-set intervals, or if your organization only tracks availability for an annual event that takes place over different dates each year. Clearing availability will wipe all of a volunteer's current choices away so she can sign-in to [VicNet \[pg:1724\]](#) and make new choices for the field.

This change cannot be undone so you should only proceed if you're positive you will not need the availability information currently stored on the volunteer records. *Also, please note that if a [Site-Level Operator \[pg:1442\]](#) clears availability, it will clear the field for volunteers at all Sites in the account--not just the operator's Site.*

---

## Share My Schedule Setup Page

Help topic 2387

Added or revised 11-13-2008

---

You can use the Share my schedule setup page to configure the Share my schedule field on the Vic tab in the volunteer record. To get to the setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Vic tab, and then choose Share my schedule.

### Field location:

This section indicates where the Share my schedule field you are working with is located. In this case, it is on the Vic tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that Share my schedule is a Checkbox field.

### Field name:

This field is called "Share my schedule" (Allow others to see when I am scheduled). It is not possible to change the name of this field.

### Hidden:

No

"No" must be selected in order for system operators to see this checkbox and the information it contains on the Vic tab of the volunteer record.

Yes

If you do not want system operators to be able to view this Share my schedule on the Vic tab of the volunteer record, you can select "Yes" from the drop down list. When a checkbox is hidden, System operators will not see the checkbox or whether or not it was marked before the field was made hidden, but if the checkbox was marked before it was hidden, it will still be marked if you later unhide the checkbox.

### Default entry:

If you want this checkbox to be checked by default, you can check the box here.

## OK To Call Field Properties Setup Page

Help topic 2396

Added or revised 11-11-2008

---

You can use the OK to call Field Properties setup page to configure the OK to call field on the Site tab in the Site record. To get to the Site tab OK to call Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Site tab, and then choose OK to call.

### Field location:

This section indicates where the OK to call field you are working with is located. In this case, the field is on the Site tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is an OK to call field.

### Field name:

The field is called "OK to call." This field name cannot be changed.

### Hidden:

No

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Site tab of the Site record.

Yes

If you do not want system operators to be able to view the OK to call field on the Site tab of the Site record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Whether or not it is hidden can become very important for this particular field. Consider the following scenario: If an OK to call field is used and volunteers indicate that certain numbers are "OK to call" and others are not "OK to call," and then the field is hidden, Volgistics users will not know whether or not a volunteer should be contacted at a particular number stored in the system.

### Default entry:

You can decide if the OK to call field on the Site tab is initially marked or unmarked in all new Site records by making the desired selection here.

This section indicates where the Email field you are working with is located. In this case, the field is on the Site tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Email field is a Text field.

#### Field name:

This is the first place on the Email Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Email" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

#### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Site tab of the Site record.

*Yes*

If you do not want system operators to be able to view the Email field on the Site tab of the Site record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

#### Require an entry:

*No*

If you select "No" it will be possible for the Email field on the Site tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Email field. If you select the "At VIC" option, the system will not allow them to log out with a blank Email field.

*Always*

If you select "Always" it will not be possible for the Email field on the Site tab to be left blank in Volgistics, or at VIC.

#### Default entry:

The Email field often contains no default entry. If, however, you want certain text to initially appear in the Email field on the Site tab in all new Site records, enter it here.

## Spare Dropdown Field Properties Setup Page

Help topic 2406

Added or revised 11-14-2008

---

You can use the Spare dropdown field properties setup page to configure a Spare dropdown field on the Site tab in the Site record. To get to the Spare dropdown field properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Site tab, and then choose the Spare dropdown field of interest.

### Field location:

This section indicates where the Spare dropdown field you are working with is located. In this case, the field is on the Site tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Spare dropdown field is a Dropdown field.

### Field name:

This is the first place on the Spare dropdown Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Spare dropdown" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Site tab of the Site record.

*Yes*

If you do not want system operators to be able to view this Spare dropdown field on the Site tab of the Site record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Spare dropdown field on the Site tab to be left blank in Volgistics, as well as at VIC.

### *At VIC*

This selection requires that users always enter information in this Spare dropdown field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

### *Always*

If you select "Always" it will not be possible for the Spare dropdown field on the Site tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

### **Drop down table items**

#### *Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

## **Zip Field Properties Setup Page**

Help topic 2414

Added or revised 11-11-2008

---

You can use the Zip Field Properties setup page to configure the Zip field on the Place tab in the Place record. To get to the Place tab Zip Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Place tab, and then choose Zip.

### Field location:

This section indicates where the Zip field you are working with is located. In this case, the field is on the Place tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Zip field is a whole Zip field.

### Field name:

This is the first place on the Zip Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Zip" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Place tab of the Place record.

*Yes*

If you do not want system operators to be able to view the Zip field on the Place tab of the Place record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Zip field on the Place tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in the Zip field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the Zip field on the Place tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

**System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

Volgistics Administrators

*View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

*View*

## **Country Field Properties Setup Page**

Help topic 2415

Added or revised 11-12-2008

---

You can use the Country Field Properties setup page to configure the Country field on the Place tab in the Place record. To get to the Place tab Country Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Place tab, and then choose Country.

### Field location:

This section indicates where the Country field you are working with is located. In this case, the field is on the Place tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Country field is a Dropdown field.

### Field name:

This is the first place on the Country Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Country" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Place tab of the Place record.

Yes

If you do not want system operators to be able to view the Country field on the Place tab of the Place record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if all or most of your organization's volunteers are from one Country, you can choose it as the default so that you can pass by this field when creating a new Place record.

**Drop down table items**

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

**System operator rights**

## **OK To Call Field Properties Setup Page**

Help topic 2417

Added or revised 11-11-2008

---

You can use the OK to call Field Properties setup page to configure the OK to call field on the Place tab in the Place record. To get to the Place tab OK to call Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Place tab, and then choose OK to call.

#### Field location:

This section indicates where the OK to call field you are working with is located. In this case, the field is on the Place tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is an OK to call field.

#### Field name:

The field is called "OK to call." This field name cannot be changed.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Place tab of the Place record.

*Yes*

If you do not want system operators to be able to view the OK to call field on the Place tab of the Place record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Whether or not it is hidden can become very important for this particular field. Consider the following scenario: If an OK to call field is used and volunteers indicate that certain numbers are "OK to call" and others are not "OK to call," and then the field is hidden, Volgistics users will not know whether or not a volunteer should be contacted at a particular number stored in the system.

### Default entry:

You can decide if the OK to call field on the Place tab is initially marked or unmarked in all new Place records by making the desired selection here.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

## Email Field Properties Setup Page

Help topic 2423

Added or revised 11-11-2008

---

You can use the Email Field Properties setup page to configure the Email field on the Place tab in the Place record. To get to the Place tab Email Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Place tab, and then choose Email.

Field location:

This section indicates where the Email field you are working with is located. In this case, the field is on the Place tab.

Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Email field is a Text field.

Field name:

This is the first place on the Email Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Email" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Place tab of the Place record.

Yes

If you do not want system operators to be able to view the Email field on the Place tab of the Place record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

No

If you select "No" it will be possible for the Email field on the Place tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Email field. If you select the "At VIC" option, the system will not allow them to log out with a blank Email field.

*Always*

If you select "Always" it will not be possible for the Email field on the Place tab to be left blank in Volgistics, or at VIC.

Default entry:

The Email field often contains no default entry. If, however, you want certain text to initially appear in the Email field on the Place tab in all new Place records, enter it here.

## Cluster Field Properties Setup Page

Help topic 2429

Added or revised 07-14-2016

---

You can use the Cluster field properties setup page to configure a Cluster field on the Assignment tab in the Assignment record. To get to the Cluster field properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Assignment tab, and then choose the Cluster field.

Field location:

This section indicates where the Cluster field you are working with is located. In this case, the field is on the Assignment tab.

Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Cluster field is a Dropdown field.

Field name:

This is the first place on the Cluster Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Cluster" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Assignment tab of the Assignment record.

**Yes**

If you do not want system operators to be able to view this Cluster field on the Assignment tab of the Assignment record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

**No**

If you select "No" it will be possible for the Cluster field on the Assignment tab to be left blank in Volgistics.

**Yes**

If you select "Yes" it will not be possible for the Cluster field on the Assignment tab to be left blank in Volgistics.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

### **Drop down table items**

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

Volgistics Administrators

*View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

*View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

*Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

## Power users

### *View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

### *View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

### *Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

## Basic users

### *View and change*

Select this option to permit system operators designated as Basic users to view and edit this field.

### *View*

Select this option to permit system operators designated as Basic users to view this field, but to prevent them from making any changes to it.

If you do not want system operators to be able to view the Country field on the Assignment tab of the Assignment record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if all or most of your organization's volunteers are from one Country, you can choose it as the default so that you can pass by this field when creating a new Assignment record.

### **Drop down table items**

#### *Add a new item:*

This is where a system operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

## **Home Field Properties Setup Page**

Help topic 2439

Added or revised 11-11-2008

---

You can use the Home Field Properties setup page to configure the Home field on the Assignment tab in the Assignment record. To get to the Assignment tab Home Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Assignment tab, and then choose Home.

#### Field location:

This section indicates where the Home field you are working with is located. In this case, the field is on the Assignment tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Home field is a phone number field.

There are six phone number format options. Select the way you would like to track Home phone numbers in your system from the drop down menu here.

Field name:

This is the first place on the Home Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Home" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Assignment tab of the Assignment record.

*Yes*

If you do not want system operators to be able to view the Home field on the Assignment tab of the Assignment record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Home phone number field on the Assignment tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter a phone number in the Home field at VIC, but system operators working within Volgistics will not be forced to enter a number in this field.

*Always*

If you select "Always" it will not be possible for the Home field on the Assignment tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

**System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

Volgistics Administrators

*View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

*View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

*Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

Power users

*View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

*View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

*Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

Basic users

*View and change*

Select this option to permit system operators designated as Basic users to view and edit this field.

*View*

Select this option to permit system operators designated as Basic users to view this field, but to prevent them from making any changes to it.

*Hidden*

Select this option to prevent system operators designated as Basic users from both editing and viewing this field.

## OK To Call Field Properties Setup Page

Help topic 2440

Added or revised 11-11-2008

---

You can use the OK to call Field Properties setup page to configure the OK to call field on the Assignment tab in the Assignment record. To get to the Assignment tab OK to call Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Assignment tab, and then choose OK to call.

### Field location:

This section indicates where the OK to call field you are working with is located. In this case, the field is on the Assignment tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is an OK to call field.

### Field name:

The field is called "OK to call." This field name cannot be changed.

### Hidden:

No

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Assignment tab of the Assignment record.

Yes

If you do not want system operators to be able to view the OK to call field on the Assignment tab of the Assignment record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Whether or not it is hidden can become very important for this particular field. Consider the following scenario: If an OK to call field is used and volunteers indicate that certain numbers are "OK to call" and others are not "OK to call," and then the field is hidden, Volgistics users will not know whether or not a volunteer should be contacted at a particular number stored in the system.

### Default entry:

You can decide if the OK to call field on the Assignment tab is initially marked or unmarked in all new Assignment records by making the desired selection here.

### **System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

### Volgistics Administrators

### *View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

### *View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

### *Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

### Power users

#### *View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

#### *View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

#### *Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

### Basic users

#### *View and change*

Select this option to permit system operators designated as Basic users to view and edit this field.

## **Email Field Properties Setup Page**

Help topic 2446

Added or revised 11-11-2008

---

You can use the Email Field Properties setup page to configure the Email field on the Assignment tab in the Assignment record. To get to the Assignment tab Email Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Assignment tab, and then choose Email.

Field location:

This section indicates where the Email field you are working with is located. In this case, the field is on the Assignment tab.

Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Email field is a Text field.

Field name:

This is the first place on the Email Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Email" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Assignment tab of the Assignment record.

*Yes*

If you do not want system operators to be able to view the Email field on the Assignment tab of the Assignment record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Email field on the Assignment tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Email field. If you select the "At VIC" option, the system will not allow them to log out with a blank Email field.

*Always*

If you select "Always" it will not be possible for the Email field on the Assignment tab to be left blank in Volgistics, or at VIC.

Default entry:

The Email field often contains no default entry. If, however, you want certain text to initially appear in the Email field on the Assignment tab in all new Assignment records, enter it here.

## Qualifications Field Properties Setup Page

Help topic 2453

Added or revised 11-20-2008

---

You can use the Qualifications field properties setup page to configure the Qualifications field on the Description tab in the Assignment record. To get to the Qualifications field setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Description tab and then choose Qualifications field.

#### Field location:

This section indicates where the Qualifications field you are working with is located. In this case, the field is on the Description tab.

#### Field format:

Information is stored in several types of fields in Volgistics. This section indicates that the Qualifications field is a text field.

#### Field name:

This is the first place on the Qualifications field Properties setup page where a system operator can make any adjustments to the field. The field is called "Qualifications field" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

#### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Description tab of the Assignment record.

*Yes*

If you do not want system operators to be able to view this Qualifications field on the Description tab of the Assignment record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for this field on the Description tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this Qualifications field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for this Qualifications field on the Description tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want certain information to appear in this field by default, you can enter it here.

**System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

Volgistics Administrators

*View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

*View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

*Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

Power users

*View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

*View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

The field is called "Nickname" by default; however, some organizations may want to use a different name for this field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

#### *No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Coordinator tab of the coordinator record.

#### *Yes*

If you do not want system operators to be able to view the Nickname field on the Coordinator tab of the coordinator record, you can select "Yes" from the drop down list. When a field is hidden, system operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Nickname field on the Coordinator tab to be left blank.

*Always*

If you select "Always" it will not be possible for the Nickname field on the Coordinator tab to be left blank.

Default entry:

The Nickname field often contains no default entry. If, however, you want certain text to initially appear in the Nickname field on the Coordinator tab in all new coordinator records, enter it here.

## **Title Field Properties Setup Page**

Help topic 2364

Added or revised 11-11-2008

---

You can use the Title Field Properties setup page to configure the Title field on the Coordinator tab in the coordinator record. To get to the Coordinator tab Title Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Coordinator tab, and then choose Title.

### Field location:

This section indicates where the Title field you are working with is located. In this case, the field is on the Coordinator tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Title field is a Dropdown field.

### Field name:

This is the first place on the Title Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Title" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Coordinator tab of the coordinator record.

*Yes*

If you do not want system operators to be able to view the Title field on the Coordinator tab of the coordinator record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Title field on the Coordinator tab to be left blank.

*Always*

If you select "Always" it will not be possible for the Title field on the Coordinator tab to be left blank.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

### **Drop down table items**

*Add a new item:*

This is where a system operator enters the possible options for this drop down field. Examples of potential drop down items for the Title field include "Mr.," "Ms.," "Mrs.," "Dr.," etc. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Delete** button next to the field containing that item. You can also merge one Title into another. After you merge two dropdown items together, any records that had the first entry will have the second entry you choose instead. The merged item will no longer appear as a choice in the Status field.

Note: Several minutes may pass before the merged values appear in your database.

## Home Field Properties Setup Page

Help topic 2472

Added or revised 11-11-2008

---

You can use the Home Field Properties setup page to configure the Home field on the Coordinator tab in the coordinator record. To get to the Coordinator tab Home Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Coordinator tab, and then choose Home.

### Field location:

This section indicates where the Home field you are working with is located. In this case, the field is on the Coordinator tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Home field is a phone number field.

There are six phone number format options. Select the way you would like to track Home phone numbers in your system from the drop down menu here.

### Field name:

This is the first place on the Home Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Home" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

No

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Coordinator tab of the coordinator record.

Yes

If you do not want system operators to be able to view the Home field on the Coordinator tab of the coordinator record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

No

If you select "No" it will be possible for the Home phone number field on the Coordinator tab to be left blank in Volgistics, as well as at VIC.

### *At VIC*

This selection requires that users always enter a phone number in the Home field at VIC, but system operators working within Volgistics will not be forced to enter a number in this field.

### *Always*

If you select "Always" it will not be possible for the Home field on the Coordinator tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

## **OK To Call Field Properties Setup Page**

Help topic 2473

Added or revised 11-11-2008

---

You can use the OK to call Field Properties setup page to configure the OK to call field on the Coordinator tab in the coordinator record. To get to the Coordinator tab OK to call Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Coordinator tab, and then choose OK to call.

### Field location:

This section indicates where the OK to call field you are working with is located. In this case, the field is on the Coordinator tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is an OK to call field.

### Field name:

The field is called "OK to call." This field name cannot be changed.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Coordinator tab of the coordinator record.

*Yes*

If you do not want system operators to be able to view the OK to call field on the Coordinator tab of the coordinator record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Whether or not it is hidden can become very important for this particular field. Consider the following scenario: If an OK to call field is used and coordinators indicate that certain numbers are "OK to call" and others are not "OK to call," and then the field is hidden, Volgistics users will not know whether or not a coordinator should be contacted at a particular number stored in the system.

Default entry:

You can decide if the OK to call field on the Coordinator tab is initially marked or unmarked in all new coordinator records by making the desired selection here.

**System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

## Email Field Properties Setup Page

Help topic 2479

Added or revised 11-11-2008

---

You can use the Email Field Properties setup page to configure the Email field on the Coordinator tab in the coordinator record. To get to the Coordinator tab Email Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Coordinator tab, and then choose Email.

### Field location:

This section indicates where the Email field you are working with is located. In this case, the field is on the Coordinator tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Email field is a Text field.

### Field name:

This is the first place on the Email Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Email" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Coordinator tab of the coordinator record.

*Yes*

If you do not want system operators to be able to view the Email field on the Coordinator tab of the coordinator record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Email field on the Coordinator tab to be left blank in Volgistics.

*Always*

If you select "Always" it will not be possible for the Email field on the Coordinator tab to be left blank in Volgistics.

Default entry:

The Email field often contains no default entry. If, however, you want certain text to initially appear in the Email field on the Coordinator tab in all new coordinator records, enter it here.

## **Last Name Field Properties Setup Page**

Help topic 2505

Added or revised 12-12-2008

---

You can use the Last name Field Properties setup page to configure the Last name field on the Core tab in the volunteer record. To get to the Core tab Last name Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Last name.

#### Field location:

This section indicates where the Last name field you are working with is located. In this case, the field is on the Core tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Last name field is a Text field.

#### Field name:

This is the first place on the Last name Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Last name" by default; however, some organizations may want to use a different name for this field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

#### Hidden:

No

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

Yes

If you do not want system operators to be able to view the Last name field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Last name field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Last name field. If you select the "At VIC" option, the system will not allow them to log out with a blank Last name field.

*Always*

If you select "Always" it will not be possible for the Last name field on the Core tab to be left blank in Volgistics, or at VIC.

Default entry:

The Last name field often contains no default entry. If, however, you want certain text to initially appear in the Last name field on the Core tab in all new volunteer records, enter it here.

## First Name Field Properties Setup Page

Help topic 2506

Added or revised 12-12-2008

---

You can use the First name Field Properties setup page to configure the First name field on the Core tab in the volunteer record. To get to the Core tab First name Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose First name.

#### Field location:

This section indicates where the First name field you are working with is located. In this case, the field is on the Core tab.

#### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the First name field is a Text field.

#### Field name:

This is the first place on the First name Field Properties setup page where a system operator can make any adjustments to the field. The field is called "First name" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

#### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the First name field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the First name field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the First name field. If you select the "At VIC" option, the system will not allow them to log out with a blank First name field.

*Always*

If you select "Always" it will not be possible for the First name field on the Core tab to be left blank in Volgistics, or at VIC.

Default entry:

The First name field often contains no default entry. If, however, you want certain text to initially appear in the First name field on the Core tab in all new volunteer records, enter it here.

## **Number Field Setup**

Help topic 2509

Added or revised 05-10-2016

---

You can use the Number field setup number to configure the Number field on the [Core tab \[pg:1868\]](#) in the volunteer record. To get to the Number field setup page, choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Number.

### Field location:

This section indicates where the Number field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is a Number field.

### Field name:

This is the first place on the Number Field Properties setup Number where a [System Operator \[pg:0065\]](#) can make any adjustments to the field. The field is called "Number" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for System Operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want System Operators to be able to view the Number field on the Core tab of the volunteer record, you can select "Yes" from the dropdown list. When a field is hidden, System Operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Number field on the Core tab to be left blank in Volgistics, as well as at VIC.

*Always*

If you select "Always" it will not be possible for the Number field on the Core tab to be left blank in Volgistics, or at VIC.

## **Automatic PIN numbering**

*Random (recommended)*

With this option, Volgistics automatically assigns a volunteer number that is between 4 and 6 digits long. Numbers are assigned randomly, reducing the possibility that volunteers will have sequential volunteer numbers. This is the default and recommended selection for automatic numbering.

*Home phone*

When you choose this option Volgistics attempts to use the last 7 digits of a volunteer's home phone number as their volunteer number. If no home phone number has been entered for the volunteer, or if another volunteer already has this number, Volgistics assigns a random number that is between 4 and 6 digits long.

*Sequential*

Choose this option if you prefer that new volunteer numbers be assigned automatically in a sequential order. With this option selected, Volgistics will automatically assign the next highest unused volunteer number, starting with the lowest number already used. If no volunteer records have previously been added to an account, numbering will begin at 1000. To cause numbering to start with a number less than 1,000 enter the first volunteer record and manually assign that volunteer record the number you wish to start with (by entering the number in the Number field on the Core tab).

---

## Status Field Properties Setup Page

Help topic 2510

Added or revised 10-27-2011

---

You can use the Status Field Properties setup page to configure the Status field on the Core tab in the volunteer record. To get to the Core tab Status Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Status.

### Field location:

This section indicates where the Status field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Status field is a Dropdown field.

### Field name:

This is the first place on the Status Field Properties setup page where a System Operator can make any adjustments to the field. The field is called "Status" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

No

"No" must be selected in order for System Operators to see this field and the information it contains on the Core tab of the volunteer record.

Yes

If you do not want System Operators to be able to view the Status field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System Operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

Always

Every volunteer and group record is required to have a Status so it is not possible to select an option other than "Always."

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if all or most of your organization's volunteers are given one Status, such as "Active," you can choose it as the default so that you can pass by this field when creating a new volunteer record.

## Drop down table items

*Add a new item:*

This is where a System Operator enters the possible options for this drop down field. Each time you enter a new item and click the **Save** button, an additional "Add a new item:" field will be created so that you can continue to add drop down items for this field. If you no longer want to use a particular drop down item, click the **Merge** to merge it with another item.

Every volunteer record must have a volunteer status. For this reason, it is not possible to delete a status (deleting a status would potentially leave some volunteers without a status). If you have a status you no longer need, instead of deleting it, combine it with another status. This ensures that no volunteer records are left without any status in their record. For example, if you have a status called "Moved" that you want to remove from your system, combine it with a status such as "Inactive." Any volunteers who had the "Moved" status will be changed to the "Inactive" status, and "Moved" will be removed from the Status drop-down list.

## System Operator rights

This section determines which types of [System Operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

### Volgistics Administrators

*View and change*

Select this option to permit System Operators designated as Volgistics Administrators to view and edit this field.

## Flags Field Properties Setup Page

Help topic 2511

Added or revised 09-17-2010

---

You can use the Flags Field Properties setup page to configure the Flags field on the Core tab in the volunteer record. To get to the Core tab Flags Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Flags.

### Field location:

This section indicates where the Flags field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Flags field is a Dropdown field.

### Field name:

This is the first place on the Flags Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Flags" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Flags field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

## Drop down table items

This section displays the list of options currently defined for fields that use drop-down lists. The items you see listed here will be the only items that can be selected for this field.

*Add a new item:*

Use the *Add a new item* field to add additional options to this drop down field. Enter the new item and then click the **Save** button for each item you want to add. Each item you add to the drop-down list here will appear as choice for this field when the field's drop-down list is selected in Volgistics.

*Delete*

*Merge*

If you no longer want to use a particular drop down item you can delete it, or merge it into another item on the list.

To delete an item click the **Delete** button next to the field containing that item. When you delete an item from a drop-down list, the item you delete will be removed from any record where it is currently selected. For example, if you delete the item "XYZ" from the State or Province field, any record that has "XYZ" as an entry in that field will have a blank entry once you delete "XYZ."

In some cases it's better to "merge" drop-down list items than to delete them. [Help topic 2018 \[pg:0963\]](#) explains how to merge drop-down list items.

## System operator rights

## Type Field Properties Setup Page

Help topic 2512

Added or revised 12-12-2008

---

You can use the Type Field Properties setup page to configure the Type field on the Core tab in the volunteer record. To get to the Core tab Type Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Type.

Field location:

This section indicates where the Type field you are working with is located. In this case, the field is on the Core tab.

Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Type field is a Dropdown field.

Field name:

This is the first place on the Type Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Type" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Type field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Type field on the Core tab to be left blank in Volgistics, as well as at VIC.

*Always*

If you select "Always" it will not be possible for the Type field on the Core tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if all or most of your organization's volunteers are given one Type, such as "Active," you can choose it as the default so that you can pass by this field when creating a new volunteer record.

## **Drop down table items**

This section displays the list of options currently defined for fields that use drop-down lists. The items you see listed here will be the only items that can be selected for this field.

*Add a new item:*

Use the *Add a new item* field to add additional options to this drop down field. Enter the new item and then click the **Save** button for each item you want to add. Each item you add to the drop-down list here will appear as choice for this field when the field's drop-down list is selected in Volgistics.

*Delete*

*Merge*

If you no longer want to use a particular drop down item you can delete it, or merge it into another item on the list.

To delete an item click the **Delete** button next to the field containing that item. When you delete an item from a drop-down list, the item you delete will be removed from any record where it is currently selected. For example, if you delete the item "XYZ" from the State or Province field, any record that has "XYZ" as an entry in that field will have a blank entry once you delete "XYZ."

In some cases it's better to "merge" drop-down list items than to delete them. [Help topic 2018 \[pg:0963\]](#) explains how to merge drop-down list items.

## Street Field Properties Setup Page

Help topic 2513

Added or revised 11-11-2008

---

You can use the Street Field Properties setup page to configure the Street field on the Core tab in the volunteer record. To get to the Core tab Street Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Street.

### Field location:

This section indicates where the Street field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Street field is a Text field.

### Field name:

This is the first place on the Street Field Properties setup page where a system operator can make any adjustments to the field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Street field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Street field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this Street field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the Street field on the Core tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain option to appear in this Street field on the Core tab in all new volunteer records, select it here.

## City Field Properties Setup Page

Help topic 2514

Added or revised 12-12-2008

---

You can use the City Field Properties setup page to configure the City field on the Core tab in the volunteer record. To get to the Core tab City Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose City.

### Field location:

This section indicates where the City field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the City field is a Text field.

### Field name:

This is the first place on the City Field Properties setup page where a system operator can make any adjustments to the field. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the City field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the City field on the Core tab to be left blank in Volgistics, as well as at VIC.

### *At VIC*

This selection requires that users always enter information in this City field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

### *Always*

If you select "Always" it will not be possible for the City field on the Core tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain option to appear in this City field on the Core tab in all new volunteer records, select it here. For example, if your organization's volunteers are all or mostly local people, you might choose to enter the local city name in this field. This way, when creating a new volunteer record you can pass by this field if it already contains the correct information for that individual.

### **System operator rights**

## State Field Properties Setup Page

Help topic 2515

Added or revised 12-12-2008

---

You can use the State Field Properties setup page to configure the State field on the Core tab in the volunteer record. To get to the Core tab State Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose State.

### Field location:

This section indicates where the State field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the State field is a Dropdown field.

### Field name:

This is the first place on the State Field Properties setup page where a system operator can make any adjustments to the field. The field is called "State" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the State field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the State field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this State field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the State field on the Core tab to be left blank in Volgistics, or at VIC.

### Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here. For example, if all or most of your organization's volunteers are from one state, you can choose it as the default so that you can pass by this field when creating a new volunteer record.

### **Drop down table items**

This section displays the list of options currently defined for fields that use drop-down lists. The items you see listed here will be the only items that can be selected for this field.

*Add a new item:*

Use the *Add a new item* field to add additional options to this drop down field. Enter the new item and then click the **Save** button for each item you want to add. Each item you add to the drop-down list here will appear as choice for this field when the field's drop-down list is selected in Volgistics.

*Delete*

*Merge*

If you no longer want to use a particular drop down item you can delete it, or merge it into another item on the list.

To delete an item click the **Delete** button next to the field containing that item. When you delete an item from a drop-down list, the item you delete will be removed from any record where it is currently selected. For example, if you delete the item "XYZ" from the State or Province field, any record that has "XYZ" as an entry in that field will have a blank entry once you delete "XYZ."

In some cases it's better to "merge" drop-down list items than to delete them. [Help topic 2018 \[pg:0963\]](#) explains how to merge drop-down list items.

*Add all U.S. States*

*Add all Canadian Provinces*

State or Province fields include *Add all U.S. States* and *Add all Canadian Provinces* buttons.

When you first start your Volgistics account your own State or Province abbreviation is automatically added to the State/Province field drop-down list, however you can always add any other State or Provinces that you'd like to appear in this drop-down list using the "Add a new item" field.

If you want to add all of the U.S. State or all of the Canadian Province abbreviations, just click the *Add all U.S. States* or *Add all Canadian Provinces* button.

## No postal mail Field Properties Setup Page

Help topic 2518

Added or revised 12-12-2008

---

You can use the No postal mail Field Properties setup page to configure the No postal mail field on the Core tab in the volunteer record. To get to the Core tab No postal mail Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose No postal mail.

Field location:

This section indicates where the No postal mail field you are working with is located. In this case, the field is on the Core tab.

Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that this is an No postal mail field.

Field name:

The field is called "No postal mail." This field name cannot be changed.

Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

Yes

If you do not want system operators to be able to view the No postal mail field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Whether or not it is hidden can become very important for this particular field. Consider the following scenario: If an No postal mail field is used and volunteers indicate that certain numbers are "No postal mail" and others are not "No postal mail," and then the field is hidden, Volgistics users will not know whether or not a volunteer should be contacted at a particular number stored in the system.

Default entry:

You can decide if the No postal mail field on the Core tab is initially marked or unmarked in all new volunteer records by making the desired selection here.

## Home Field Properties Setup Page

Help topic 2520

Added or revised 12-12-2008

---

You can use the Home Field Properties setup page to configure the Home field on the Core tab in the volunteer record. To get to the Core tab Home Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Home.

### Field location:

This section indicates where the Home field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Home field is a phone number field.

There are six phone number format options. Select the way you would like to track Home phone numbers in your system from the drop down menu here.

### Field name:

This is the first place on the Home Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Home" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

No

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

Yes

If you do not want system operators to be able to view the Home field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

No

If you select "No" it will be possible for the Home phone number field on the Core tab to be left blank in Volgistics, as well as at VIC.

### *At VIC*

This selection requires that users always enter a phone number in the Home field at VIC, but system operators working within Volgistics will not be forced to enter a number in this field.

### *Always*

If you select "Always" it will not be possible for the Home field on the Core tab to be left blank in Volgistics, or at VIC.

## Email Field Properties Setup Page

Help topic 2527

Added or revised 12-12-2008

---

You can use the Email Field Properties setup page to configure the Email field on the Core tab in the volunteer record. To get to the Core tab Email Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Email.

### Field location:

This section indicates where the Email field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Email field is a Text field.

### Field name:

This is the first place on the Email Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Email" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

No

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

Yes

If you do not want system operators to be able to view the Email field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

No

If you select "No" it will be possible for the Email field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Email field. If you select the "At VIC" option, the system will not allow them to log out with a blank Email field.

## *Always*

If you select "Always" it will not be possible for the Email field on the Core tab to be left blank in Volgistics, or at VIC.

### Default entry:

The Email field often contains no default entry. If, however, you want certain text to initially appear in the Email field on the Core tab in all new volunteer records, enter it here.

# Web site Field Properties Setup Page

Help topic 2528

Added or revised 07-06-2009

---

You can use the Web site Field Properties setup page to configure the Web site field on the Core tab in the volunteer record. To get to the Core tab Web site Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Web site.

For volunteers who have a personal web page, or profiles on web sites such as a Facebook or Twitter, you can optionally use this field to record a link to the volunteer's page.

### Field location:

This section indicates where the Web site field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Web site field is a Text field.

### Field name:

This is the first place on the Web site Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Web site" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" is the default option here. "No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Web site field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

### Require an entry:

*No*

If you select "No" it will be possible for the Web site field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

If a volunteer has access to their personal information at VIC, they may either intentionally or inadvertently delete information stored in the Web site field. If you select the "At VIC" option, the system will not allow them to log out with a blank Web site field.

*Always*

If you select "Always" it will not be possible for the Web site field on the Core tab to be left blank in Volgistics, or at VIC.

Default entry:

The Web site field often contains no default entry. If, however, you want certain text to initially appear in the Web site field on the Core tab in all new volunteer records, enter it here.

Display as a link:

When a valid web page address has been saved in this field, a "Visit" link to that web page will appear next to the field if this checkbox is checked. When you use this field to collect and track volunteer web pages (such as Facebook and Twitter pages), this link will take you to their page.

### **System operator rights**

This section determines which types of **system operators** [pg:1895] can view, or view and change, this field in Volgistics.

Volgistics Administrators

*View and change*

Select this option to permit system operators designated as Volgistics Administrators to view and edit this field.

*View*

Select this option to permit system operators designated as Volgistics Administrators to view this field, but to prevent them from making any changes to it.

*Hidden*

Select this option to prevent system operators designated as Volgistics Administrators from both editing and viewing this field.

Power users

*View and change*

Select this option to permit system operators designated as Power users to view and edit this field.

### *View*

Select this option to permit system operators designated as Power users to view this field, but to prevent them from making any changes to it.

### *Hidden*

Select this option to prevent system operators designated as Power users from both editing and viewing this field.

### Basic users

#### *View and change*

Select this option to permit system operators designated as Basic users to view and edit this field.

### *View*

Select this option to permit system operators designated as Basic users to view this field, but to prevent them from making any changes to it.

## **Title Field Properties Setup Page**

Help topic 2529

Added or revised 09-17-2010

---

You can use the Title Field Properties setup page to configure the Title field on the Core tab in the volunteer record. To get to the Core tab Title Field Properties setup page, choose Setup from the [menu \[pg:0215\]](#), click on Field options, Core tab, and then choose Title.

### Field location:

This section indicates where the Title field you are working with is located. In this case, the field is on the Core tab.

### Type of field:

Information is stored in several types of fields in Volgistics. This section indicates that the Title field is a Dropdown field.

### Field name:

This is the first place on the Title Field Properties setup page where a system operator can make any adjustments to the field. The field is called "Title" by default. To change the name of the field, delete the text from this field and enter the name you would like to change the field to.

### Hidden:

*No*

"No" must be selected in order for system operators to see this field and the information it contains on the Core tab of the volunteer record.

*Yes*

If you do not want system operators to be able to view the Title field on the Core tab of the volunteer record, you can select "Yes" from the drop down list. When a field is hidden, System operators will not see the field or any information that may have been entered in it before the field was made hidden, but any information that may have been in the field before it was hidden will still be there if you later unhide the field.

Require an entry:

*No*

If you select "No" it will be possible for the Title field on the Core tab to be left blank in Volgistics, as well as at VIC.

*At VIC*

This selection requires that users always enter information in this Title field at VIC, but system operators working within Volgistics will not be forced to enter information in this field.

*Always*

If you select "Always" it will not be possible for the Title field on the Core tab to be left blank in Volgistics, or at VIC.

Default entry:

If you want a certain drop down item to appear in this field by default, you can select it here.

### **Drop down table items**

This section displays the list of options currently defined for fields that use drop-down lists. The items you see listed here will be the only items that can be selected for this field.

*Add a new item:*

Use the *Add a new item* field to add additional options to this drop down field. Enter the new item and then click the **Save** button for each item you want to add. Each item you add to the drop-down list here will appear as choice for this field when the field's drop-down list is selected in Volgistics.

*Delete*

*Merge*

If you no longer want to use a particular drop down item you can delete it, or merge it into another item on the list.

To delete an item click the **Delete** button next to the field containing that item. When you delete an item from a drop-down list, the item you delete will be removed from any record where it is currently selected. For example, if you delete the item "XYZ" from the State or Province field, any record that has "XYZ" as an entry in that field will have a blank entry once you delete "XYZ."

In some cases it's better to "merge" drop-down list items than to delete them. [Help topic 2018 \[pg:0963\]](#) explains how to merge drop-down list items.

## **System operator rights**

This section determines which types of [system operators \[pg:1895\]](#) can view, or view and change, this field in Volgistics.

### Volgistics Administrators

## Documents Tab Rights Setup Page

Help topic 2553

Added or revised 04-04-2017

---

The Documents Tab Rights Setup Page is used to set the [System Operator \[pg:0065\]](#) rights for the Docs tab on volunteer, Coordinator, Site, Place and Assignment records.

If you are not already on the Documents Tab Rights Setup page, you can get to the page by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Field options* link.
3. Select *Document tab rights*.

### User Levels

You control tab rights based on the operator's *user level*. There are three *user levels* in Volgistics:

- Volgistics Administrators
- Power Users
- Basic Users

Every Volgistics System Operator has one of these three *user levels*. You can determine or change a System Operator's user level by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *System Operators* link.
3. Select an operator's name.
4. View or change the *User level* dropdown. See [help topic 1011 \[pg:1895\]](#) if you need more assistance.
5. Click the **Save** button if a change was made in step 4.

### Tab Rights

To set tab rights, select a sub-tab for the type of record where you want to set the tab rights. For example, to set the tab rights for the Docs tab on volunteer records, be sure the *Volunteer* sub-tab is selected.

**Document Tab Rights**

**Volunteer**

Volgistics Administrators:

Power Users:

Basic Users:

[Help](#)

**Please Note:** The *Coordinator, Site, Place and Assignment* sub-tabs will only appear if you have the [VicDocs \[pg:1648\]](#) module included in your account's [service level \[pg:0719\]](#). If VicDocs is not included, you will only see the Volunteer sub-tab.

Use the dropdown list to determine the rights for the operators at each user level. The dropdown will contain different options depending on if the [VicDocs \[pg:1648\]](#) module is included in your account's [service level \[pg:0719\]](#). Here are the rights associated with each dropdown list selection:

View, upload and delete (VicDocs included)

Select this option if you want operators with the user level to access the Docs tab to upload new documents, open and download documents, edit document names, and delete documents.

View and delete (VicDocs not included)

Select this option if you want operators with the user level to access the Docs tab to open and download documents, edit document names, and delete documents.

View and upload (VicDocs included)

Select this option if you want operators with the user level to access the Docs tab to upload new documents, open and download documents, and edit document names.

View only

Select this option if you want operators with this user level to access the Docs tab to open and download documents.

Hidden

Select this option if you want to prevent operators with this user level from accessing the Docs tab.

---

## Message Types

Help topic 1023

Added or revised 07-24-2014

---

Volgistics provides [message preference \[pg:0381\]](#) features needed to ensure the integrity of automatic and mass email and text messages. These features enable volunteers and [Coordinators \[pg:0163\]](#) to opt-in or opt-out of different types of automatic or mass messages your organization might routinely send. For example, an individual volunteer might like to receive *newsletter* messages, but not *fundraising request* messages.

We require opt-in and opt-out options to be used with all messages sent to more than one volunteer or Coordinator. Otherwise, Internet Service Providers (ISP's) and cell phone providers could mistakenly identify Volgistics as a spammer and prevent all messages from being delivered. [Help topic 2101 \[pg:0384\]](#) explains more.

If you're not already on the Message Types page, you can get there by selecting [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), choosing *Messages*, and then clicking *Message types*.

### Types of mass messages

Use the *Types of mass messages* section to define the different kinds or "types" of mass messages your organization might periodically send to volunteers and Coordinators. These become the choices volunteers and Coordinators see when they select the types of messages they would like to receive. Then, each time you send a mass message, you choose which of these types of message you're sending. Volgistics will only deliver the message to those who have opted to receive that type of message.

#### Type

Use the *Type* field to define up to ten different kinds of messages your organization may periodically send.

Type:

Default  (for new volunteers and coordinators)

Default  (as shown when opting in to text messaging in VicNet)

Reset  to

Type:

The type listed in the top spot on the page will appear as the default option in the dropdown for selecting types when an email message is sent. So if most of your messages will be a particular type, we recommend listing this in the top spot on the page.

These are some examples of different types of mass messages often sent by volunteer programs:

- Electronic newsletters
- Recruitment appeals
- Opportunity announcements

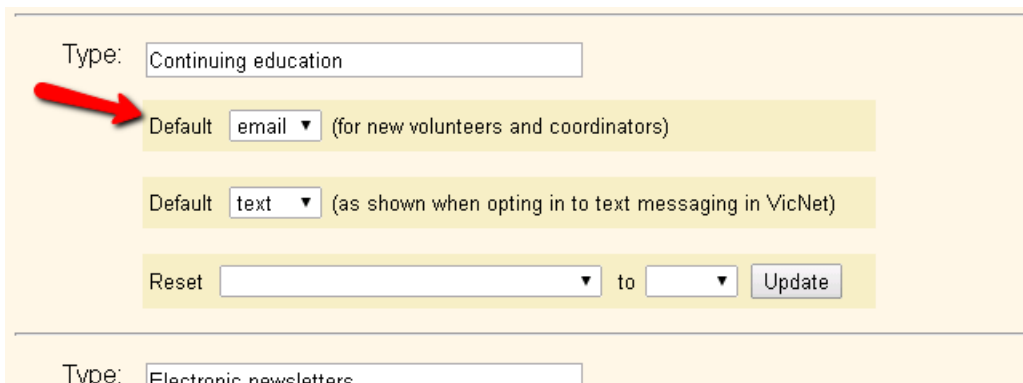

Training announcements  
Fund raising appeals  
News related to our mission  
Information request  
Volunteer news

### Important!

After you setup your message types, you should add descriptions about what information is sent with the type so volunteers and Coordinators have a better idea how they would like to receive this type of message. [Help topic 1068 \[pg:1327\]](#) shows how to do this for volunteers. [Help topic 1025 \[pg:1325\]](#) shows how to do this for Coordinators.

#### Default (for new volunteers and coordinators)

You can select to have a type show as selected, or not selected, by default.

Type: Continuing education

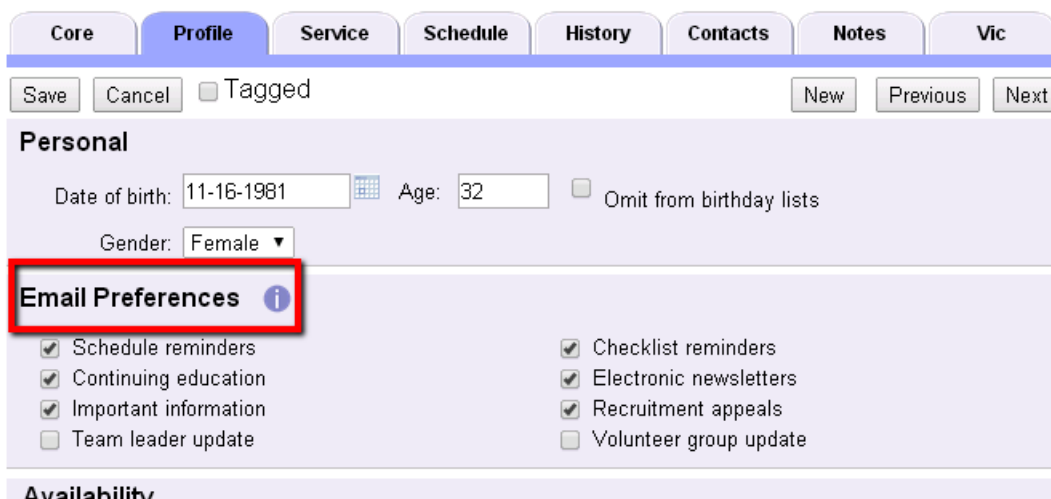

Default email (for new volunteers and coordinators)

Default text (as shown when opting in to text messaging in VicNet)

Reset [ ] to [ ] Update

Type: Electronic newsletters

This will control if the type appears as checked or un-checked for the Email Preference field for new volunteer records. The Email Preference field can be shown on the Profile tab of the volunteer records:

Core Profile Service Schedule History Contacts Notes Vic

Save Cancel Tagged New Previous Next

**Personal**

Date of birth: 11-16-1981 Age: 32 Omit from birthday lists

Gender: Female

**Email Preferences**

- Schedule reminders
- Continuing education
- Important information
- Team leader update
- Checklist reminders
- Electronic newsletters
- Recruitment appeals
- Volunteer group update

**Availability**

This field can also be shown in [VicNet \[pg:1724\]](#), on [online application forms \[pg:0413\]](#), and on the page volunteers see if they [click the preferences link \[pg:0381\]](#) at the bottom of an email message they receive.

Select *email* from the dropdown to have the type show as checked by default. Select *None* from the dropdown to make the field show as not selected by default. Be sure to click the **Save** button at the bottom of the page to save your selections.

No matter which default setting you choose, volunteers and Coordinators can still update their email preferences later.

Default (as shown when opting in to text messaging in VicNet)

*This option will only show if [text messaging is enabled \[pg:0321\]](#) for your account.* Select the option (*email*, *text*, or *none*) you want to appear as selected when volunteers opt-in to text messaging.

Type:

Default  (for new volunteers and coordinators)

Default  (as shown when opting in to text messaging in VicNet)

Reset  to

Type:

Volunteers and Coordinators will see your choice for the type in [VicNet \[pg:1724\]](#) during the [opt-in process \[pg:0323\]](#). They can either keep the setting the same, or change it.

**Custom Messages**

Email

Email with Text Notification

None

Continuing education  
Be all that you can be! Updates on education programs including new course offerings, and times and locations for classes.

Electronic newsletters

Volunteers and Coordinators can also change their choices later by returning to VicNet, or on the page they see if they [click the preferences link \[pg:0381\]](#) at the bottom of an email message they receive.

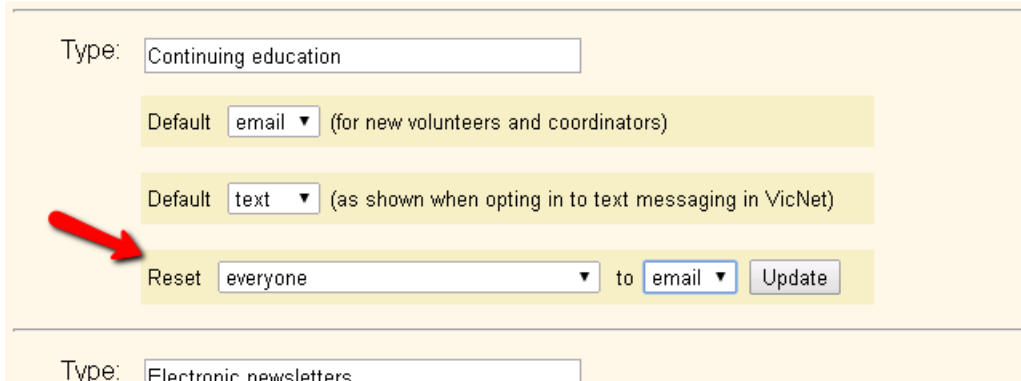

### Reset

While we urge you to respect your volunteers' and Coordinators' choices for message preferences, there may be times when you want to change the selection on records. You can do this on the individual records from the Profile tab, but you can also use this option if you need to reset the message type selections for multiple records that are currently in your database.

One instance where you may need to do this is if you are changing an existing message type from one thing to another. In this case, you will need to clear all of the existing volunteer preferences for the type. For example, if you have a message type you no longer use called "Weekend event announcements," and you want to replace it with a completely different type called "Emergency volunteer appeals." To do this, you would reset everyone's

preference to none to clear the volunteer message preferences already made for the original "Weekend event announcements" type. If you did not reset the preferences in this example, the selections volunteers made previously for "Weekend event announcements" would continue to appear for the revised "Emergency volunteer appeals" type.

The Reset option pictured below allows you to make changes to the message preferences for all records currently in your database:

Type:

Default  (for new volunteers and coordinators)

Default  (as shown when opting in to text messaging in VicNet)

Reset  to

Type:

Different options will appear depending on if the account has [enabled text messaging \[pg:0321\]](#), or not.

For accounts without text messaging, the first dropdown will only show *everybody*, and the second will show *email* and *none*. If you select *email* from the dropdown and click the **Update** button, all records will have the message type selected for the Email Preference field. If you select *none* from the dropdown and click the **Update** button, the message type will be un-checked on all of the records for the Email Preference field.

For accounts with text messaging, the first dropdown will have selections for *everybody*, *those opted in to text messaging*, and *those not opted in to text messaging*. You can use these options to select which records the message preferences will be changed for. The second dropdown will only have selections for *email* and *none*. This is because regulations do not allow you to opt someone in to receive a message by text. This is due to the possibility that a recipient could be charged a fee by their cell phone carrier when a text is received.

### Types of automatic messages

In addition to the ten mass message types described above, there are two types of messages you may configure Volgistics to send volunteers and Coordinators automatically. These are the [Schedule Reminder \[pg:0791\]](#) messages and the messages volunteers can receive when a periodic or annual [Checklist \[pg:0142\]](#) item is due to be renewed. When either of these automatic messages are enabled, a choice for the type will be included in the Message Preferences field.

Note that [Coordinators \[pg:0163\]](#) do not have Checklist items so their setting for the *Checklist reminders* type will not have any effect.

Please see the *Types of mass messages* section above if you need help with the setup options for the message types.

### Email failure threshold

The [email failure threshold \[pg:0379\]](#) controls how far back Volgistics looks at a volunteer's or Coordinator's email history to determine if their email address is valid or not. This controls when the [Email validity \[pg:0377\]](#) icon will show an email address as not being valid.

## Text Message failure threshold

The [text message failure threshold \[pg:0379\]](#) controls how far back Volgistics looks at a volunteer's or Coordinator's text message history to determine if their text message number is valid or not. This controls when the [Text Message validity \[pg:0333\]](#) icon will show a text number as not being valid.

---

## Coordinator Message Preferences

Help topic 1025

Added or revised 07-29-2014

---

Volgistics provides [Message Preference \[pg:0381\]](#) features needed to ensure the integrity of automatic and mass messages. These features enable people to opt-in or opt-out of different types of automatic or mass messages your organization might routinely send. For example, an individual [Coordinator \[pg:0163\]](#) might like to receive email *newsletters*, but not *fund raising requests*.

Each time you send a mass email message from Volgistics, your message includes an opt-out link at the bottom. The mail recipient can click this link to change their message preferences. When a mail recipient clicks this link, a Message Preferences window similar to the one shown below appears. Coordinators may use this window to change their message preferences. If the Coordinator has [opted-in to text messaging \[pg:0323\]](#), they will also see options for text message preferences on this page.

## Volunteer Message Preferences

Please help us communicate with you better by allowing us to send email or text messages. Please select the types of messages you wish to receive.

Click the "Save" button when you are finished.

### Send me...

Email	<input checked="" type="radio"/> Text Message	<input type="radio"/> None
-------	---	----------------------------

- Schedule reminders  
Handy reminders to help you remember when you're scheduled to serve.
- Checklist reminders  
Reminder messages for when you're due for things such as training, TB tests, flu shots, etc.

Email	<input checked="" type="radio"/> Email with text notification	<input type="radio"/> None
-------	---	----------------------------

- Continuing education  
Updates on education programs including new course offerings, and class times and locations.
- Electronic newsletters  
News about what's happening in the Volunteer Services Department.
- Important information  
Only used to communicate important news that affects you. Please DO NOT opt-out of this type of message.
- Recruitment appeals  
Stay informed of new opportunities to serve.
- Team leader update  
Information for Coordinators who lead volunteer teams.

**Please remove me from all messages.**  
I no longer wish to receive any volunteer messages from Great Lakes Volunteers.

← Click Save to save your settings

Use the Coordinator Message Preferences page to customize the way Coordinators see the Message Preference window. If you're not already at the Coordinator Message Preferences page, you can get there by choosing [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), then Messages, and then "Coordinator message preferences."

These setup options are similar to the setup options on the [Volunteer Message Preferences \[pg:1327\]](#) window. The difference is that *these options* control what [Coordinators \[pg:0163\]](#) see on the Message Preferences window. While the options on the [Volunteer Message Preferences \[pg:1327\]](#) window control what *volunteers* see. You can customize the Message Preferences page differently for volunteers and Coordinators.

Enter the instructions you want to appear at the top of the Coordinator Message Preferences window:

Type or [paste \[pg:0063\]](#) the text instructions you would like Coordinators to see at the top of the Message Preferences window here.

Send an alert if a Coordinator asks not to receive any messages.

If a Coordinator uses the Message Preference window to request that no further messages be sent to them, Volgistics automatically changes the Coordinator's [email validity \[pg:0377\]](#) icon to red and prevents all email from being sent to the Coordinator. If the Coordinator has opted-in to text messaging, the [text number validity \[pg:0333\]](#) icon is also changed to red and text messages are blocked from being sent.

While it is possible for [System Operators \[pg:0065\]](#) to manually press the *Reset* link beside the *Email* field on the Coordinator's record, this should only be done in cases where the selection was made inadvertently or the Coordinator has contacted the organization to request that they be returned to the list of individuals receiving their emails.

Email:   [Reset](#)

Because text messages can cost a Coordinator money if his or her cell phone carrier charges for texting, regulations do not allow you to reset a Coordinator's text preferences. If a Coordinator has opted-out of receiving text messages, he or she will need to [Resume text messaging \[\\_\\_\\_\\_\\_\]](#) so they can have texts sent to them again.

Volgistics can send an alert to the [In Box \[pg:0303\]](#) of your Volgistics mailbox letting you know that the Coordinator has asked not to receive any further messages. Check this checkbox if you would like to receive these alerts.

#### Brief description

Enter a brief description of this [message type \[pg:1321\]](#). This brief description appears along with the title of the message type to help Coordinators understand what this kind of information these messages will typically include. For example, to describe a type of mass message called *Newsletters* you might enter this brief description: "Periodic news and information about happenings at our agency."

---

## Volunteer Message Preferences

Help topic 1068

Added or revised 07-29-2014

---

Volgistics provides message preference features needed to ensure the integrity of automatic and mass messages. These features enable volunteers to opt-in or opt-out of different [types of automatic or mass messages \[pg:1321\]](#) your organization might routinely send to volunteers. For example, an individual volunteer might like to receive *newsletter* messages, but not *fund raising request* messages.

Each time you send a mass email message from Volgistics, your message includes an opt-out link at the bottom the recipient can use to change their message preferences. When a recipient clicks this link, a Message Preferences window similar to the one shown below appears. Volunteers may use this window to change their email preferences. If the volunteer has [opted-in to text messaging \[pg:0323\]](#), they will also see options to change their text preferences.

## Volunteer Message Preferences

Please help us communicate with you better by allowing us to send email or text messages. Please select the types of messages you wish to receive.

Click the "Save" button when you are finished.

Reset

Because text messages can cost a volunteer money if his or her cell phone carrier charges for texting, regulations do not allow you to reset a volunteer's text preferences. If a volunteer has opted-out of receiving text messages, he or she will need to [Resume text messaging \[\\_\\_\\_\\_\\_\]](#) so they can have texts sent to them again.

Volgistics can send an alert to the [In Box \[pg:0303\]](#) of your Volgistics mailbox letting you know that the volunteer has asked not to receive any further messages. Check this checkbox if you would like to receive these alerts.

#### Brief description

Enter a brief description of this [message type \[pg:1321\]](#). This brief description appears along with the title of the message type to help Coordinators understand what this kind of information these messages will typically include. For example, to describe a type of mass message called *Newsletters* you might enter this brief description: "Periodic news and information about happenings at our agency."

---

# Online Forms Ground Rules

Help topic 1052

Added or revised 05-10-2016

---

Use the Online Forms

*Ground rules* page to customize the appearance of your online forms. Online forms include the [VicNet \[pg:1724\]](#) module, [volunteer application forms \[pg:0413\]](#), and the [Opportunity Directory \[pg:0420\]](#). If you're not already on this Ground Rules page, you can get there by:

1. Choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Select *Online forms*.
3. Select *Ground rules*.

## Fonts

### Font name & size

Choose the font names and sizes you want to use for the text on your forms. The font characteristics you choose here apply to forms displayed in either the full-page or the embedded mode. See "[Adding Volgistics features to your web site](#)" [\[pg:0208\]](#) for more information about these two form modes.

Specify a font name and size for each of these three kinds of text:

- Form headings

The text used for your form headings. The heading font should generally be larger than the other fonts on the form.

- Field labels

The field label font is the font used to render the field names that appear just to the left of (or above) each input field on a form.

- Main body

This is the font Volgistics uses for all other text on the form.

Enter any font name you like. You can find a list of common fonts used on the Internet at [w3schools.com](#).

If your web site uses a particular font, selecting that font for your forms helps give your site a more unified appearance. It's best to stick with fonts known to be available to most web browsers (such as Arial, Times New Roman, and Verdana). If the font you choose is not available in a visitor's browser, the form defaults to a standard sans-serif font.

## Buttons

You can customize the buttons that appear on your online forms here. You can use an image file you saved, generate an image using a program such as Microsoft Paint, or use an online button generating program. Your image must meet the following requirements:

- GIF, JPG or PNG file extension
- Width: 200 pixels (or less); Height: 40 pixels (or less)

- File Size: 4,096 bytes (4 kb) (or less)

### Continue

This is the button users click to submit an [application form \[pg:0413\]](#), confirm their schedule choices for VicNet [self-scheduling \[pg:1494\]](#), and more. Click on the button image to be taken to a page where you can upload your custom graphic.

### Clear choices

This is the button users click to clear their [Schedule Preference \[pg:1343\]](#) selections on an application form. Click on the button image to be taken to a page where you can upload your custom graphic.

## **Full Page Form Appearance**

The settings in this section apply to forms you choose to link using the [full-page \[pg:0208\]](#) mode.

### Form panel size

Forms displayed in the full-page mode appear on a white form panel. You can control the width of this panel here.

Choose *"Adjust the form panel dynamically to fit the size of a visitor's browser window"* if you want the form panel to expand or shrink to fill the available space in a visitor's browser.

Choose *"Display the form panel with a fixed width of"* if you want the form panel to always appear with a certain width (in pixels). If you select this option, enter the width (in pixels) that you want the form panel to be and if you want the panel to be left, center, or right justified in the window. The default setting is a width of 1200 pixels, centered on the screen.

### Background

Forms displayed in the *full-page* mode appear on a white form panel that is on a colored background. Use this field to choose the color you want the form background to be. Enter the background color in RGB color notation (see *"A note about RGB color notation"* below if you're not sure what this is). You can also click in the field to bring up a color picker that you can use to select the color.

For a more integrated look, use the same background color as your own website. This will make it look more like the Volgistics form is part of your website.

### Privacy Policy

Visitors to your website may have questions about the security of the information they give you online, and how you're going to use it. For this reason you can optionally include a link to a *privacy policy* from the forms you link in the *full-page* mode. The help topic ["Online form security & privacy" \[pg:1365\]](#) offers some pointers on developing an appropriate privacy policy statement for your forms.

If you want your forms to include this link, check

*"Include a link to this privacy policy statement"*

, and then enter your own privacy policy in the space provided. For best results, prepare your privacy policy in a word processor where you can use tools like a spelling checker to check your work, and then use the [clipboard \[pg:0063\]](#) to copy and paste your finished statement into the space provided.

## Return navigation

When you display forms in a *full-page* mode, you should offer visitors an easy way to return to the page (on your website) they were on when they clicked the link to your form.

- Include a 'Close this window' link to close the browser window that contains the form

If you choose "*Include a 'Close this window' link to close the browser window that contains the form*", visitors to your forms will see a "*Close this window*" link at the bottom of each form. When they click this link, the window that contained your form will close and the visitor will return to the page in your website they were on when they clicked the form link. Choose this option if you open your forms in new browser windows. This is the default selection for this option.

- Include the following link back to a page in your own web site

If you choose "*Include the following link back to a page in your own web site*", visitors will see a link at the bottom of each form that will take them to the web page of your choice. Choose this option if you do not open your forms in a new browser window, and you want visitors to continue browsing your site when then are finished with a form.

If you select this option, you must also specify the *link text* and *link URL*.

### Link text

Enter the text for the link here. For example, if you want the link to appear as "*Return to Home Page*", enter "*Return to Home Page*" in this space.

### Link URL

Enter the web page address for the web page you want visitors to go to when they click this link. This would typically be a page within your organization's website. For example, the web page the visitor was on when they clicked the form link. An example of a URL is [www.yourwebsite.org/volunteer](http://www.yourwebsite.org/volunteer).

- No return navigation required

If you choose "*No return navigation required*", visitors will not be provided with a return navigation link at the bottom of your forms. Choose this option only if you configure your form links in a manner that would make it unnecessary for a visitor to return to an earlier page.

## Font colors

By default, the font color for forms displayed in *full-page* mode is black. You can optionally choose a different font color here for each of three kinds of text that appears on forms. Enter font colors in RGB color notation (see "*A note about RGB color notation*" below for a description of RGB color notation). You can also click in the field to bring up a color picker that you can use to select the color.

### **Embedded Form Appearance**

The settings in this section apply to forms you choose to link using the **embedded** [pg:0208] mode.

## Background

Choose the color you want the form background to be. Enter the background color in RGB color notation (see "*A note about RGB color notation*" below if you're not sure what this is). You can also click in the field to bring up a color picker that you can use to select the color.

For a more integrated look, use the same background color as your own website. This will make it look more like the Volgistics form is part of your website.

For a transparent background, leave this field blank. If your website uses a background pattern or image, leaving this field blank and linking your forms from frames that includes your website's background causes your forms to have the same background as your site.

### Font colors

By default, the font color for forms displayed in *embedded* mode is black. You can optionally choose a different font color here for each of three kinds of text that appears on forms. Enter font colors in RGB color notation (see "*A note about RGB color notation*" below for a description of RGB color notation). You can also click in the field to bring up a color picker that you can use to select the color.

### **A note about RGB color notation**

There are several fields on this page for setting background and font colors. Enter color information in these fields using standard hexadecimal RGB color notation. This is the color notation used in HTML (Hypertext markup language) to specify color attributes for web page elements. Hexadecimal RGB color notation includes the '#' character followed by a six character RGB color value in hexadecimal notation (hex).

These are some examples of this notation:

#FFFFFF (white)

#000000 (black)

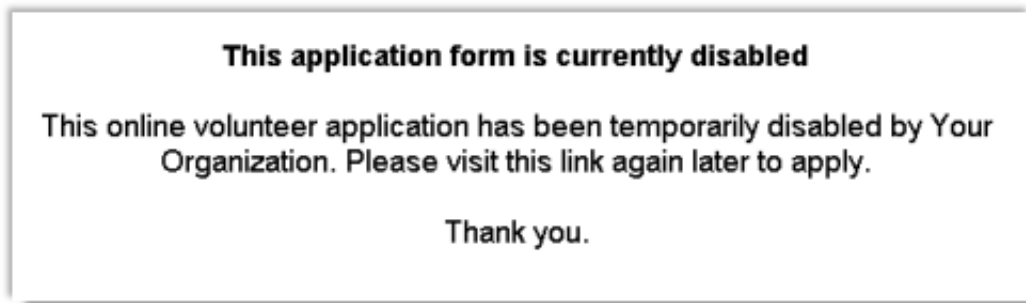

#FF0000 (red)

#00FF00 (green)

If you click on the field itself, a color picker will appear that makes it easy to select the color you need. You can also learn more about hexadecimal RGB colors for websites at [w3schools.com](http://w3schools.com)

### **Disabled Form Message**

If you add a link to an [online volunteer application form \[pg:0413\]](#) from your web site, and then later [disable that application form \[pg:1357\]](#) for any reason, visitors who click the disabled form's link will receive the following default message:

If you would like a different message to appear when a visitor clicks a link to an application form you have disabled, enter it in this space.

## Application Form Setup Page

Help topic 1053

Added or revised 01-18-2017

---

Use the Setup page to tailor the kinds of information collected through an [online volunteer application form \[pg:0413\]](#). You get to this *Setup* page by choosing [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), selecting 'Online forms,' choosing 'Volunteer application forms' and then clicking on the name of the form you want to setup.

Visit the online form [Ground rules \[pg:1330\]](#), and [Logo graphic \[pg:0516\]](#) windows for settings related to *graphic* style of your online forms.

### Title

Enter the title you want to appear at the top of this application form

This will be the form name applicants see at the top of the form. This is usually something like 'Volunteer application form,' 'Registration form,' or a form name specific to your situation, such as 'Docent Application Form.'

Enter a name for internal use that describes this application form

Since you can have more than one volunteer application form, you need to give each form you create a unique name. Enter a unique name for this form here. The only people who will see this name are you, and other System Operators who have access to setup.

### Instructions

Enter the instructions you want to appear at the top of the form

If you want to provide applicants with any general instructions about how they should complete the application form, enter them here. For best results, consider composing your instructions in a word processor where you can use tools such as spell checker, and then copy and paste the instructions into this space.

If your form has one or more fields that require an entry, this would be a good place to explain that the fields which are followed by a red asterisk are required. It may also help to explain that the applicant should click the 'Continue' button at the bottom of the form when they're finished.

### Content

Use the links in this section to tailor the way this application form appears on the Internet. These setup links may be available:

[Site selection \[pg:1338\]](#)

This link will take you to the [Site Selection \[pg:1338\]](#) setup page. This page's setup options will function differently depending on if your account has [Site Level Access \[pg:0092\]](#) enabled or not. When Site Level Access is not enabled, this page's purpose is limited to making [Assignments \[pg:0096\]](#) that fall under a particular Site appear when Assignment Preference fields are used on the report. When Site Level Access is enabled, this page's setup options control which Site(s) will receive applications submitted through this form. If you're setting up one form for each Site, use this link to specify the Site each application is for.

### [Form sections \[pg:1340\]](#)

Volgistics organizes the fields on your application form under different form sections. Use the *Form sections* link on the Setup window to establish the sections you would like this application form to have, and to specify their headings and instructions.

### [Fields \[pg:1341\]](#)

Use the Fields setup window to choose the Core tab and Profile tab fields you would like to collect information for.

### [Schedule fields \[pg:1343\]](#)

If you use Volgistics to manage volunteer schedule openings and you want applicants to indicate their preference for actual schedule openings, use the *Schedule fields* link on the Setup window to specify which schedule openings are to be offered on this application form, and how applicants indicate their schedule preference.

### [Comment fields \[pg:1345\]](#)

If you would like your application form to include spaces for applicants to enter narrative information (for example, space for applicants to 'describe any previous volunteer work' they have performed'), use the *Comment fields* link on the Setup window to choose where these fields should appear, and what instructions they should include for the applicant.

### [Contact fields \[pg:1346\]](#)

You can ask applicants to list emergency contacts, employers, references, parent or guardian names, or any similar kind of contact appropriate to your organization. Use the *Contact field* links on the Setup window to define the kinds of contact information you want to collect and where it should appear on the form.

### [I Agree section \[pg:1348\]](#)

Click the

*I Agree section*

link on the Setup window to configure an acceptance section at the bottom of the form in which you can ask applicants to accept a [policy statement or agreement \[pg:0420\]](#).

### [Receipt confirmation \[pg:1349\]](#)

Use the *Receipt confirmation* link on the Setup window to customize the message applicant's see after they submit their application form, and whether or not you want to acknowledge newly submitted applications by email.

### [Display assignment names as links to assignment profiles](#)

If your volunteer application form includes fields for collecting assignment or schedule preferences, checking this option causes the assignment names in these fields to appear as hyperlinks. When an applicant clicks any of these assignment name hyperlinks, the assignment profile opens for the selected assignment. An applicant can click on any assignment name to learn more about that assignment.

You can tailor the way assignment profiles appear under the [Opportunity Directory \[pg:1368\]](#) settings.

If your volunteer application form does not include fields for collecting assignment or schedule preferences this option has no effect on your application form.

## Status

Use the Status drop-down list to select the volunteer [status \[pg:1832\]](#) you want people who submit *this* volunteer application form to have when their application form is first received. The default selection is 'Applicant.' This helps you distinguish between new 'applicants' (who you may not yet recognize as volunteers) and 'active' volunteers using the Status field.

## Type

If you want all of the people who submit *this* application form to always have a specific [Type \[\\_\\_\\_\\_\\_\]](#) when you first receive their application form, select that Type from the Type drop-down list.

If you create more than one volunteer application form, you can use the Type field to determine which application form a given applicant used. For example, if you have one application form for 'Adults' and another for 'Juniors' you can set the Type on the 'Adult' application form to 'Adult,' and the Type on the Junior application to Junior. You will be able to determine which form an applicant used to apply by looking at the Type column on the Applications tab in the Volgistics Mailbox before receiving the application. Once the application has been received, the Type field on the Core tab in the volunteer's record will also automatically contain the Type associated with the form they used to apply.

Since volunteers may only have one Type, if you specify a Type here you cannot also allow volunteer's to choose their Type on the application form. If you want volunteers to be able to choose a Type from the Type field on the application form, do not select a Type here. Instead, add the Type field to the application form using the Fields link above.

[Help topic 2018 \[pg:0963\]](#) explains how to add additional items to drop-down lists such as the Type field.

## Flag

If you want all of the people who submit *this* application form to always have a specific [Flag \[\\_\\_\\_\\_\\_\]](#) when you first receive their application form, select that Flag from the Flag drop-down list.

If you create more than one application form, one way you can determine which application form a volunteer used to apply is by specifying a specific Flag for each form. Then you'll know from the Flag field in the applicant's record which form they used to apply (the Flag field appears on the Core tab in each volunteer's record).

[Help topic 2018 \[pg:0963\]](#) explains how to add additional items to drop-down lists such as the Flag field.

## Kind

If you use both [Group \[pg:1909\]](#) and individual records in your account, and you want all the people who submit *this* application to always have a specific Kind (Group or Individual), select the Kind from the dropdown list. This is useful if you create different application forms with different fields for groups and individuals.

## Alerts

If you would like to have an alert sent to a designated Volgistics [System Operator \[pg:0065\]](#) each time someone submits a volunteer application through this online volunteer application form, choose that System Operator's name here.

## Send the alert to

Check "To the Volgistics mailbox" if you would like a copy of the alert sent to the Volgistics mailbox. The alert will appear on the [In Box \[pg:0303\]](#) tab each time a new application is submitted.

Check "By email" if you would like a copy of the alert sent by email to the selected System Operator's email address.

Check "By text message" if you would like a copy of the alert sent by text message to the selected System Operator's cell phone. This option will not appear in accounts that have not [enabled text messaging \[pg:0321\]](#).

## **Application auditing**

By default, all new volunteer applications submitted online are initially staged on the Applications tab in your Volgistics mailbox. This gives you an opportunity to screen new applications for potential duplicates, and to look at the applicant's name entry to be sure it's not a phony application (e.g. "Mickey Mouse") *before* the new volunteer record is added to your database.

If you would prefer that new applications go directly into your database without screening, check the *Bypass auditing* checkbox.

When

### *Bypass auditing*

is checked, all new applications submitted through this online volunteer application form will go directly into your Volgistics database rather than being staged in your Volgistics mailbox, as long as your database has space for new volunteer records. If your database does not have space for new volunteer records (based on your account's [service level \[pg:0719\]](#)), then all new applications will be held on the Applications tab in your Volgistics mailbox until you make space available to receive them into your account (online volunteer application forms will continue to accept new applications even if your database does not have space for new volunteer records).

When *Bypass auditing* is checked no duplicate checking can be performed. If a volunteer who is already in your database submits a new application form, an additional volunteer record will be added for them.

New records that you receive through this online application form will always have the initial volunteer Status, Flag, and/or Type selected for the form, whether or not you screen new applications in your Volgistics mailbox. So you can still identify new applicants based on a Status, Flag, or Type designation even if you do not screen new applications in your Volgistics mailbox.

## **Links**

### Temporarily disable links to this form

Check this checkbox, and then click the **Save** button if you want to temporarily disable links to this application form. You might choose to disable this application form while you make changes to it, or if the event for which you were collecting applications has past (but you don't want to delete the application form yet). When the application form is disabled, links to the form from your web site will display a "temporarily unavailable" message.

You can optionally customize the message that appears when an application form is disabled on the [Online forms ground rules \[pg:1330\]](#) page.

## Preview buttons

You may create links to your volunteer application form in either a 'full-page' mode or an 'embedded mode' [pg:0208]. To preview your application form in either mode, click the appropriate preview button at any time to see how the form looks. This is a useful tool as you develop a new application form because it lets you see how your form will appear online as you're making changes to the way the form is setup.

## The link for adding this application form to a web page is...

This section shows you the proper HTML (Hypertext markup language) tags for inserting links [pg:1362] to this application form on your own web site. The form number for this application form appears in this section. Your links must include this form number or they will not work properly.

## **Submissions**

A count of the number of times this online volunteer application form has been submitted since the date the submission count was last reset.

Click the **Reset this count** button if you want to reset this count to zero and start counting over again.

This count is provided as a simple indication of the frequency with which this online volunteer application form is submitted by visitors to your web site. It may not provide an accurate indication of the number of new volunteers you have because you may not accept all of the application forms submitted, and some application forms may be for people who are already registered volunteers.

A more accurate way to count to new volunteers is to use the Statistics report on the Print page; or a **Set** [pg:0858] that finds all of the volunteers who have started during a time period you specify [pg:0841].

## **Delete**

Use the **Delete** button at the bottom of the Setup window to delete a volunteer application form. If you delete a volunteer application form, any received or pending applications submitted through the form will remain in your system, but the form itself will be deleted. If there are any links on your web site for the form you're deleting, they will no longer work. It's best to remove any links to the application form before you delete it.

Click the **Save** button to save changes you make to the setup window. Changes you make to a volunteer application form take effect online immediately after you save them.

---

## **Site Selection**

Help topic 1054

Added or revised 08-10-2015

---

If you are not already on the Site Selection page, you get there by:

1. Select **Setup** [pg:0887] on the **menu** [pg:0215].
2. Expand the *Online forms* link.
3. Select *Volunteer application forms*.

4. Select the name of an application form.

5. Select *Site selection*.

The Site Selection field for application forms will function differently depending on if your account has [Site Level Access \[pg:0092\]](#) enabled or not.

### **Site Level Access is *Not* Enabled**

If your account is not using [Site Level Access \[pg:0092\]](#), the settings on this page will not make much difference to your account. This is because volunteers will not be assigned to a certain Site based on their selections on the application form, and all [System Operators \[pg:0065\]](#) are essentially headquarters operators because they already have access to all the Sites in your account.

The exception to this is if you use the

*This application is for this site only*

settings to make the application form apply to one specific Site. While this will not limit System Operator access to the form or assign volunteers to a specific Site, it will limit the [Assignments \[pg:0096\]](#) that appear in the Assignment Preference field to just Assignments from the Site specified. [Help topic 2055 \[pg:0967\]](#) explains more.

### **Site Level Access *is* Enabled**

If you use the [Site Level Access \[pg:0092\]](#) feature, this page is where you control which Site(s) will receive applications submitted through an application form.

With the Site Level Access option, you need to decide who should receive new volunteer applications. Applications can be directed just to the headquarters site, one particular Site, or multiple Sites if the applicant is interested in assignments at more than one Site.

[Applicants will not select a Site. Send all applications to headquarters](#)

Choose this option if you would like all newly submitted volunteer application forms to be delivered to the headquarters site mailbox only. [Site-Level Operators \[pg:1442\]](#) will not receive applications submitted through *this* form in their Site's Volgistics mailbox.

[This application is for this Site only](#)

If this volunteer application form is for a single Site, choose this option and then select the Site's name from the list of Sites. With this option selected, applications submitted through *this* volunteer application form will only appear in the selected Site's Volgistics mailbox (note, the headquarters Site can see all of the pending applications in all mailboxes by checking the *All Sites* checkbox on the Applications tab in the headquarters' Volgistics mailbox).

[Determine applicant's Site\(s\) based on their choice of...](#)

If your application form includes any [preference fields \[pg:1011\]](#), you can configure *this* volunteer application form so that newly submitted applications appear in the Volgistics mailboxes for each of the Site's that have an assignment that matches the applicant's selections on the form.

**Preference fields** [pg:1011] are fields applicants can use to indicate the volunteer assignment they're interested in, or the kind of volunteer assignment(s) that most interest them. You can have a Preference field setup for a Site, Place, Assignment, **Assignment Cluster** [pg:0934], **state** [pg:1016], **Characteristic** [pg:0033], or the **customizable fields** [pg:0957] in the Detail box on the Assignment record.

This is an example of how you might use the Preference field on your volunteer application form, and how a volunteer's preference would determine which Site(s) their application will be sent to. *A multi-county organization has a Volgistics site for each of their counties, and they create a Preference field that allows applicants to choose the county/counties where they would prefer to serve.* If this organization sets-up the Preference field in this example so applicants can choose only one county, application forms will go only to the Site for the county selected on the form by the applicant.

If this organization sets-up the Preference field so applicants can choose more than one county, application forms will go to each of the Sites for the counties selected on the form by the applicant.

Click the **Save** button to save your changes to the Site selection page, or the **Cancel** button to close the page without saving your changes.

---

## Form Sections

Help topic 1055

Added or revised 01-18-2017

---

The *Form sections* page is where you establish the sections you would like an **application form** [pg:0413] to have by entering their headings and instructions. You get to *Form sections* by clicking the 'Form sections' link on an application form's **Setup** [pg:1334] page .

Your form must have at least one section, and it can have as many as twelve. Each section must have a heading, and optionally written instructions which will appear beneath the heading.

Create a section for each logical grouping of fields you plan to have on your application form, or any field that needs special instructions. Here are some examples of different section headings you might use on your form:

- Name and address
- Demographic information
- About you...
- Skills
- Assignment preference
- Past experience
- Emergency contact
- References
- Employer information
- Previous volunteer experience
- Why are you interested in volunteering?
- Your Availability
- When can you serve?

Sections appear on the form in the order in which you establish them on this page.  
Enter a heading for this section, or leave the heading blank to skip this section

Enter a section heading for each of the form sections you'd like to use. The section heading appears at the beginning of the section in the **heading font** [pg:1330] you choose for your online forms.

Enter the instructions you want to appear at the top of this section

Optionally enter any instructions you would like to appear beneath the section heading. These would typically explain how the visitor should complete the fields that appear within this section.

This is an example of the section headings and instructions on a volunteer application form:

The screenshot shows a form with two sections. The first section is titled "Demographics" and includes instructions: "You may optionally provide the following information. It is used only to help us get a better idea of the demographic make-up of our volunteers." Below the instructions are three dropdown menus: "Date of birth:" with "Month", "Day", and "Year" options (with "(year optional)" text), "Gender:" with a "Choose" option, and "Education:" with a "Choose" option. The second section is titled "Skills & Experience" and includes instructions: "In which of these areas do you feel you have moderate to excellent skill? Check all that apply." Below the instructions are six checkboxes with labels: "Accounting", "Carpentry", "Computer data entry", "Counseling Others", "Grant writing", and "Graphic Arts". Red arrows on the left side of the form point to the "Heading" and "Instructions" for both sections.

Move Up  
Move Down

Your form sections will appear in the order in which they appear on the Form Sections page. Use the **Move up** and **Move down** buttons if you want to change the order of your form's sections.

You use the [Fields \[pg:1341\]](#), [Schedule fields \[pg:1343\]](#), [Comment fields \[pg:1345\]](#), and [Contact fields \[pg:1346\]](#) windows to choose the fields you want to appear in each section.

Click the **Save** button to save your changes to the Form sections page, or the **Cancel** button to close the page without saving your changes.

---

## Volunteer Application Form Fields

Help topic 1056

Added or revised 01-18-2017

---

The

### *Fields*

page is where you choose the Core tab and Profile tab fields you would like to use to collect information on your [volunteer application form \[pg:0413\]](#). You get to the *Fields* page by clicking the 'Fields' link on an application form's [Setup \[pg:1334\]](#) page.

For each field you want on your application form, use the drop down list located beside the field name to choose the form section where you would like the field to appear. Choose 'Omit' from the drop down list for any field you do not want to appear on this application form.

Place a check mark in the 'Required' checkbox for any fields for which applicants should be required to make an entry. These fields will have a red asterisk located beside them on the application form indicating that they require an entry. Applicants will not be able to submit their information until they have entered something in each of the required fields. Use required fields sparingly. Forms that contain too many required fields can cause some visitors to give up before they complete the form.

You may not see every field you want your application form to include listed on the Fields page. Consider these additional resources in this case:

- If you want to add fields applicants will use to choose the schedule opening(s) they're interested in filling, use the [Schedule fields \[pg:1343\]](#) setup options.
- If you want to add fields for collecting information about emergency contacts, references, employers, parents, or other kinds of volunteer contacts, use the [Contact fields \[pg:1346\]](#) setup options.
- If you want to add space for open-ended narrative entries (e.g. "Explain why you're interested in volunteering..."), use the [Comment fields \[pg:1345\]](#) setup options.
- If you want to add fields for gathering data about specific volunteer characteristics (e.g. skills, interests, hobbies, etc.) consider adding a new [Characteristic field \[pg:0033\]](#) to your database. After you setup a new *characteristic field* it will appear here on the Fields window where you can then add it to your form.
- If you want to add fields for gathering information about the assignment, kind of assignment, or location applicants are interested in, consider adding a new [preference field \[pg:1011\]](#) to your database. After you setup a new *preference field* it will appear here on the Fields window where you can then add it to your form.
- If you want to add fields for collecting additional demographic information such as

Education or training information

Marital status

Are you a relative of a current or former patient?

Do you smoke?

Do you have a 4 wheel drive vehicle?

Certification numbers (RN, Diver)

Driver's license numbers

- Consider [customizing an additional Profile tab field \[pg:0957\]](#) for this information. Volgistics includes a series of customizable Profile tab fields which are initially hidden. Once you un-hide any of these fields, and give them a field name that suits your needs, they will appear on the Fields window where you can then add them to your form.

When you add a field to your volunteer application form, the field appears on the form with the same field name you see in Volgistics. For example, if the field name is 'Last name:' in Volgistics, it appears on the volunteer application form as 'Last name:.'

Similarly, fields you place on your volunteer application form have the same field properties on the application form that they have in your volunteer records. A field that appears as a drop-down list in the volunteer record – such as the State or Province field – also appears as a drop down list on the application form. In addition, the same drop down list options you see for the field in your volunteer records appear when you visit the field on the application form.

You can change most field names – and for drop down lists the options available for you to choose from the drop-down – under [Field Options \[pg:0957\]](#).

Click the **Save** button to save your changes to the Fields page, or the **Cancel** button to close the page without saving your changes.

---

## Schedule Fields

Help topic 1057

Added or revised 01-18-2017

---

Use the *Schedule fields* page to specify which [schedule openings \[pg:0776\]](#) are to be offered on a [volunteer application form \[pg:0413\]](#), and how applicants indicate their schedule preference. You get to the *Schedule fields* page by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Online forms* link.
3. Select *Volunteer application forms*.
4. Select the name of a form.
5. Select *Schedule Fields* under the **Content** heading.

Before you can place schedule fields on your application form, you must have one or more assignments in your database with a schedule that has [schedule openings \[pg:0776\]](#).

### If you want to allow applicants to select openings

Use the dropdown list to choose the [form section \[pg:1340\]](#) you want the schedule fields to appear under. If you do not want to use schedule preferences with this application form, choose *Omit* from the dropdown.

### Allow applicants to sign-up for schedules in

Use this dropdown list to choose the Assignment(s) you want applicants to be able to choose [schedule openings \[pg:0776\]](#) for on this volunteer application form.

- Choose *All assignments* if you want applicants to be able to choose schedule openings for all volunteer assignments that have schedule openings.
- Choose the a name of a specific [Site \[pg:0110\]](#) if you want applicants to be able to choose schedule openings from all assignments under a specific Site that have schedule openings.
- Choose the a name of a specific [Place \[pg:0108\]](#) if you want applicants to be able to choose schedule openings from all assignments under a specific Site that have schedule openings.
- Choose the a name of a specific [Assignment \[pg:0106\]](#) if you want applicants to be able to choose from all schedule openings setup for a specific assignment.

## Hint!

If you have specific Assignments that you do not want openings to appear for, check the "Never include this schedule on online volunteer application forms" checkbox on the Rules tab of the Assignment. You can learn more about this [here \[ \]](#).

### List schedule openings

Your application form can list schedule openings starting on the current date (for a certain number of days forward), or schedule openings that fall between two dates you specify.

Choose 'For the next \_\_\_ days' if you want the form to offer schedule openings starting on the current date, continuing forward for the specified number of days (up to 60 days forward). For example, choose this and select '10' if you want the form to list schedule openings beginning on the current date (whatever day it is when an applicant visits the form) through the next ten days.

Choose 'Between \_\_\_ and \_\_\_' if you want the form to offer schedule openings for a specific period of days, and then enter the beginning and ending dates you want to include. If you're registering volunteers for a special event, you could choose this option and then enter the first and last date of your event. This would make the application form list only the schedule openings during the event.

**Please remember** that your form will need to open the schedule file for each opening on each Assignment you select in the *Allow applicants to sign-up for schedules in* section, as well as each date in the date range you select. Having a large number of Assignment openings show and/or a large date range selected can slow down how fast your form loads for applicants.

If the 'Show opening notes' checkbox is checked, [opening notes \[pg:0750\]](#) will appear along with the rest of the opening information on your application forms. If the box is un-checked, the opening note information will not appear.

### Applicants can

Use this setting to control the number of schedule openings an applicant can choose, and if you want applicants to rank their choices or not.

Choose 'Sign-up for \_\_\_ openings' if you do not want applicants to rank their schedule preferences. Then, use the dropdown list to choose the number of openings an applicant should be allowed to choose. Select 'in all' if you want to limit the number of openings an applicant can choose overall on the form, or 'per day' if you want to limit the number of openings an applicant can choose for each date schedule openings appear on the form.

Choose 'Rank their first \_\_\_ choices' if you want applicants to rank their schedule preferences (e.g. 1st choice, 2nd choice, etc.). Then, use the dropdown list to choose the number of choices applicants should be allowed to make (e.g. choose '3' if you want applicants to rank their first 3 choices). Select 'overall' if you want applicants to choose this many schedule preferences overall on the form, or 'per day' if you want them to rank their choices this way for each date schedule openings appear on the form.

### Show assignment names

Use these settings to control how you want the assignments to appear on your form.

Choose 'Without Site and Place names' if you just want the name of the assignment to show.  
Choose 'With Site and Place names' if you want the Site and Place information to show in brackets behind the assignment's name.

### Receive applicant schedule selections as

Use these settings to control how the applicant's selections will appear.

Choose 'Schedule preferences (allows you to approve schedules)' if you want to approve the applicant's selections before they actually appear on your schedule. With this option, you must [receive applications into your account \[pg:0415\]](#) if you audit your applications forms, and then [approve the applicant's preferences \[pg:0773\]](#), before the applicant's choices will appear on the schedule. For this reason, you may end up with more preferences than you have room for. For example, if you have an opening setup to have 8 volunteers needed, and you receive 12 applications where the opening is selected as a preference--4 of the applicants will not be able to fill the opening.

This option works best for organizations that like to pick the most qualified volunteers to fill an opening. However, you may need to communicate with the applicants who you did not select to fill the opening to let them know that they are not scheduled for the date and time they picked on the application form.

Choose 'Actual schedule entries' if you want the applicant's choices to go directly onto the schedule. This option allows the number of schedule openings to update in real time as long as you have the 'Bypass auditing' box checked on the [application form setup page \[pg:1334\]](#). For example, if you have an opening setup to have 3 volunteers needed, once three applicants have selected the opening and submitted their forms the opening will no longer appear as a choice for future applicants.

This option works best for organizations (such as festivals and other one time events) that have volunteers who are applying just to work at the event.

### **Remember to Save**

Remember that you must click the **Save** button to keep your changes to the Schedule fields page after you make them. You can also click the **Cancel** button to close the page without saving your changes.

---

## **Comment Fields**

Help topic 1058

Added or revised 08-10-15

---

Use the *Comments fields* page to setup narrative text fields on your [volunteer application form \[pg:0413\]](#). You get to the *Comment fields* page by clicking the 'Comment fields' link on an application form's [Setup \[pg:1334\]](#) page.

Comment fields provide space on an application form for an applicant to enter narrative text. Use comment fields anywhere you'd like to ask an applicant a question they should answer by typing a few sentences (or more). These are some examples of questions that often appear on volunteer application forms for which comment fields are appropriate:

Why do you want to volunteer with us?  
Describe your employment history  
List other organizations you've volunteered for

Is there anything else you'd like to tell us about yourself?  
If you've volunteered here before, when and in what capacity?  
What are your career objectives?

The information applicants type into comment fields on the application form appears on the Notes tab in their volunteer record after you receive their form.

#### Section name

You can include one comment field in each of your application [form sections \[pg:1340\]](#). To add a comment field to a particular form section, place a checkmark next to the section name.

#### Instructions

Enter the question you want to ask in this space.

Click the **Save** button to save your changes to the Comment fields page, or the **Cancel** button to close the page without saving your changes.

---

## Contact Fields on Application Forms

Help topic 1059

Added or revised 08-10-2015

---

You can add fields to track a volunteer's or group's contacts to your application forms. You get to the *Contact fields* page by clicking the name of a contact "kind" on an application form's [Setup page \[pg:1334\]](#). For example, if you need to add fields for collecting an applicant's references, select "Reference Fields." Here are the kinds of contacts available by default:

## Instructions

Enter the instructions you want to appear at the top of the form:

Please complete this application form if you are interested in becoming a volunteer. Once you complete the form, click the submit button at the bottom.

## Content

Use these links to tailor the way this application form appears on the Internet.

[Site selection](#)

[Form sections](#)

[Fields](#)

[Schedule Fields](#)

[Comment Fields](#)

[Emergency contact Fields](#)

[Employer Fields](#)

[Reference Fields](#)

[Relative Fields](#)

['I Agree' Section](#)

[Receipt confirmation](#)

Display assignment names as links to assignment profiles

If you would like to collect a certain kind of contact information, but you don't see that kind of contact listed on the Setup page, you can create a new contact kind in Volgistics. For instance, if you want to track "Parent or Guardian" information for some volunteers, but you don't see "Parent or Guardian" listed as a kind of contact, you can add it.

To create a new kind of contact:

1. Select "Setup" from the [menu \[pg:0215\]](#).
2. Expand the "Field options" link.
3. Choose "Contacts tab."
4. Scroll down and choose the "Kind" field.
5. Use the "Add a new item" field to enter the new kind of contact you want to track, and then click the **Save** button. When you return to the Setup window for your volunteer application form, you'll be able to add the new contact kind to your form.

## Form section

If you want applicants to list this kind of contact on the application form, choose the [form section \[pg:1340\]](#) where you want these fields to appear. Choose "Omit" if you do not want applicants to list this kind of contact on this application form. It's usually a good idea to create a form section just for tracking the contact kind you're

adding to the application.

### Quantity

Choose the number of different contacts (up to 4) you want applicants to list on the form. For example, if you want applicants to list three references, choose "3" here.

### Fields

Place a checkmark in the Include column for each contact field you want on your application form.

#### **Please note:**

In order for the system to save the contact information applicants submit, you must include the *Last name* and the *First name* fields. If these fields are not included, there is not a way for the system to make a new contact record on the Contact tab of the applicant's record.

Place a check mark in the Required column for any fields for which applicants should be required to make an entry. In most web browsers, these fields will have a red asterisk located beside them on the application form, which indicates that they require an entry. Applicants will not be able to submit their information until they have entered something in each of the required fields. *Use required fields sparingly. Forms that contain too many required fields can cause some visitors to give up before they complete the form.*

Click the **Save** button to save your changes to the Contact Fields page, or click the **Cancel** button to close the page without saving your changes.

---

## I Agree Section

Help topic 1060

Added or revised 08-10-2015

---

You get to the *I agree section* page by clicking the 'I agree section' link on an application's form [Setup \[pg:1334\]](#) page.

When you include an 'I agree section' on an [application form \[pg:0413\]](#), the form will include a statement of your choice near bottom, followed by an 'I agree' checkbox. Before an applicant can submit their form they must check this 'I agree' checkbox. This feature is typically used to confirm an applicant's acceptance of any volunteer [terms or policies \[pg:0420\]](#) you have in your organization.

### Include an agreement section

Check this checkbox if you want this application form to include an 'I agree' section. Uncheck this checkbox if you don't want this form to have such a section.

Enter a name for the form section that will include the agreement checkbox

Enter the heading you would like this section of the form to have.

Enter the agreement statement you want to appear next to the 'I agree' checkbox

Enter the statement you want applicants to accept. See [Volunteer policy, confidentiality, and release agreements \[pg:0420\]](#) for more information.

For best results, prepare your statement in a word processor where you can use tools like a spelling checker to check your work, and then use the [clipboard \[pg:0063\]](#) to copy and paste your finished statement into this space.

#### Initially display the 'I agree' checkbox

Use this option to choose whether or not you want the 'I agree' checkbox to be checked by default when a visitor opens the application form. It's usually a good idea to use the 'Unchecked' option, since this requires the applicant to consciously place a checkmark here before they can submit the form.

Click the **Save** button to save your changes to the I agree section page, or the **Cancel** button to close the page without saving your changes.

---

## Receipt Confirmation

Help topic 1061

Added or revised 08-10-2015

---

Use the *Receipt confirmation* window to customize the page applicant's see after they submit their [application form \[pg:0413\]](#), and whether or not you want to acknowledge newly submitted applications by email. You get to the *Receipt confirmation* page by clicking the 'receipt confirmation' link on an application form's [Setup \[pg:1334\]](#) page.

### **Submit button confirmation**

Use this section to tailor the page applicants see after they successfully submit their volunteer application form. This typically includes a message that says "you have received their application form," and explains what happens next.

#### Enter a heading for your acknowledgement message here

Enter the heading you want to appear on this page. This typically something like 'Thank you,' 'Finished!,' or 'Complete.'

#### Enter or paste your acknowledgement message here

Enter the actual message you want to appear on this page. It's a good idea to confirm that "you have received" their application form, and explain what happens next. For example 'someone will contact you soon,' or 'you will receive more information in the mail,' depending on your organization's specific application procedures.

For best results, prepare your message in a word processor where you can use tools like 'spell check' to check your work, and then use the [clipboard \[pg:0063\]](#) to copy and paste your finished message into this space.

### **Automatic email confirmation**

Volgistics can automatically send email confirmations to people who submit online applications. These messages are typically used to acknowledge your receipt of the application form, and to explain what happens next.

Volgistics can send automatic email confirmations if

1. Your application form includes the Email field from the Core tab.
2. An applicant enters a valid email address on their application form in this field.

The Volgistics system generally sends these confirmation emails within a few minutes of the time someone successfully submits an application form.

Who should these confirmation email messages be from

Enter whatever you would like to appear in the 'From' field on these confirmation messages (that is, who is the email message from?). This could be the name of your organization, an individual's name, or your email address.

What "reply to" email address should your acknowledgement email have

Enter the valid email address you want to appear as the 'Reply-to' address in these email messages. This must be a valid email address for your organization. This is the address a reply message will go to if the email recipient uses their email program's 'Reply' button to reply to the message.

What should the subject of your confirmation email message be?

Enter whatever you would like to appear as the 'Subject' of these confirmation messages. Some likely examples would be "Volunteer application acknowledgement," "We have received your volunteer application form," or "Thank you for volunteering."

Enter or paste the content of the email confirmation message here

Enter the text message you want to appear in the body of these acknowledgement emails. This is where you would typically thank the recipient for their application, and explain what happens next in your volunteer application process. . For example 'someone will contact you soon,' or 'you will receive more information in the mail,' depending on your organization's specific application procedures.

For best results, prepare your message in a word processor where you can use tools like a spelling checker to check your work, and then use the [clipboard \[pg:0063\]](#) to copy and paste your finished message into this space.

These automatic email confirmation messages are always sent as plain text (you cannot format your message in HTML or send attachments).

Click the **Save** button to save your changes to the Receipt confirmation page, or the **Cancel** button to close the page without saving your changes.

## How do I collect Assignment Preferences on an application form?

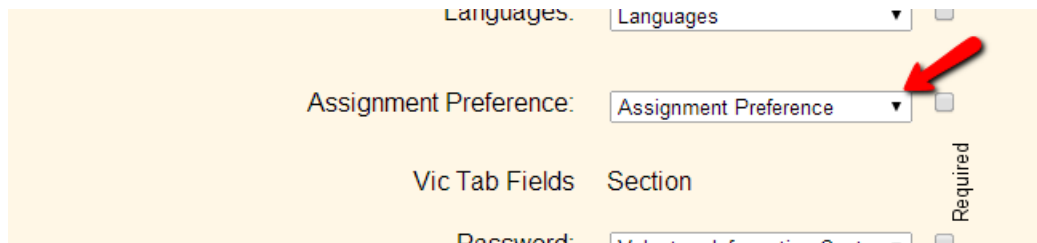

Help topic 1165

Added or revised 01-18-2017

---

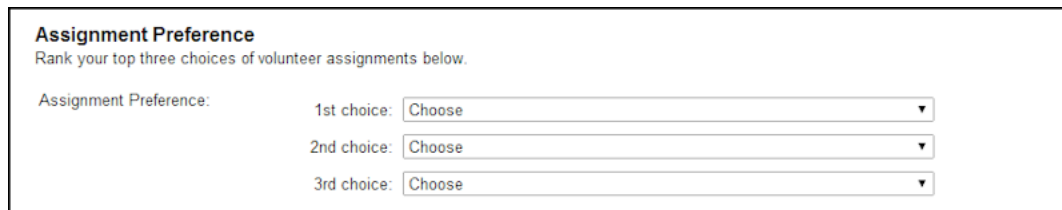

By default, there is an Assignment Preference field on the Profile tab in the volunteer record. Allowing an applicant to select which Assignment(s) they prefer to serve in can be as easy as adding this field to the [online application form \[pg:0413\]](#).

On the [Application form setup page \[pg:1334\]](#), click on the "Fields" link. Scroll down to locate the Assignment Preference field, and select from the drop down list the form section where it should be placed on the form. If you want, you can create a form section specifically for the Assignment Preference field. In the example below, the Assignment Preference field is being added to the application form in the section called "Assignment Preference."

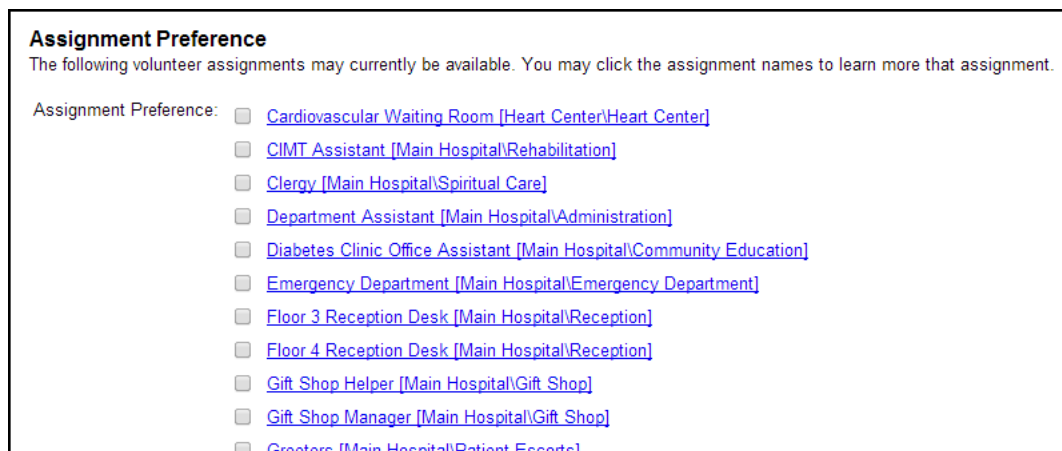

The screenshot shows a configuration interface for an application form. It features several fields with dropdown menus and checkboxes. The 'Assignment Preference' field is highlighted with a red arrow pointing to its dropdown menu, which currently displays 'Assignment Preference'. To the right of this field is a 'Required' checkbox. Below the 'Assignment Preference' field, there are labels for 'Vic Tab Fields' and 'Section'. Other visible fields include 'Languages' and 'Password'.

Once you save your changes to place the field on the form, it will be added to the form and applicants will be able to make Assignment Preference selections when they apply. If you have the Assignment Preference field setup to rank each choice, it will appear similar to this on the application form:

The screenshot shows a form section titled 'Assignment Preference'. Below the title is the instruction: 'Rank your top three choices of volunteer assignments below.' The form contains three rows, each with a label and a dropdown menu: 'Assignment Preference: 1st choice: Choose', '2nd choice: Choose', and '3rd choice: Choose'.

Or if you have the Assignment Preference field setup to not rank the applicant's choices, it will appear similar to this on the application form:

The screenshot shows a form section titled 'Assignment Preference'. Below the title is the instruction: 'The following volunteer assignments may currently be available. You may click the assignment names to learn more that assignment.' The form contains a list of assignments, each with a checkbox and a link: 'Assignment Preference:  [Cardiovascular Waiting Room \[Heart Center/Heart Center\]](#)', ' [CIMT Assistant \[Main Hospital/Rehabilitation\]](#)', ' [Clergy \[Main Hospital/Spiritual Care\]](#)', ' [Department Assistant \[Main Hospital/Administration\]](#)', ' [Diabetes Clinic Office Assistant \[Main Hospital/Community Education\]](#)', ' [Emergency Department \[Main Hospital/Emergency Department\]](#)', ' [Floor 3 Reception Desk \[Main Hospital/Reception\]](#)', ' [Floor 4 Reception Desk \[Main Hospital/Reception\]](#)', ' [Gift Shop Helper \[Main Hospital/Gift Shop\]](#)', ' [Gift Shop Manager \[Main Hospital/Gift Shop\]](#)', and ' [Greeters \[Main Hospital/Patient Escorts\]](#)'.

## What if I want to ask for Assignment preferences differently?

The Assignment Preference field can be customized to reflect a number of different options. For example, you can select how many preference choices volunteers can make, whether or not they should be ranked, and whether or not they can select from all Assignments, active Assignments only or Advertised Assignments only. You can tailor the way the Assignment Preference field works like this:

1. Choose [Setup \[pg:0887\]](#) from the main [menu \[pg:0215\]](#).
2. Select *Field Options*.
3. Select *Profile tab (for volunteers)*.
4. Select *Assignment Preference*.

This opens the Field Properties page for the Assignment Preference field, where you'll find several options for controlling which assignments are listed and how many choices applicants can select.

## How do I make a volunteer's Assignment preference become an actual Assignment Entry?

When a volunteer indicates an Assignment preference on their application, their [Service tab \[pg:0138\]](#) in Volgistics will show that they have the Assignment with the [Role \[pg:0103\]](#) of "Preference."

Assignment	Role	From	To		
Client Advocate [Headquarters\Client Services]	Preference	02-28-2008		<a href="#">Edit</a>	<a href="#">Delete</a>
Landscaping [East\Maintenance]	Preference	02-28-2008		<a href="#">Edit</a>	<a href="#">Delete</a>
Trail Management [East\Conservation]	Preference	02-28-2008		<a href="#">Edit</a>	<a href="#">Delete</a>

To change the volunteer's Role in an Assignment from "Preference" to "Assigned," locate the Assignment record on their [Service tab \[pg:0138\]](#) and click the orange Edit link next to the Assignment. Then, in the Edit box that appears, choose "Assigned" from the Role dropdown list, and click **Save**.

**Edit**

Assignment: Client Advocate [Headquarters \ Client Services]

Role: Preference

From: To:

Assigned  
Former  
Inactive  
Preference  
Referral  
Substitute  
Trainee

[Save](#) [Cancel](#)

**Matches**

Good  Marginal

[Refresh](#)

Alternatively, you can change a volunteer's Role in an Assignment from within the Assignment record, like this:

1. Choose Assignments from the [menu \[pg:0215\]](#).
2. Click on name of the Assignment.
3. Go to the Assignment's Volunteers tab. Use the Search options to pull up just the records with the Role of *Preference*. You can find assistance with this in [help topic 2221 \[pg:0131\]](#).
4. Use the dropdown list in the *New role* column to select *Assigned*.

Tag	Volunteer	Role	New role
<input type="checkbox"/>	<a href="#">Applebe, Tom</a>	Assigned	Assigned <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>	<a href="#">Bennequin, Keshia</a>	Assigned	Assigned <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>	<a href="#">Hill, Carl</a>	Preference	Preference <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>	<a href="#">Howard, Jim</a>	Assigned	Assigned <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>	<a href="#">Norris, Kathy</a>	Assigned	Former <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>	<a href="#">Ross, Benjamin</a>	Assigned	Inactive <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>	<a href="#">Wilson, Jenna</a>	Assigned	Preference <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>			Referral <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>			Substitute <input type="button" value="v"/> <a href="#">Delete</a>
<input type="checkbox"/>			Trainee <input type="button" value="v"/> <a href="#">Delete</a>

5. Repeat step 4 for any other volunteers you wish to assign to the Assignment.

### What is the difference between Assignment Preference and Schedule Preference fields?

While Assignment Preferences allow applicants to indicate the general kinds of service they would like to participate in at an organization, Schedule Preferences let volunteers choose their preference of specific schedule openings. You can read more about the distinction [here \[pg:0411\]](#).

## How to Upload Logo Graphics

Help topic 1187

Added or revised 07-14-2016

If your organization has a computer graphic file that contains your logo, you can upload it to Volgistics as the *print graphic* and/or *display graphic* for your account. You can optionally upload an image to be used for the VicNet mobile sessions.

There is not a limit on the dimensions (height and width) of the graphic file(s) used, but the actual file size must be under 48 KB. You may want to use separate images with different dimensions for the print, display and mobile graphics to make sure the most aesthetically pleasing choice is used for each. Volgistics does not have any built-in features that allow you to resize images, but most graphic or photo editing software programs or services have options to change a file's dimensions when it is saved. You may also wish to optimize the file when it is saved. This is particularly true for the mobile graphic. Optimizing the file reduces the amount of computer resources required to store the file, as well as the bandwidth required to transmit the file.

Graphic files can be uploaded on the *Logo graphics* setup page. If you're not already on this page, you can get there by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Online forms* link.
3. Select *Logo graphic*.

### **Print graphic (GIF, JPG or PNG)**

The graphic image you upload in the *Print graphic* section will be printed on selected reports. If you have already uploaded a print graphic, it will be displayed here.

You can choose to clear the graphic so that no image is printed on any reports by clicking the **Clear** button, or you can upload a new image to replace the current file.

Your *Print graphic* image can be a GIF, JPG or PNG file up to 48 kb in size and should have a white or transparent background.

To upload your print graphic:

1. Click the **Browse** or **Choose File** button.
2. Use the *File Upload* or *Upload file* window to locate the custom graphic file you want to load, click on the file name, and then click the **Open** button.
3. Click the **Upload** button at the bottom of the page. It may take a minute or two for your computer to upload the new file(s) so do not close your browser or go to another web page until you receive the upload confirmation.

Once a print graphic is successfully loaded into your Volgistics account, you can choose to display it on a report by customizing the *Logo & title locations* field on the report's [Page design \[pg:0451\]](#) tab.

		<b>All Service By Assignment</b> <small>Your Organization</small>		
Site	Place	Assignment	FY 09-10 Hours	Total Hours
Your Organization	Administration	Info Desk	176:22	176:22

### **Display graphic (GIF, JPG or PNG)**

The graphic image you upload in the *Display graphic* section will be displayed on the [Opportunity Directory \[pg:0420\]](#), online [application forms \[pg:0413\]](#), and at [VicNet \[pg:1724\]](#) and/or [VicTouch \[pg:1778\]](#). If you have already loaded a *Display graphic*, your current file will be visible here.

You can choose to clear the graphic so that no image is displayed on your online forms by clicking the **Clear** button, or you can upload a new image to replace the current file.

Your *Display graphic* image can be a GIF, JPG or PNG file up to 48 kb in size and should have a transparent or white background.

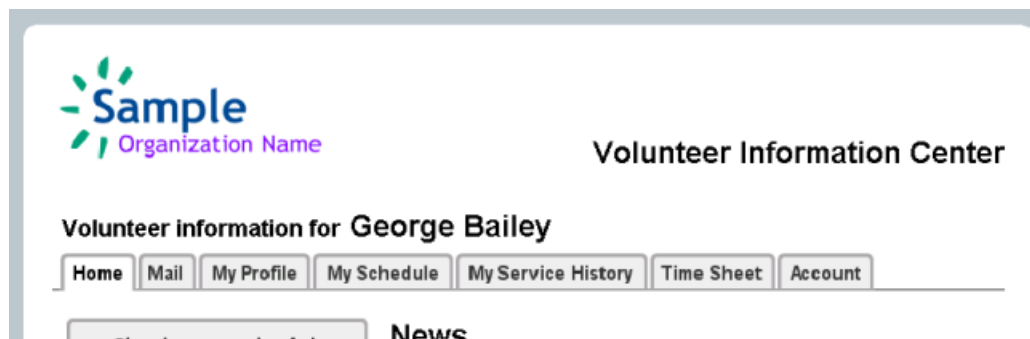

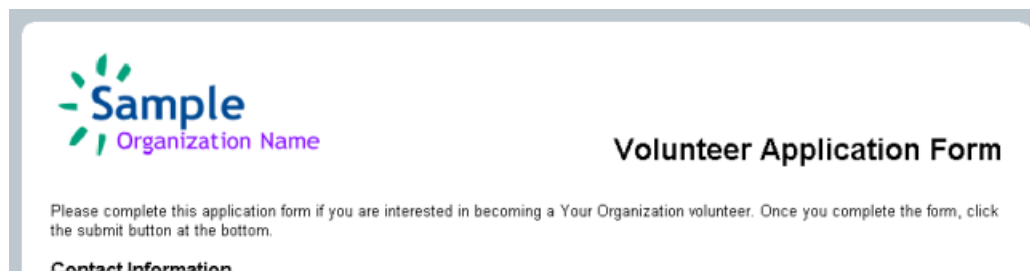

To upload your display graphic:

1. Click the **Browse** or **Choose File** button.
2. Use the *File Upload* or *Upload file* window to locate the custom graphic file you want to load, click on the file name, and then click the **Open** button.
3. Click the **Upload** button at the bottom of the page. It may take a minute or two for your computer to upload the new file(s) so do not close your browser or go to another web page until you receive the upload confirmation.

Once a

*Display graphic*

is successfully loaded into your Volgistics account, it will appear on your online forms. It will not appear at VicTouch until VicTouch has been **shut down** [pg:1762] and restarted.

### **Mobile VicNet logo (GIF, JPG or PNG)**

You will need to upload a separate image file if you want your organization's logo to appear on the mobile view of VicNet. You can find information on how to change other settings (such as the font and background colors) for the mobile view of VicNet in [help topic 1214](#) [pg:1934]. If you have already loaded a *Mobile VicNet logo*, your current file will be visible here.

You can choose to clear the graphic so that no image is displayed on the mobile view of VicNet by clicking the **Clear** button, or you can upload a new image to replace the current file.

Your volunteers and [Coordinators](#) [pg:0163] may pay for their data plans with their wireless carrier so you may want to resize your image with smaller dimensions and optimize the file when it is saved. Optimizing the file reduces the amount of computer resources required to store the file, as well as the bandwidth required to transmit the file. Most graphic or photo editing software programs or services have options to change a file's

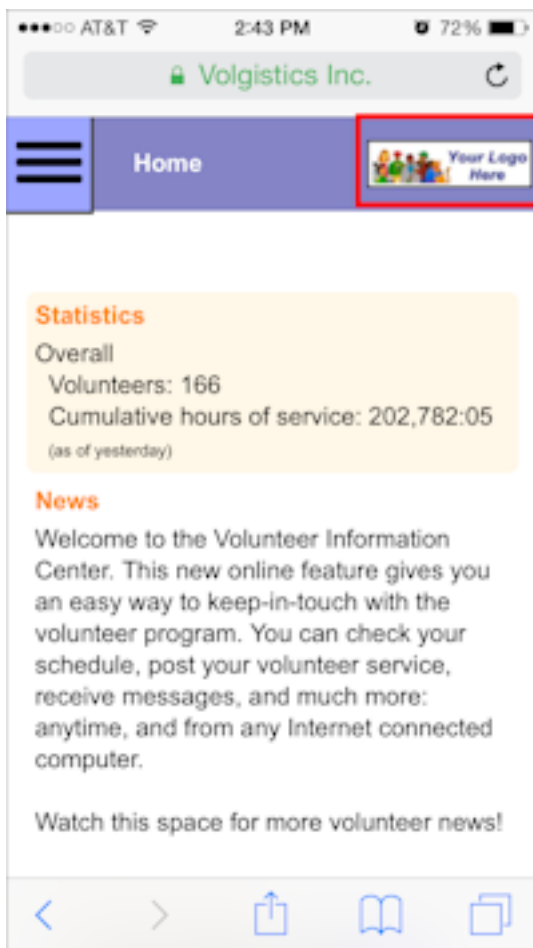

dimensions and to optimize the file when it is saved.

Your *Mobile VicNet logo* image can be a GIF, JPG or PNG file up to 48 kb in size and should have a transparent or white background. The PNG file type is the recommended format.

To upload your mobile VicNet logo graphic:

1. Click the **Browse** or **Choose File** button.
2. Use the *File Upload* or *Upload file* window to locate the custom graphic file you want to load, click on the file name, and then click the **Open** button.
3. Click the **Upload** button at the bottom of the page. It may take a minute or two for your computer to upload the new file(s) so do not close your browser or go to another web page until you receive the upload confirmation.

Once a *Mobile VicNet logo* graphic is successfully loaded into your Volgistics account, it will appear in the top right corner of the VicNet page when the user selects to use VicNet in the mobile format.

---

## How do I disable an online application form?

Help topic 1191

Added or revised 09-30-2016

---

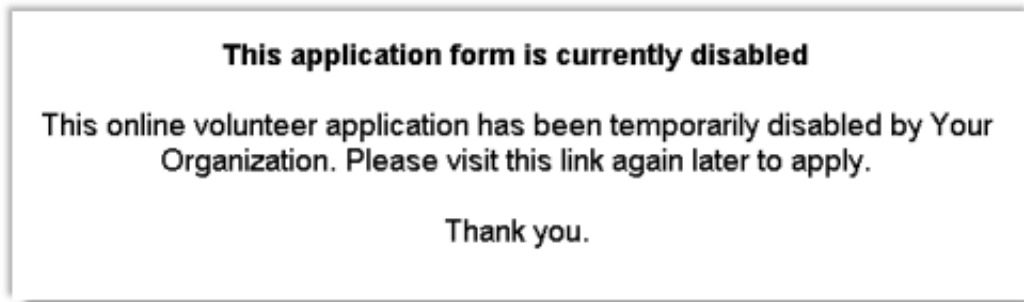

There may be times when you would like to temporarily disable an [online volunteer application form \[pg:0413\]](#) without permanently removing the link to the application form from your organization's web site. When you disable an online volunteer application form, visitors who click your link to that form will receive a message explaining that application form is temporarily unavailable. They will not be able to submit applications while it is disabled.

To disable an online volunteer application form:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "Online forms."
3. Click "Volunteer application forms."
4. Click on the name of the application form you want to disable.
5. On the form setup page under the **Links** heading, check "Temporarily disable links to this form."
6. Click the **Save** button.

When you are ready to return the application form to service, repeat these steps, un-checking the "Temporarily disable links to this form" checkbox.

While an application form is disabled, a visitor who clicks your web site's link to the application form will see the following message by default:

You can optionally customize this message on the [Online forms ground rules \[pg:1330\]](#) page.

### Removing an application form permanently

If you would like to permanently remove an online volunteer application form that you have linked to from your organization's web site, you should ask the person who maintains your web site to remove the form's link from your own web site.

## How can I collect a volunteer's affiliation information?

Help topic 2070

Added or revised 01-03-2012

---

**Q.** My organization is interested in asking applicants if they are affiliated with certain groups when they complete the online application form. How can we do this and where will this information appear in their record?

**A.** You can create a *characteristics* field called 'Affiliations' and place this field on your application form. This would give applicants a checkbox for each group for which you want to track volunteer affiliations. You will see what affiliations a volunteer has on the Profile tab in their record.

Start by adding a new *characteristics* field:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Choose 'Field Options.'
3. Choose 'Profile tab (for volunteers).'
4. Click the 'Add a new characteristic' link. This opens the Field Properties page shown below.
5. On the Field Properties page, enter a name for this field after 'Characteristic name.' This is the field name that will appear on the application form, and on the Profile tab in your volunteer records. 'Affiliations' would be a good field name in this case.
6. Use the 'Add a new item' field to enter the names of each of the groups for which you want to track volunteer affiliations. Click the **Save** button after you enter each group name. You can always return to this page to add more items to this field if you need to.
7. When you're finished adding the item names, click the Save button.

The Field Properties page will look something like this when you're finished:

**Field Properties** Save Delete Cancel

**Affiliations**

Field location: **Profile tab**

Type of field: **Characteristic**

Characteristic name:

You can choose:

Use this for...

- Use this characteristic for matching volunteers and assignments. This characteristic appears on the Profile tab for both volunteers and assignments.
- Track this characteristic for volunteers only. This characteristic appears on the Profile tab for volunteers only.
- Track this characteristic for assignments only. This characteristic appears on the Profile tab for assignments only.

**Items**

Add a new item:  Save

<input type="text" value="A church or religious group"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="AARP"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="Junior League"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="Kiwanis Club"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="PTA (your local PTA)"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="Rotary International"/>	<span>Delete</span>	<span>Merge</span>

**System operator rights**

Volgistics Administrators:

Power users:

Basic users:

Save Delete Cancel

Now you're ready to add the new *Affiliations* field to your online volunteer application form. To do this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Choose 'Online forms.'
3. Choose 'Volunteer application forms.'
4. Click on the name of the application form you want to add the new *Affiliations* field to. This opens the application form setup page.
5. We will add a new form section for the Affiliation field, so click the 'Form sections' link on the application form setup page.
6. On the Forms Section page, locate the next available form section. Enter the heading you want to appear at the beginning of this form section (e.g. 'Affiliations'), enter any instructions you would like to appear under the section, and then click the **Save** button.

The Forms Section page will include a section definition similar to this when you're finished:

information, and receive messages. Please select the [dropdown]

**10** Enter a heading for this section, or leave the heading blank to skip this section:  
Affiliations

Enter the instructions you want to appear at the top of this section:  
Are you currently affiliated with any of the following groups? Check all that you are currently affiliated with.

**11** Enter a heading for this section, or leave the heading blank to skip this section:

7. From the application form setup page, click the 'Fields' link. This opens the Fields page.

8. On the Fields page, locate the *Affiliations* field, use the drop down list next to the *Affiliation* field to choose the form section you just added, and then click the **Save** button.

HOURS: Omit [dropdown] [checkbox]

Skills: Skills & Experience [dropdown] [checkbox]

**Affiliations:** Affiliations [dropdown] [checkbox]

Assignment Preference: Assignment Preference [dropdown] [checkbox]

Your online application form now includes the *Affiliation* field. This is an example of how this would appear to applicants on your application form.

Confirm password: [input]

**Affiliations**  
Are you currently affiliated with any of the following groups? Check all that you are currently affiliated with.

Affiliations:  A church or religious group  AARP  Junior League  
 Kiwanis Club  PTA (your local PTA)  Rotary International

**I Agree**  
I understand and agree that submitting this application form does not automatically register me as a Sample Agency Name

The new *Affiliation* field will also now appear on the Profile tab in each volunteer's record in box similar to the one shown here.

**Affiliations**

A church or religious group  AARP  Junior League  
 Kiwanis Club  PTA (your local PTA)  Rotary International

This is where you will see what groups an applicant said they are affiliated with. You can add or edit a volunteer's affiliations here too.

You can also now include the volunteer *Affiliation* field on printed reports. For example, you can add the *Affiliation* field to any [Volunteer List \[pg:0692\]](#) or Volunteer Profile report you create. You can also create [Sets \[pg:0858\]](#) that will find all of the volunteers who have a specific group selected in the *Affiliation* field.

## How to Set Up a Volunteer Application Form

Help topic 2122

Added or revised 01-18-2017

---

There are different options you can use to get started with setting up an application form. No matter which option you choose to use, you will need to get started by:

1. Choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Select *Online forms*.
3. Select *Volunteer application forms*:
4. From here, you have the following options to setup a form:
  - (1) Select *Create a new application form* to start a new form from scratch.
  - (2) Select *Clone a form* to spin off a copy of a default form or an existing form. You can learn more about this [here \[pg:1367\]](#).
  - (3) Select one of the default forms (*Detailed form* or *Short form*), or an existing form, to review or modify that form.

### Volunteer application forms

Click 'Create a new application form' to create a new online application form, or 'Clone a form' to make a new form that is based on an existing form. Click on the name of an existing form to review or edit the form.

[Create a new application form](#) **1**

[Clone a form](#) **2**

[Detailed form](#) (0 submissions)

[Great Lakes Form \(Adults\)](#) (54 submissions)

[Great Lakes Form \(Youth\)](#) (0 submissions)

[Short form](#) (0 submissions)

[Summer Festival 2015](#) (2 submissions)

**3**

5. Use the form's Setup page to control how the form will work. [Help topic 1053 \[pg:1334\]](#) has a detailed explanation of the settings on this page.

## Previewing application forms

As you setup or modify a volunteer application form, it's often helpful to preview the form and see how it will look to online visitors. To preview the volunteer application form you're working on, scroll down the Setup window to the

### Links

section and click one of the buttons to preview the form. You can preview the form in full-page view or in an embedded format. You can learn more about the differences in these two views in [help topic 2252 \[pg:0208\]](#).

You can also submit a test application form when you preview a form if you wish. When you preview the form, just fill in the fields and then click the

### Continue

button to submit the form. You can learn how to receive an application form that is not setup to bypass auditing in [help topic 2123 \[pg:0415\]](#).

## Changing form colors and fonts

Volgistics lets you control many graphic characteristics of your online forms, such as background colors, font names, and sizes. Choosing graphic characteristics for your forms that match the style of your own web site gives your site a unified appearance, and lets you "brand" your online forms as your own. Use the [Online Forms Ground rules \[pg:1330\]](#) and [Logo graphic setup \[pg:1353\]](#) options to customize the graphic look of your forms.

---

# Creating Links to Your Volunteer Application Form

Help topic 2125

Added or revised 08-10-2015

---

Potential volunteers can get to your [online volunteer application form \[pg:0413\]](#) from links you place on your own web site.

You create one or more links to your volunteer application form from your own web site. This makes it easy for prospective volunteers to go right to your form while they're visiting your site, and it's the place people would logically go online to if they're interested in your organization and they're looking for a way to get involved.

### Linking from your own web site

Incorporating a link to your online volunteer application form is as simple as adding the following hyperlink to the HTML (Hyper Text Markup Language) markup for your site:

```
<A HREF="https://www.volgistics.com/ex/portal.dll/ap?AP={form number}">Volunteer application form</A>
```

Replace {form number} with the form number for *your* volunteer application form. This is an example of a completed link to an application form with the hypothetical form number "1234567890":

```
<A HREF="https://www.volgistics.com/ex/portal.dll/ap?AP=1234567890">Volunteer application form</A>
```

To get the form number for *your* application form:

1. From the [menu \[pg:0215\]](#), choose Setup.
2. Select 'Online forms.'
3. Select 'Volunteer application forms.'
4. Click the name of the application form you want to link.
5. Scroll down to the *Links* section. The *Links* section shows you the form number, as well as examples of links. You can copy and paste the link from this Volgistics setup page into your HTML document, or you can type the link into your HTML document manually.

If you maintain your own web site then you're probably familiar with HTML and hyperlinks. If someone else maintains your web site, consider printing a copy of this help topic for them to follow as they install your link (be sure to give them *your* application form number, too).

Instruction(s) on how to work with HTML is beyond the scope of this topic. However you should know that there are several different ways you can incorporate your application forms into your web site. Each method has pros and cons, discussed briefly in this section. Choose the method you feel will most closely integrate the form into your web site. You can...

- open the form in the same browser window or frame
- open the form in a new browser window
- open the form as an inline frame

#### Opening the form in the same browser window or frame

This is the simplest and most common kind of hyperlink. It's advantages include not opening a new browser window, and giving your form a more integrated look. This is an example of an HTML link with the text "Volunteer Application Form." When a visitor clicks the link they see your application form:

```
<A HREF="https://www.volgistics.com/ex/portal.dll/ap?AP={form number}">Volunteer application form</A>
```

If your web site does not use *frames*, the visitor to your form will see just the application form in their browser window when they click the link. When you create a link to your application form from a web site that does not use frames, and if you don't open the form in a new browser window, then you should include a 'back link' on the application form so that visitors can easily continue browsing your organization's web site after they submit the form.

To include a back link to your web site:

1. From the [menu \[pg:0215\]](#), select 'Setup.'
2. Choose 'Online forms.'
3. Click 'Volunteer application forms.'
4. Select your application form from the 'Volunteer Application Forms' window.
5. Click the 'Receipt confirmation link.'

6. In the 'Return navigation section,' select 'Include the following link back to a page in your own web site,' and then enter the text and [url \[pg:1349\]](#) for your back link.

7. Click the **Save** button.

An ideal approach to opening the application form on your own web site uses *frames*. With this approach, the organization's logo and navigational links can appear in one frame, while the various pages the visitor selects appear in an adjacent frame. This ensures that visitors to the site will always see the Site's menu no matter what page they're on. When the form link shown above is made from within a frame, visitors can still see your site's menu even after they click the application form link. You can use this approach to give your online volunteer application forms a totally integrated look.

If you place your volunteer application form link within a frame, you need not include a 'back link' or 'Close this window' button on your form, since visitors can easily continue browsing your site after they submit their application using the menu or navigational links you provide in another frame.

#### Opening the form in a new browser window

A different approach to links is making the linked form open in a new, separate browser window on the visitor's computer.

The advantage to this approach is that visitors return to the same web page they were on when they clicked the application form link after they submit their form and close the form's browser window. Some developers avoid opening new browser windows because they may confuse novice web visitors.

This is an example of an HTML hyperlink that opens the application form in a new browser window:

```
<A HREF="https://www.volgistics.com/ex/portal.dll/ap?AP={form number}"  
TARGET="NEW">Volunteer Application Form</A>
```

If you use this approach to your application form link, it's a good idea to include a 'Close this window' button on the application form. This makes it easier for visitors to exit the new browser window after they submit their form.

To include a 'Close this window' button on your form:

1. From the [menu \[pg:0215\]](#), select 'Setup.'
2. Choose 'Online forms.'
3. Click 'Volunteer application forms.'
4. Select your application form from the 'Volunteer Application Forms' window.
5. Click the 'Receipt confirmation link.'
6. In the [Return navigation section \[pg:1349\]](#), select 'Include a 'Close this window' button on the confirmation window.'
7. Click the **Save** button.

## Opening the form in an in-line frame

*In-line framing* (also called "floating frames") is a method of embedding one HTML document inside the framework of another HTML document. An in-line frame is similar to the HTML IMG tag, except that an HTML page is inserted at the tag location rather than an image.

This is an example of an HTML tag for including the application form within the body of another web page:

```
<IFRAME SRC="https://www.volgistics.com/ex/portal.dll/ap?AP={form number}">  
This page requires a browser that can display frames</IFRAME>
```

The advantage of this method is your ability to display the form within a web page that includes other elements you choose, such as a background image or custom graphics or links you want to appear along with the form. A disadvantage is that some older browsers do not support the IFRAME tag (Hint: install a conventional link to the application form within the <IFRAME> and </IFRAME> tags to give visitors who use older browsers access to the form in a new browser window).

If you use this approach and you would like a background image to appear behind the form, choose a transparent background color for your online forms in Volgistics.

To make your online forms transparent:

1. From the [menu \[pg:0215\]](#), select 'Setup.'
2. Choose 'Online forms.'
3. Click 'Ground rules.'
4. Clear any color entry that currently appears for the background color in the 'Background' section so the Background color field is completely blank.
5. Click the **Save** button.

When creating web pages that include an iframe, be sure to use a DOCTYPE that supports Iframes for your web page.

---

## Online Form Security and Privacy Policies

Help topic 2129

Added or revised 01-07-2015

---

As you develop and implement online tools for volunteers, such as [online volunteer application forms \[pg:0413\]](#), consider people's concerns about the security and privacy of the information they submit on line. It's reasonable for visitors to your web site to expect some assurance that their information will be protected.

Organizations that have web sites may already have established privacy policies posted on their sites. These may cover volunteer information collected online. Others may need to develop such policies from scratch. As you prepare to post online forms through Volgistics, you should determine where you stand. Does your site already have a posted policy? Does it cover volunteer information? Will people visiting your site to fill-out an application form already see a link to this policy?

If the answer to any of these questions is 'no,' this help topic offers some basic guidance on how to proceed.

## Providing privacy information on online forms

You can optionally include a privacy policy statement on the [online forms you add to your web site \[pg:0208\]](#). When a visitor to your online forms clicks a 'privacy policy' link, they will see your privacy information.

To install a privacy policy:

1. From the [menu \[pg:0215\]](#), select 'Setup.'
2. Click 'Online forms.'
3. Click 'Ground rules' and then scroll down to the 'Privacy policy' section.
4. Click the 'Include a link to this privacy policy statement' checkbox.
5. Enter your privacy policy in the space provided, or copy and paste the statement into this space from a word processing program or other source.
6. Click the **Save** button.

Your online forms will now include a 'privacy policy' links to your privacy policy statement.

## Developing security and privacy policies

Be sure your organization doesn't already have a policy before you start developing one. If your organization has a 'webmaster,' this may be something they've completed or are involved with. Also recognize that this is the sort of policy that your supervisor or a legal advisor may need to be involved with. Be sure you've checked with the right people before posting your policy!

There are generally two concerns that people have about providing information through online forms. First is that their personal information will be secure as it travels over the Internet: that it will reach you without being intercepted by anyone along the way. Second is that you will respect the privacy of their information once you receive it and only use it for certain purposes.

The first concern is something Volgistics can help you address, because the Volgistics system handles the transfer of information over the Internet. The second concern is something your organization must address, since you are the actual user of the information people provide to you.

### Security policies

Volgistics protects the information volunteers (or prospective volunteers) submit through online forms with the same high level of security used to protect your interactions with Volgistics. This includes the use of Secure Sockets Layer (SSL) technology for protecting information as it travels over the Internet, firewalls, secure servers, database encryption, and other security measures.

The following sample wording describes security measures used by Volgistics. You can incorporate this wording in your own security and privacy information to describe the security of the online form provided by Volgistics.

The information you submit through this online form is protected using Secure Sockets Layer (SSL) technology. This means that your information is encrypted as it travels between your computer and our volunteer database. This is the same technology used by banks to protect online banking services and online merchants to protect credit card information. Once your data reaches our volunteer database, it is protected by hardware firewalls, secure servers, database encryption, and other security measures.

Of course you're welcome to tailor your own security information, however you must be careful not to offer any security assurances that are not provided by the Volgistics service.

### Privacy policies

Individual organizations that collect volunteer information through online volunteer application forms should offer applicants an explanation of what information they collect, and how they will use it. This is often called a 'Privacy Policy.'

Different organizations use volunteer information in different ways. Therefore, your privacy policy is something you should tailor to the way your own organization uses volunteer data.

An excellent resource for guidance on how to develop a privacy policy is Truste (www.truste.com), an online service dedicated to internet privacy.

---

## How to Clone a Volunteer Application Form

Help topic 2131

Added or revised 10-05-2016

---

There may be times when you want to create an application form that is very similar to one you have already created. For example, you may have already created a form for adult volunteers and now you want to create a new form for youth volunteers. The youth form will have many of the same settings for which fields are selected and how the form functions, but will have a few differences. In this case, the easiest way to make the new youth form will be to clone the existing adult form. Here is how you can do this:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Online forms* link.
3. Select *Volunteer application forms*.
4. Select *Clone a form*.

### **Volunteer application forms**

Click 'Create a new application form' to create a new online application form, or 'Clone a form' to make a new form that is based on an existing form. Click on the name of an existing form to review or edit the form.

[Create a new application form](#)

[Clone a form](#)

[Print a blank form](#)

[Detailed form](#) (0 submissions)

[Great Lakes Form \(Adults\)](#) (56 submissions)

5. Select the existing form you want the new form to be based on from the *Form* dropdown list and then enter a name for your new form in the *New Form Name* field.

Please choose a form which you want to clone.

Form:

New Form Name:

6. Click the **Submit** button.

7. Select the name you gave the new form from the list if you need to modify the form's setup. You can find information on how to do this [here \[pg:1334\]](#).

**Please note:** If a new name for the form was not selected in step 5, the new form's name will be the same as the old form's name except that a number will be appended to the end of the title. For example, if the form cloned was named "Great Lakes Form (Adult)" and a new name was not entered when the **Submit** button was clicked, the new form will be called "Great Lakes Form (Adult) 2"

---

## Opportunity Directory Setup Page

Help topic 2251

Added or revised 05-21-2012

---

You can use the [opportunity directory \[pg:0420\]](#) feature to add information about your volunteer opportunities to your own web site. The Opportunity Directory setup page is where you customize certain characteristics of your Opportunity Directory. If you're not already on the Opportunity Directory setup page you can get there by choosing [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), selecting 'Online forms,' and then clicking the 'Opportunity directory' link.

### Appearance

You can create links to your opportunity directory in either of two modes: 'Full-page' mode or 'Embedded' mode. The controls in this section affect the way your directory appears in either mode.

#### List assignments...

This setting controls the way the list of advertised assignments is organized.

- As a plain alphabetical list

Select this option if you want the directory to list your advertised assignments in a single alphabetical list no matter which Site or Place the assignment is from. Visitors click any assignment name to learn more about that assignment.

Example:

- Book Cart**
- Client Advocate**
- Client Intake**
- Docent**
- Festival**
- Information Desk**
- Instructor**
- Phones**
- Records**
- Speakers Bureau**
- Special Events**
- Transportation Driver**

- By Site and Place

Select this option if you want the directory to list advertised assignments according to their Site and Place. Each Site and Place in your database that has one or more advertised assignments is listed, followed by the advertised assignments for each Place. Visitors click any assignment name to learn more about that assignment.

Example:

## **Downtown Region**

### **Administration**

- Client Intake
- Information Desk
- Records

### **Client Services**

- Book Cart
- Client Advocate
- Transportation  
Driver

### **Volunteer Office**

- Phones
- Speakers Bureau
- Special Events

## **Northeast Region**

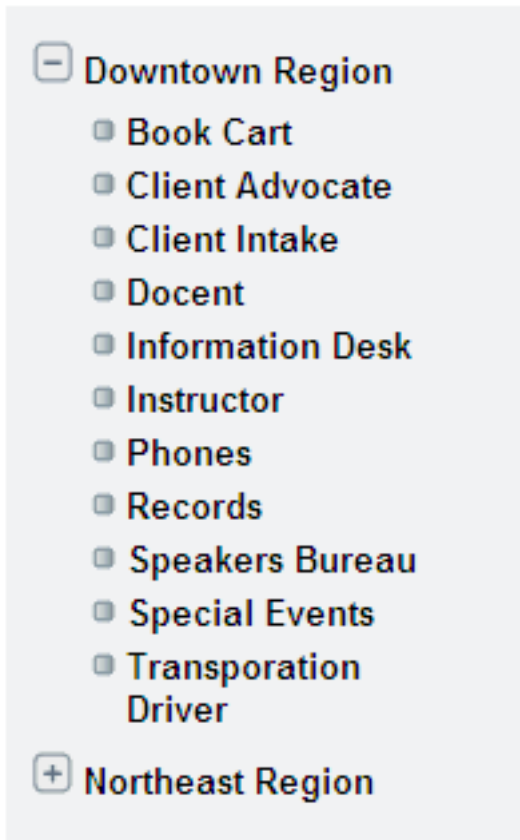

### **Volunteer Services**

- Festival

- By Site in an expandable format

Select this option if you want the directory to list advertised assignments according to their Site. Each Site in your database that has one or more advertised assignments is listed. Visitors click any Site name expand the list of advertised assignments for that Site.

Example:

Draw border around assignment profiles

Check this checkbox if you want assignment profiles to appear with a rounded border, as shown here:

Bullets next to assignment names

Check this checkbox if you want bullets next to each assignment name. Un-checking this checkbox causes assignment names to appear without these bullets.

Page instructions

The first time a visitor to your web site views the opportunity directory, instructions appear on the right side of the directory asking the visitor to click any assignment name to learn more about that assignment. You can customize these instructions here.

These instructions are replaced by an assignment profile as soon as the visitor clicks an assignment name.

### Assignment information

Check each of the fields of assignment information you want to appear in your directory. When a visitor clicks an assignment name link, this is the information they will see for the selected assignments.

Your field selections here apply to all of your advertised assignments.

Warning for organizations that use the VicNet module and choose to include links for more information about assignments on the 'My Schedule' [pg:1453] tab:

These settings also control what volunteers see when they click the 'Job Description' link. If no fields are selected under 'Assignment information' for the Opportunity Directory, no information will be shown when volunteers click on the 'Job Description' link. So any fields you want volunteers to see for an assignment when the 'Job Description' link is clicked must be selected here.

### **Full-page appearance**

You can create links to your opportunity director in either of two modes: 'Full-page' mode or 'Embedded' mode. The controls in this section apply only to forms displayed using the Full-page mode.

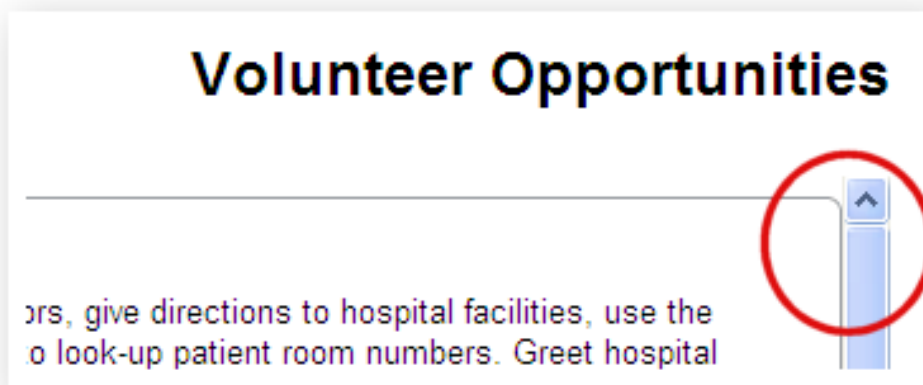

### Heading

Enter the text heading you would like to appear at the top of the opportunity directory. For example 'Volunteer Opportunities.'

### Panel height

Enter a height for the form panel in pixels. The default height is 600 pixels. You may make the panel taller if you wish.

If you find that your list of volunteer opportunities or your assignment profiles appear with scroll bars as shown below, you can eliminate the scroll bars by increasing the panel height.

---

## How to Print, View or Save a Completed Application Form

Help topic 2552

Added or revised 10-14-2015

---

The [online volunteer application forms \[pg:0413\]](#) in Volgistics allow you to collect information from prospective volunteers and have the information they enter on the form automatically transfer to a volunteer record in your account. This is a great way to streamline the application process because you will not need to manually enter the volunteer's information into your account.

You may want to print, view or save a file of the completed application form a volunteer submits. After the release of Phase 2 of the VicDocs feature, Volgistics automatically creates a [PDF \[pg:0449\]](#) file showing the applicant's selections on the form.

 **Your Agency Individual Application**

Please complete this application form if you are interested in becoming a Your Agency Name volunteer. Once you complete the form, click the Continue button at the bottom.

Emergency Contact

In the event of an emergency, whom should we notify?

If you need the completed application form for a volunteer record created from an application submitted after Phase 2 of the VicDocs feature was released, see the After VicDocs Released section below. If you need the completed form for a volunteer record made prior to the release of Phase 2, see the Before VicDocs Released section below.

### After VicDocs Released

If your application forms are setup to be audited, you will need to [receive the applicant's information \[pg:0415\]](#) before proceeding. After the record is in your database, you can find it using the options shown in [help topic 2023 \[pg:1982\]](#). Once you have found the record, click on the Docs tab, which is the last tab on the right hand side the record.

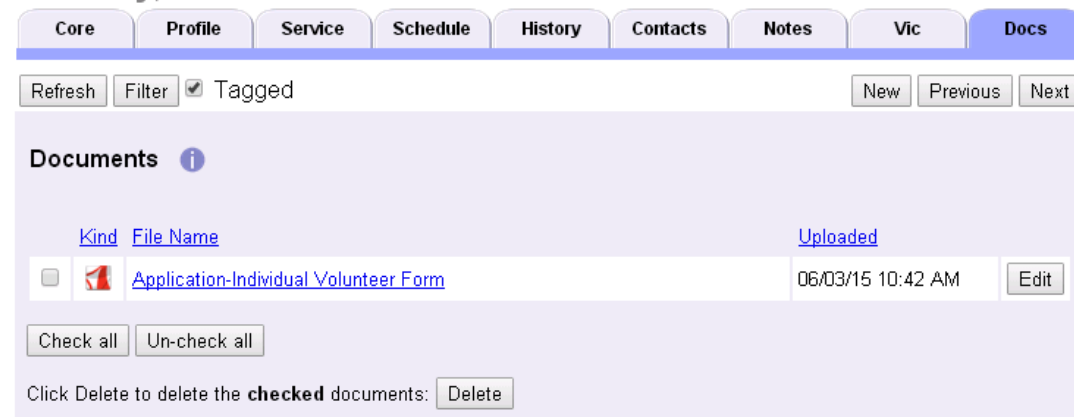

### Holliday, John

If you are not able to see the tab, your [System Operator \[pg:0065\]](#) rights do not allow access to the tab. You will need to contact your account's [Administrator \[pg:0052\]](#) for further assistance if you need to use the Docs tab and it does not show when you view a volunteer's record.

To view, print or save the application form, select the form in the *File Name* column.

### Holliday, John

What you see next will depend on the web browser you are using and its settings.

- If your web browser uses a built-in PDF viewer, your web browser may open another window to display your document. In this case, you will need to use the viewer's tools to save or print the file. If the form tries to load but never opens, you may need to disable the built-in viewer. You can find more information on this [help topic 2176 \[pg:1606\]](#).
- If your web browser is setup to download or save PDF files, you will need to go to the location the file was downloaded or saved to. Once you locate the file, you can open it from the saved location in order to print your form.

## Before VicDocs Released

There is not a way to view, print or save a completed application form for records created prior to the release of Phase 2 of the VicDocs feature. If you need a hard copy of the application form for these records, one option is to print a Volunteer Profile report that has the same fields of information that the application form has. The [Fields tab \[pg:0697\]](#) of the Volunteer Profile report has text fields that can be used to copy statements such as photo or liability waivers, and create signature fields if you will need a signed copy.

Here is how to create a Volunteer Profile report for this:

1. Choose Print from the [menu \[pg:0215\]](#).
2. Expand the *Volunteer Profile* link.
3. Select *Create a new volunteer profile report*.
4. On the Options tab, select the options for sorting the report.
5. On the Fields tab, select the fields that you want to appear on the report.
6. On the Include tab, select which volunteers you want on the report. If you are running the report for a specific volunteer, use the [Tags \[pg:1529\]](#) feature as shown in [help topic 2322 \[pg:0471\]](#).
7. On the Save tab, give the report a unique name so you can find it again. Click the **Save and Print** button when you're ready to start the report. When the Include tab appears again, click the **Start printing** button.

The report will be placed on the [In Box \[pg:0303\]](#) tab of your Volgistics Mailbox after it has been compiled by the servers.

---

## How to Print a Blank Volunteer Application Form

Help topic 2554

Added or revised 08-11-2015

---

The [online volunteer application forms \[pg:0413\]](#) in Volgistics allow you to collect information from prospective volunteers and have the information they enter on the form automatically transfer to a volunteer record in your account. This is a great way to streamline the application process because you will not need to manually enter the volunteer's information into your account.

However, there may be times when you need a paper application for prospective volunteers to fill out. For example, if the prospective volunteer does not have access to the Internet, or you are going to a volunteer fair where you want to hand out applications. In these cases, you can print a paper copy of your online application form.

Once the form is completed, a [System Operator \[pg:0065\]](#) for your account will need to [manually enter \[pg:1877\]](#) the applicant's information into your account if you want to track the volunteer using Volgistics.

Here is how you can print a blank copy of your application form.

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Online forms* link.
3. Select *Volunteer application forms*.
4. Select *Print a blank form*.

### Volunteer application forms

Click 'Create a new application form' to create a new online application form, or 'Clone a form' to make a new form that is based on an existing form. Click on the name of an existing form to review or edit the form.

[Create a new application form](#)

[Clone a form](#)

[Print a blank form](#) 

[Detailed form](#) (0 submissions)

[Great Lakes Form \(Adults\)](#) (56 submissions)

5. Select the name of the form you want to print a copy of from the dropdown list.
6. Click the **Submit** button.

At this point, the Volgistics system has created a PDF file for your blank application form. You may see different things depending on the web browser you're using and its settings.

- If your web browser uses a built-in PDF viewer, your form will display in the entire window. In this case, you
- will need to use the viewer's tools to save or print the file. When you are done working with the PDF file,
- select another item from the [menu \[pg:0215\]](#) to continue working in Volgistics.

**Please note:**

There are some instances where built-in PDF viewers do not pull up the PDF file. If you just get a page loading icon and the page never loads, you will need to disable the PDF viewer in your web browser. You can find

directions on how to do this in [help topic 2176 \[pg:1606\]](#).

- If your web browser is setup to download or save PDF files, you will need to go to the location the file was downloaded or saved to. Once you locate the file, you can open it from the saved location in order to print your blank form.

## Setup Birthday Lists

Help topic 1067

Added or revised 02-22-2009

---

You use the Birthday List page to setup the Volgistics [birthday list \[pg:1385\]](#) features.

To get to the Birthday List page:

1. From the [menu \[pg:0215\]](#), choose 'Setup.'
2. Click 'Other options,' and then click 'Birthday lists.'

The Birthday List page has these birthday list setup options:

### Use birthday lists

Check this checkbox if you want to use any of the Volgistics birthday list features. When you select this option, you can optionally include volunteer birthday lists on the Welcome page in Volgistics for selected Volgistics system operators. If you do not select this option, the system never displays birthday lists on the Welcome page in Volgistics.

### Update the birthday list...

Choose the frequency at which you want Volgistics to update the birthday list. Volgistics automatically updates the birthday list overnight at the frequency you choose here.

When you choose *monthly*, Volgistics generates a new birthday list on the first day of every month. The list will include all volunteers you want to appear on birthday lists, who have a birthday in the current month. This usually results in the longest birthday lists.

Choose *weekly* if you want Volgistics to generate a new birthday list every Sunday. The list will include all volunteers you want to appear on birthday lists who have a birthday in the current week (Sunday through Saturday).

Choose *daily* if you want Volgistics to generate a new birthday list every day. The list will include all volunteers you want to appear on birthday lists who have a birthday on the current day. This usually results in the shortest birthday lists.

### Include volunteers in the list if their Status is any of these...

Use this option to specify the kinds of volunteers you want to appear on birthday lists, based on their volunteer *Status*. Check each volunteer Status you want to include. If you want to exclude volunteers who are inactive, for example, do not check the 'inactive' Status.

### Include volunteers on the list no matter what their Type is...

Include volunteers on the list only if their Type is one of these...

Volunteer *Type* is another field you can use to control the kinds of volunteers that appear on birthday lists. The volunteer Type field appears in the Name box on the Core tab for each volunteer, and it is usually used to identify broad categories of volunteers, such as 'Adult,' 'Junior,' 'Student,' 'Community,' and so forth.

Choose "Include volunteers on the list no matter what their Type is..." if you do not want to use the Type field to limit the kinds of volunteers that will appear on birthday lists.

If you do want birthday lists to only include volunteers of certain Types, choose "Include volunteers on the list only if their Type is one of these..." and then check up to eight different Types you want to include.

### Refresh

Click the **Refresh** button to refresh the birthday list now.

Volgistics will automatically refresh the birthday list on whichever frequency you choose for the "Update the birthday list..." setting (monthly, weekly, or daily), and whenever you change and then Save the Birthday List settings. You the Refresh button if you want to refresh the birthday list before the next scheduled monthly, weekly, or daily update.

### Save

Click **Save** to save your changes to the birthday list settings, and refresh the birthday list.

### Cancel

Click **Cancel** to close the Birthday lists window without saving your changes.

## **Related help**

## **How to Setup the Clipboard Copy Feature**

Help topic 1150

Added or revised 01-18-2012

---

Use the Clipboard Copy setup page to select which information in a volunteer's record will be copied to your computer's "clipboard" when you use the [copy \[pg:0427\]](#) button.

If you're not already on the Clipboard copy setup page, you can get there like this: Choose Setup from the menu, click on Other options, and click on Clipboard copy.

### Allow copying to clipboard

To turn on the clipboard copy feature, mark this box. If this box is un-checked, you will not be able to use the copy feature in Volgistics.

### **When copying & pasting individual names and addresses include:**

If you allow copying to the clipboard, you must choose how you would like the volunteer's name to appear when it is pasted into another document.

#### *Title First name Last name*

Choose this option if you would like the information in the Title field (such as "Dr." or "Ms.") to be included in the name, along with the text stored in the First name and Last name fields, in that order. If this option is chosen and the Title field is blank, just the first and last names will appear.

#### *First name Last name*

Select this format if only the first and last names should be copied to the clipboard.

### Last name, First name

Choose this option to copy and paste the text in the Last name field, followed by a comma and then the text stored in the First name field.

Choose among the following options to select which information should be copied to the clipboard along with the volunteer's name:

### Mailing address

Marking this option will cause the volunteer's mailing address, including information in any of the Street fields, the City field, the State field and the Zip field, to be copied to the clipboard.

### Group name

Select this option if you use [group records \[pg:1909\]](#) in your account and you want the name of the group copied to the clipboard.

### Nickname

Choose this field if the copied information should include the text in the Nickname field. If this option is selected and there is no information in the Nickname field for the selected record, this will simply be excluded when the information is pasted into a document.

### Number

Select this option if the [volunteer number \[pg:1856\]](#) stored in the Number field should be copied to the clipboard.

### Type

Marking this option will cause the volunteer's [Type \[pg:0212\]](#) to be copied to the clipboard.

### Email

If the volunteer's email address should be copied to the clipboard when you use the Copy button, choose this option.

### Phone numbers

If you choose to copy phone numbers stored on the Core tab, you can specify which numbers should be copied to the clipboard:

#### *All phone numbers that are "OK to call"*

Choose this option to copy only those phone numbers for which the "OK to call" box is checked.

#### *All phone numbers*

To copy all recorded phone numbers, regardless of whether or not the "OK to call" box is checked, select this option.

#### *Just these phone numbers*

Choose this option to copy only certain numbers from the Core tab. Then mark the boxes next each type of phone number you would like to copy from the list below.

---

## How to customize which fields appear in the volunteer list

Help topic 1202

Added or revised 02-09-2017

---

When you view lists of volunteers on the Volunteers page you see volunteer names in a list format along with key information for each volunteer, such as their address.

	Name	Tag	Street	City	State	
	<input type="text" value="Search Name"/>		<input type="text" value="Search Street"/>	<input type="text" value="Search City"/>	<input type="text" value="Search S"/>	<input type="text" value="Se"/>
	Armstrong, Mary E	<input type="checkbox"/>	4985 Maloy Court	Cascade	MI	496
	Baccus, Lydia R	<input type="checkbox"/>	4632 Cherry Ridge Drive	Wyoming	MI	496
	Bailey, Victor R	<input type="checkbox"/>	2401 Franklee Lane	Caledonia	MI	493
	Barker, Geraldine D	<input type="checkbox"/>	2412 Werninger Street	Comstock Park	MI	493
	Barnes, Merry R	<input type="checkbox"/>	3200 Saint Clair Street	Grandville	MI	494
	Barra, Cathv R	<input type="checkbox"/>	2563 Tree Top Lane	Wavland	MI	496

### Choosing Fields/Columns

You can control which fields, or columns, appear in this on-screen list to suit your organization's preferences.

To customize which fields appear in this list:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the *Other options* link.
3. Select *Volunteer list*.
4. Check the box next to the fields you want to appear on the list. The [record icon \[pg:0756\]](#), volunteer name (last name, first name), and the [Tag \[pg:1529\]](#) fields are always included on the list. *Changes you make to these settings affect all [System Operators \[pg:0065\]](#) in your account.*

## Volunteer List

### Include these fields on the Volunteer List page:

- Name (always included)
- Middle name (Appended to Name)
- Group Name
- Street Address
- City
- State
- Zip
- Number
- Status
- Type
- Kind
- Home
- Work
- Cell
- Fax
- Pager
- Other
- Email
- Email validity icon
- Text
- Text message validity icon
- Date of last activity
- Date entered
- Start Date
- Stop Date
- Last VicNet Access

5. Click the **Save** button.

### Hint

Avoid choosing more fields than necessary. If you select more fields than the width of your monitor allows, you will need to scroll over to see the additional information. This can be confusing because you will no longer be able to see the name of the volunteer the information is associated with.

Remember you can click anywhere in a row to see more details for a volunteer.  
The customizations for the Volunteers page only affect the on-screen view you see after you select

### *Volunteers*

from the menu. If you are looking for instructions on how to control the fields that appear on a printed report, please see [help topic 2223 \[pg:0467\]](#).

### Changing Sort Order

Initially when the list is shown it is sorted in alphabetical order based on the record's last name. You can change the sort order for the page by clicking on any of the column headings. For example, if you include the volunteer numbers on this page, you can sort the page from lowest to highest volunteer number by clicking the "Number"

heading. Click the heading again to sort the page from highest to lowest volunteer number. Similarly, if you include the volunteer's [Start Date \[pg:1890\]](#), you can sort the page from the oldest to the most recent date by clicking the "Start Date" heading. Volunteer records without an entry in the Start Date field will appear at the bottom of the list. Click the heading again to sort the page from the most recent to the oldest date. Volunteer records without an entry in the Start Date field will appear at the top of the list.

**Please note:** It is not possible to sort columns with icons or checkboxes such as the Tag column, or the [email validity \[pg:0377\]](#) or [text number validity \[pg:0333\]](#) indicator columns.

---

## Time Zone Settings

Help topic 2111

Added or revised 05-13-2016

---

Your Volgistics account has a default time zone setting. In addition, each [System Operator \[pg:0065\]](#) and each [VicTouch \[pg:1778\]](#) station has a time zone setting.

#### Administrative Tasks

Some of the instructions in this help topic may require [Volgistics Administrator \[pg:0052\]](#) level access to your system. If you are not the Volgistics Administrator for your organization you may need to contact them for assistance.

#### Default time zone

Your account has a default time zone setting. Each time you add a new System Operator their time zone is initially set to this default time zone. If you use [VicTouch \[pg:1778\]](#), VicTouch stations also default to this time zone.

To set the default time zone for your account:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Other options.'
3. Select 'Date and time settings.'
4. Select your default time zone under "Time zone."
5. Click the **Save** button.

#### System Operator Time Zones

Each System Operator also has a time zone setting. This makes it possible for Volgistics to localize date and time values for individual System Operators, even in organizations where some System Operators work in different time zones.

If a System Operator's time zone setting is not set to the time zone where they normally work, they may not see the correct date or time in Volgistics fields that default to the current date and time, or on the [Who's Here \[pg:1772\]](#) page.

To adjust a system operator's time zone setting:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'System Operators.'
3. Click on the System Operator's name.
4. Choose this System Operator's correct time zone under "This operator's time zone."
5. Click the **Save** button.

This change will take effect the next time the System Operator logs-in to Volgistics.

### **VicTouch Time Zone**

[VicTouch \[pg:1778\]](#) also includes a time zone setting. By default – and if you use [unattended startup \[pg:1765\]](#) - VicTouch stations are set to the default time zone for your account. VicTouch obtains the current date and time for your time zone from the Volgistics system, not from the computer where VicTouch is running.

#### If VicTouch does not display the correct time

If your account's default time zone was not set correctly when VicTouch was started, or if the incorrect time zone was selected when VicTouch was started, VicTouch will not display the correct local date and time.

To correct this:

1. Check your account's default time zone setting as described under *Default time zone* above.
2. At the station where VicTouch does not display the correct date or time, perform these steps:
  - a. If VicTouch is running, [shut-down VicTouch \[pg:1762\]](#).
  - b. Start Microsoft Internet Explorer at the VicTouch computer and clear the browser *cookies*. To clear the cookies:
    - Choose Tools from the Internet Explorer menu, and then select Internet Options.
    - Under Browsing History click the **Delete** button.
    - Click the **Delete Cookies** button.
    - Click the **Close button**.
  - c. Restart VicTouch using the [VicTouch shortcut \[pg:1765\]](#).

If VicTouch has not been set up for unattended startup, the Time Zone setting screen shown below will appear. Touch **Yes** if the correct time zone is selected. If the correct time zone is not already selected touch **No** and then choose the correct time zone.

VicTouch should now use the correct date and time.

If VicTouch is setup for [unattended startup \[pg:1765\]](#) you will not see the Time Zone screen shown above, and VicTouch will use the default time zone setting for your account.

### Using Current Time button on Who's Here page

When editing entries on the [Who's Here \[pg:1772\]](#) page, the **Add current time** button uses the time on the computer you are using to edit the entry. So if this is incorrect, you will need to correct the local computer's time setting instead of following the directions in the "VicTouch Time Zone" section above.

### Daylight Saving Time

---

## Birthday Lists

Help topic 2148

Added or revised 10-23-2012

---

Wishing volunteers "happy birthday" is a common practice in many volunteer programs, and Volgistics makes it easy to know who has upcoming birthdays or whose birthday is today.

With the *birthday list* feature, Volgistics can automatically show you volunteer birthdays for the current day, week, or month on the Welcome page each time you login.

## Birthdays

This month

Sort by Date

Susan Alpin	May 24
Jessica Joplin	May 6
George Lupin	May 2
Larry Mandrake	May 23
Sara Ann McCorky	May 19
Allison Moore	May 23
Fern Nagleford	May 1
Louise Nederveld	May 28
Marissa Nixon	May 1
Renea Rivera	May 24

By default, the birthday list is sorted alphabetically by the volunteer's last name each time you visit the Welcome page. However, you can quickly sort it by date order by clicking the **Sort by Date** button at the top of the list. Click the **Sort by Last Name** button when the list is in date order to change the list back to being sorted by last name.

The birthday list gets volunteer birthdays from the [Date of birth \[pg:1861\]](#) field in the Personal box on the Profile tab.

### Personal

Date of birth:   Age:   Omit from birthday lists

In order to appear on the list, you (or the volunteer) must have entered at least the volunteer's month and day of birth in the *Date of birth* field. A volunteer will never appear on the birthday list if their *Date of birth* field is left empty because Volgistics cannot determine when their birthday is without this information.

The birthday list will only show birthdays for volunteers in the non-archived section of your account. Because records in the archived section are generally stored due to inactivity, these records will not appear on the list. You can find out more about archived and non-archived records [here \[pg:0709\]](#).

If you choose to use the birthday list features, Volgistics provides an "Omit from birthday lists" checkbox next to the *Date of birth* and *Age* fields on the Profile tab in each volunteer's record. Check this checkbox for any volunteer who prefers not to have their birthday listed. This enables you to track dates of birth for all volunteers, while giving you the flexibility of honoring individual volunteer requests to be omitted from published birthday lists. If you use VicNet, volunteers can opt-out of birthday lists themselves by checking this option on the Profile tab in their own record.

The birthday list feature displays the volunteer's name, followed by their month and day of birth. It does not display their year of birth, even if one is entered in their *Date of birth* field.

To [setup birthday list \[pg:1378\]](#) features:

1. Select Setup From the [menu \[pg:0215\]](#).
2. Expand the "Other options" link.
3. Select "Birthday lists."

### Related help

[Help Topic 1067 \[pg:1378\]](#) - Setup birthday lists

---

## Statistics

Help topic 2260

Added or revised 09-17-2009

---

Use the Statistics Setup page to tailor certain statistical reporting rules for your database. If you're not already on the Statistics setup page you can there by choosing Setup from the [menu \[pg:0215\]](#), selecting 'Other options,' and then selecting 'Statistics.'

### Statistics

Use this section to select the statistics you want to appear in the Statistics box on the Core tab for each volunteer.

#### Date of last activity

Check the 'Date of last activity' checkbox if you want the [Date of last activity \[pg:0076\]](#) field to appear on the Statistics box for each volunteer.

#### Years of service

Check the 'Years of service' box if you want the [Years of service \[pg:0077\]](#) field to appear on the Statistics box for each volunteer.

#### Life

YTD

MTD

Use the checkboxes under these headings to choose the volunteer service totals you want to appear in the Statistics box for each volunteer.

Check items in the 'Life' column to include the grand total of all service ever recorded for a volunteer.

Check items in the 'YTD' column to include *year-to-date* service totals for a volunteer. These subtotals are for the fiscal year you set for your account. On the first day of each fiscal year these subtotals automatically return to zero until the first service entry is made for a volunteer in the new fiscal year. (This setting effects only the service totals displayed in the Statistics box on the Core tab. You can always print service reports for any current or past fiscal year whenever you choose.)

Check items in the 'MTD' column to include *month-to-date* service totals for a volunteer. These subtotals are for the current month. On the first of each month these subtotals automatically return to zero, until the first service entry is made for a volunteer in the new month. (This setting effects only the service totals displayed in the Statistics box on the Core tab. You can always print service reports for any current or past month whenever you choose.)

In addition to Life, YTD, and MTD subtotals, you may also include up to two 'floating subtotals' in the Statistics box (see 'Floating subtotals' below). To include one or both floating subtotals in the Statistics box, check them here.

### **Volgistics fiscal year**

Volgistics calculates year-to-date (YTD) service statistics based on a 12 month cycle you define here. This 12 month cycle is known as the Volgistics fiscal year.

If you want Volgistics to report year-to-date service based on the calendar year (January through December), choose January from the drop down.

If you want Volgistics to report year-to-date service based on a 12 month period that is not the same as the calendar year – such as a fiscal year used by your organization – choose the first month of that fiscal year here.

The Volgistics fiscal year is used as the basis for calculating these statistics:

- YTD Hours. The Year-to-date (YTD) hours field which appears in the Statistics box on the core tab is the sum of each volunteers service since the first day of the current Volgistics fiscal year.
- Service summary reports. The [Service Summary Report \[pg:0580\]](#) format includes an option for printing volunteer service statistics for either the calendar year, or the Volgistics fiscal year.
- Award criteria. You can create award rules based on service performed during the calendar year or the Volgistics fiscal year.

### **Years of service**

Volgistics calculates a volunteer's [years of service \[pg:0077\]](#) as the number of years (and months) the volunteer's status has been any of the statuses checked in this section. For example, if you check only the 'Active' status here, volunteer years of service will include just the number of years the volunteer has been active.

Check all of the statuses if you want volunteer years of service to be the number of years since each volunteer's earliest status date (all of the years since they first started, even if they have had periods of inactivity).

### **Floating subtotals**

In addition to MTD, YTD, and Life service totals, Volgistics gives you an option for displaying volunteer service subtotals for two additional time periods that you choose here. These are called "floating" subtotals because you may change the time period they include whenever you choose.

These are examples of time periods you might choose to display service subtotals for:

- Last year (choose the beginning and end of your last fiscal year, of the last calendar year).
- A 2nd fiscal year (choose the beginning and end of a second fiscal year).
- A 'quarter' (choose the beginning and ending dates of any three month period).
- This month last year (choose this month last year as both the beginning and ending date)

---

## Date and Time Settings Setup Page

Help topic 2495

Added or revised 11-29-2008

---

This topic explains how to setup the date and time zone settings for Volgistics. If you're not already on the Date and Time Settings Setup Page, you can get there by selecting Setup from the [menu \[pg:0215\]](#), clicking Other options, and then clicking Date and time settings.

### Time zone:

Use the dropdown menu to select the appropriate default time zone for your organization.

### Format dates as:

#### *Month/Day/Year*

Choose this option to display dates in the month/day/year format (e.g. October 20, 2009 will appear as 10/20/2009).

#### *Day/Month/Year*

Choose this option to display dates in the day/month/year format (e.g. October 20, 2009 will appear as 20/10/2009).

### **Related help**

---

## Duplicate Checking

Help topic 2496

Added or revised 02-11-2014

---

This topic explains how to setup the duplicate checking settings for Volgistics. If you're not already on the duplicate checking setup Page, you can get there by selecting Setup from the [menu \[pg:0215\]](#), clicking Other options, and then clicking Duplicate checking.

### **Duplicate checking**

#### Perform duplicate checking:

Mark this box to turn on the duplicate checking feature, which will cause the system to automatically check new volunteer records as you add them to your database for possible duplicates.

#### Consider a record a possible duplicate if...

Mark one or more of the options below as indicators of possible duplicate records. When a new record exhibits the characteristics in the option(s) checked below, Volgistics will treat the record as a possible duplicate of an existing record.

*First and last names are spelled the same*

*Email address is the same*

**If a possible duplicate is found**

Select one of the following choices:

Show the identifying information about the possible duplicate no matter which Site(s) the possible duplicate is assigned to

If this option is selected, a system operator will be able to see a potential duplicate volunteer's identifying information, even if that volunteer is assigned to a Site other than the operator's Site(s).

*If a duplicate is found at a Site other than the user's Site, the user can assign that volunteer to their own Site too.*

Mark this option if a system operator should also be able to see volunteers at other Sites in the account and then add the volunteer to his or her own Site.

Show the identifying information about the possible duplicate only if the possible duplicate is assigned to the user's Site

When this option is selected, the duplicate checking feature will still be prompted, but the system operator will not be able to view identifying information about the possible duplicate unless he or she is assigned to the system operator's Site(s).

## Holidays

Help topic 1022

Added or revised 10-03-2016

---

Use the Holidays page to record any dates your organization closes for a holiday. If you are not already on the Holidays page you can get there by choosing Setup from the [menu \[pg:0215\]](#), selecting 'Scheduling;' and then choosing 'Holidays.'

Entering a holiday here causes any regularly scheduled volunteers to be removed from all schedules on the date of the holiday. Openings will appear on a designated holiday only if the opening was added as a 'one time' opening. This gives you the ability to override a holiday in selected assignments (if you want to) by deliberately scheduling volunteers for those assignments on that date or adding schedule openings specifically to that date, as 'one time' openings. In addition, ongoing openings will not appear on the online application form for a date you make a holiday.

For example, on a particular holiday no volunteers are needed for any of your regular openings. However, there is one important assignment that you want to staff even though it's a holiday. To do this you would enter the holiday as usual. This removes all of the regular openings and all of the regularly scheduled volunteers from the schedule system wide.

Then you can go to the schedule for that one important assignment and either add an opening or schedule a volunteer for that date only. These one-time schedule entries made on a holiday will then override the holiday setting.

### Date

Enter the date of the holiday here.

### Holiday

Enter the name of the holiday here (e.g. 'Thanksgiving').

### Save

Click the **Save** button to save your changes.

### Cancel

Click the **Cancel** button to exit without saving your changes.

### Delete

To delete a holiday entered previously, click the Delete link next to the holiday entry you want to delete.

### Edit

To change a holiday entered previously, click the Edit link next to the holiday entry you want to change, use the Edit box to make your changes, and then click the **Save** button.

---

## Scheduling Ground Rules

Help topic 1181

Added or revised 10-24-2011

---

The Scheduling Ground Rules page is where you customize the overall settings for schedules in Volgistics. If you are not already on the Scheduling Ground Rules page, you can get there like this: choose Setup from the menu; click on Scheduling, and click on Ground rules.

### Hours of operation

Use this section to indicate your organization's [hours of operation \[pg:1395\]](#). The hours you enter here affect which hours are available as options for scheduling and availability tracking. Enter the earliest time volunteers serve in the "Start at" field and the latest time volunteers serve in the "End at" field.

### Scheduling interval

Choose to schedule volunteers on 15 minute intervals, 30 minute intervals, or one hour intervals.

#### *15 Minute intervals*

If you choose 15 minute intervals, you can schedule a volunteer for a shift that starts or ends on the hour, quarter past the hour, half past the hour, and a quarter 'til the hour. For example, scheduling options between 9:00 and 10:00 am will include 9:00, 9:15, 9:30, 9:45 and 10:00 am.

#### *30 Minute intervals*

If you choose 30 minute intervals, you can schedule a volunteer for a shift that starts or ends on the hour or half past the hour. For example, scheduling options between 9:00 and 10:00 am will include 9:00, 9:30 and 10:00 am.

#### *One hour intervals*

If you choose one hour intervals, you can only schedule a volunteer for a shift that starts or ends on the hour. For example, scheduling options between 9:00 and 10:00 am will include only 9:00 and 10:00 am.

### Volunteer status

Remove volunteers from schedules when their Status changes to:

In many organizations, a volunteer who *becomes* Inactive, LOA, or another Status often no longer needs to appear on schedules. When you mark a checkbox here, you are choosing to automatically remove a volunteer from the schedule when their Status changes to one that has been marked.

This change is not retroactive. That is, if none of the Statuses are checked here, and your system contains Inactive volunteers who are still on a schedule, selecting "Inactive" here and saving your changes will not cause your already Inactive volunteers to be removed from the schedule. On the other hand, if you first select "Inactive" here and save your changes, and there is an Active volunteer on the schedule whose Status is then changed to "Inactive," they will be removed from the schedule upon their Status change.

## **Additional options**

### Do not allow conflicting schedules

Marking this checkbox turns on Volgistics' **schedule conflict prevention** [pg:1398] features. That is, the system will prevent a volunteer from being scheduled at a date and time that would cause a conflict with that volunteer's existing schedule.

This setting is not retro-active. If there are any schedule conflicts that exist before you turn-on conflict checking they will still exist after this is turned-on.

### Use substitute tracking

When this option is checked, a "Substitute" field will become part of your schedule entries. If you want to indicate the name of a volunteer who is serving in place of another volunteer, **substitute tracking** [pg:0745] allows you to do so.

### We schedule most volunteers

#### *On a regular ongoing basis*

If most volunteers are scheduled for a repeating schedule (i.e. every Monday from 1:00 pm until 5:00 pm; every Saturday and Sunday from 9:00 am until 12:00 pm), choose this option. The effect of making this selection is that schedule entries created from a Site, Place, or Assignment's Schedule tab will be "regular" entries by default.

#### *On a one-time basis*

If most volunteers do not have a regular, ongoing schedule and are instead scheduled for single shifts, choose this option. The effect of making this selection is that schedule entries created from a Site, Place, or Assignment's Schedule tab will be "one-time" entries by default.

### Initially display the

#### *Monthly calendar*

If you select this option, the schedule will be displayed in the monthly calendar format when you go to a Site, Place, or Assignment's Schedule tab. This setting does not affect how the schedule is displayed when you choose Schedule from the main menu; this will always go to a daily schedule view.

#### *Daily calendar*

If you select this option, the schedule will be displayed in the daily schedule format by default when you go to a Site, Place, or Assignment's Schedule tab.

### Default to

#### *The current date*

Choosing this option will cause all schedules to display the current date. Monthly calendars will default to the month that contains today's date, and daily schedules will automatically display today's schedule.

#### *This date:*

Choosing this option allows you to select a specific date for the schedule to automatically display. For example, if you select this option and enter June 1, 2020 in the dropdown fields, choosing Schedule from the menu will bring you directly to the daily schedule for June 1, 2020. Likewise, June 1, 2020 or June 2020's schedule will be

displayed when you go to a Site, Place, or Assignment's Schedule tab.

#### Display volunteer's...

Mark the checkboxes for each item that should be displayed on the *daily view* of the schedule. This option controls which items will appear on the *daily view* of the schedule that system operators see. To change which items appear on the *calendar view*, change the settings in the "Monthly calendar view options" section below.

If you choose to include phone numbers and mark the "Only list phone numbers that are OK to call," then only the phone numbers that are selected here *and* have the "OK to call" box checked on the volunteer's Core tab will be displayed on schedules.

### **Monthly calendar view options**

#### Display Assignment names...

*With Site and Place names*

Choose this option to show the Site and Place next to the Assignment name on schedules.

*Without Site and Place names*

Choose this option to display only the Assignment name on schedules.

#### Include schedule icons

Check this option if you would like the opening icons to appear on your view of *monthly calendars*. The opening icons show which openings are filled and unfilled, and where volunteers are scheduled without openings.

- Unfilled schedule opening
- Filled schedule opening
- Scheduled volunteer (who does not fill an opening)

Un-checking this option reduces the amount of space (from left to right) required to display monthly calendars.

This option controls the appearance of opening icons on the *calendar view* only (opening icons will always appear on the schedule's *daily view*).

#### Include notes

Check this option if you want schedule notes to appear on your view of the monthly calendars. This option controls whether or not notes will appear on the calendar view that system operators see. The schedule notes will always be shown on the daily view of the schedule for system operators. The notes are also shown by default when volunteers and/or coordinators view their schedules through VicNet or VicTouch.

#### Display volunteer names as

*First initial. Last name*

Choosing this option would cause the name of a volunteer named Tom Smith to be displayed as "T. Smith" for example.

*First name Last name*

Choosing this option would cause the name of a volunteer named Tom Smith to be displayed as "Tom Smith" for example.

*Last name, First name*

Choosing this option would cause the name of a volunteer named Tom Smith to be displayed as "Smith, Tom" for example.

Include volunteer's...

Mark the checkboxes for each item that should be displayed on the monthly view of the schedule. The selected information will appear on the monthly schedule only.

If you choose to include phone numbers and mark the "Only list phone numbers that are OK to call," then only the phone numbers that are selected here *and* have the "OK to call" box checked on the volunteer's Core tab will be displayed.

### **Time sheet view options**

Sort time sheets by...

*Volunteer name*

Select this option to view the schedule in the Time Sheet format listed alphabetically by the volunteer's last name.

*From time*

---

## **Hours of Operation**

Help topic 2257

Added or revised 05-16-2011

---

You can set your organization's 'hours of operation' in Volgistics. Setting your hours of operation makes certain functions – such as scheduling and availability tracking – easier by listing only the times that occur during the hours you operate.

Your hours of operation are the hours of the day volunteers typically serve.

To set your hours of operation:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Scheduling.'

3. Click the 'Ground rules' link.

4. In the 'Hours of operation' setting select your 'Start at' and 'End at' times.

Select the earliest time of day volunteers typically serve as the 'Start at' time. Select the latest time of day volunteers typically end their service as the 'End at' time.

For example, if your earliest volunteers typically start at 7:00 am; and volunteers typically complete their service by 10:00 pm; enter 7:00 am as your 'Start at' time and '10:00 pm' as your 'End at' time.

If volunteers serve around the clock, choose 12:00 am as your 'Start at' time **and** your 'End at' time.

5. Click the **Save** button.

If your organization does not need to schedule volunteers around-the-clock, it's best to select the earliest time you typically schedule volunteers for your 'Start at' time; and the latest time volunteers would typically serve until as your 'End at' time. This makes scheduling and availability tracking easier by eliminating all of the unnecessary times from the time drop down lists on your schedule and availability time fields.

#### **Related help**

[Help Topic 2258 \[pg:0789\]](#) - Around-the-clock scheduling

---

## **On-Demand Schedule Reminders**

Help topic 2272

Added or revised 03-28-2014

---

Volgistics can send [schedule reminder email messages \[pg:0791\]](#) for you automatically on a monthly or daily basis. In addition to (or instead of) these automatic reminders, you can also trigger the sending of schedule reminder email messages manually whenever you choose. This capability is especially useful if you want to send schedule reminders or confirmations more than one month in advance of special events.

When you trigger schedule reminder emails manually, you can choose the range of dates for which schedule entries will be included. Volunteers scheduled more than once during the date range you select receive just one reminder email with each of their scheduled assignments and times listed.

As with automatic schedule reminder emails, only the schedules for assignments with the 'Schedule reminders' checkbox checked are included. The 'Schedule reminders' checkbox appears on the Assignment tab for each assignment as shown below. Reminder emails do not include schedules for assignments that do not have this 'Schedule reminders' checkbox checked.

### Ticket booth

Assignment | Coordinators | Profile | Description | Volunteers | Schedule

Save | Cancel | Combine, move or delete

**Name**

Site: **Monroe County**  
 Place: **Volunteer Services**  
 Assignment: Ticket booth  
 Impact:   
 Status: Active   Advertise  Sign-in option  Schedule reminders

To send schedule reminders to volunteers on a specific date:

1. Choose Setup from the menu [pg:0215].
2. Select 'Scheduling.'
3. Select 'Monthly & on demand volunteer reminders.'
4. If your schedule reminder message is not already configured, enter the text you want to appear in the reminder email message, and choose the schedule fields you want to include in the reminders using the fields in the "Monthly & on-demand volunteer reminders" box. You do not need to check the 'Send monthly reminders' checkbox if you only want to send reminders manually. Check the 'Send monthly reminders' checkbox only if you want monthly schedule reminders sent automatically.
5. If you want to see a sample of the reminder message before you send it, enter your own email address in the 'Sample' box and then click the **Send sample now** button. A sample will be sent to email address you specify within several minutes.
6. Scroll down to the "Send now" box.
7. Select the date range you want to send reminders for. For example, if you select December 22, 2006 through December 30, 2006; all of the schedule entries between these dates will appear in the reminder.

### Send Now

You can optionally send these schedule reminder emails now, for the date range you choose below. To send these schedule reminder emails now, enter the date range for which you want to send reminders and then click the **Send Reminders now** button.

Send reminders for schedule entries:

From: December  22  2006   
 Through: December  30  2006

8. Click the **Send reminders now** button.

The reminder messages will be sent as soon as you click the **Send reminders now** button. Reminders will be sent to every volunteer who...

- Has an email address in their record.
- Is scheduled during the date range you select in any of the assignments for which the 'Schedule reminders' checkbox (shown above) is checked.
- Has not [declined schedule reminder email \[pg:0409\]](#) messages.

Email reminders cannot be sent to volunteers for whom an email address is not entered.

If you schedule both individuals and groups in Volgistics, schedule reminders are sent to all *Individual* volunteers, and to the group contact for each [Group record \[pg:1909\]](#) scheduled. In the case of *Group* records (where you do not track the group members individually), there is not a way to send automatic schedule reminders to the separate members of a group you've scheduled, as their individual email addresses are not tracked. Instead the group contact would receive the automatic schedule reminder.

#### Related help

---

## How can I prevent volunteers from having overlapping schedules?

Help topic 2280

Added or revised 08-07-2006

---

You can setup Volgistics to prevent a volunteer from being scheduled at a date and time that would cause a conflict with that volunteer's existing schedule.

To setup Volgistics to perform this kind of schedule conflict checking:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Scheduling.'
3. Select 'Ground rules.'
4. Under "Additional options" check 'Do not allow conflicting schedules.'
5. Click the **Save** button.

Once you setup Volgistics to prevent duplicate schedules you cannot add a volunteer to a schedule for a date and time that would conflict with another of that volunteer's schedules.

---

## Monthly & On-Demand Volunteer Reminders Setup Page

Help topic 2491

Added or revised 11-25-2008

---

You can use the Monthly & On-Demand Volunteer Reminders setup page to configure Volgistics' monthly and on-demand schedule reminders feature. To get to the Monthly & On-Demand Volunteer Reminders setup page, choose Setup from the [menu \[pg:0215\]](#), click on Scheduling, and then choose Monthly & On-Demand Volunteer Reminders.

### *Send monthly reminders*

Mark this checkbox to turn on the monthly schedule reminders feature. Monthly reminders will not be sent if this box is unmarked.

*Send these on the "xx" day of the preceding month.*

Use the dropdown field to select the date reminders should be sent. If you choose "25th" from the dropdown field, the monthly reminders for the month of April will be sent out on March 25th.

### *Subject*

Enter the subject line you would like volunteers to see when they receive the monthly reminder email message here.

### *Top of message:*

Enter the text you would like to appear above the schedule information in this text box.

### *Include*

Choose one or more of the optional pieces of information for inclusion in the monthly reminder email.

- Include:
- Day of the week
  - Start time
  - Stop time
  - Assignment name
  - Note
  - Substitute information

### *Bottom of message:*

Enter the text you would like to appear below the schedule information in this text box.

### **Sample**

To test your changes to the options on this page, enter the email address that should receive a sample schedule reminder, and click the **Send sample now** button.

### **Send Now**

Use this section if you would like to send "on-demand" schedule reminders to your volunteers. Use the "From" and "Through" dropdown fields to indicate the schedule entry dates for which reminders should be sent, and click the **Send reminders now** button.

---

## **Monthly & On-Demand Coordinator Reminders Setup Page**

Help topic 2492

Added or revised 9-9-2015

---

You can use the Monthly & On-Demand Coordinator Reminders setup page to configure Volgistics' monthly and on-demand schedule reminders that are sent to [Coordinators \[pg:0163\]](#). To get to the Monthly & On-Demand Coordinator Reminders setup page, choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), click on Scheduling, and then choose Monthly & On-Demand Coordinator Reminders.

### *Send monthly reminders*

Mark this checkbox to turn on the monthly schedule reminders feature. Monthly reminders will not be sent if this box is unmarked.

*Send these on the "xx" day of the preceding month.*

Use the dropdown field to select the date reminders should be sent. If you choose "25th" from the dropdown field, the monthly reminders for the month of April will be sent out on March 25th.

### *Subject*

Enter the subject line you would like Coordinators to see when they receive the monthly reminder email message.

*Top of message:*

Enter the text you would like to appear above the schedule information in this text box.

### *Include*

Choose the schedule information that you want to appear in the message.

- Include:
- Day of the week
  - Start time
  - Stop time
  - Note
  - Substitute information
  
  - Include openings

Please note the following about the *Include* options:

- The *Note* information is the [schedule entry \[pg:0750\]](#) notes specific to each volunteer. This is not the same as the notes that can be added to each instance of a [schedule opening \[pg:0776\]](#).
- The *Substitute information* will show replacement volunteers scheduled with the [substitute tracking \[pg:0745\]](#) feature.
- If *Include openings* is checked the Coordinator's schedule will show any [unfilled openings \[pg:0776\]](#) for the date. This can be useful if the Coordinator needs to arrange for other volunteers to be scheduled to assure coverage.

*Bottom of message:*

Enter the text you would like to appear below the schedule information in this text box.

### Sample

To test your changes to the options on this page, enter the email address that should receive a sample schedule reminder, and click the **Send sample now** button.

### Send Now

Use this section if you would like to send "on-demand" schedule reminders to your Coordinators. Use the "From" and "Through" dropdown fields to indicate the schedule entry dates for which reminders should be sent, and click the **Send reminders now** button.

Coordinator schedule reminders use the reply-to email address you specify for Coordinator email on the [Message Ground Rules \[pg:0929\]](#) page. Please see [help topic 2190 \[pg:0398\]](#) if you need help updating your account's reply-to addresses.

---

## Daily Volunteer Reminders Setup Page

Help topic 2493

Added or revised 11-25-2008

---

You can use the Daily Volunteer Reminders setup page to configure Volgistics' daily schedule reminders feature. To get to the Daily Volunteer Reminders setup page, choose Setup from the [menu \[pg:0215\]](#), click on Scheduling, and then choose Daily Volunteer Reminders.

### *Send daily reminders*

Mark this checkbox to turn on the daily schedule reminders feature. Daily reminders will not be sent if this box is unmarked.

*Send these "xx" day(s) before the scheduled date.*

Use the dropdown field to select the number of days before a schedule entry that reminders should be sent. If you choose "1" from the dropdown field, the daily reminders will be sent to volunteers the day before their scheduled service.

### *Subject*

Enter the subject line you would like volunteers to see when they receive the daily reminder email message here.

### *Top of message:*

Enter the text you would like to appear above the schedule information in this text box.

### *Include*

Choose one or more of the optional pieces of information for inclusion in the daily reminder email.

- Include:
- Day of the week
  - Start time
  - Stop time
  - Assignment name
  - Note
  - Substitute information

### *Bottom of message:*

Enter the text you would like to appear below the schedule information in this text box.

### **Sample**

To test your changes to the options on this page, enter the email address that should receive a sample schedule reminder, and click the **Send sample now** button.

---

## Daily Coordinator Reminders Setup Page

Help topic 2494

Added or revised 11-18-2015

---

You can use the Daily Coordinator Reminders setup page to configure Volgistics' daily schedule reminders feature for [Coordinators \[pg:0163\]](#). To get to the Daily Coordinator Reminders setup page, choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), click on Scheduling, and then choose *Daily Coordinator Reminders*.

### *Send daily reminders*

Mark this checkbox to turn on the daily schedule reminders feature. Daily reminders will not be sent if this box is unmarked.

*Send these "xx" day(s) before the scheduled date.*

Use the dropdown field to select the number of days before a schedule entry that reminders should be sent. If you choose "1" from the dropdown field, the daily reminders will be sent to Coordinators the day before their scheduled service. If you choose "0" from the dropdown field, the daily reminders will be sent the morning of the day the volunteers are scheduled.

### *Subject*

Enter the subject line you would like Coordinators to see when they receive the daily reminder message.

### *Top of message:*

Enter the text you would like to appear above the schedule information in this text box.

### *Include*

Choose the schedule information that you want to appear in the message.

- Include:
- Day of the week
  - Start time
  - Stop time
  - Note
  - Substitute information
  
  - Include openings

Please note the following about the *Include* options:

- The *Note* information is the [schedule entry \[pg:0750\]](#) notes specific to each volunteer. This is not the same as the notes that can be added to each instance of a [schedule opening \[pg:0776\]](#).

- The *Substitute information* will show replacement volunteers scheduled with the [substitute tracking \[pg:0745\]](#) feature.
- If *Include openings* is checked the Coordinator's schedule will show any [unfilled openings \[pg:0776\]](#) for the date. This can be useful if the Coordinator needs to arrange for other volunteers to assure coverage.

*Bottom of message:*

Enter the text you would like to appear below the schedule information in this text box.

### **Sample**

To test your changes to the options on this page, enter the email address that should receive a sample schedule reminder, and click the **Send sample now** button.

Daily coordinator schedule reminders use the reply-to email address you specify for Coordinator email on the [Message Ground Rules \[pg:0929\]](#) page. Please see [help topic 2190 \[pg:0398\]](#) if you need help updating your account's reply-to addresses.

---

## Setting up Mandatory Service

Help topic 1008

Added or revised 08-04-2016

---

Use the Mandatory Service setup page to configure the basic operating rules for the [mandatory service \[pg:1419\]](#) features in Volgistics. If you're not already on the Mandatory Service setup page you can get there by selecting Setup from [menu \[pg:0215\]](#), choosing *Service tracking*, and then clicking on the *Mandatory service* link.

### Mandatory service

*Use the mandatory service features*

Mark this box to enable the mandatory service features in Volgistics. To disable the mandatory service features, un-check this box. Be sure to click the **Save** button at the bottom of the setup page to save your changes.

### Base mandatory service on...

In addition to hours, mandatory service can be based on any other [service measures \[pg:1557\]](#) an organization tracks as well as [Merit Hours \[pg:1564\]](#). Mark the box next to "Merit hours" and/or any other service measures created by your organization to permit service completed under any of these measures to be applied to a mandatory service program. For example, if you track a service measure called "Tours Given" and volunteers must give 5 tours per year, in addition to completing 25 hours of service per year, be sure that not only the "Hours" box is checked, but that the "Tours Given" box is checked here as well.

### Automatically mark complete?

An organization can use this setting to decide whether they want to manually mark mandatory service requirements "Complete" or they want the system to automatically manage Mandatory Service completion for them.

*Automatically manage Mandatory Service completion for me.*

When this option is selected, Volgistics will recognize when the service requirements for a mandate have been met. The system will automatically mark the "Completed" checkbox and enter the appropriate date in the "Completed on" field on the volunteer's Service tab.

Note that if this option is selected, the "Completed" checkbox and the "Completed on" date field will become disabled for [System Operators \[pg:0065\]](#) and the only way either of these fields can be edited is by the system's automatic mandatory service management function.

*Do not manage Mandatory Service completions automatically. I want to mark Mandatory Service complete myself.*

This option will require a System Operator to manually mark the "Completed" checkbox on the date when a volunteer has met the requirements of a service mandate. This is the best option to use when it may be desirable to edit "Completed on" dates or mark a service mandate "Complete" before a volunteer has actually finished all of the required service for the service mandate.

### Show progress at the Volunteer Information Center?

The Service History tab in VicNet can optionally display a chart showing a volunteer's progress toward completing their service mandate(s). An example of this appears below:

## Community Service Service Goal

	Hours	Visits
Service goal:	250:00	50
Recorded so far:	145:06	35
Service remaining:	104:54	15

Started: 08-01-2013

Target date: 12-01-2013

Days left: 39

Progress:

This option can also be customized on the VicNet Service History tab setup page. To get to this page select Setup from the menu, choose VicNet, select *Service History tab*. You can find more information on this setting in [help topic 1207 \[pg:1465\]](#).

---

## How to Setup a Service Measure

Help topic 1017

Added or revised 01-25-2017

---

Use the service measure setup page to create a new service measure, or to change the way an existing service measure is setup. To access the service measure setup page, select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), select *Service tracking* and then click on *Service measures*. From this screen, click on the first available measure to create a new service measure, or click on an existing measure to edit it.

### Name

Enter a name for the service measure in the Name field. Examples include *Tours Given*, *Calls Answered*, *Meals Delivered*, *Absences*, and *Mileage*.

### Format

Service measure fields can track numerical information as whole numbers (0); currency (\$0.00); hours and minutes (0:00); numbers with one decimal (0.0), or numbers with two decimals (0.00). Use the drop down Format field to choose the way information for the measure will be entered and tracked. For example, a *Mileage* measure might use the two decimals format, while a *Meals Delivered* measure would use the whole number format.

### Default value

If volunteers almost always complete a specific number of the activity being measured, you can enter that number here. The number entered in the *Default value* field will automatically show up for that service measure each time a service entry is added. Leave this field blank if you do not want a number to appear for this measure by default.

For example, if every time volunteers serve in an animal shelter, they must feed 5 animals in addition to whatever else they are doing, an *Animals Fed* service measure might contain a default value of 5. Each time a [System Operator \[pg:0065\]](#) enters service for volunteers manually, "5 Animals Fed" will be posted as part of the service entry, unless the number in the *Animals Fed* field is manually changed.

If your volunteers enter their service information through the [Time Sheet tab \[pg:1460\]](#) in [VicNet \[pg:1724\]](#), the default will value will show initially. Volunteers can change the default if it should be different.

There is not a way for volunteers to enter service measure information when they sign-in or sign-out through the [VicTouch \[pg:1778\]](#) module. If a default is setup for the service measure, it will be used for the service entry. If changes need to be made to the default value, a System Operator will need to edit the completed service entry.

### **Require an entry**

If an organization wants to make an entry for this measure compulsory, they can choose "Always" from the drop down list in the *Require an entry* field. When this option is checked, a service entry cannot be saved unless a value is entered in the field for this measure.

### **Volunteer view**

You can select the wording that will appear when your volunteers enter their service information through the [Time Sheet tab \[pg:1460\]](#) in [VicNet \[pg:1724\]](#). You can choose between *How Much* and then the service measure's name, *How many* and then the service measure's name, or just have the service measure's name.

### **Include as a grid item**

Checking the box next to *Include as a grid item* will produce a column to track this measure on the volunteer record's [Service tab \[pg:1581\]](#). In the Service box, the measure will be included along with Date, Assignment, Hours and any other fields setup as grid columns so that a System Operator can gauge a volunteer's service under this measure. If this box is not checked, the measure can still be included on reports, but will not show up on a volunteer's Service tab except when you're adding or editing service entries.

### **Save**

Click the **Save** button to save your service measure setup, or the **Cancel** button to close the page without saving your changes.

### **Delete this measure**

If you no longer want to track a service measure, you can click the **Delete this measure** button. Clicking this button removes the service measure field from all of your service records, and it also erases any values previously recorded for this service measure from throughout your database.

*You should only click the **Delete this measure** button if you are certain that you no longer need any of the data previously entered for the selected service measure. You cannot "undo" this action.*

## Make the default value retroactive

If you add a new service measure to your account after you already have some service records entered, you may want to make the default value for the new service measure retroactive to all of your existing service records. You can use the *Make the default value retroactive* button to do this.

For example, suppose you are creating a new service measure to track the number of visits volunteers make to your organization on each service record. If volunteers usually make one visit for each service record you post, you could set the default value for that service measure to "1." Then each time you make a new service record entry, the value of "1" would appear in the *Visits* field by default. If you happened to be making a service record entry that represented multiple visits, then you would simply change the "1" to appropriate number of visits.

In this example, you might also want to populate the new *Visits* field with the default value of "1" in all of your existing service records. A reason that you may want to do this is if you need to find out how many visits volunteers made to your facility in the previous year, and you are just creating a service measure for *Visits* now.

To do this, you would simply click the **Make the default value retroactive** button. When you click this button, Volgistics will insert the default value for the service measure into every service record that's already in your database (if the service measure is currently 0 in a given service record).

Making a new service measure's default value retroactive is useful in situations such as the one described in the example above, where you want the default value to apply to service records that were saved before you created a service measure.

*There is not a way to "undo" making a service measure's default value retroactive unless you edit each and every service entry the value was added to. So please make sure you wish to add the default value to every existing service entry before clicking the button.*

The **Make the default value retroactive** button will be disabled if the service measure does not have a Default value.

---

## Auditing Vic Service Entries

Help topic 1072

Added or revised 11-19-2013

---

If you use the [VicNet \[pg:1724\]](#) or [VicTouch \[pg:1778\]](#) modules to collect volunteer service information, you can optionally monitor - or audit - all of the service entries made by volunteers. If necessary, you can adjust, or delete, service entries.

When auditing is turned-on for Vic entries, service entries made by volunteers appear **in volunteer records as usual** [\[pg:1579\]](#). However, they also appear on a Service tab in your Volgistics mailbox so you can review the entries which have been posted.

To turn-on auditing for Vic service entries:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Click the "Service tracking" link.

3. Click the "Service record auditing" link.

4. In the "Auditing" box, check "Those entered through VicNet" if you want to audit service entries made through the VicNet [Time Sheet tab \[pg:1460\]](#). Check "Those entered through VicTouch" if you want to audit service entries made through VicTouch. Please note that there is a separate setting on the [VicTouch Ground Rules \[pg:1511\]](#) page for auditing service entries if a volunteer forgets to sign-out.

5. Click the **Save** button.

Any new service entries posted after you turn-on auditing will appear in the Volgistics mailbox.

If you choose to audit service entries, you should check your Volgistics mailbox for new entries periodically, and before you print any month or year-end service reports.

To audit new service entries:

1. Choose Mailbox from the [menu \[pg:0215\]](#).

2. Click the "Service" tab. Any new service entries that require auditing will appear here. These entries also appear as usual on the Service tab for the volunteers for whom they were entered.

If you would like to delete any of the entries that appear on the Service tab, click the "Delete" link in the right column for the entry you want to delete. Click the "Edit" link to edit a service entry.

You can change the sort order of the service entries awaiting auditing by clicking the Volunteer, Date, Assignment, or Hours links at the top of each column. Sorting by hours makes it easy to locate any entries that have very large hour values.

3. To "approve" entries that appear on this tab, place a check mark next to the entry (to approve all of the entries on the tab, click the **Check all** button), and then click the **Audited** button.

---

## How to Setup Merit Hours

Help topic 1101

Added or revised 12-23-2013

---

If an organization has determined it wants to use [merit hours \[pg:1564\]](#), a Volgistics [System Operator \[pg:0065\]](#) must turn the feature on and define the rules that will apply to merit hours. Note that merit hours are tracked in addition to regular hours.

### The merit hours setup page

To get to the merit hours setup page, choose [Setup \[pg:0887\]](#) from the menu, click on Service tracking, and click on Merit hours.

Turn on the merit hours feature by checking the "Use merit hours" box on this page.

Up to four rules and/or additional [travel time \[pg:1416\]](#) rules can be applied to service entries. *Please note that if more than one rule applies to a service entry, the system will determine which rule gives the highest total and only use that rule to calculate merit hours.* The exception to this is travel time merit hours, which will apply in addition to other merit hour rules.

Click on the "Rule 1" link to define the first rule. This opens the Merit hour rule setup page.

Before entering any information on the merit hour rule setup page, note that setting more than one condition for a rule will require that all of the conditions are met before the merit hours will be applied. For example, if "Arrive after 5:00 pm" and "Serve on a Sunday" are both checked, merit hours will only be given for volunteers who arrive after 5:00 pm on Sundays.

### **The merit hour rule setup page**

The following options allow System Operators to define when merit hours should be applied and how volunteer hours should be adjusted.

#### **Name**

Optionally enter a name for this Merit hours rule that will help you remember which hours this rule will apply to. This name will appear on the Setup page next to the rule number. For example, if this rule will cause Merit hours to be given to volunteers who serve between 11:00 p.m. and 7:00 a.m., you might name this rule "Overnight shift."

#### **Apply merit hours if volunteers...**

##### Have this Type

Check this box to apply merit hours to only volunteers of a certain [Type \[pg:0212\]](#). Select the Type of volunteers merit hours should apply to from the dropdown list.

##### If their Kind is

If you only want the merit hour rule to be applied to individual or [group \[pg:1909\]](#) volunteer records, check this box and select which records you want the rule to apply to. Leaving the box un-checked will make the rule apply to both individual *and* group records.

##### Arrive...

If merit hours should apply to volunteers who begin serving before or after a certain time, check this box.

Choose "Before" if merit hours should apply to volunteers arriving for service before a specified time. For example, if volunteers who work an early shift that starts before 6:00 am will be getting "time-and-a-half," choose Arrive... "Before" and enter "6:00" am.

Choose "After" if merit hours should apply to volunteers arriving for service after a specified time. For example, if volunteers who begin their service after 9:00 pm should receive additional hours, select Arrive... "After" and enter "9:00" pm.

##### Depart...

If merit hours should apply to volunteers who stop serving before or after a certain time, check this box.

Choose "Before" if merit hours should apply to volunteers departing from service before a certain time. For example, if merit hours should apply to volunteers who finish their shift before 8:00 am, select Depart... "Before" and enter "8:00" am.

Choose "After" if merit hours should apply to volunteers departing from service after a specified time. For example, if merit hours should apply to volunteers who finish their shift after 7:00 pm, choose Depart... "After" and enter "7:00" pm.

#### Serve more than...

If volunteers must work at least a minimum number of hours during a given shift in order for merit hours to apply, choose this box. If, for example, a volunteer must serve at least 7.5 hours before merit hours will apply, check the box and enter "7" in the hours field and "30" in the minutes field.

#### Serve on or between...

If merit hours should apply when a volunteer works within a certain range of dates, choose this option. If, for example, merit hours should apply to volunteers who serve during an organization's summer season that runs from June 15, 2014 through August 31, 2014, a system operator would check this box and enter "6-15-2014" in the first field and "8-31-2014" in the second field. The date fields in this option are inclusive.

#### Serve on a holiday

To apply merit hours on dates specified as a [holiday \[pg:1391\]](#) in Volgistics, check this option. Dates must be designated as holidays by a System Operator before a merit hour rule including this option will apply to service on any particular date(s).

#### Serve on a...

Check this option if merit hours should apply when volunteers serve on one or more days of the week. For example, check the "Serve on a..." option and mark the boxes next to Saturday and Sunday if merit hours should apply for service completed on the weekend.

#### Are in this Set

If merit hours should apply to a group of volunteers designated by a [Set \[pg:0858\]](#), choose this option and select the appropriate Set from the dropdown list.

#### Serve in these Assignments...

If merit hours should be applied when volunteers serve in certain [Assignments \[pg:0096\]](#), choose this option. Mark the boxes next to the names of all Assignments the merit hour rule should apply to.

#### **Adjust their hours by...**

##### Adding...

If a specific number of hours and/or minutes should be added to each service record that meets the characteristics defined above, choose this option. Then enter the appropriate amount of time to be added to each entry in the hours and/or minutes fields.

##### Subtracting...

If a specific number of hours and/or minutes should be deducted from each service record that meets the requirements defined above, choose this option. Enter the appropriate amount of time to be deducted from each entry in the hours and/or minutes fields.

##### Multiplying...

To multiply the actual number of hours served by a specific number when the entry meets the requirements above, choose this option. Enter the number to multiply their hours by in the blank field. For example, select this option and enter "1.5" to multiply hours by 1.5, effectively giving the volunteer "time-and-a-half" for their service that meets the set characteristics.

### *If multiplying...*

If a system operator chooses to multiply hours by a certain number, they must choose whether the entire hour entry or only a portion will be adjusted.

Choose "The entire hour entry" option to multiply the whole hour figure by the designated multiplier.

Choose "The portion served between..." option to only multiply the part of an entry that occurs within a specific time period by the multiplier.

For example, volunteer service might meet the requirements on the merit hour rule setup page, and the system operator might have chosen to adjust their hours by multiplying them by 1.5. The agency may only want the hours that meet the requirements AND were served between 6:00 am and 9:00 am to be multiplied by 1.5. This can be indicated by choosing this option and entering "6:00 am" and "9:00 am" in the appropriate fields.

### **When "switching assignments"...**

If your organization uses the [VicTouch \[pg:1778\]](#) module for volunteers to sign-in and sign-out, you can choose to have the rule apply to all or part of their service entries.

Choose "Only to their final service record for that visit" if you only want the merit hours to apply to the final service entry created for a volunteer through VicTouch on the date of their visit.

Choose "To each of their service records for that visit" if you want the merit hours to apply to each service entry created for a volunteer through VicTouch on the date of their visit.

Click the

#### **Save**

button to save your merit hours rule setup, or the

#### **Cancel**

button to close the page without saving your changes. If you no longer need a merit hour rule, click the

#### **Clear this rule**

button. Please note that if you clear the merit hour rule, it will not change any existing service entries made that originally applied the rule. However, if you open an entry to [edit the service \[pg:1574\]](#), the merit hour total will be adjusted so that the deleted rule no longer applies when the **Save** button is clicked.

After defining one rule, up to three additional merit hour rules can be defined by returning to the

### *Merit Hours Setup*

page. Use as many merit hour rules as are necessary to apply adjusted hours to the appropriate volunteers. You can also click the [travel time \[pg:1416\]](#) link to setup special merit hours to be applied based on how long a volunteer will be traveling to get to your location.

**To use merit hours without having them appear as a column on the Service tab, take the following steps:**

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Click on *Field options*.
3. Click on *Service tab*.
4. Under *Service box*, click on *Merit hours*.
5. Un-check the box next to *Include as a grid column*.
6. Click the **Save** button.

---

## How to Setup Service Values

Help topic 1163

Added or revised 09-23-2016

---

If an organization has determined that it wants to attribute monetary value to volunteer service, it should use the [service values \[pg:0034\]](#) feature in Volgistics to do so. This help topic explains how to set, remove or change the monetary value of actual hours, [merit hours \[pg:1564\]](#), or any [service measures \[pg:1557\]](#) an organization tracks.

If you are not already on the service value setup page, you can get there like this:

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Click on Service tracking.
3. Click on Service values.

From here, choose the type of hours or service for which you would like to customize the value.

### **Value of (actual hours / merit hours / service measure)**

Use this box to enter the default rate Volgistics should use to calculate the monetary value of the type of hours or service measure you have chosen.

Click the **Add** button if a rate other than the default rate should be given to service performed during a different time period. This is useful when an agency's workload is significantly different seasonally or during a certain month. Or if you're using different values for different years. Be sure to save your changes.

In the example below, each actual hour served has a value of \$18.50, except for hours served from January 2015 through December 2015, when each hour served is worth \$23.56.

## Value of actual hours

### Default rate for "actual hours"

Set the default rate you want Volgistics to use to calculate the monetary value of *actual hours*. If you would like to have different default rates for different time periods, click the add button to choose a time period and rate.

Use the default rate of  per "actual hour" for any time period not listed below.

Beginning	Through	Value		
January 2015	December 2015	\$23.56	<a href="#">Edit</a>	<a href="#">Delete</a>

[Help](#)

## Setting different rates for individual Assignments

Service values can be further specified by Assignment. For example, actual hours served in most Assignments might be given the default value of \$18.50, while some Assignments can be skipped or given different monetary values. For example, if an Assignment represents a training or orientation you may not want to assign a monetary value to that Assignment. But if the Assignment is more difficult to perform, hard to fill, or requires special professional training, it can be given a greater monetary value.

Click on the name of an Assignment to give it a monetary rate different than your default rate. Please note that you can set different monetary values in different time periods per Assignment also.

In the example below, the Assignment called Patient Advocate will be given the monetary value of \$31.75 per hour served, except from November through December 2016, when it will be valued at \$33.25 per hour served.

## Value of actual hours in "Patient Advocate"

Set the rate you want Volgistics to use to calculate the monetary value of *actual hours* performed in the **Patient Advocate** assignment. If you would like to use different monetary values for different time periods for *actual hours* service performed in the **Patient Advocate** assignment, click the add button to specify a time period and value.

- Do not calculate any value for service performed in this assignment.
- Always use the default rate of \$18.50 for this assignment.
- Use the rate of  per "actual hour" for any time period not listed below.

Beginning	Through	Value		
November 2016	December 2016	\$33.25	<a href="#">Edit</a>	<a href="#">Delete</a>

[Help](#)

## What monetary amount should I give for the service value?

It is ultimately up to each organization to decide the monetary value of the jobs that volunteers perform. If you have a large organization, this is something the Board of Directors or Human Resources department may be

able to assist with. You could also look on the web for assistance. For example, Independent Sector (a Washington, D.C. based advocacy coalition) announced the U.S. average for volunteer service value was \$23.56 per hour in 2015. The group also releases averages for each State. You can learn more about this group's figures at [https://www.independentsector.org/volunteer\\_time](https://www.independentsector.org/volunteer_time).

[Help Topic 1162 \[pg:0034\]](#) - Service Values

---

## Auditing Service Entries

Help topic 1208

Added or revised 03-11-2014

---

You can setup your account to send some service entries to the Service tab of your Volgistics Mailbox for auditing. You control which service entries are sent to be audited on the [Service Record Auditing Setup Page \[pg:1432\]](#). You can select to have the following entries sent for review:

- Service entered through the [VicNet module \[pg:1724\]](#) on the [Time Sheet tab \[pg:1460\]](#).
- Service entered through volunteers signing-in and signing-out of the [VicTouch module \[pg:1778\]](#).
- Service entered by a particular [System Operator \[pg:0065\]](#). Each operator who can enter service will be listed separately.
- Service entered for volunteers with incomplete [service mandates \[pg:1419\]](#).

In addition to the *Service Record Auditing Setup Page*, you can also send VicTouch service entries to be audited based on the following two options:

- You can select to audit the service entry if a volunteer forgets to sign-out of VicTouch on the [VicTouch Ground Rules \[pg:1511\]](#) page.
- You can select to audit the service entry if a volunteer clicks the *Not sure* button for their assignment on the [Assignment Selection Screen Setup \[pg:1515\]](#) page.

Any new service entries posted after you turn-on auditing will appear in the Volgistics mailbox. If you choose to audit service entries, you should check your Volgistics mailbox for new entries periodically, and before you print any month or year-end service reports.

To audit new service entries:

1. Choose Mailbox from the [menu \[pg:0215\]](#).
2. Click the "Service" tab. Any new service entries that require auditing will appear here. These entries also appear as usual on the [Service tab \[pg:1581\]](#) for the volunteers for whom they were entered.

You can change the sort order of the service entries awaiting auditing by clicking the Volunteer, Date, Assignment, or Hours links at the top of each column. Sorting by hours makes it easy to locate any entries that have very large hour values.

- If an entry is totally incorrect, click the "Delete" link in the right column. This action will delete the service entry
- from the Service tab of the volunteer's record and it will no longer show as needing to be audited. If you do
- not see the "Delete" link, your [System Operator \[pg:0065\]](#) rights do not include this ability. System Operator rights are set by each account's [Administrator \[pg:0052\]](#).

- If an entry just needs to be adjusted, click the "Edit" link and adjust the entry in the box that appears at the bottom of the tab. When you click the
- **Save**
- button, the adjusted record will be sent to the volunteer's Service tab and the entry will no longer show as needing to be audited. If you do not see the "Edit" link, your [System Operator \[pg:0065\]](#) rights do not include this ability. System Operator rights are set by each account's [Administrator \[pg:0052\]](#).

---

## How to Setup Travel Time Merit Hours

Help topic 1210

Added or revised 12-23-2013

---

If your organization has determined it wants to use [merit hours \[pg:1564\]](#) to add travel time to volunteer [service entries \[pg:1568\]](#), the first step will be to determine how you will handle the additional time given. Extra time can be given with a standard amount (such as 30 minutes) for all volunteers, or you can calculate up to six (6) zones and give extra time based on which zone the volunteer lives in.

For example, you may determine you will give volunteers 15, 30, 45, 60, 75 or 90 minutes extra depending on how far away they live from your facility. If you will be giving time based on the zone a volunteer lives in, create up to six (6) [Flags \[pg:0212\]](#) for the zones. Then place the appropriate Flag on the volunteer's record based on how long it will take them to travel to your facility. Note that you can add Flags to multiple volunteer records at once by using the [Tags \[pg:1529\]](#) feature. The *Add a Type or Flag entry to the tagged records* section of [help topic 2137 \[pg:1999\]](#) explains how to do this.

After you have decided how your organization will give travel time, you will need to enable merit hours if you are currently not using the merit hours feature. To do this:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Service tracking* link.
3. Select *Merit hours*.
4. Check the box for *Use merit hours*.
5. Click the **Save** button.

You can optionally setup other merit hour rules as shown in [help topic 1101 \[pg:1409\]](#). The travel time merit hours will work whether or not you have other merit hour rules defined.

When you're ready to setup the travel time merit hours, click the *Travel Time* link on the *Merit hours setup* page. If you're not already on this page, follow steps 1 - 3 above.

### Apply travel time when volunteers

Setup the conditions for when you want travel time merit hours added to volunteer records. Note that with the exception of the *Serve anytime* setting, requiring more than one condition will require that all of the conditions are met before the travel time merit hours are applied. For example, if the conditions for *Adult Type* and *Arrive after 5:00 pm* are both checked, travel time merit hours will be given only for volunteers with the *Adult Type* who arrive after 5:00 pm.

Serve anytime (apply travel time to every service entry)

Check this box if you want travel time to apply to every service entry made for a volunteer.

If their Kind is

If you only want the merit hour rule to be applied to individual or [group \[pg:1909\]](#) volunteer records, check this box and select which records you want the rule to apply to. Leaving the box un-checked will make the rule apply to both individual *and* group records.

Have this Type

Check this box to apply travel time merit hours to only volunteers of a certain [Type \[pg:0212\]](#). Select the Type of volunteer records travel time merit hours should apply to from the dropdown list.

Arrive...

If travel time merit hours should apply to volunteers who begin serving before or after a certain time, check this box.

Choose "Before" if travel time merit hours should apply to volunteers arriving for service before a specified time. For example, if volunteers who work an early shift that starts before 6:00 am will be getting travel time, choose Arrive... "Before" and enter "6:00" am.

Choose "After" if travel time merit hours should apply to volunteers arriving for service after a specified time. For example, if volunteers who begin their service after 9:00 pm should receive travel time, select Arrive... "After" and enter "9:00" pm.

Depart...

If travel time merit hours should apply to volunteers who stop serving before or after a certain time, check this box.

Choose "Before" if travel time merit hours should apply to volunteers departing from service before a certain time. For example, if travel time should apply to volunteers who finish their shift before 8:00 am, select Depart... "Before" and enter "8:00" am.

Choose "After" if travel time merit hours should apply to volunteers departing from service after a specified time. For example, if travel time should apply to volunteers who finish their shift after 7:00 pm, choose Depart... "After" and enter "7:00" pm.

Serve more than XX hours and XX minutes in the same visit

If volunteers must work at least a minimum number of hours during a given shift in order for travel time merit hours to apply, choose this box. If, for example, a volunteer must serve at least 7.5 hours to qualify for travel time, check the box and enter "7" in the hours field and "30" in the minutes field.

Are in this Set

If travel time merit hours should apply to a group of volunteers designated by a [Set \[pg:0858\]](#), choose this option and select the appropriate Set from the dropdown list.

Serve in these Assignments...

If travel time merit hours should be applied when volunteers serve in certain [Assignments \[pg:0096\]](#), choose this option. Mark the boxes next to the names of all Assignments the travel time should apply to.

**Adjust their hours by...**

Adding XX hours and XX minutes for every qualifying visit

If a specific number of hours and/or minutes should be added to each service record that meets the characteristics defined above, choose this option. Then enter the appropriate amount of time to be added to each entry in the hours and/or minutes fields.

#### Base travel time on a volunteer's Flags

If you will base travel time merit hours on how far the volunteer travels and have created Flags for this, choose this option. Enter the hours and minutes you would like volunteers to be given and select the corresponding Flag from the dropdown list. *If a volunteer record has more than one of the Flags selected here, they will be given travel time based on whichever Flag gives them the highest total.*

#### **If a volunteer has more than one service entry in the same day**

##### If a volunteer has multiple service records within....

If you only want to give one travel time allocation when volunteers have two or more service entries on the same visit, choose this option. Enter the hours and minutes for the amount of time that must pass between the entries in order for them to be considered separate visits. By default, the hours and minutes are set at 1 hour and 30 minutes since that would be considered to be long break while at your facility.

##### Treat every service record as a separate visit

If you always want to give travel time for each service entry made for the volunteer, choose this option. The travel time will be given for every service entry the volunteer has on their record, even if they are on the same date.

#### **If a volunteer also qualifies for other merit hours**

If you have additional [merit hour rules \[pg:1409\]](#) setup, and a volunteer's service meets the requirements of the merit hours rules *and* the travel time rules--both will be used to figure the merit hours for the volunteer.

##### Base their other merit hours on their *actual time* only

Choose this option if you want the merit hours to be based on the actual time the volunteer served *before* the travel time merit hours are calculated.

##### Base their other merit hours on their actual time *plus* their travel time

Choose this option if you want the merit hours to be based on the actual time the volunteer served *and* the extra time given for travel time.

Click the

#### **Save**

button to save your travel time merit hour rule setup, or the

#### **Cancel**

button to close the page without saving your changes. If you no longer need the travel time merit hour rule, click the

#### **Clear this rule**

button. Please note that if you clear the travel time merit hour rule, it will not change any existing service entries made that originally applied the rule. However, if you open an entry to [edit the service \[pg:1574\]](#), the merit hour total will be adjusted so that the deleted rule no longer applies when the **Save** button is clicked.

---

## Tracking Mandatory Service

Help topic 2156

Added or revised 12-16-2016

---

**Question:** If we require volunteers to perform a certain number of hours, can we track their progress?

**Answer:** Volgistics includes features for tracking "mandatory service." Use these features if you challenge or require some or all of your volunteers to perform a certain amount of service in a certain period of time. The mandatory service feature makes it easy for you and your volunteers to see how much service they have performed toward their goal, and how much they have left to perform. It even lets you track recurrent challenges (for example, for students who have a new challenge every summer), and overlapping service obligations.

Enable the mandatory service features.

To set up Volgistics to use mandatory service:

1. Choose Setup from the [menu \[pg:0215\]](#) and then select *Service tracking*.
2. Click *Mandatory service*.
3. Check *Use the mandatory service features*. Then customize any of the setup options on the [Mandatory Service setup page \[pg:1405\]](#).
4. Click the Save button.

Enter the name(s) of your mandatory service program(s).

For example, a mandatory service program might be called "2017 Summer Volunteer" or "Community Service."

To enter a mandatory service program name:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select *Field Options*.
3. Choose *Service tab*.
4. Under the *Mandatory service box* heading, select the Program field.
5. Use the *Add a new item* field to enter the name of the program.
6. Click the **Save** button.

Add mandatory service to volunteer records.

To enter the number of hours an individual volunteer is challenged or required to perform:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and select a volunteer.
2. Click on their Service tab and scroll down to the *Mandatory Service* box.
3. Use the Add box to select the Program along with any applicable fields such as Starting Date, Due by date, hours, and other Service Measures required.
4. Click the **Save** button.

If a group of volunteers all have the same mandate with the same dates, hours required, etc., you can enter the information for the entire group at once by using the Tags menu. To do this:

1. [Tag the volunteer records \[pg:1538\]](#) that the mandate will apply to.
2. Select Tags from the menu.
3. Add the mandate to all of the tagged records as shown in the *Add a Mandate to all of the tagged records* section of [help topic 2137 \[pg:1999\]](#).

#### Collect service information for *mandated* volunteers.

You post or collect volunteer service information for *mandated* volunteers the same way you do for other volunteers. As service is posted for these volunteers, their Service tab will show you where they stand.

When a service entry will be applied to a mandate:

- When posting service from within Volgistics (with the [Post \[pg:1559\]](#) feature or [manually \[pg:1569\]](#) on a volunteer's Service tab):

If an "Apply to" value is selected, that service entry is applied to whichever mandatory service program the [System Operator \[pg:0065\]](#) selects from the "Apply to" dropdown list.

- When posting service through VicTouch:

If a volunteer has one unfulfilled service mandate and uses [VicTouch \[pg:1778\]](#) to sign-in and out when they serve, the VicTouch system will automatically apply that service to the mandate. If a volunteer has more than one unfulfilled mandate, the service entered through VicTouch will not be applied to any mandatory service program. In this case, a System Operator can later [edit the service record \[pg:1574\]](#) to make it apply to a specific program if necessary.

- When posting service through the VicNet Time Sheet tab:

If a volunteer has one unfulfilled service mandate and makes a service entry on the [Time Sheet tab \[pg:1460\]](#) of [VicNet \[pg:1724\]](#), the service will automatically be applied to that incomplete mandate. While volunteers will not see the name of the mandatory service program this service record was applied to on the Time Sheet tab, they can view their progress toward the service goal on the [My Service History tab \[pg:1465\]](#) in VicNet. The *Enable mandatory service progress chart* section below shows how to set this up.

If a volunteer has more than one unfulfilled service mandate, each of their incomplete mandatory service programs will be available from a dropdown list on the VicNet Time Sheet tab. Volunteers can select which mandate to apply their service to when making their service entry.

Enable mandatory service progress chart.

If you use [VicNet \[pg:1724\]](#), you can configure the [My Service History tab \[pg:1465\]](#) to display a chart showing their progress on mandates. An example of this appears below:

## Community Service Service Goal

	Hours	Visits
Service goal:	250:00	50
Recorded so far:	145:06	35
Service remaining:	104:54	15

Started: 08-01-2013

Target date: 12-01-2013

Days left: 39

Progress:

To enable the mandatory service progress chart:

1. Select Setup from the [menu \[pg:0215\]](#).
2. Choose VicNet.
3. Select *Service History tab*.
4. Select Yes to show the progress chart.
5. Use the dropdown to select if you'd like the progress information to continue to be shown after the mandate is completed. You can select No or a monthly interval from 1 to 6 months.
6. Click the **Save** button.

The chart appears on the

*My Service History*

tab for every volunteer who has a service mandate while the mandate is incomplete and for the time frame selected after it is complete. Please see [help topic 1207 \[pg:1465\]](#) for more information on this chart.

FAQs about Mandatory Service.

**Q:** Does a mandatory service program *need* a "Starting date" and "Due by" date?

**A:** No. When a service mandate is given to a volunteer on the volunteer's Service tab, the "Starting date" and "Due by" fields are not required. If a System Operator does enter dates in either or both of these fields, this information is for reference only. That is, the dates entered in these fields will not affect whether or not service can or will be applied to a mandatory service program.

**Q:** Why are the "Completed" checkbox and the "Completed on" field disabled when I add or edit a mandate for a volunteer?

**A:**

The "Completed" checkbox and the "Completed on" field will be disabled when the system has been configured to manage mandate completion automatically. This setup option can be viewed or changed on the [Mandatory Service Setup \[pg:1405\]](#) page.

**Q:** How should I deal with annual or recurring mandatory programs?

**A:** If your organization has a mandatory service program that is re-introduced in successive years or time periods (e.g. a Summer Intern program), be sure to give the mandatory service programs unique names. That is, you might enter a "Summer Intern 2017" program, a "Summer Intern 2018" program, and so on.

This can become significant if, for example, a volunteer has not met the service requirements of the first year of the program, but continues to participate in the Summer Intern program in future years. In this case, this person would have multiple unfulfilled service mandates, all within the Summer Intern program. If each service mandate given to this volunteer were called simply "Summer Intern," it would be difficult to distinguish which program should be selected when posting hours at VicNet or within Volgistics.

Note that if you choose not to have the system automatically manage mandatory service completion for you (see the *Enable the mandatory service features* section above), you could mark the mandatory service program from a previous year or season "Complete" for volunteers--even if they have not completed the required service. When this is done, the program will no longer appear as an option for service to be applied to at VicNet or in Volgistics.

---

## How do I track volunteer mileage?

Help topic 2271

Added or revised 02-10-2017

---

You can optionally track and report the number of miles (or kilometers) volunteers drive using a mileage service measure (you can track up to 14 different measures of volunteer service in Volgistics). If you also track volunteer hours, you can enter a volunteer's mileage along with her or his hours.

To setup a service measure for tracking mileage:

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Select *Service tracking*.
3. Select *Service measures*.
4. Click on the first available measure (e.g. "Measure 1 (available)").

5. Make the following entries on the service measure page:

Name

Enter "Mileage" (or "Kilometers")

Format

Select *Whole number (0)* if you choose not to track fractional miles. If you want to track fractional miles (e.g. 2.5 miles or 3.25 miles) choose *One decimal (0.0)* or *Two decimals (0.00)*.

Default value

You can leave this field blank unless you want a set number of miles to appear by default.

Require an entry

Choose *No* if some volunteers will have zero miles to report. Choose *Yes* only if there will always be miles to record on every service entry.

Please note that this setting only applies when [System Operators \[pg:0065\]](#) enter volunteer service information. If your volunteers will enter their own service through the [Time Sheet tab \[pg:1460\]](#) in [VicNet \[pg:1724\]](#), the *Require an entry* setting will not make a difference even if it is set to *Yes*.

Volunteer view

You can select the wording that will appear when your volunteers enter their service information through the [Time Sheet tab \[pg:1460\]](#) in [VicNet \[pg:1724\]](#). You can choose between *How Much* and then the service measure's name, *How many* and then the service measure's name, or just show the service measure's name.

Include as a grid column

Check this if you want to the Mileage field to appear in the Service box on the [Service tab \[pg:1581\]](#) of the volunteer records.

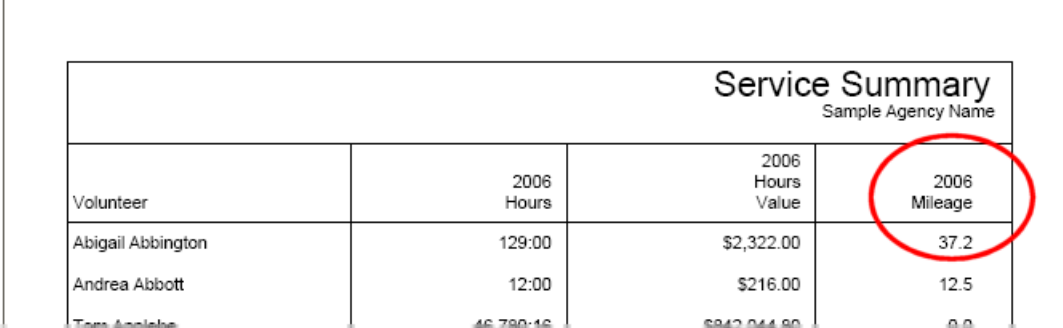

6. Click the **Save** button.

Now, each time you make a service entry, the *Mileage* field will appear for you to record the number of miles driven.

The screenshot shows a web form titled "Service" with a sub-header "Add". The form contains several input fields: "Assignment" (a dropdown menu), "Month" (a dropdown menu set to "July"), "Year" (a dropdown menu set to "2006"), "Hours" (a text input field set to "0:00"), and "Mileage" (a text input field set to "0.0"). The "Mileage" field is circled in red. At the bottom right of the form are "Save" and "Cancel" buttons.

You can include the Mileage field on any Service Details or Service Summary report you create [pg:0467] by selecting the *Mileage* field from the Fields page when you create the new report.

Service Summary			
Sample Agency Name			
Volunteer	2006 Hours	2006 Hours Value	2006 Mileage
Abigail Abbington	129:00	\$2,322.00	37.2
Andrea Abbott	12:00	\$216.00	12.5
Tom Apple	46 790:16	\$942 044.80	9.9

## Tracking Volunteer Absences

Help topic 2275

Added or revised 10-04-2016

---

You can optionally use Volgistics to keep track of the number of times volunteers are absent. In organizations that depend on regular volunteer participation, a volunteer may be considered *absent* if they fail to serve as scheduled. Tracking the number of times volunteers are absent is often an important measure of volunteer performance in these organizations.

This topic explains how to initially setup a Volgistics service measure for tracking absences; how to record an absence; how to report absences; and how to use Sets to find volunteers with a certain number of absences.

### How to setup a service measure for tracking absences

If you would like to track absences in Volgistics, start by setting-up an *Absences* service measure.

1. Choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Select *Service tracking*.
3. Select *Service measures*.
4. If you do not already have a service measure for tracking absences, click on the next available service measure (e.g. "Measure 1 (available)"). If you already have a service measure for tracking absences (e.g. "Measure 1 (Absences)"), click on it.
5. Configure the Service measure page as shown here:

## Service measure

### Measure 1

Name:   
Format:  ▾  
Default value:   
Require an entry:  ▾  
Volunteer view:  ▾  
 Include as a grid column

[Help](#)

6. Click the **Save** button.

You are now ready to start tracking absences.

## How to record absences

There are several ways you can record volunteer absences, and you can use whichever method is the easiest for your organization.

### Record an individual volunteer absence

To record a single absence for an individual volunteer:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. [Locate the record \[pg:1982\]](#) for the volunteer who was absent.
3. Click on the Service tab for the selected volunteer.
4. Using the Add box in the Service section, optionally select the assignment the volunteer was absent for if you track assignments. Enter the date or month of the absence, and then enter "1" in the Absence field. Leave the Hours field set to zero, the time fields blank if you use them, and set any other service measures to zero if they do not apply.

### Add

Assignment:  ▾

Date:   From time:   ▾

To time:   ▾

Hours:

Visits:  Absences:

5. Click the **Save** button.

### Record absences using the Post feature

If you use the Post feature to post volunteer service, you can optionally record absences while you're posting volunteer service.

1. Choose Post from the [menu \[pg:0215\]](#).
2. Choose who you want to post service for as usual, and then click the **Continue** button.
3. Choose how you want the service entry fields to appear in this batch. Under *Absences field*, select "Let me enter Absences on each entry."
4. Click the **Start posting** button.
5. The Absences field will appear along with any other fields you select for this batch, as shown below. If a volunteer was not absent during the period for which you are posting service, simply leave the Absences field blank for that volunteer. If a volunteer did have one or more absences during the period for which you are posting service, enter their number of absences in the Absences field.

## Post

Volunteer	Service	Skip
Bailey, Harry	Assignment: <input type="text"/> <input type="button" value="v"/> Date: <input type="text"/> <input type="button" value="c"/> Hours: <input type="text"/> <b>Absences: <input type="text"/></b>	<input type="checkbox"/>
Bailey, Mary	Assignment: <input type="text"/> <input type="button" value="v"/> Date: <input type="text"/> <input type="button" value="c"/> Hours: <input type="text"/> Absences: <input type="text"/>	<input type="checkbox"/>
Rollard		

6. Finish posting service as usual. Any absences you post are recorded, and they will appear on the Service tab in the volunteer's record.

### Record absences using the Post feature to post service from the schedule

If you use the Post feature to post volunteer service, and you post hours from the schedule, record an absence by removing the *From time* and *To time* values and entering "1" in the Absence field, as shown here:

## Post

Volunteer Service		Skip
Applebe, Tom	Assignment: Info Desk [Sample Agency Name\Administration]	<input type="checkbox"/>
	From time: <input type="text"/>	
	To time: <input type="text"/>	
	Absences: <input type="text" value="1"/>	
Ross, Benjamin	Assignment: Info Desk [Sample Agency Name\Administration]	<input type="checkbox"/>
	From time: 10:00 p	
	To time: 3:00 a	
	Absences: <input type="text"/>	

This will cause the service entry to include zero hours and 1 absence.

### How to create a report that shows absences

You can include the Absences service measure on any new report you [create \[pg:0467\]](#) using the [Service Detail \[pg:0560\]](#), [Service Summary \[pg:0580\]](#), or [Volunteer List \[pg:0692\]](#) report formats.

To create a simple service summary report by volunteer that includes the Absences field:

1. Choose Print from the [menu \[pg:0215\]](#).
2. Select *Service summary*.
3. Click *Create a new service summary report*.
4. On the Options page, change *Organize this report by* to Volunteer and then click the **Next** button.

### Options

Organize this report by:  Volunteer  Site  Site & Place  Site, Place & Assignment  Type

Summarize  Fiscal year

5. On the Fields page, check the *Absences* checkbox and then click the **Next** button.

**Fields** Help Back Next Cancel

Choose the fields you want to appear in this report.

For each calendar year list...

- Hours
- Hours value
- Hours FTE comparison
- Absences
- Absences value
- Mileage
- Mileage value
- Total estimated volunteer count

6. On the Page design page, click the **Next** button.

7. On the Include page, select the time period you want to include in the report and then click the **Next** button.

8. On the Save page, optionally change the name of the report, and then click the **Save and Print** button. When the Include page appears again, click the **Start printing** button.

An example of the report appears below. This is just one example of how you might report absences. You can include absences data on any of the report formats listed above, and further customize these reports to suit your needs.

<b>Service Summary</b>		
Sample Agency Name		
Volunteer	2006 Hours	2006 Absences
Harry Bailey	157:45	1
Violet Bick	8:00	0
Janice Clark	106:45	2

### How to use a Set to find volunteers with a certain number of absences

If you track volunteer absences, you may want to monitor for volunteers who have more than a certain number of absences during a certain period of time. For example, 4 or more absences in 6 months. You can do this using a [Set \[pg:0858\]](#).

To create this Set:

1. Choose Sets from the [menu \[pg:0215\]](#).

2. Click the **Create a new set** button.

3. On the *Define a new set* page, enter a name for the Set, select *Their service* from the dropdown list, and then click the **Go** button.

**Define a new set**

What would you like to call this set?

Enter any name that describes this set of volunteers  
 (e.g. 'Over 65' or 'Available weekends')

Include volunteers in this set based on

Select what it is the volunteers in this set will all  
 have in common and then click the Go button.

[Help](#)

4. Configure the *Their Service* Set rule as shown below. In this example, the Set finds volunteers with four or more absences in 6 months. You can set any conditions you want for this rule (such as 6 or more absences between two dates, or 5 or more absences this fiscal year).

**Their Service** Rule

They have...

At least  Absences in

At least  hours between  
 the beginning of   and the end of

At least  Life hours

They do not have any  recorded

Only count service in

[Help](#)

5. Click the **Finished** button.

Once you create this Set you can easily [view \[pg:0861\]](#) or [print \[pg:0863\]](#) a list of the volunteers in the Set.

---

## Customizing the Fields that Appear for Manual Hour Entries

Help topic 2325

Added or revised 10-07-2016

---

If you track the number of hours volunteers serve, and you enter some or all of your hour records manually (as opposed to collecting them through VicNet or VicTouch), you can tailor the manual hour entry record to best match the way you enter hours.

To do this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Service tracking.'
3. Select 'Ground rules.'
4. Under 'Manual volunteer service entries' choose the option that best describes the way you want to post volunteer hours manually.
5. Click the Save button.

The effect each of these options has on the fields you'll see when you post hours manually is shown here:

If you choose...

**"We always make manual service entries for one month at a time."**

Manual hour records will look like this...

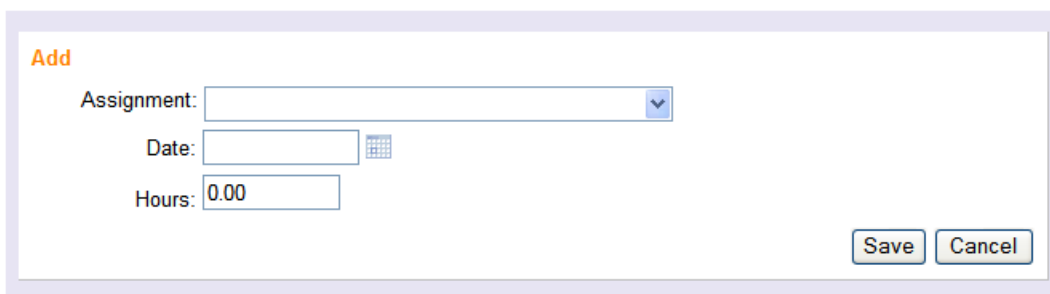

The screenshot shows a form titled "Add" with the following fields: "Assignment:" (a dropdown menu), "Month:" (a dropdown menu set to "October") and "2007" (a year dropdown menu), and "Hours:" (a text input field containing "0.00"). At the bottom right, there are "Save" and "Cancel" buttons.

If you choose...

**"We always make manual service entries for one day at a time, and we do NOT want to enter the volunteer's start and stop times."**

Manual hour records will look like this...

The screenshot shows a form titled "Add" with the following fields: "Assignment:" (a dropdown menu), "Date:" (a text input field with a calendar icon to its right), and "Hours:" (a text input field containing "0.00"). At the bottom right, there are "Save" and "Cancel" buttons.

If you choose...

**"We always make manual service entries for one day at a time, and we DO want to enter the volunteer's start and stop times."**

Manual hour records will look like this...

The screenshot shows a web form titled "Add" with the following fields: "Assignment:" (a dropdown menu), "Date:" (a text box with a calendar icon), "From time:" (a text box with a dropdown menu for "am"), and "To time:" (a text box with a dropdown menu for "pm"). Below these is an "Hours:" field containing "0.00". At the bottom right are "Save" and "Cancel" buttons.

If you choose...

**"We want to make manual service entries with a beginning and an ending date, and we do NOT want to enter the volunteer's start and stop times."**

Manual hour records will look like this...

The screenshot shows a web form titled "Add" with the following fields: "Assignment:" (a dropdown menu), "From date:" (a text box with a calendar icon), "To date:" (a text box with a calendar icon), and "Hours:" (a text box containing "0.00"). At the bottom right are "Save" and "Cancel" buttons.

If you choose...

**"We want to make manual service entries with a beginning and an ending date, and we DO want to enter the volunteer's start and stop times."**

Manual hour records will look like this...

## Service Record Auditing Setup Page

Help topic 2489

Added or revised 03-11-2014

---

You can use the Service Record Auditing Setup page to configure the kinds of [service entries \[pg:1568\]](#) you would like to appear on the Service tab in your Volgistics Mailbox. To get to the Auditing setup page, choose Setup from the [menu \[pg:0215\]](#), click on *Service tracking*, and then choose *Service record auditing*.

### Choose the kinds of service entries you want to audit:

Select one or more of the options below to determine which service entries should be sent to the Service tab in your Volgistics Mailbox for auditing:

- Service entered through the [VicNet module \[pg:1724\]](#) on the [Time Sheet tab \[pg:1460\]](#).
- Service entered through volunteers signing-in and signing-out of the [VicTouch module \[pg:1778\]](#).
- Service entered by a particular [System Operator \[pg:0065\]](#). Each operator who can enter service will be listed separately.
- Service entered for volunteers with incomplete [service mandates \[pg:1419\]](#).

You can also send VicTouch service entries to be audited based on the following two options:

- You can select to audit the service entry if a volunteer forgets to sign-out of VicTouch on the [VicTouch Ground Rules \[pg:1511\]](#) page.
- You can select to audit the service entry if a volunteer clicks the *Not sure* button for their assignment on the [Assignment Selection Screen Setup \[pg:1515\]](#) page.

---

## Service Posting Setup Page

Help topic 2490

Added or revised 11-25-2008

---

You can use the Service Posting setup page to configure the basic use of Volgistics' "Post" feature. To get to the Service Posting setup page, choose Setup from the [menu \[pg:0215\]](#), click on *Service tracking*, and then choose *Service Posting*.

### Assignment Role

Use the options in this section of the page to choose which volunteers – based on their Roles in an Assignment – should appear on the [Post page \[pg:1559\]](#) when posting hours for an individual Assignment. You can select as many choices as you would like.

### Volunteers per page

# System Operator Page

Help topic 1011

Added or revised 03-31-2017

---

In Volgistics, [System Operators \[pg:0065\]](#) are the users who login to the system with the Login link located at [www.volgistics.com](http://www.volgistics.com). The System Operator page is used to [add a new System Operator \[pg:1440\]](#), change the settings for an existing System Operator, or [delete a System Operator \[pg:1441\]](#).

If you're not already on the System Operator page, you can get there by choosing Setup from the [menu \[pg:0215\]](#), selecting *System Operators* and then clicking the *Create a new operator* link or the link to an existing System Operator.

This help topic gives details on each field on the page. You can navigate directly to a specific item in the help topic by clicking the link in the Contents box.

### Basic Operator Information

#### Last name

Enter this operator's last name

#### First name

Enter this operator's first name

#### Email address

Enter this operator's email address. This is the email address this System Operator will enter when they [login \[pg:0220\]](#) to Volgistics.

### Phone number

Optionally enter a telephone number for this System Operator.

### Password & Confirm password

Enter the password this operator will use when they [login \[pg:0220\]](#) to Volgistics. Passwords are case sensitive, can be up to 30 characters long, contain lower and upper case letters, numbers, and special characters such as \$ & or ?.

For security purposes, you do not see the password as you enter it. To be sure you've entered the password correctly, enter the same password in the *Password* and the *Confirm password* fields. Volgistics will check to be sure you entered it the same way in both of these fields.

If the *Caps Lock* key on your keyboard is on, you will receive a warning message like the one below when you start to type in the password. In this case, press the *Caps Lock* key on your keyboard to turn this off before continuing.

The screenshot shows a form titled "New System Operator" with the following fields and options:

- Last name: Lawson
- First name: Brenda
- Email address: b.lawson@volunteers.org
- Phone number: (555) 123-4567
- Password: [blacked out]
- Confirm password: [blacked out]
- Operator must change their password when they login next
- Time zone: (GMT-05:00) Eastern Time (US & Canada)

A warning box on the right side of the form displays a yellow exclamation mark icon and the text "Caps Lock is on".

If you enter a password that does not meet the password strength rules setup on the [System Operator Ground Rules \[pg:1442\]](#) page, you will see a message like the one below when you attempt to save the record. The message lists the password strength rules currently in place. You will need to re-enter a password that meets each rule in order to be able to save it.

## Password does not meet the password strength rules for your account.

The password you entered does not meet one of the following password rules. Passwords must:

- Be between 8 and 30 characters long.
- Include both letter and number characters.
- Include some upper and some lower case letters.
- Include some characters that are not letters or numbers, such as !#\$% or ?.
- Must not contain any space characters.
- Be different from the current password.

Enter a new password that conforms to these rules, and then click the Save button again.

### Operator must change their password when they login next

Check this box if you want to require this System Operator to choose a new Volgistics password the next time they login. Checking this box when you create a new System Operator, or update the password strength rules, forces the System Operator to select a password other than the password assigned to them when they login the next time.

### Time zone

Select the time zone for the location where this System Operator is based. In many organizations, everyone who uses Volgistics works from the same time zone. However, in some national and international organizations, some operators may be located in distant locations and time zones. This setting allows Volgistics to localize date and time values for individual System Operators.

If your organization uses the [VicTouch \[pg:1778\]](#) module, this setting also controls the times that will appear when the operator views the [Who's Here \[pg:1772\]](#) page.

### Date of Last Activity

This field tracks when the operator logged into the account last. It can be useful to note this to see if the operator's record is necessary in your account. If the operator is not logging in regularly, you can [delete the System Operator \[pg:1441\]](#) and then reduce your account's [service level \[pg:0719\]](#). Or, you can delete the record and then create a new record for someone who will use it.

## Rights

### Block this operator's access to the system

Check this checkbox to temporarily prevent this System Operator from being able to login to Volgistics. As long as this checkbox is checked, no one can access Volgistics using this operator's credentials. Once this checkbox is un-checked, this System Operator can access the system with the Rights you select for them.

## More Help

This help topic explains how to setup or change an operator's record to limit access to the system or the actions the operator can perform. You may also find [help topic 2028 \[pg:0053\]](#) useful because it gives examples of how the changes will appear for the operator, as well as more information on how to configure your account to limit operator access.

### Site

If your organization has volunteer offices at multiple Sites, and you want to limit this operator's access to just the volunteers assigned to one individual Site, select that Site here. Otherwise, select *All sites* here. Volgistics refers to an operator with access to just one Site as a [Site-Level Operator \[pg:1442\]](#).

See [Site Level Access \[pg:0092\]](#) for more information about this Volgistics feature.

### User level

User levels determine the degree of access a System Operator has in the Volgistics system. Every System Operator has one of the three following *user levels* in Volgistics:

- Basic User
- Power User
- Volgistics Administrator

By default,

*Basic users*

and

*Power users*

have the same level of access to the system; however, you can tailor what *Power users* and *Basic users* are allowed to do in Volgistics by granting or restricting specific [tab rights \[pg:1012\]](#) and/or [field rights \[pg:0957\]](#) to these user levels.

*Basic User*

. Choose

*Basic User*

for operators who will have basic access to Volgistics. These are typically people who assist with data entry, but who do not perform many reporting or management functions. You can customize which tabs *Basic Users* can see on the [Tab Rights page \[pg:0933\]](#) and which fields they can see or change in the [Field Properties \[pg:0957\]](#) window. Please note that only *Volgistics Administrators* have access to the Volgistics Store with their login credentials. However, you can give a *Basic User* access by giving them the [accounting access code \[pg:0728\]](#) for your account.

*Power User*

. Choose

## Power User

for operators who will be extensive users of the Volgistics system. These are typically people who not only assist with data entry, but who also perform reporting or management functions. You can customize which tabs *Power Users* can see on the [Tab Rights page \[pg:0933\]](#) and which fields they can see or change in the [Field Properties \[pg:0957\]](#) window. Please note that only *Volgistics Administrators* have access to the Volgistics Store with their login credentials. However, you can give a *Power User* access by giving them the [accounting access code \[pg:0728\]](#) for your account.

*Volgistics Administrator*. [Volgistics Administrators \[pg:0052\]](#) have access to all of your account's administrative controls so this user level should only be selected for the operator (or operators) your organization has designated as the Volgistics Administrator. If you do not want to give an individual complete access to your database, you should make them a *Power user* or *Basic user*. You can customize which tabs *Volgistics Administrators* can see on the [Tab Rights page \[pg:0933\]](#) and which fields they can see or change in the [Field Properties \[pg:0957\]](#) window.

## Computers

If your organization's internal network has a shared Internet connection that uses a fixed IP address (so all of the computers on the internal network use the same public IP address on the Internet) you can create a System Operator who is permitted to access Volgistics only when they use a computer on your internal network. These operators would not be able to access the system from any computers outside of your internal network.

*Login allowed from any computer on the Internet*. Choose this option if this System Operator is allowed to access Volgistics from any computer on the Internet or if there is not a fixed IP address to which this operator's access can be restricted.

When this option is selected this System Operator may access Volgistics from any computer on the Internet. This is the default setting.

*Login allowed only from computers that use one of these Internet addresses*. Choose this option if your organization has Internet access through a shared network or broadband connection that has a static (or fixed) public IP address, and you want this System Operator to use Volgistics only from computers on your internal network. An example of when this might be used is if you have a System Operator who only enters data while they are in your office--and you do not want them to be able to login to the system from a computer at their home or other site.

If you are not sure if your organization has Internet access that uses a fixed IP address, contact your organization's computer support department or ISP. If your organization does have a fixed public IP address for Internet access, your computer support department or ISP can tell you what that IP address is.

*Permitted IP address*. Enter up to two public IP addresses here. This System Operator will be permitted to login only when they access the system from a computer using either of these two addresses. If you have just one fixed IP address enter zeros for the second permitted IP address.

You can permit access from an entire Class A, B, or C network by entering a zero for the appropriate IP address octets. For example, to permit access from any IP address in the range 192.168.1.1 to 192.168.1.255 you would enter "192.168.1.0."

### Caution

For security purposes, the Volgistics Team cannot remove this restriction from a System Operator under any conditions. If you choose to impose this restriction on a System Operator, only a *Volgistics Administrator* from your organization can remove this restriction or change the permitted IP addresses.

To prevent potential *lock-out* conditions, this restriction cannot be placed on System Operators who are Volgistics Administrators. Volgistics Administrators can always login to the system from any Internet connected

computer.

### This operator may have access to...

Each of these checkboxes corresponds to a Volgistics [menu \[pg:0215\]](#) item, and they allow you to control which menu options *this* System Operator can see and use. Check the menu items you want this operator to be able to use, and un-check any you do not want this operator to be able to use. For example, if this System Operator is someone who would not normally use the Tickler menu option, you can remove the check from the Tickler menu item.

In most cases, it's best to check the [Setup \[pg:0887\]](#) menu option only for operators whose access level you've set to *Volgistics Administrators*. However, this is not required so if you may check this option for *Power Users* and *Basic Users* if it fits your needs.

### This operator is allowed to...

Choose the privileges appropriate for this operator by placing a check mark next to the privileges you want this operator to have, and removing the checkmark from any you do not want this operator to have.

*Change their password (if it has not expired)*. You should normally give all operators this right, since allowing operators to change their passwords on a regular basis can improve security. If you do not want this operator to be able to change their password for any reason, un-check this item.

*Add new volunteer records*. When checked, this operator is allowed to [create \[pg:1877\]](#) new volunteer records. If you do not want this operator to be able to do this, un-check this item.

*Delete and restore volunteer records*. When checked, this operator is allowed to [delete \[pg:2016\]](#) complete volunteer records, [combine \[pg:1884\]](#) volunteer records, and [restore \[pg:1888\]](#) deleted records. If you do not want this operator to be able to do these things, un-check this item.

*Archive and restore volunteer records*. When checked, this operator is allowed to [archive \[pg:1819\]](#) volunteer records as well as [restore \[pg:1852\]](#) archived records. If you do not want this operator to be able to do this, un-check this item.

*Change or delete existing service records*. If checked, this operator can [modify or delete service records \[pg:1574\]](#) (hour entries) that were entered previously. If not checked, this operator cannot make changes to, or delete, service (hour) records entered previously. However, they can still make new service entries.

*Add new assignments*. If checked, this operator can [create new Assignments \[pg:0106\]](#) on the Assignments page. If this box is not checked, this operator cannot add a new Assignment to the system.

*Combine, move or delete assignments*. When checked, this operator is able to [combine, move, and delete \[pg:0112\]](#) assignment records. If this operator should not be permitted to do any of these things, un-check this box.

*Add or change schedule openings and schedule setup*. When checked, this operator can add or change schedule openings on your volunteer schedules, as well as add or change volunteer entries on schedules.

When un-checked, this operator can still add or change volunteer entries on schedules, but they cannot [add new schedule openings \[pg:0776\]](#) or make changes to existing schedule openings. It's a good idea to un-check this option for people who will help manage volunteer schedules, but who are not responsible for initially establishing the schedules.

### Send email and text messages

. Un-check this option if you do not want this operator to be able to use Volgistics to [send email \[pg:0404\]](#) and [text messages \[pg:0343\]](#) to volunteers or [Coordinators \[pg:0163\]](#). When checked, this operator can send email and text messages to volunteers and Coordinators.

**Create or modify reports.** When checked, this operator can [create new Volgistics reports \[pg:0467\]](#) and modify existing reports. When this privilege is not checked, this operator can still print existing reports, but they cannot create new reports or change existing reports.

**See Account Statistics on Welcome page.** When checked, this operator will see the [Account Statistics \[pg:0028\]](#) box on the Welcome page. The Account Statistics box displays summary information such as the number of volunteers and amount of service performed overall in your organization. The Welcome page is what first appears when you login to Volgistics and when you choose *Welcome* from the [menu \[pg:0215\]](#).

**See Birthday Lists on the Welcome page.** If you use the [birthday list \[pg:1385\]](#) feature, checking this box causes this System Operator to see the current birthday list on the Welcome page. If this box is not selected, or you do not use the birthday list feature, this System Operator will not see the birthday list on the Welcome page. The Welcome page is what first appears when you login to Volgistics and when you choose 'Welcome' from the [menu \[pg:0215\]](#).

**See information popup icons (blue circles with 'i' inside).** When this box is checked, this operator will see the information icons that appear throughout the Volgistics account. An example of what the operator would see if they place their cursor over the information icon by the Status field on the Core tab of the volunteer's record appears below:

The information icons are useful to new operators because they give information on how the fields and features are used, and often have links to help topics about the item. If the operator is familiar with the system and does not want to see the information icons, un-check this box.

See [session expiration warnings](#)

. Volgistics includes a security feature that closes sessions automatically when approximately 60 minutes of inactivity occur. You can optionally disable the alert messages warning that the session will be expiring soon.

*This will not prevent the session from expiring. It will only prevent the alert messages from appearing for the operator.* You can learn more about the feature that closes inactive sessions [here \[pg:1589\]](#).

## Email

### Reply-to address

Use this optional text field if email messages sent by this System Operator should contain a [reply-to \[pg:0398\]](#) address other than their login name email address (provided in the *Email address* field above). When this System Operator sends email, the address entered here will be used as the reply-to address. If this field is left blank the reply-to address will be the System Operator's email address.

### Email signature block

Each System Operator can customize his or her own email signature block, which automatically appears at the bottom of all email messages he or she sends through Volgistics. The text entered here will be used as this user's default email signature block. When this System Operator composes a new email message in Volgistics, this default signature will appear, but there will be an option to edit the signature for that specific message.

Click **Save** to save changes you've made to a System Operator record, **Cancel** to exit without saving your changes, or **Delete this operator** to delete the selected System Operator record.

---

## Adding a New System Operator

Help topic 2026

Added or revised 04-03-2017

---

[System Operators \[pg:0065\]](#) are the people you authorize to use Volgistics.

You must be a [Volgistics Administrator \[pg:0052\]](#) to add new System Operators. The number of System Operators you can have is limited by your account's [Service Level \[pg:0719\]](#).

To add a new System Operator:

1. Choose [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Click *System Operators*.
3. Click *Create a new operator*.
4. Enter the information for the operator. It is also a good practice to check the box to require new operators to set a different password the first time they login. You can set password strength rules to prevent operators from picking an easy to guess password on the [System Operator Ground Rules \[pg:1442\]](#) page.

5. Set the permissions for the operator. Help topic 1011 "[System Operator Page](#)" [pg:1433] has information on the settings on this page. You may also find help topic 2028 "[How to Limit Operator Rights or Access](#)" [pg:0053] useful.

6. Click the **Save** button when you're done setting up the operator.

Let the new person know the account number, plus the email address and password you entered, so they can [login](#) [pg:0220] to the Volgistics account. If the new operator has trouble accessing the account, double check that the email address and password being entered match the email address and password on their record exactly.

---

## Deleting a System Operator

Help topic 2029

Added or revised 03-27-2017

---

System Operators are the people you authorize to use Volgistics.

If someone you previously established as a [System Operator](#) [pg:0065] leaves your organization or no longer uses Volgistics, you should delete their System Operator record. Deleting unused System Operator records is not only a good security practice, but it may enable you to reduce your Volgistics [Service Level](#) [pg:0719], or make room for other System Operators.

To delete a System Operator:

1. Choose Setup from the [menu](#) [pg:0215].
2. Expand the *System Operator* link.
3. Click the name of the operator whose record you want to delete. If the name does not appear, the operator attempting the change has a Site selected on his or her record that does not match the other operator's Site. In this case, the change will need to be made by a System Operator that has access to "All Sites." [Help topic 2035](#) [pg:0092] explains more about how this works.
4. Click the **Delete this operator** button at the bottom right of the page then verify that you want to complete the action by clicking the **OK** button in the pop up window.

If the **Delete this operator** button does not appear as shown above, this operator is the only [Volgistics Administrator](#) [pg:0052] for your account. Because accounts must have at least one Administrator, you will need to do one of two things. One option is to change an existing operator's User Level by following steps 1 – 3 above for the operator you want to change. Then select "Volgistics Administrator" from the dropdown next to User level and click the

### Save

button to update the setting. Another option is to replace this operator's information with a new Administrator's

information. [Help topic 2535 \[pg:0084\]](#) shows how to do this.

---

## Site-Level Operator

Help topic 2204

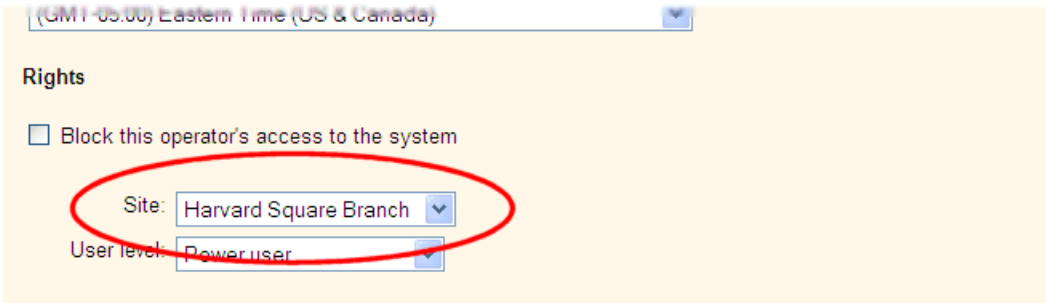

Added or revised 04-03-2017

---

A Site Level Operator is a Volgistics [System Operator \[pg:0065\]](#) who is given access to just one [Site \[pg:0096\]](#) using the [Site Level Access \[pg:0092\]](#) features.

When a Site Level Operator logs-in to Volgistics, they only 'see' the volunteers for their Site. This is ideal for organizations that have volunteer leaders at different remote Sites (such as branch or county offices) or for different volunteer groups within the same organization (such as Adult and Junior volunteer programs).

You setup System Operators to have Site Level Access on the [System Operator Page \[pg:1433\]](#) by choosing their Site from the Site field, as shown here:

The screenshot shows a web interface for configuring a System Operator. At the top, there is a time zone dropdown menu set to "(GMT-05:00) Eastern Time (US & Canada)". Below this is a section titled "Rights" containing a checkbox labeled "Block this operator's access to the system". Underneath the checkbox are two dropdown menus: "Site:" with "Harvard Square Branch" selected, and "User level:" with "Power user" selected. A red oval highlights both the "Site:" and "User level:" dropdown menus.

While Site Level Access provides great convenience, it may not (and is not intended to) provide a level of security in which operators at one Site could never discover any information about volunteers from another Site in the same Volgistics account. For example, when a volunteer serves at more than one Site in the same Volgistics account, their record is shared between those Sites.

---

## System Operator Ground Rules

Help topic 2236

Added or revised 04-26-2016

---

Use the System Operator Ground Rules page to set your organization's password policies for Volgistics [System Operators \[pg:0065\]](#). If you are not already on the System Operator Ground Rules page, you can there by selecting [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), clicking "System Operators," and then choosing "Ground Rules."

The settings on this page affect the passwords used by Volgistics System Operators. They do not affect passwords used by volunteers or [coordinators \[pg:0163\]](#) to access VicNet. The settings for VicNet passwords are found on the [VicNet Ground Rules \[pg:1447\]](#) page.

## **Password strength rules**

### Must be at least x characters long

Use this control to specify a minimum password length for Volgistics System Operator passwords. Choose any number between 6 and 30. For example, if you want to require that Volgistics System Operator passwords be at least 12 characters long, select 12 here. The system will prevent System Operators from choosing a password that is shorter than this.

Generally, longer passwords provide better security.

### Must contain a combination of letters and numbers

When you check this box, new Volgistics System Operator passwords must contain some combination of letter characters (a through z) and number characters (0 through 9). When this box is not checked, new Volgistics System Operator passwords may contain just letter characters, just number characters, or some combination of both.

Generally, passwords that contain a combination of letters and numbers provide better security.

### Must contain a combination of lower case and uppercase letters

Check this box if you want to require that passwords contain both lowercase and uppercase letters. When this box is not checked, passwords may contain all lowercase, all uppercase, or both lowercase and uppercase letters. This option is not available unless the option to make passwords contain letters and numbers is selected.

### Must contain some characters that are not letters and numbers (such as !#\$&?)

Check this box if you want to require passwords to contain at least one character that is not a number (0 through 9) or a letter of the alphabet (a through z).

### Never expire

### Expire every x days

Choose "Never expire" if you not want to require Volgistics System Operators to change their Volgistics passwords periodically.

Choose "Expire every x days" if you want to require Volgistics System Operators to change their Volgistics passwords periodically. Use the drop-down list to choose how frequently passwords should expire.

If you choose to have your System Operator passwords expire periodically, System Operators will receive a notice that their password will expire soon on the Welcome page beginning one week before their password will expire. System Operators may change their password when see this notice. If a System Operator does not change their password before it expires, Volgistics will require them to update their password the next time they log in.

---

## VicNet My Profile Tab Photo page

Help topic 1034

Added or revised 07-03-2012

---

Use the *My Profile tab Photo* page to customize [volunteer photo \[pg:1798\]](#) features on the My Profile tab in [VicNet \[pg:1724\]](#). If you are not already on the *My Profile tab Photo* page you can get there by choosing Setup from the [menu \[pg:0215\]](#); selecting VicNet; selecting Profile tab (for volunteers); and then clicking the Photos link.

### Form section

If you want volunteers to be able to see or upload their own volunteer photo, use the Form section dropdown to choose the form section you want the photo and photo upload controls to appear in when volunteers view their "My Profile" tab at VicNet.

If you do not want volunteers to be able to view or upload their own volunteer photos, choose **Omit photos** from the Form section dropdown.

### **Need a new form section?**

If you do not currently have a form section suitable for the volunteer photo, you can open the Sections link and add a new form section for photos like this:

1. Choose Setup from the menu.
2. Select VicNet.
3. Select Profile tab (for volunteers).
4. Click the Sections link.
5. On the Vic My Profile tab Sections page, locate the next unused form section, and then enter a section heading – such as "Photo" and any instructions you want to appear under the form heading.
6. Click the Save button.

You can now return to the *My Profile tab Photo* page and choose the form section you just created for photos.

### Allow volunteers to upload their own photo

Check this option if you want volunteers to be able to upload a photo of themselves through VicNet.

When this option is not checked, only Volgistics system operators or Coordinators (if you allow Coordinators to upload photos) can upload volunteer photos.

### Allow volunteers to clear their own photo

This option is available only if you allow volunteers to upload their own photo.

---

## VicNet Volunteer tab Photo page

Help topic 1035

Added or revised 07-03-2012

---

Use the *Volunteers tab Photo* page to customize [volunteer photo \[pg:1798\]](#) features on the Volunteers tab that Coordinators see in [VicNet \[pg:1724\]](#). If you are not already on the *Volunteers tab Photo* page you can get there by choosing Setup from the [menu \[pg:0215\]](#); selecting VicNet; selecting Volunteers tab (for coordinators); and then clicking the Photos link.

### Form section

If you want coordinators to be able to see or upload photos of their volunteers, use the Form section dropdown to choose the form section you want the photo and photo upload controls to appear in when coordinators view the "Volunteers" tab at VicNet.

If you do not want coordinators to be able to view or upload photos of their volunteers, choose **Omit photos** from the Form section dropdown.

### **Need a new form section?**

If you do not currently have a form section suitable for the volunteer photo, you can open the Sections link and add a new form section for photos like this:

1. Choose Setup from the menu.
2. Select VicNet.
3. Select Volunteers tab (for coordinators).
4. Click the Sections link.
5. On the Vic Volunteers tab Sections page, locate the next unused form section, and then enter a section heading – such as "Photo" and any instructions you want to appear under the form heading.
6. Click the Save button.

You can now return to the *Volunteer tab Photo* page and choose the form section you just created for photos.

### Allow Coordinators to upload volunteer photos

Check this option if you want coordinators to be able to upload photos of their volunteers through VicNet.

When this option is not checked, only Volgistics system operators or volunteers (if you allow volunteers to upload their own photos) can upload volunteer photos.

### Allow Coordinators to clear volunteer photos

This option is available only if you allow coordinators to upload photos of their volunteers.

---

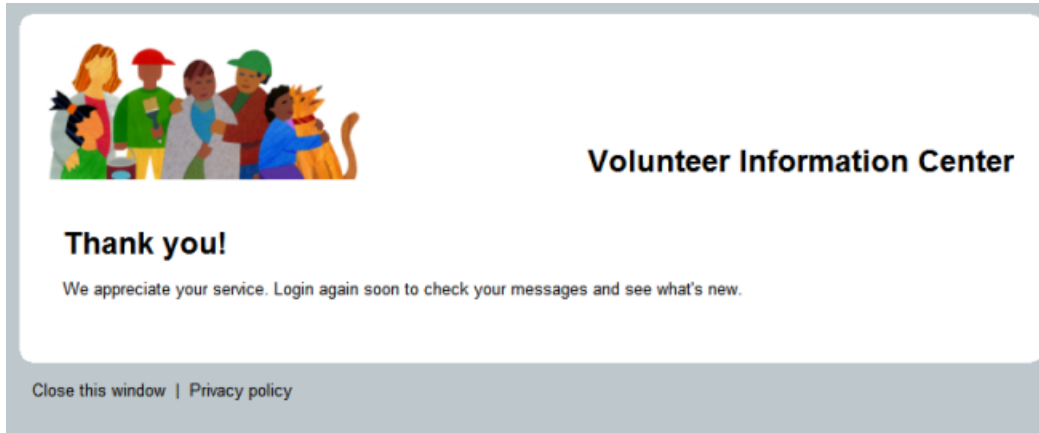

## VicNet Exit Page Setup

Help topic 1071

Added or revised 08-02-2012

---

When a volunteer or coordinator clicks the **Exit** button in VicNet they go to an 'Exit' page similar to this:

You use the 'VicNet Exit Page' setup page to customize the way the [VicNet \[pg:1724\]](#) Exit Page appears. If you're not already on this setup page you can get there by selecting 'Setup' from the [menu \[pg:0215\]](#), clicking the 'VicNet' link, and then choosing 'Exit Page.'

The Exit page is typically used to thank the volunteer or coordinator for visiting, and acknowledge that they have logged-out of VicNet.

### Exit page heading

Enter the text heading you want to appear at the top of the Exit page. For example "Thank you" or "Good-bye!"

### Exit page text

Enter the text you want to appear on the Exit page. This would typically acknowledge that the visitor has now exited from VicNet, and that they may click the 'Continue' button to return to a web page of your choosing (usually your own web site).

When you're finished, click the **Save** button to Save your changes, or the **Cancel** button to exit without saving.

---

## VicNet Ground Rules

Help topic 1073

Added or revised 04-28-2016

---

You use the VicNet Ground Rules page to setup the basic operating rules for the online accessible Volunteer Information Center (VicNet for short). If you're not already on the VicNet Ground Rules page you can get there by selecting Setup from [menu \[pg:0215\]](#), selecting "VicNet," and then clicking the "Ground Rules" link.

### Volunteers Can...

Volunteers can use VicNet if...

Their Status is...

You can prevent volunteers with a certain Status – such as Inactive – from being able to use VicNet. Check the volunteer Status (or Statuses) volunteers must have in order to use VicNet. If a volunteer has a Status that is **not** checked here, they will be unable to login to VicNet even if an email address and password are established in their volunteer record.

If their Type is/is not

You can control which Type(s) of volunteers can access VicNet. If you want only volunteers of a particular Type – such as Adult – to be able to use VicNet, check the box next to Type and select the "is" button. Choose the volunteer Type the volunteer must have to use VicNet from the drop down list.

To exclude a Type from being able to use VicNet, check the box next to Type and select the "is not" button. Choose the volunteer Type that cannot use VicNet – such as Junior – from the drop down list.

If a volunteer Type is prohibited from using VicNet on the VicNet Ground Rules page, a volunteer with that Type will not be able to login to VicNet even if an email address and password are established in their volunteer record.

If their Flags include

To allow only volunteers with a particular Flag to access VicNet, check the box next to "If their Flags include" and select the Flag volunteers must have to use VicNet from the drop down list.

### Coordinators can...

Check "Use VicNet" if you want [coordinators \[pg:0163\]](#) to be able to use VicNet. When "Use VicNet" is checked, coordinators can login to VicNet and perform certain record management functions for the volunteers who have the assignment(s) they coordinate.

### Password strength rules

Use the password controls to customize VicNet password creation rules. Changes made to these settings only affect passwords created starting at the time you make the change (existing passwords are not affected until they are changed). These controls enable customers to set password standards consistent with their own privacy and security policies.

[VicNet passwords are case sensitive](#)

For security, VicNet passwords are case sensitive by default. The system will check for correct upper and lowercase letters when passwords are entered.

Must be at least \_\_\_ characters long

Use this control to set the minimum password length. Choose any value between 4 and 30 characters.

Must contain a combination of letters and numbers

Check this box if you want to require that passwords contain a combination of letters and numbers. When this box is not checked, passwords may contain only letters, only numbers, or both letters and numbers.

Must contain a combination of lower case and uppercase letters

Check this box if you want to require that passwords contain both lowercase and uppercase letters. When this box is not checked, passwords may contain all lowercase, all uppercase, or both lowercase and uppercase letters. This option is not available unless both the option to make passwords case sensitive and the option to make passwords contain letters and numbers are selected.

Must contain some characters that are not letters and numbers (such as !#\$&?)

Check this box if you want to require that passwords contain at least one character that is not a number (0 through 9) or a letter of the alphabet (a through z).

Never expire

Expire every \_\_\_ days

Choose "Never expire" if you do not want to require that volunteers and coordinators change their passwords periodically. Choose "Expire every \_\_\_ days," and select the number of days if you do want to require volunteers and coordinators to change their passwords periodically.

If passwords will never expire, choose "Allow volunteers & coordinators to change their passwords" if you want volunteers and coordinators to be able to change their own password when they choose to. It is a good idea to choose this option, as it provides volunteers with a way to set their own password without having to ask the volunteer office to set a particular password for them. Choose "Do not allow volunteers & coordinators to change their passwords" if you do not want to allow volunteers or coordinators to change their own passwords. You can optionally choose to let just volunteers, or just coordinators, change their own passwords.

If you require or allow volunteers to change their own passwords, they can do so on the Account tab in VicNet. If you do not allow volunteers to change their own passwords, the "change password" option does not appear on the Account tab in VicNet.

*For security, there is technically not a way to prevent volunteers from changing their passwords completely. Volunteers and coordinators can still change their password by using the [Forget your password? \[pg:1975\]](#) link.*

**Please note:**

Even if one of the options is selected to

*not*

allow volunteers or coordinators to change their own passwords, they will still be able to change their own password by clicking the [Forget your password? \[pg:1975\]](#) link on the login page. There is not a way to completely prevent volunteers and coordinators from changing their own password.

## Password email

Volgistics uses this template for the VicNet password email message. The same template is used for three purposes: 1) when the message is sent by a [System Operator \[pg:0065\]](#) to volunteers, 2) when the message is sent by a System Operator to [Coordinators \[pg:0163\]](#), and 3) when the message is sent because volunteers or Coordinators request a password on the VicNet login page.

We recommend customizing the contents of the password email message to fit your organization's needs. For example, it is often useful to include instructions to the web page on your organization's website where you've [placed the link to the VicNet portal \[pg:1491\]](#).

Because the same email message is used for all three purposes mentioned at the start of this section, you will want to keep the message generic enough to apply to all three purposes while still educating the person on how to log-in. You can see a sample what you could enter as the message's content below:

Expire every  days

### Password email

Volunteers and Coordinators can receive a link to set their password by email. You can customize the content of this message below. Volgistics inserts the person's login name (email address), and the password link, between the Top and Bottom parts

Top part:

```
Thank you for serving at "My organization." You can find login information for the Volunteer Information Center (VicNet) below. Click on the link to set your password. After you have successfully set a password, you will be directed to the login page.
```

Bottom part:

```
To login to VicNet in the future:  
  
1. Go to our website (www.organization.org)  
2. Select the Volunteer page.  
3. Click on the "Volunteer portal" link.  
4. Enter your email address and password.  
  
We appreciate your service! Please contact Jessica in Volunteer Services (555-444-3333) if you have trouble logging-in.
```

What should the subject line be for VicNet password emails?

### Heading

Please keep in mind that the text fields for customizing your password email message will only take plain text. So if you do not place a link to the VicNet portal on your web site, and choose to give the [URL address for the portal \[ \]](#) in your message, the URL address may not always appear as a clickable link when the volunteer or Coordinator receives the email. This will depend on how the recipient's email system treats URL addresses sent in plain text. To help with this, it may be beneficial to put text such as "If this does not appear as a clickable link, please copy and paste this address into your web browser" in your message.

There are two parts to this email message, a top part and a bottom part. Volgistics inserts the volunteer or coordinator's email address and a password link between these two parts.

### Top Part

Enter the part of the message you want to appear above the volunteer's login information.

### Bottom Part

Enter the part of the message you want to appear beneath the volunteer's login information.

### **Heading**

By default, VicNet will have a heading at the top with the words "Volunteer Information Center." You can optionally change this heading here. If you want to refer to the VicNet system using a name other than "Volunteer Information Center," enter it here. For example, you might prefer to refer to the VicNet system as your "Volunteer Portal;" "Volunteer File;" or "Volunteer Central" (or something specific to your organization).

### **Login Instructions**

Use the Login fields to customize the messages that appear on the VicNet Login page. The Login page is the page that first appears when volunteers click the VicNet link on your web site, where they enter their email address and password to login.

#### Enter any instructions you want to appear on the VicNet Login page

Use this space to add a custom message to the top of the login page that volunteers and coordinators use to login to VicNet. You may want to provide volunteers with information about what they should do if they have forgotten their email address or password (consider providing the name of the person in the volunteer office who can help them if they require login assistance). You might also include instructions here that explain that only registered volunteers can login, and what steps a visitor to your web site should take if they are not a registered volunteer, but they are interested in becoming one.

#### Enter the message you would like to appear if...

If you use Volgistics to provide an [online volunteer application form \[pg:0413\]](#), you can optionally [ask applicants to choose a VicNet password on the application form \[ \]](#). However, an applicant cannot access VicNet until you have [received their application form \[pg:0415\]](#) from the Applications tab in your Volgistics Mailbox (and they meet any other criteria you specify for VicNet access).

If an applicant attempts to login to VicNet before you receive their application form they will see a message explaining that they cannot access VicNet until after you receive their application (and they meet any other criteria for VicNet access you specify). Use this field to customize the message these applicants will see if they attempt to login before you receive their application. Your message should explain that the volunteer cannot login to VicNet yet because their application form is still pending.

You can skip this field if you do not use an online volunteer application form, or you do not ask applicants to select a VicNet password on your online application form (because applicants would not know how to login until after you receive their application and provide them with a VicNet password yourself).

### **Links**

## Your public account identifier is

Your Volgistics "public account identifier" is shown here. If you [create links to VicNet from your own web site \[pg:1491\]](#), your links must include this number as shown in the link examples. If you do not correctly include this number in your links, they will not work.

Your "public" account number is different than your regular nine-digit Volgistics account number. Your public account identifier cannot be used as part of your Volgistics login credentials, therefore it is safe to include it in your VicNet links, which may be visible to visitors to your web site.

When you're finished, click the **Save** button to save your changes, or the **Cancel** button to exit without saving.

## VIC Graphics

Help topic 1074

Added or revised 09-18-2007

---

Organizations may customize any of the graphic images that appear in [VicNet \[pg:1724\]](#) or VicTouch. You use the VIC Graphics page to select the graphic image you want to customize. If you're not already on the VIC Graphics page, you can get there by choosing Setup from the [menu \[pg:0215\]](#), clicking on VicNet, and then clicking the "Graphics" link.

To customize a graphic image, click on the image you want to customize.

To restore the default graphics for all of the images, click the **Restore Defaults** button.

Click the **Close** button when you're finished.

## Customizing VIC Graphics

Help topic 1075

Added or revised 08-23-2011

---

Organizations may customize any of the graphic images that appear in [VicNet \[pg:1724\]](#) for a truly 'branded' and integrated look.

The general steps to creating custom graphics are:

1. Determine the maximum dimensions and file size for the image you want to customize.
2. Use graphics editing software to customize or create a new image (Volgistics does not provide or support graphics editing software, however graphics tools are readily available from many sources and they often come pre-installed on new computers).
3. Upload your custom graphics using the Vic Graphics page in Setup.

### Things to consider before you customize graphics

## File formats

Custom images must be in one of these graphic file formats: GIF, JPG, or PNG. Some graphic file formats are more suitable than others for a particular image. If you're not familiar with graphic image file formats and when one is more suitable than another (or with graphic editing tools) you may want to involve someone with these skills.

## Each image has maximum dimensions

To ensure a proper fit on the page, each graphic image has a maximum height and width in pixels. You should know what the maximum dimensions are for a particular image before you begin developing a custom version. Don't make your custom graphic larger than the maximum dimensions or it won't fit. You can determine what the maximum dimensions are for a particular image by clicking on the image from the [Vic Graphics \[pg:1451\]](#) window.

## Each image has a maximum image file size

To ensure fast load times for VIC pages, each graphic image has a maximum image file size in bytes. You should know what the maximum image file size is for a particular image before you begin developing a custom version. You can determine what the maximum image file size is for a particular image by clicking on the image from the [Vic Graphics \[pg:1451\]](#) window.

If your image file size is too large, you can often make it smaller by reducing the number of colors used in the file, without degrading the appearance of the image.

## Consider your background color

You can set a background color for your forms, including Vic, on the [Online Forms Ground Rules page \[pg:1330\]](#). Your custom images should either have a transparent background, or use the same background color as your forms.

## Graphic image rights

You can copy and modify the default graphic images that are part of Volgistics, as long as you use these images in Volgistics only. Volgistics does not grant rights to use its images for any other purpose, or for use outside of Volgistics.

If you're using graphic images you've obtained from other sources, you must be certain that you have the legal right to use those images. Unless an image is offered for use without restriction, most of the graphic images that appear on the web are protected by copyrights. Be certain you have the proper rights before installing custom graphics you have obtained from others.

## **Installing a custom graphic**

Before you can install a new graphic, the graphic file you want to install must be accessible from your computer: either on your computer's hard drive, a network drive you can reach from your computer, or on a CD or diskette you can access.

When you're ready to install a custom graphic follow these steps (you must be logged into your Volgistics account with access to the Setup area):

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Click the "VicNet" link.
3. Click the "Graphics" link.
4. Click on the graphic you want to customize. This opens the VIC Graphics editing page.
5. Select "Install a new graphic"
6. Click the Browse button.
7. Use the "Choose file" window to locate the custom graphic file you want to load, then click the Open or Ok button.
8. Click the Install button. It may take a minute or two for your computer to upload the new file, so do not close your browser or go to another web page until you receive the upload confirmation.

## VIC My Schedule Setup Page

Help topic 1171

Added or revised 04-06-2017

---

The VIC My Schedule tab is where volunteers and coordinators can view their schedule, and optionally sign-up for openings. This help topic explains what features are available on the VIC My Schedule tab and how to customize them. You customize the VIC My Schedule tab on the VIC My Schedule Tab setup page. If you're not already on this page (and you have access to Setup) you can get to the VIC Schedule Tab setup page by choosing [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#), selecting VicNet, and then choosing the 'Schedule tab' link.

### **Volunteers can...**

#### *Use this tab at VicNet*

To permit volunteers to access the My Schedule tab at VicNet, mark this box. If this box is unchecked, volunteers will not see this tab at all when they log into VicNet.

#### *Use this tab at VicTouch*

To permit volunteers to access the My Schedule screen at VicTouch, mark this box. If this box is unchecked, volunteers will not be able to view the My Schedule screen at VicTouch.

#### When volunteers view the schedule, do you want them to see who else is scheduled?

#### *No*

Choose No if you do not want volunteers to see anything other than the dates and times they are scheduled themselves. When you choose this option volunteers cannot see when other volunteers are scheduled at VicNet.

#### *Yes, but only in Assignments they can sign-up for*

Choose this option if you want volunteers to see when other volunteers are scheduled each day, but only in Assignments that a volunteer is allowed to schedule themselves for (in other words, only in their own Assignments). This is the recommended setting.

## *Yes, in all Assignments*

Choose "Yes, in all Assignments" if you want volunteers to see who else is scheduled in all of the Assignments you have in your database.

## **Coordinators can...**

### Use this tab at vicNet

To permit coordinators to access the My Schedule tab at VicNet, mark this box. If this box is unchecked, coordinators will not see this tab at all when they log into VicNet.

### View schedules only

Choose this option to allow coordinators to view the schedules for their Assignments on the My Schedule tab in VicNet, but to prevent them from changing the schedules. A coordinator will only be able to view schedules for the Assignments listed on the Assignment tab in their coordinator record.

### View and change schedules

Select this option to permit coordinators to both view and change their schedules displayed on the My Schedule tab. A coordinator will only be able to view and change schedules for the Assignments listed on the Assignment tab in their coordinator record.

## **Assignment names**

### Show Assignment names *without* Site and Place names

Choose this option if only Assignment names should be displayed on the My Schedule tab.

### Show Assignment names *with* Site and Place names

Choose this option to display Assignment names along with Site and Place names on the My Schedule tab.

## **Appearance for VicNet**

### Mobile text for tab:

This field shows the name that will be used for the expanding menu when volunteers use the mobile friendly version of VicNet. You can learn more about these settings in the *Expanding Menu Items* section of [help topic 1214 \[\\_\\_\\_\\_\\_\]](#).

The text in the *Mobile text for tab* field is also what is used in the *full-site* view if the user has a screen reader or has their web browser set up to show alternate (alt) text when their cursor hovers over the tab image.

Click the *Restore default* link to return the tab's alternate text to its default of "My Schedule."

Note that the text entered in this field will not change the name of the tab in the

*full-site*

view because the name is actually part of the tab image file. Entering a label here will only change the text

displayed in the box that appears on the screen when you hover the cursor over the tab name, and the name displayed for the tab in the expanding menu for the mobile view of VicNet. To change the actual appearance of the tab in the full-site view, you will need to upload a new graphic file for the "My Schedule" tab. You can use the [VIC Graphics \[pg:1451\]](#) setup page to upload a new tab image.

#### Do not include links to Assignment profiles for each Assignment

Choose this option to have volunteers view the Assignment names on their schedule at the VicNet Schedule tab without a link to the Assignment profile.

#### Include links to Assignment profiles for each Assignment

Select this option to have volunteers view links to the Assignment profile for each Assignment on their schedule at the VicNet Schedule tab.

The assignment information that appears when this link is clicked is controlled by the fields selected for the assignment in the [Opportunity Directory \[pg:1368\]](#). If no fields appear when the link is clicked, please select one or more fields under 'Assignment information' on the Opportunity Directory Setup page.

### **Coordinator calendar view options**

#### Display volunteer names as

*First initial. Last name*

Choosing this option would cause the name of a volunteer named Tom Smith to be displayed as "T. Smith" for example.

*First name Last name*

Choosing this option would cause the name of a volunteer named Tom Smith to be displayed as "Tom Smith" for example.

*Last name, First name*

Choosing this option would cause the name of a volunteer named Tom Smith to be displayed as "Smith, Tom" for example.

#### Include volunteer's...

Use this section to determine which phone number(s) should be visible when coordinators view their calendar at VicNet. Also use this section to indicate whether or not volunteer email addresses should appear.

*Only list phone numbers that are OK to call*

If this option is marked, only phone numbers for which the "OK to call" checkbox is checked will appear on the coordinator's calendar view.

### **Instructions**

Display these instructions on the My Schedule tab for volunteers:

Enter the text you would like volunteers to see when they access the My Schedule tab at VicNet.

Locate these instructions at the...

*Top of the tab*

Select this option to place these instructions at the top of the My Schedule tab for volunteers.

*Bottom of the tab*

Select this option to place these instructions at the bottom of the My Schedule tab for volunteers.

Display these instructions on the My Schedule tab for coordinators:

Enter the text you would like coordinators to see when they access the My Schedule tab at VicNet.

Locate these instructions at the...

*Top of the tab*

Select this option to place these instructions at the top of the My Schedule tab for coordinators.

*Bottom of the tab*

Select this option to place these instructions at the bottom of the My Schedule tab for coordinators.

## **Appearance for VicTouch**

Page Heading

Enter the text that should appear at the top of the Schedule screen at VicTouch. By default, this heading reads as "Volunteer Schedule for (volunteer name)."

Display these instructions at the top of the Schedule page:

Enter the text you would like volunteers to see when they access the Schedule screen at VicTouch.

Click the **Save** button to save your changes, or click **Cancel** to navigate away from the My Schedule tab setup page without saving any changes.

## **VicNet My Profile Tab**

Help topic 1178

Added or revised 08-05-2015

---

The My Profile tab at [VicNet \[pg:1724\]](#) is where volunteers and coordinators can view and update their volunteer profile. This help topic explains what features are available on the VicNet My Profile tab and how to customize them. You customize the VicNet My Profile tab on the VIC My Profile Tab setup page. If you're not already on this page (and you have access to [Setup \[pg:0887\]](#)) you can get to the VIC My Profile Tab setup page by choosing Setup from the [menu \[pg:0215\]](#), selecting VicNet, and then choosing the 'Profile tab (for volunteers)' link.

## Volunteers can...

### *Use this tab at vicNet*

To permit volunteers to access the My Profile tab at VicNet, mark this box. If this box is unchecked, volunteers will not see this tab at all when they log into VicNet.

### Mobile text for tab:

This field shows the name that will be used for the expanding menu when volunteers use the mobile friendly version of VicNet. You can learn more about these settings in the *Expanding Menu Items* section of [help topic 1214 \[ \]](#).

The text in the *Mobile text for tab* field is also what is used in the *full-site* view if the user has a screen reader or has their web browser set up to show alternate (alt) text when their cursor hovers over the tab image.

Click the *Restore default* link to return the tab's alternate text to its default of "My Profile."

Note that the text entered in this field will not change the name of the tab in the

### *full-site*

view because the name is actually part of the tab image file. Entering a label here will only change the text displayed in the box that appears on the screen when you hover the cursor over the tab name, and the name displayed for the tab in the expanding menu for the mobile view of VicNet. To change the actual appearance of the tab in the full-site view, you will need to upload a new graphic file for the "My Profile" tab. You can use the [VIC Graphics \[pg:1451\]](#) setup page to upload a new tab image.

## Sections

Click the "Sections" link to define the sections you want to appear on the "My Profile" tab in VicNet.

## Fields

Click the "Fields" link to access the VIC My Profile Tab Fields setup page. Here you can choose which sections fields should appear under on the My Profile tab at VicNet. You can also use this page to omit fields, determine which fields are required, and set certain fields as 'read only.'

## Photos

Click the "Photos" link if you want to add or change [volunteer photo \[pg:1798\]](#) features on the My Profile tab.

## Emergency contact Fields

Click the "Emergency contact Fields" link to access the VIC My Profile Tab Emergency contact Fields setup page. If you want the "My Profile" tab to provide fields for Emergency contacts, you can use this setup page to choose the section of the tab where these fields should appear, the number of Emergency contacts volunteers can enter, and which Emergency contact fields should be included, required, or made 'read only.'

## Employer Fields

Click the "Employer Fields" link to access the VIC My Profile Tab Employer Fields setup page. If you want the "My Profile" tab to provide fields for Employer contacts, you can use this setup page to choose the section of the tab where these fields should appear, the number of Employer contacts volunteers can enter, and which Employer contact fields should be included, required, or made 'read only.'

### Reference Fields

Click the "Reference Fields" link to access the VIC My Profile Tab Reference Fields setup page. If you want the "My Profile" tab to provide fields for Reference contacts, you can use this setup page to choose the section of the tab where these fields should appear, the number of Reference contacts volunteers can enter, and which Reference contact fields should be included, required, or made 'read only.'

### Relative Fields

Click the "Relative Fields" link to access the VIC My Profile Tab Relative Fields setup page. If you want the "My Profile" tab to provide fields for Relative contacts, you can use this setup page to choose the section of the tab where these fields should appear, the number of Relative contacts volunteers can enter, and which Relative contact fields should be included, required, or made 'read only.'

### Spouse Fields

Click the "Spouse Fields" link to access the VIC My Profile Tab Relative Fields setup page. If you want the "My Profile" tab to provide fields for Spouse contacts, you can use this setup page to choose the section of the tab where these fields should appear, the number of Spouse contacts volunteers can enter, and which Spouse contact fields should be included, required, or made 'read only.'

### Display these instructions on the My Profile tab for volunteers:

Enter the text you would like volunteers to see when they access the My Profile tab at VicNet.

### Locate these instructions at the...

#### *Top of the tab*

Select this option to place these instructions at the top of the My Profile tab for volunteers.

#### *Bottom of the tab*

---

## **Changing Volunteers' VIC Privacy Settings**

Help topic 1179

Added or revised 04-12-2017

---

The [VIC Schedule tab \[pg:1453\]](#) features provide the option of showing volunteers other volunteers who are scheduled to work. When this is enabled, the names of other volunteers who are scheduled are displayed in VicNet when a volunteer selects a specific date from the calendar.

**Schedule**

**Greeters** [Description](#)  
 6:00 a to 11:30 a Open  
 1 volunteer still needed  
 Would you like to serve on this date? Click the **Schedule me** button to schedule yourself here  
 6:00 a to 11:30 a Carter, Kathryn

**Mail Delivery** [Description](#)  
 10:00 a to 2:30 p Barker, Geraldine  
 10:00 a to 2:30 p Saenz, Charles

**Patient Advocate** [Description](#)  
 9:00 a to 5:00 p Sullivan, Sharon

[Calendar view](#)

You may have volunteers who do not want their names to be displayed for privacy reasons. In this case, Volgistics has a feature to make opening slots appear as filled, but to hide the volunteer's name.

**Schedule**

**Greeters** [Description](#)  
 6:00 a to 11:30 a Open  
 1 volunteer still needed  
 Would you like to serve on this date? Click the **Schedule me** button to schedule yourself here  
 6:00 a to 11:30 a Carter, Kathryn

**Mail Delivery** [Description](#)  
 10:00 a to 2:30 p Barker, Geraldine  
 10:00 a to 2:30 p Saenz, Charles

**Patient Advocate** [Description](#)  
 9:00 a to 5:00 p Filled

[Calendar view](#)

This help topic explains different ways to set a volunteer's record so the volunteer's name does not appear on the schedule for other volunteers to see.

### Allow Volunteers to Change Their Privacy Settings in VicNet

You may want to give volunteers the choice to un-check, or check, the *Share my schedule* option that controls if their name is listed in VicNet. Here is how you can do this:

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Click on VicNet.
3. Click on *Profile tab (for volunteers)*.
4. If you want to have the field in its own form section, select

#### Sections

. You can put information in the instructions field to let volunteers know more about what un-checking the option will do. Remember to click the **Save** button after you finish. You can find additional help on creating sections in [help topic 1055 \[pg:1340\]](#).

If you do not need a new form section, proceed to step 5.

5. Click on the *Fields* link.

6. Scroll down to the *Vic Tab Fields* section, and locate the *Share my schedule* field.
7. Choose the name of the section where the field should be located from the dropdown menu.

The screenshot shows a configuration window with a yellow background. At the top, there is a 'Languages:' dropdown menu set to 'Skills & Experience'. Below it is an 'Assignment Preference:' dropdown menu set to 'Omit'. The 'Vic Tab Fields' section contains a 'Section' dropdown menu set to 'Privacy'. To the right of this dropdown is a 'Read only' checkbox, which is checked. A red arrow points to this checkbox. At the bottom right, there are three buttons: 'Help', 'Save', and 'Cancel'.

8. Click the **Save** button.

This will add the field to the

*My Profile*

tab in VicNet so volunteers can update the field themselves. You can check how the tab appears for volunteers by previewing a volunteer record as shown in [help topic 2159 \[pg:1705\]](#).

**Please note:** You can make the *Share my schedule* field visible to volunteers, but not allow them to change the field's settings. To do this, check the *Read only* box to the right of the field after step 7.

### **Change a Volunteer's Privacy Settings Yourself**

As a [System Operator \[pg:0065\]](#), you can also update a volunteer's privacy settings yourself. To do this:

1. Choose *Volunteers* from the [menu \[pg:0215\]](#).
2. Locate and click on the name of a volunteer. If you need help with this, see [help topic 2023 \[pg:1982\]](#).
3. Go to the *Vic* tab in that volunteer's record.
4. Locate the Privacy box at the bottom of the *Vic* tab, and either mark or un-mark the *Allow other volunteers to see when I am scheduled* checkbox.
5. Click the **Save** button.

---

## **VicNet Time Sheet Tab**

Help topic 1204

Added or revised 10-04-2016

---

You use the VicNet Time Sheet Tab page to setup your [VicNet \[pg:1724\]](#) module to allow volunteers to enter their own service information. Service entered on the Time Sheet tab will become service entries on the [Service tab \[pg:1581\]](#) of the individual volunteer record. You can choose to audit entries made through VicNet also. [Help topic 1072 \[pg:1408\]](#) shows how to set this up.

If you're not already on the VicNet Time Sheet Tab page, you can get there by selecting Setup from [menu \[pg:0215\]](#), selecting "VicNet," and then clicking the "Time Sheet tab" link.

### **Volunteers can...**

Use this section to control whether or not volunteers can use the Time Sheet tab through VicNet and what they will see.

#### **Use this tab at VicNet**

Check the box if you want to allow volunteers to post service using the VicNet module. If the box is not checked, volunteers will not see the Time Sheet tab when they log into VicNet so none of the other settings on this page will apply.

#### **If their Type is or is not**

You can control which [Type\(s\) \[pg:0212\]](#) of volunteers can use the VicNet Time Sheet tab if you wish. If you only want volunteers of a particular Type – such as Adult – to be able to post their service hours on the Time Sheet tab, check the box next to Type and select the "is" button. Choose the volunteer Type the volunteer must have to use the Time Sheet tab from the dropdown list.

To exclude a Type from being able to use the Time Sheet tab, check the box next to Type and select the "is not" button. Choose the volunteer Type that you do not want to allow to post service – such as Junior – from the dropdown list.

#### **If their Flags include**

To allow only volunteers with a particular [Flag \[pg:0212\]](#) to post service hours on the Time Sheet tab, check the box next to "If their Flags include" and select the Flag volunteers must have to use the Time Sheet tab from the dropdown list. For example, if you have volunteers who do not serve at the main campus and have marked these records with an "Off Site" Flag, you can allow only these volunteer to use the Time Sheet tab to enter service by checking the box and then selecting the "Off Site" Flag from the dropdown list.

#### **Mobile text for tab:**

This field shows the name that will be used for the expanding menu when volunteers use the mobile friendly version of VicNet. You can learn more about these settings in the *Expanding Menu Items* section of [help topic 1214 \[\\_\\_\\_\\_\\_\]](#).

The text in the *Mobile text for tab* field is also what is used in the *full-site* view if the user has a screen reader or has their web browser set up to show alternate (alt) text when their cursor hovers over the tab image.

Click the *Restore default* link to return the tab's alternate text to its default of "Time Sheet."

Note that the text entered in this field will not change the name of the tab in the

*full-site*

view because the name is actually part of the tab image file. Entering a label here will only change the text displayed in the box that appears on the screen when you hover the cursor over the tab name, and the name displayed for the tab in the expanding menu for the mobile view of VicNet. To change the actual appearance of the tab in the full-site view, you will need to upload a new graphic file for the "Time Sheet" tab. You can use the [VIC Graphics \[pg:1451\]](#) setup page to upload a new tab image.

### **Volunteers will post their volunteer service...**

Select the option that meets your organization's needs for collecting volunteer service information. There are three basic options--daily entries, monthly entries, or a single date or range of dates. When they apply, you will see more settings under the basic option you select.

### **On a daily basis (one entry for each day they serve)**

Select this if you want a service entry created for each date where a volunteer has service. There are additional settings under this to control the dates volunteers can choose and how much detail you want the service entry to have.

For the current day only. Select this option if you only want volunteers to be able to enter service for the current date.

For any date up to XX day(s) back. Select this option if you want volunteers to be able to enter service for the current date, or any date a selected number of days ago. For example, selecting 7 from the dropdown allows volunteers to enter service for the current date, or any date in the previous week. You can select 1 through 10 days back, and then increments of 10 up to 60 (i.e. 10, 20, 30, etc.).

For any date. Select this option if you want volunteers to be able to enter service for any date in the current year, or any year up to 5 years past.

Support all time zones. Select this option if you have selected either the "For the current day only" or the "For any date up to XX day(s) back" option above, and you have volunteers in time zones where the date will be different than your own. This basically adds the next calendar date to the options volunteers see so they do not need to wait for the date to take place in your time zone before entering service.

Here is an example of how this could work. In this scenario we will take the case of your account headquarters being located on the east coast of the continental United States, but you have volunteers located in Asia who enter service hours using VicNet. If it is November 28, 2014 in your time zone it may already be November 29, 2014 for the volunteers in Asia. Selecting this setting allows volunteers to enter service for the November 29, 2014 date before midnight takes place on November 28, 2014 in your time zone.

Do you want volunteers to have 'start' and 'stop' time fields for entering . . . . Select "No. Do not provide start and stop time fields" if you want volunteers to enter service without recording the time they began and ended the service. With this option, volunteers will use an hour and minute dropdown to select the time served. These dropdowns will only allow a maximum of 23 hours and 59 minutes of service because that is the most service that can be given during a 24 hour day.

Select "Yes, Provide start and stop time fields" if you want volunteers to enter a beginning and ending time for the service they record. Volgistics will automatically calculate the hours and minutes for the service entry based on the volunteer's selections.

Volunteers should enter their start and stop times. . . . If you selected to have volunteers enter start and stop times, use this setting to control how the dropdown lists for hours and minutes will appear. You can select to have the dropdown lists show 15 or 30 minute intervals, one hour intervals, or to allow any valid hour and minute time entry.

### **On a monthly basis (one lump-sum entry for each month they serve)**

Select this option if you want one service entry created for a month of service. The service entry on the volunteer's Service tab will show with the first of the month for whatever month is selected. Volunteers can make multiple entries during the month. For example, if you have volunteers select the assignment they served in, they could make a lump-sum entry for the month for 30 hours in "Assignment A" and then make a separate entry for 20 hours in "Assignment B." Both entries will show on the 1st of whatever month they were made for. There are additional settings to control the months that appear for volunteers to select.

For the month most recently ended. Select this option if you want volunteers to enter service for whatever month ended last. For example, if it is currently November 2012, any service volunteers enter would apply to October 2012.

For any month, up to XX month(s) back. Select this option if you want volunteers to be able to enter service for the current month, or in any month a selected number of months back. For example, if it is currently November 2012 and you select 3 months back, volunteers could enter service for November 2012, October 2012, September 2012, or August 2012. You can select from 1 to 12 months back.

### **For any single day, or range of days they choose**

Select this option to allow volunteers to select a beginning and ending date for the service hours they are entering. This option will allow volunteers to select service dates for any date in the current year, or any year up to 5 years past. Volunteers can select a maximum of 180 hours and 59 minutes of service. Entries larger than this will need to be split into smaller entries.

### **Service measures**

In addition to collecting service hour information, you can also select to have volunteers enter information about any service measure you have setup in your account. Just check the box in front of the service measure(s) you want volunteers to see when they enter service. If you're unfamiliar with the service measure feature, [help topic 1016 \[pg:1557\]](#) explains more.

You can choose if the service measure's name is preceded by

*How much*

,

*How many*

, or if just the name of the service measure appears. You do this on the setup page for the service measure as shown in [help topic 1017 \[pg:1406\]](#).

### **Assignment tracking**

Use this section to control whether you will, or will not, have assignment information included with service entries made on the Time Sheet tab.

### **Do not ask them to select the assignment they volunteered in**

Select this if you want volunteers to enter service information without linking it to a specific assignment.

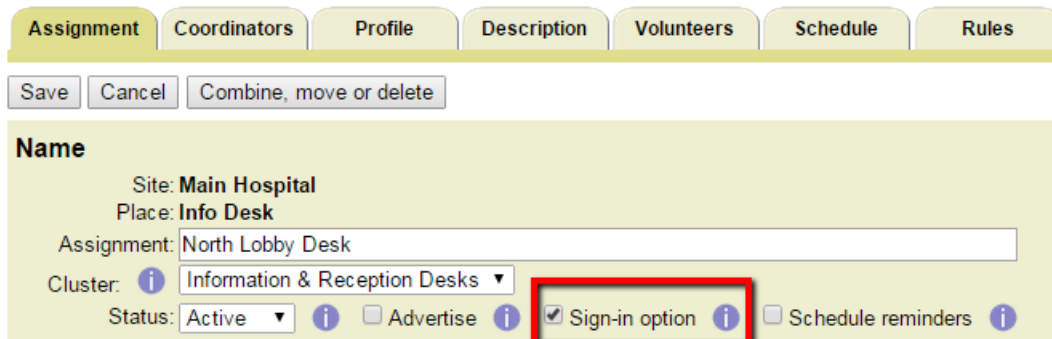

### **Ask them to select the Assignment they volunteer in**

Select this if you want the volunteer's service entry to be linked to a specific assignment. You can use the options that appear underneath of this to control which assignments appear on the list the volunteer can select from. You can select one, or more, of these options depending on which assignments you want shown.

Their own Assignments if their Role is. You can use [Roles \[pg:0103\]](#) to show a volunteer's relationship with an assignment. If you only want assignments where the volunteer has certain Roles to appear on the dropdown list, select this option and then the Roles you want from the list below the option. The Roles that appear underneath will depend on what Roles are currently setup in your account.

All Assignments flagged as 'Sign-in' options. Select this option if you want assignments with the Sign-in option checked to appear on the list. You can select this in addition to the settings in the "Their own Assignments if their Role is" section. This would make volunteers see their own assignments, plus any other assignments that have the Sign-in option checked. The Sign-in option appears on the first tab of the assignment record as shown in the picture below:

The screenshot shows a web interface for managing assignments. At the top, there are tabs for 'Assignment', 'Coordinators', 'Profile', 'Description', 'Volunteers', 'Schedule', and 'Rules'. Below the tabs are buttons for 'Save', 'Cancel', and 'Combine, move or delete'. The main form area is titled 'Name' and contains the following fields: 'Site: Main Hospital', 'Place: Info Desk', 'Assignment: North Lobby Desk', 'Cluster: Information & Reception Desks', 'Status: Active', 'Advertise' (unchecked), 'Sign-in option' (checked), and 'Schedule reminders' (unchecked). The 'Sign-in option' checkbox is highlighted with a red box.

### All Assignments

. Select this option if you want all assignments setup in your account to show on the dropdown list. Volunteers will see assignments as long as the assignment is still active in your account. If the assignment has been made inactive, it will not appear in the dropdown list. [Help topic 2537 \[pg:0140\]](#) explains more about inactive assignments.

Require volunteers to choose an assignment. Select this if you want to require volunteers to select an assignment when they submit a service entry. When this is selected, volunteers will be unable to complete a service entry if they do not select an assignment from the dropdown list.

Please note that if a volunteer does not have any assignments that apply based on the other options in the

### *Assignment Tracking*

section, that they can still submit a service entry even when this box is checked. For example, if you have the option for "Their own Assignments if their Role is" selected and the "Assigned" Role marked, a volunteer may not have any assignments with this Role on their [Service tab \[pg:0138\]](#). In this case a volunteer can still submit a service entry on the Time Sheet tab even if you have the "Require volunteers to choose an assignment" option selected.

### **Other settings**

This section has settings to allow you to customize more options on the Time Sheet tab.

### **Display the volunteer's five most recent service entries on the Time Sheet tab**

Select this option if you want the five most recent service entries for the volunteer to appear on the Time Sheet tab. These will include all service entries no matter [how the service was entered \[pg:1568\]](#) on the volunteer's record. Volunteers can always click the *My Service History* tab of their record to see a complete listing of their service entries as long as this tab is enabled in your VicNet setup.

### **Display this message after a volunteer submits a time sheet**

You can customize the message volunteers will see on the page after they confirm a service entry.

## **Instructions**

This section has settings to allow you to customize the instruction fields on the Time Sheet tab.

### **Display these instructions on the Time Sheet tab for volunteers**

You can customize the instructions volunteers see on the Time Sheet tab here.

### **Locate these instructions at the . . .**

Use these settings to control where the instruction field appears on the Time Sheet tab.

Top of the tab. Select this option to have the instructions appear at the top of the Time Sheet tab.

Bottom of the tab. Select this option to have the instructions appear at the bottom of the Time Sheet tab.

## **Time Sheet Tab and Mandatory Service**

There are not any settings to control how volunteers select to apply a service entry toward **mandatory service** [pg:1419] that you have setup for the volunteer. However, service entries can be applied to these from the Time Sheet tab.

If the volunteer only has one unfulfilled service mandate, then any service entry made on the Time Sheet tab will automatically go toward completing the requirement. Volunteers will not see the name of the mandatory service program when they make the entry, but they can view their progress toward completing the measure on their *My Service History* tab as long as your account is setup to show this. **Help topic 2156** [pg:1419] has instructions on how to make a chart for tracking mandatory service appear on the *My Service History* tab under the "To enable the mandatory service progress chart" heading.

If a volunteer has more than one unfulfilled service mandate, they will see a dropdown listing all unfulfilled service mandates that apply to them. They can use this dropdown to select the service mandate the service entry should apply to when they submit the service entry.

## **Time Sheet Tab and Group Records**

The Time Sheet tab will function much the same for **group records** [pg:1909] as it does for individual records. The difference will be that groups can enter the number of volunteers who served when making a service entry, and the group's hours may, or may not, be automatically calculated depending on if you include the starting and stopping times in the service entries. Please see the information under the "Group time sheets" heading in **Help topic 1198** [pg:1673] for more about how the Time Sheet tab functions for groups.

---

## **VIC My Service Setup Page**

Help topic 1207

Added or revised 08-05-2015

---

Service records in Volgistics are the record of the dates volunteers have contributed service to your organization. Service records must be entered into the system with one of the four methods shown in **help topic 1166** [pg:1568]. In addition to the date (or date range), a service entry can optionally record the **Assignment** [pg:0096] the volunteer served in, the times the volunteer served, the number of hours the volunteer served, as well as **Merit Hours** [pg:1564], **Service Measures** [pg:1557], and **Mandatory Service programs** [pg:1419].

The VIC My Service Setup page controls the settings and information on the *Service History tab* in [VicNet \[pg:1724\]](#) and the *Service History screen* in [VicTouch \[pg:1778\]](#). You can get to this page for VicNet by selecting Setup from the menu, expanding the VicNet link, and selecting *Service History tab*. You can get to this page for VicTouch by selecting Setup from the menu, expanding the VicTouch link, and selecting *Service History screen*.

This help topic details the settings on this page.

## **Main Service Display**

*Volunteers can. . .*

Use these controls to determine which modules volunteers can use to access service information.

### View their service history at VicNet

. Check this box if you want the *My Service History* tab to be available to volunteers when they login to the [VicNet \[pg:1724\]](#) module.

### View their service history at VicTouch

. Check this box if you want the *View my service* button to be available to volunteers when they sign-in to the [VicTouch \[pg:1778\]](#) module. When volunteers press this button, they will be taken to the *Service History screen* in VicTouch.

*Show. . .*

Use these controls to select which service information fields appear for the volunteers.

### Life total

. Check this box if you want the information volunteers see to include the total number of service hours recorded for them with your organization. This total is found on the [Service tab \[pg:1581\]](#) of the volunteer's record.

### Year-to-date total

. Check this box if you want the information volunteers see to include their year-to-date (YTD) total. This total shows how many hours volunteers have served from the start of your [fiscal year \[pg:0062\]](#) to the date the volunteer is viewing the information.

### Start date

. Check this box if you want the information volunteers see to include the date they started volunteering with your organization. This field is taken from the [Start Date \[pg:1890\]](#) field that is recorded on the History tab of the volunteer's record.

*Include these fields when displaying service information. . .*

When volunteers view their service history in VicNet, the view will initially be collapsed by year and totals for each column will appear.

## Volunteer information for Andrea Campbell

[Home](#) [Mail](#) [My Profile](#) [My Schedule](#) [My Service History](#) [Time Sheet](#) [Account](#)

### Instructions

Click the "Printable view" button for a printable view of this information.

#### Totals

Start date: December 26, 2007

Year-to-date hours: 757:29

Life hours: 1,822:25

### Service by year

Click on a year to view your records for the year.

Year	Hours	Merit hours
2013 	757:29	757:29
2012	1,016:00	1,016:00
2010	3:40	3:40
2009	22:56	22:56
2008	22:20	22:20
<b>Life total:</b>	<b>1,822:25</b>	<b>1,822:25</b>

Clicking on a year will expand the view to show individual dates service was recorded for that particular year.

## Volunteer information for Andrea Campbell

[Home](#) [Mail](#) [My Profile](#) [My Schedule](#) [My Service History](#) [Time Sheet](#) [Account](#)

### Instructions

Click the "Printable view" button for a printable view of this information.

### My 2013 Service Records

Click on any date to view the service record for that date.

Date	Hours	Merit hours
09-30-2013 	4:00	4:00
09-27-2013	4:00	4:00
09-26-2013	4:00	4:00
09-25-2013	4:00	4:00
09-24-2013	4:00	4:00
09-23-2013	4:00	4:00
09-20-2013	4:00	4:00

If the volunteer clicks on a specific date, they will see all details for the service entry that you select to be shown.

## Volunteer information for **Andrea Campbell**

[Home](#)[Mail](#)[My Profile](#)[My Schedule](#)[My Service History](#)[Time Sheet](#)[Account](#)

### Instructions

Click the "Printable view" button for a printable view of this information.

### My record for service starting **Monday, September 30, 2013**

Date:	09-30-2013
Start time:	7:00 am
Stop time:	11:00 am
Assignment:	Welcome Center Desk
Hours:	4:00
Merit hours:	4:00

When volunteers view their service history in VicTouch, the view will also be collapsed by year initially. If they press the **View details for year** button, they will see more specific details depending on what is selected in this section.

#### Date (always included)

. This is the date the service entry was recorded for. This field is always displayed by default when the view has been expanded by year. In VicNet if your account is setup to record a [beginning and ending date \[pg:1429\]](#) for service entries, the beginning date will appear on the expanded by year view and the beginning and ending date will appear on the view with full details. In VicTouch, just the beginning date will be displayed once the collapsed view has been expanded by year.

#### Assignment name (without Site and Place names)

. Select this option if you want the service entry to show the Assignment name without the Site and Place it falls under. The Assignment name will only appear on the view with full details. [Help topic 2099 \[pg:0096\]](#) explains more about the Site, Place and Assignment hierarchy.

#### Assignment name (with Site and Place names)

. Select this option if you want the service entry to show the Assignment name along with the Site and Place it falls under. The Assignment, Site, and Place names will only appear on the view with full details. [Help topic 2099 \[pg:0096\]](#) explains more about the Site, Place and Assignment hierarchy.

Time-in and time-out. Select this option if you want the service entry to show the time-in and time-out recorded. The Start and Stop time fields will only appear on the view with full details.

Hours. Select this option if you want the service entry to show the number of hours recorded. The Hours field will appear as a separate column on the initial view and the expanded by year view, as well as in the view with full details.

## Merit Hours

. Select this option if you want the service entry to show the number of Merit Hours recorded. If you do not have your account setup to use [Merit Hours \[pg:1564\]](#), this option will not appear as a choice. The Merit Hours field will appear in a separate column on the initial view and the expanded by year view.

## Service Measures

. If you have Service Measures setup in your account, each Service Measure you have will be listed by name. Select which Service Measures you want volunteers to see for the service entries. If you do not have any [Service Measures \[pg:1557\]](#) setup in your account, you will not see any choices here. Each Service Measure will appear in a separate column on the initial view and the expanded by year view.

### **Mandatory Service Progress**

If you have your account setup to require [Mandatory Service programs \[pg:1419\]](#), you will see this section to include a graph of the volunteer's progress toward their goal on the *My Service* tab of [VicNet \[pg:1724\]](#). An example of this appears below:

## **Community Service Service Goal**

	Hours	Visits
Service goal:	250:00	50
Recorded so far:	145:06	35
Service remaining:	104:54	15

Started: 08-01-2013

Target date: 12-01-2013

Days left: 39

Progress:

**Please note:** If your Mandatory Service program is setup to be based on [Service Measures \[pg:1557\]](#) as well as hours, these service measures will appear on the progress chart. This is independent from the selections for Service Measures you may have selected in the

### *Main Service Display*

section of this help topic. The Service Measures that appear on the chart are based on your settings on the [Mandatory Service Setup Page \[pg:1405\]](#) and the Service Measures you have setup to apply to the mandate for each volunteer.

Yes/No

Select the Yes or the No option depending on if you want a progress chart to be displayed or not.

### *Display chart after volunteer completes mandatory service*

Use the dropdown list to select whether or not the chart will appear after the mandate has been completed. You can select *No* or a monthly interval from 1 to 6 months.

### **Headings and Instructions for the Service History Tab in VicNet**

If your account uses the [VicNet \[pg:1724\]](#) module, use this section to customize the headings and instructions volunteers will see when they select the tab.

#### *Mobile text for tab:*

This field shows the name that will be used for the expanding menu when volunteers use the mobile friendly version of VicNet. You can learn more about these settings in the *Expanding Menu Items* section of [help topic 1214 \[ \]](#).

The text in the *Mobile text for tab* field is also what is used in the *full-site* view if the user has a screen reader or has their web browser set up to show alternate (alt) text when their cursor hovers over the tab image.

Click the *Restore default* link to return the tab's alternate text to its default of "My Service History."

Note that the text entered in this field will not change the name of the tab in the

#### *full-site*

view because the name is actually part of the tab image file. Entering a label here will only change the text displayed in the box that appears on the screen when you hover the cursor over the tab name, and the name displayed for the tab in the expanding menu for the mobile view of VicNet. To change the actual appearance of the tab in the full-site view, you will need to upload a new graphic file for the "My Service History" tab. You can use the [VIC Graphics \[pg:1451\]](#) setup page to upload a new tab image.

#### *Instructions*

Type or [paste \[pg:0063\]](#) any instructions you want the volunteers to see on the tab. Please note that this field will only accept plain text so there is not a way to add hyperlinks or other HTML features to the instruction field.

#### *Locate these instructions at the...*

These settings control where the instruction field will appear on the My Service History tab. Select *Top of the tab* if you want the instructions to appear at the top of the page. Select *Bottom of the tab* if you want the instructions to appear at the bottom of the page.

### **Heading and instructions for the Service History screen at VicTouch**

If your account uses the [VicTouch \[pg:1778\]](#) module, use this section to customize the heading and instructions volunteers will see when they view their service. Please remember, if you make changes to these fields and VicTouch is running, you will need to shut down VicTouch and restart it in order for the changes to be shown. If VicTouch is running in kiosk mode as recommended, you may find [help topic 2283 \[pg:1762\]](#) useful to shut the module down.

#### *Page heading*

Use this field to customize the heading volunteers see when they select to view their service through VicTouch. By default, this will read "Service history for" and then insert each volunteer's name. So if a volunteer named George Bailey views this field, he would see "Service History for George Bailey." You can customize the portion of the heading that precedes the word "for" to be something other than "Service history."

## Additional instructions

Type or [paste \[pg:0063\]](#) any instructions you want the volunteers to see on the page. Please note that this field will only accept plain text so there is not a way to add hyperlinks or other HTML features to the instruction field.

---

# Customizing VIC Mobile Graphics & Styles

Help topic 1214

Added or revised 08-04-2015

---

Organizations may customize the graphic images and styles volunteers and [Coordinators \[pg:0163\]](#) see when they use [VicNet \[pg:1724\]](#) on a mobile device such as a smart phone or tablet. You may wish to do this if you want a truly "branded" and integrated look. Or you might want to do this to tailor the user's experience on their mobile device.

### Please note:

To make the user's VicNet experience mobile friendly, certain options available with the *full-site* setup for VicNet are not available. For example, the options to layout the [Home tab \[pg:1486\]](#) in three vertical columns and to have the schedule display in a calendar format are not available. If your full-site setup uses these display options, the mobile view of VicNet will automatically convert them into a mobile friendly format. We recommend previewing the user's VicNet experience as shown in [help topic 2159 \[pg:1705\]](#) to make sure VicNet displays how you want it to for mobile users.

To get to the setup page where you can customize VicNet for mobile devices:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicNet link.
3. Select *Mobile Graphics & Styles*.

The settings for the mobile view of VicNet are different than the settings for the *full-site* view of VicNet. The full-site view is what users see if they login to VicNet on a desktop or laptop computer. If you want to change the full-site view's graphics and styles:

- See [help topic 1187 \[pg:1353\]](#) to update the logo.
- See [help topic 1052 \[pg:1330\]](#) to update the fonts and background colors.
- See [help topic 1075 \[pg:1451\]](#) to update the button and tab graphic images.

You can click on a link in the *Contents* box to go directly to a section of the help topic.

### Contents

Volunteers and coordinators can...  
Organization Logo (specifically for mobile VicNet)  
Colors  
Expanding Menu Items  
Buttons  
Instructions

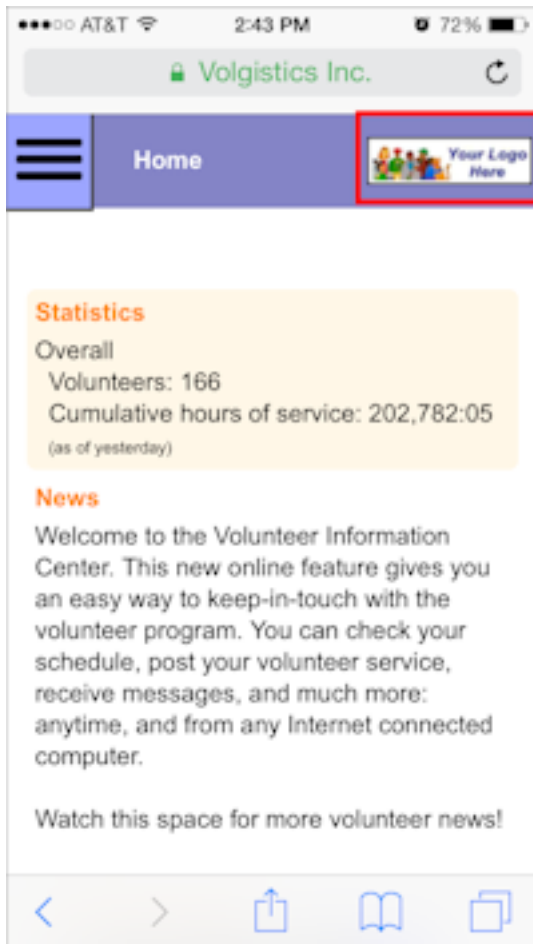

## Volunteers and coordinators can...

By default this box is checked so that your volunteers and Coordinators will see the option to sign-in to the mobile friendly view of VicNet at the volunteer portal when they are using a device such as a mobile phone or tablet. If you do not want your volunteers and Coordinators to be able to access the mobile view, uncheck the box in front of *Access the mobile version of VicNet* and then click the **Save** button.

## Organization Logo (specifically for mobile VicNet)

You will need to upload a separate image file if you want your organization's logo to appear on the mobile view of VicNet. When a file has been uploaded, it will appear in the top right corner of the VicNet page.

You may want to reduce the dimensions and optimize your organization's logo file that was used for the *full-site* version. This is because larger image files increase loading times, plus your volunteers and Coordinators may pay for their data plans with their wireless carrier. Most graphic or photo editing software programs or services have options to change a file's dimensions and to optimize the file when it is saved. Optimizing the file reduces the amount of resources required to store the file, as well as the bandwidth required to transmit the file.

There are not any height or width restrictions for the images, but the file size itself cannot exceed 48 KB. Acceptable file formats for the logo are GIF, JPG, or PNG.

To upload an image file:

1. Click the **Choose File** or **Browse** button.
2. Select the image file you want to upload and click the **Open** button.
3. Click the **Upload** button.

## Colors

This section allows you to customize the colors used for the VicNet display when it is viewed from a mobile device. The default values use the colors from the Volgistics system. You can optionally choose a different color for the different elements of the VicNet mobile display. If your organization has a web master who maintains your website, you may be able to contact him or her to find the values to enter to customize the display with your organization's color schemes.

Enter font colors in RGB color notation (see "*A note about RGB color notation*" below for a description of RGB color notation). You can also click in the field to bring up a color picker that you can use to select the color.

### A note about RGB color notation

There are several fields on this page for setting background and font colors. Enter color information in these fields using standard hexadecimal RGB color notation. This is the color notation used in HTML (Hypertext markup language) to specify color attributes for web page elements. Hexadecimal RGB color notation includes the '#' character followed by a six character RGB color value in hexadecimal notation (hex).

These are some examples of this notation:

#FFFFFF (white)

#000000 (black)

#FF0000 (red)

#00FF00 (green)

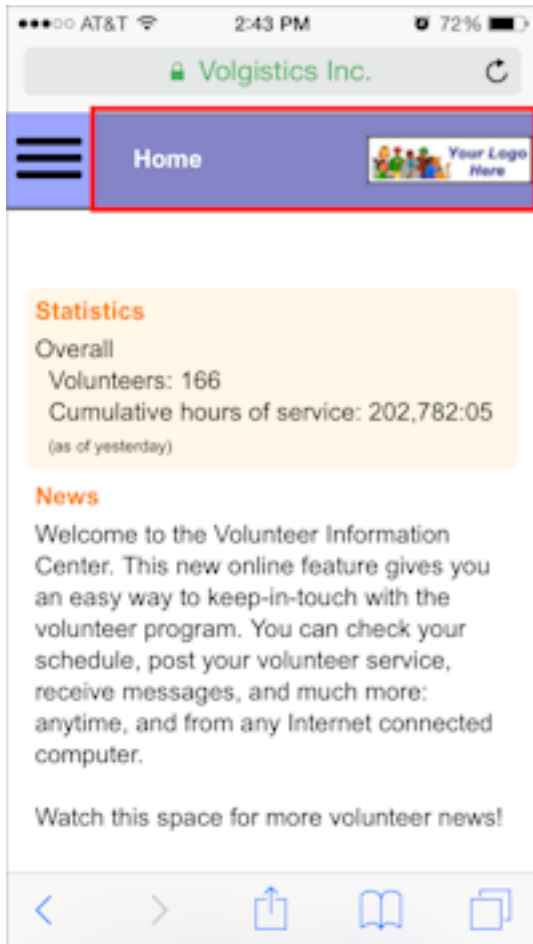

If you click on the field itself, a color picker will appear that makes it easy to select the color you need. You can also learn more about hexadecimal RGB colors for websites at [w3schools.com](http://w3schools.com)

Your color choices will be shown in the mock-up section to the right as you make the changes. You can also preview the mobile display for volunteers or Coordinators. [Help topic 2159 \[pg:1705\]](#) shows how to do this. *Remember to click the **Save** button when you are done selecting your color choices!*

Here is more information about what each color selector field will change for the VicNet mobile display:

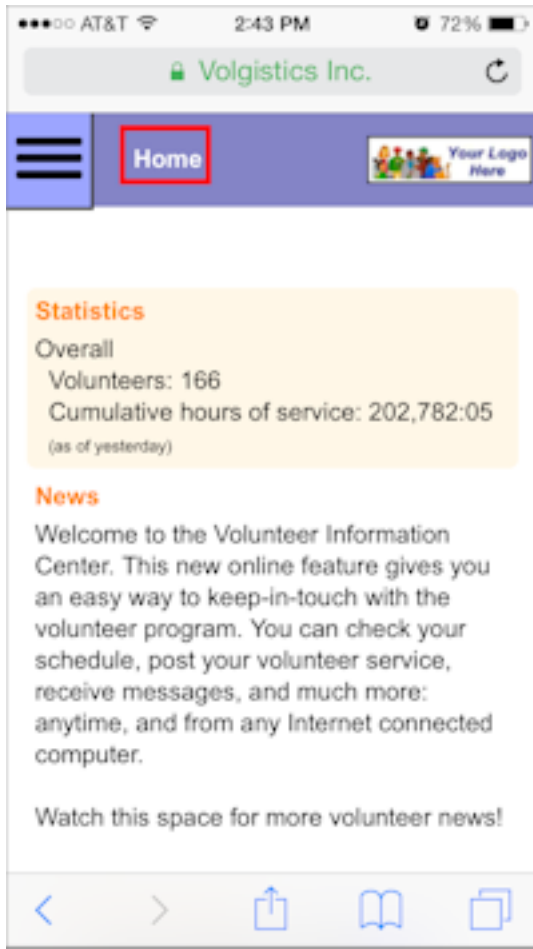

### Header section: Background color

This controls the color used in the header at the top of the screen.

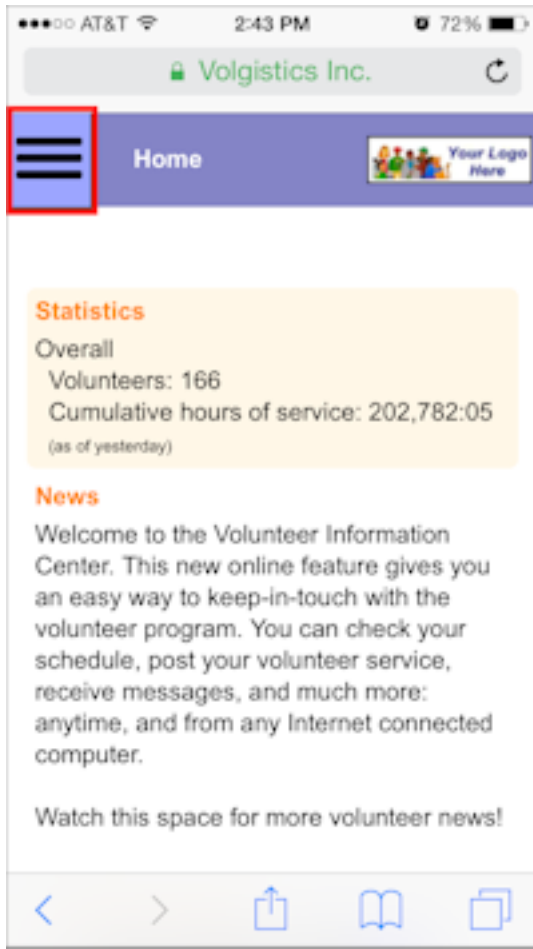

**Header section: Font color**

This controls the color of the text that appears in the header at the top of the screen.

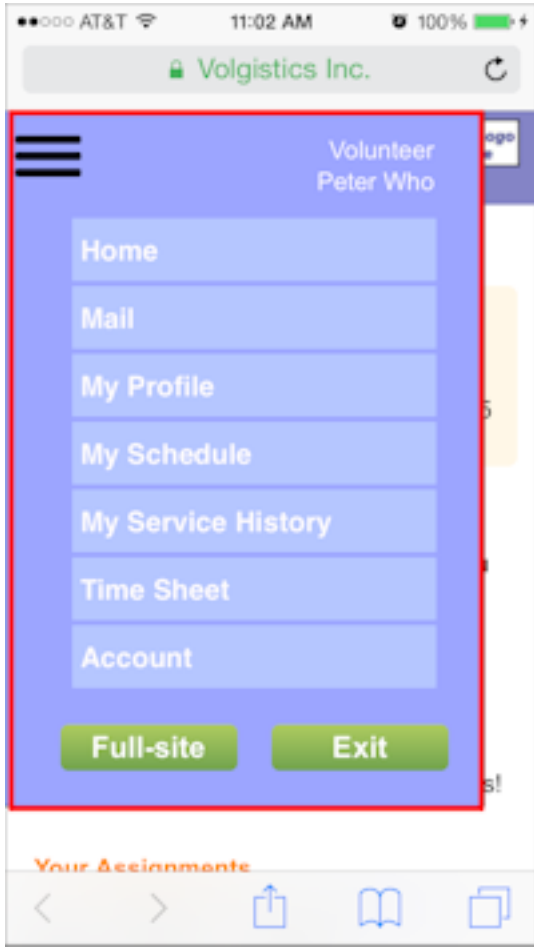

**Expanding menu: Background color**

This controls the color of the menu users tap to see their choices to navigate. When the menu is collapsed, this is the small box in the top left corner of the header section.

When the user taps the menu, it expands to fill more of the screen so users can tap the area they want to navigate to.

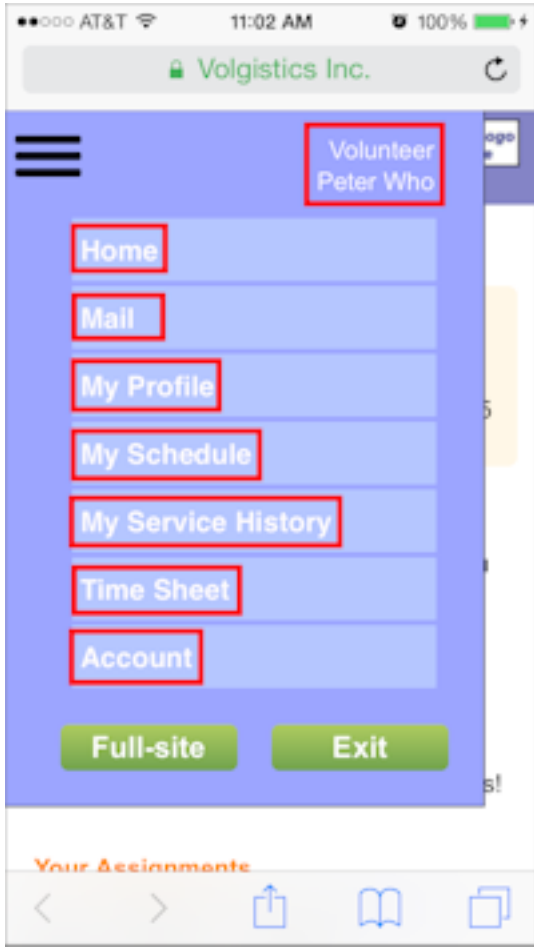

**Expanding menu:** Background color of buttons

This controls the color of the buttons on the expanding menu.

**Expanding menu: Button font color**

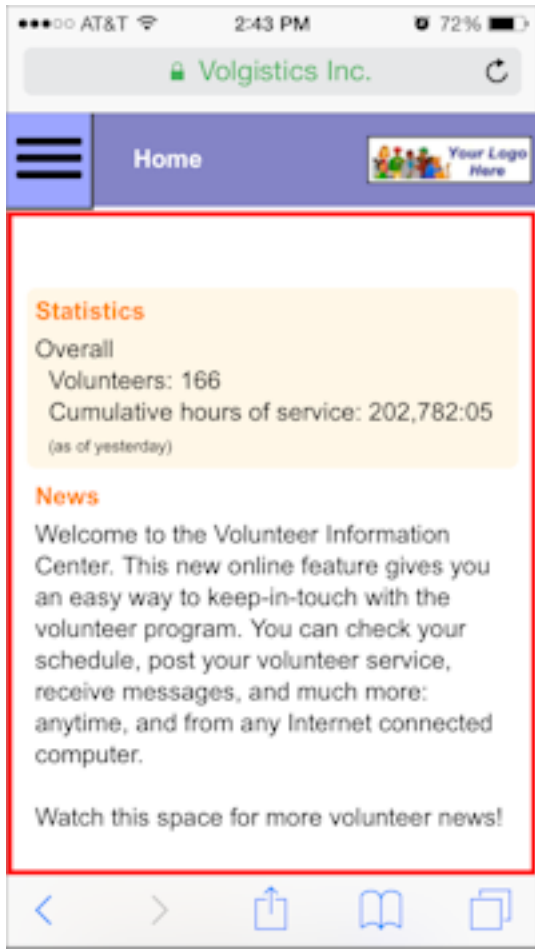

This controls the color of the text labels on the buttons that users tap to navigate to a certain area. It also controls the color of the text used for the user identification label.

**Main section:** Background color

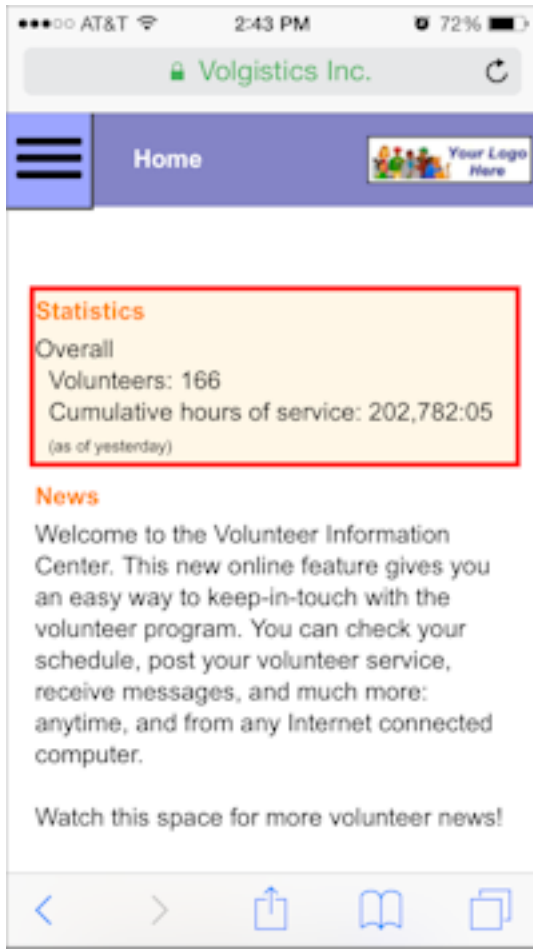

This controls the color of the section that appears under the top header.

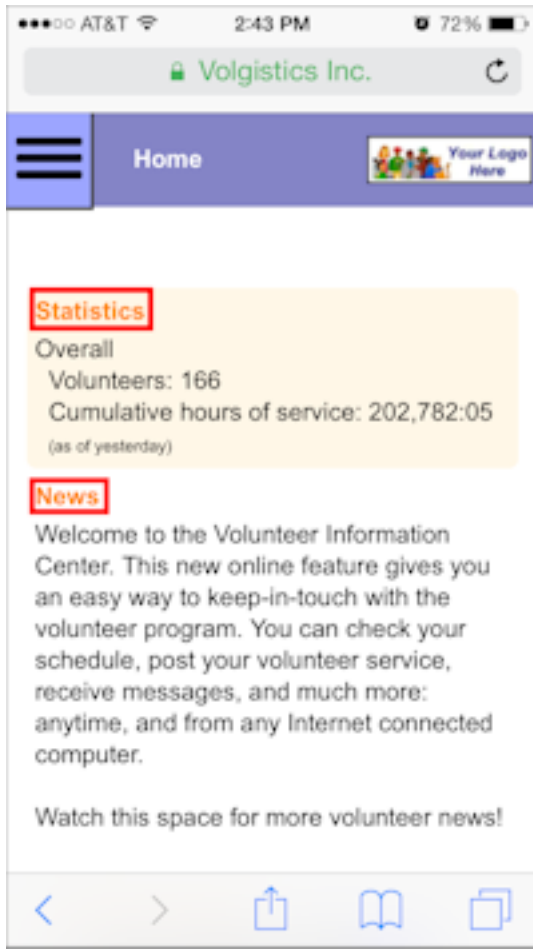

**Main section:** Background color of boxes

This controls the color used in the background on any boxes that appear in the main section.

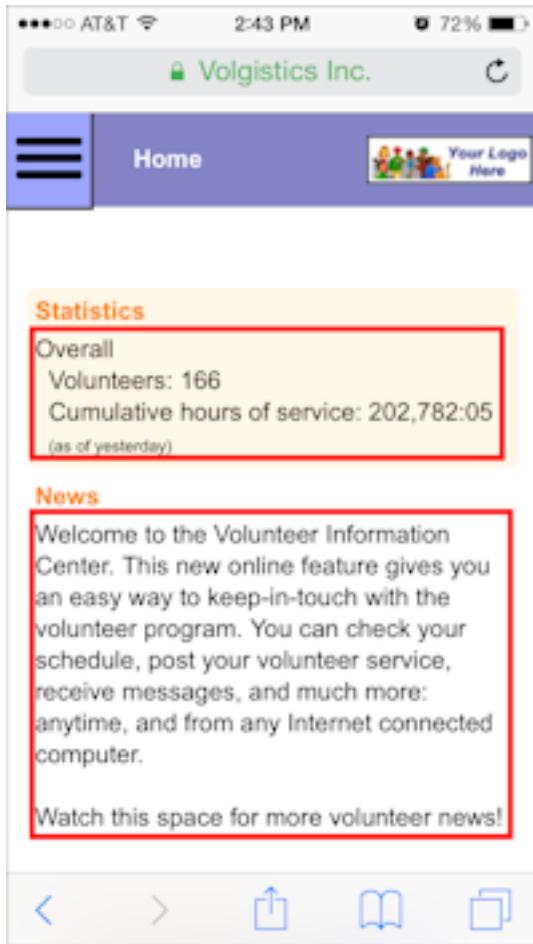

**Main section:** Color of heading fonts

This controls the color of the text used for each section's heading.

**Main section:** Color of body fonts

This controls the color of the text used for the body paragraphs in the sections.

## Expanding Menu Items

The names for the items in the expanding menu are originally taken from the *Mobile text for tab* field on each tab's setup page. The seven default tabs for volunteers are:

- Home
- Mail
- My Profile
- My Schedule
- My Service History
- Time Sheet
- Account

**Coordinators** [pg:0163] may have access to the Home, Mail, My Schedule, and Account tabs, as well as a Volunteers tab.

**Please note:** The list will contain text for each item even though you may have a tab setup so that the users do not have access to the tab in the full-site view of VicNet. If this is the case, the item will not appear in the Expandable Menu in the user's mobile view for VicNet.

If you already have a different name recorded in the *Mobile text for tab* field on the tab's setup page, this will appear instead of the default text.

You can change an item in the expandable menu by placing your cursor in the field, deleting the current text, and then entering in the new text. Be sure to click the **Save** button to keep your changes.

**Please Note:**

The text entered in the

*Expanding Menu Item*

fields will not change the name of the tabs that appear when volunteers and Coordinators view the

*full-site*

view of VicNet. Entering a label here will change the text displayed in the Expandable Menu when users view the mobile version of VicNet, as well as the name used for screen-readers and alternate (alt) text in the full-site view.

For the

*full-site*

view of VicNet, the tab names are actually part of the image files used for each tab. If you'd like to change the tab name for the full-site view, you will need to upload new image files for the tab that have the new tab name you'd like. You can find more information on this in [help topic 1075 \[pg:1451\]](#)

*To help prevent confusion for your users, we recommend that the expanding menu items in the VicNet mobile view match the names on the tab graphics used for the full-site view of VicNet.*

**Buttons**

Organizations may customize any of the graphic images for the buttons that appear in the mobile view of VicNet. Volgistics does not include any graphic or image editing software, but there are a variety of sources you can use to create graphic images. These include programs that come with your operating system, software you purchase or download from software vendors, and online image editing or button generator programs.

Some general things to keep in mind if you want to customize the graphic images are:

File Formats

Custom images must be in one of these graphic file formats: GIF, JPG, or PNG. You will get the best results with files saved in PNG format.

Maximum Dimensions

Each graphic image has a maximum height and width in pixels. Your files can be a maximum of 350 pixels wide and 100 pixels high. You may need to preview the mobile view of VicNet to make sure the button images look like you want them to. If they do not, you will need to re-size the image using whatever outside program you have for image files. After you do this, upload the re-sized image to Volgistics.

Maximum Size

To ensure fast load times for the VicNet mobile pages, each graphic image has a maximum image file size in bytes. The button images must be 6,144 bytes (6 KB) or smaller. When you save your files, most image editing programs have an option to optimize the file to reduce the file size.

### Background Color

Your custom images should either have a transparent background, or use the same background color as your forms. You can learn how to customize the color for the VicNet mobile view in the Colors section above.

### Graphic Image Rights

You can copy and modify the default graphic images that are part of Volgistics, as long as you use these images in Volgistics only. Volgistics does not grant rights to use its images for any other purpose, or for use outside of Volgistics.

If you're using graphic images you've obtained from other sources, you must be certain that you have the legal right to use those images. Unless an image is offered for use without restriction, most of the graphic images that appear on the web are protected by copyrights. Be certain you have the proper rights before installing custom graphics you have obtained from others.

### Installing New Button Graphics

Once you have your new image file for the button you want, you can install it by:

1. Click on the button that you would like to replace.
2. Be sure the radio button is on *Install a new graphic*, and click the **Choose File** or **Browse** button.
3. Find the file you want to upload and select it. Then click the **Open** button.
4. Click the **Install** button.

## **Instructions**

The instruction fields that appear on the tabs in the *full-site* view of VicNet will be used for the instruction fields on the mobile view also. You may want to modify the instructions that are used so that they apply to both instances.

The Expanding Menu Items section above lists the possible tabs for volunteers and Coordinators. To review the instruction fields and edit them if necessary, you will need to go to the setup page for the tab that you want to review and/or modify. Here is an example of how to do this for the *Home tab*:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicNet link.
3. Select the *Home tab* (or whichever tab you want to review and/or modify).
4. Review the content in the instruction fields and make sure it makes sense for users in both the full-site and mobile views. If it does not, make any changes necessary. It may help to preview the mobile and regular views volunteers and Coordinators see. [Help topic 2159 \[pg:1705\]](#) shows how to do this.
5. Click the **Save** button to keep the new content in the instructions fields if you made changes.

---

## VicNet Home Tab

Help topic 2019

Added or revised 12-19-2016

---

When volunteers and Coordinators visit [VicNet \[pg:1724\]](#), the first tab they see is the Home tab. The Home tab serves as a general information page. You can use the Home tab to communicate with volunteers and [Coordinators \[pg:0163\]](#); post volunteer news; promote your organization's activities; provide links to newsletters, policies, or forms; and even advertise if you want to.

Because the Home tab is accessible only to registered volunteers and Coordinators through VicNet, you can use it to publish information or links that you might not want to make generally available to anyone on the Internet.

This help topic explains what features are available on the VicNet Home tab and how to customize them. You customize the VicNet Home tab on the VIC Home Tab setup page. If you're not already on this page (and you have access to [Setup \[pg:0887\]](#)) you can get to the VIC Home Tab setup page by choosing Setup from the menu, selecting VicNet, and then choosing the *Home tab* link.

Click a link in the Contents box below to be taken directly a section of the help topic.

### Contents

News

Assignments

Link Buttons

Statistics Box

Message Boxes 1 - 4

Document Link Boxes 1 - 4

Instructions

[Mobile text for tab:](#)

At the top of the page before the

*News*

section you will see the

*Mobile text for tab*

field. This field shows the name that will be used for the expanding menu when volunteers use the mobile friendly version of VicNet. You can learn more about these settings in the *Expanding Menu Items* section of [help topic 1214 \[\\_\\_\\_\\_\\_\]](#).

The text in the *Mobile text for tab* field is also what is used in the *full-site* view if the user has a screen reader or has their web browser set up to show alternate (alt) text when their cursor hovers over the tab image.

Click the *Restore default* link to return the tab's alternate text to its default of "Home."

Note that the text entered in this field will not change the name of the tab in the

*full-site*

view because the name is actually part of the tab image file. Entering a label here will only change the text displayed in the box that appears on the screen when you hover the cursor over the tab name, and the name

displayed for the tab in the expanding menu for the mobile view of VicNet. To change the actual appearance of the tab in the full-site view, you will need to upload a new graphic file for the "Home" tab. You can use the [VIC Graphics \[pg:1451\]](#) setup page to upload a new tab image.

## News

Use the *News* section to post a general news announcement. All volunteers and Coordinators see the News section on the Home tab.

### Omit News

Check *Omit news* if you do not want the News section to appear on the Home tab.

### Heading

Enter the heading you want to appear above the News section. The default heading is "News."

### Text

Use this space to type (or [paste \[pg:0063\]](#)) the news you want to appear. To change an existing news message, delete the existing message and then type (or [paste \[pg:0063\]](#)) the new message in this space.

### Column

Choose which column you want the News section to appear in on the Home tab. Your Home tab may have up to three columns: left, center, and right.

### Border

Check *Border* if you want this section to have a border around it.

## Assignments

Your VicNet Home tab may optionally include a box that shows volunteers a list of their assignments. This section is purely informational. Volunteers cannot change their assignments here. It is simply a reminder of what the volunteer's assignments are in your organization.

**Please note:** This list is populated based on the assignments the volunteer has a [Role \[pg:0103\]](#) in. This is different than assignments the volunteer is scheduled in. In many cases volunteers are scheduled in assignments they have a Role in, but not always. A volunteer may have a Role in an assignment but not be scheduled in that assignment, or vice versa.

This box will not appear for Coordinators because they cannot have a Role in an assignment.

### Omit Assignments

Check *Omit Assignments* if you do not want the Assignments section to appear on the Home tab.

### List assignments for these Roles

The Assignments section will list the assignments a volunteer has if their [Role \[pg:0103\]](#) in an assignment is one of the Roles you check here. For example, if you want the Assignments section to list only the assignments for which a volunteer is *assigned*, check only the *Assigned* Role here. You set a volunteer's Role in an assignment on the [Service tab \[pg:0138\]](#) tab in their volunteer record.

## Column

Choose which column you want the Assignments section to appear in on the Home tab. Your home tab may have up to three columns: left, center, and right.

## Border

Check *Border* if you want this section to have a border around it.

## **Link Buttons**

Link buttons provide an alternate way for volunteers and Coordinators to navigate within Volgistics from the Home tab. Check any of the optional link buttons that you want to appear on the Home tab. The possible link buttons are:

- Check your schedule: takes the volunteers and Coordinators to the [My Schedule \[pg:1453\]](#) tab.
- Post your hours: takes the volunteer to the [Time Sheet \[pg:1460\]](#) tab. This button is not available for Coordinators because they cannot access the Time sheet tab. It will also not appear if the volunteer cannot access the Time Sheet tab.
- Check messages: takes the volunteers and Coordinators to the [Mail \[pg:0315\]](#) tab.
- Sign-up: takes the volunteer to the [My Schedule \[pg:1494\]](#) tab where they can sign-up for assignments. This button is not available for Coordinators because they cannot self-schedule for assignments.
- Text message opt-in: takes the volunteers and Coordinators to the *Account* tab so they can [opt-in to text messaging \[pg:0323\]](#). You will not be able to select this link button if your account does not have [text messaging enabled \[pg:0321\]](#).

## Column

Choose which column you want the Link Buttons to appear in on the Home tab. Your home tab may have up to three columns: left, center, and right.

## **Statistics Box**

The Statistics box provides a "score-board" that shows the total number of volunteers and the total number of hours recorded for your entire organization. There is not a way to make this show statistics for just the individual volunteer. However, volunteers can see their individual statistics on the *My Service History* tab in VicNet. You can use the Statistics box as a motivational tool by showing the growth of your volunteer program.

## Omit Statistics box

Check *Omit Statistics box* if you do not want the Statistics box to appear on the Home tab.

## Include:

Check the statistics you want to include in the Statistics box. The *volunteer count* is the total number of [non-archived \[pg:0709\]](#) records in your database. *Cumulative hours* are the sum of all of the hours recorded in your database as of yesterday.

## Column

Choose which column you want the Statistics Box to appear in on the Home tab. Your home tab may have up to three columns: left, center, and right.

## Border

Check *Border* if you want this section to have a border around it.

## **Message Boxes 1 - 4**

Your VicNet Home tab may include up to four Message boxes. These are flexible graphic and text boxes you can use for a variety of purposes, such as promoting your organization's activities, posting advertisements, creating links to other web sites, and more. Each message box may include an optional heading, text message, graphic image, and link.

## Omit Message box

Check *Omit Message box* if you do not want this Message box to appear on the Home tab.

## Heading

If you want this Message box to include a text heading, enter it here. Leave this field blank if you do not want a heading.

## Top text

If you want this Message box to include a text message, enter (or **paste [pg:0063]**) it here. If this Message box will include a graphic image, the text you enter here will appear above the image.

## Graphic image

If you want this Message box to include a graphic image, click the **Change image** button to load the image file. If you do not want this Message box to include a graphic image, check the *Omit the image* checkbox.

Message box images must be in a GIF, JPG, or PNG file. The image may up to 500 pixels high and 200 pixels wide, with a maximum file size of 20 Kb.

## Bottom text

If this Message box will include a graphic image, and you want a message to appear below the graphic, enter (or **paste [pg:0063]**) the text you want to appear below the graphic here.

## Link

If you want this message box to be an HTML link to another web page, enter the complete web site address you want to link to in this field. If a visitor clicks the heading, text, or image in this Message box, a new browser window or tab will open to the web page you specify here. This is an example of a complete web site address:

<https://www.volgistics.com/Free-Trial.htm>

Use this capability to create HTML links to web pages on your own web site, link to web pages for training, or to create links to an advertiser's web site if you choose to use a Message box for an advertisement.

Leave this field blank if you do not want this Message box to link to another web page.

## Column

Choose which column you want each Message box to appear in on the Home tab. Your home tab may have up to three columns: left, center, and right.

## Border

Check *Border* if you want this Message box to have a border around it.

## **Document Link Boxes 1 - 4**

Your VicNet Home tab may include up to four Document link boxes. Each document link box may contain one or more HTML links to [PDF documents \[pg:0449\]](#) you've uploaded to the [Documents tab \[pg:0388\]](#) in your Volgistics Mailbox. Use link boxes to post links to current or past issues of volunteer newsletters; forms; policies and procedures; and other related documents you want to make available to volunteers and Coordinators from the Home tab as PDF files.

Instructions for uploading PDF documents are available in [Help Topic 2142 \[pg:0388\]](#). You must upload the PDF document(s) before you can create a link to that document from the Home tab.

Volunteers must have Adobe Reader to view PDF files. Adobe Reader is available free-of-charge from Adobe, and comes pre-installed on most computers. Document link boxes may be used to provide links to files in the PDF format only.

## Omit this box

Check *Omit this box* if you do not want this Document link box to appear on the Home tab.

## Heading

If you want this Document link box to include a text heading, enter it here. Leave this field blank if you do not want a heading.

## Text

If you want this Document Link box to include instructions or a text message, enter (or [paste \[pg:0063\]](#)) it here.

## Column

Choose which column you want this Document link box to appear in on the Home tab. Your home tab may have up to three columns: left, center, and right.

## Border

Check *Border* if you want this Document link box to have a border around it.

## Document links:

If you previously added links for this Document link box, they are listed here.

For each existing link you'll see the link text and the name of the PDF file that the link is to. Click the **Remove** button next to an existing link if you want to remove that link from this Document link box. If this Document link box has more than one link, click the **Move up** button if you want to move a link up one item on the list of links. If this Document link box has more than one link, click the **Move down** button if you want to move a link down one item on the list of links.

## Add a new link:

To add a new link to this Document link box:

1. Enter the text for the link in the *Link text* field. For example, if you want the link to read "Fall 2016," enter "Fall 2016" here.
2. Choose the name of the PDF file you want to link to from the PDF File dropdown list. For example, if you want this link to go to your Fall 2016 volunteer newsletter, select the PDF document that contains your Fall 2016 newsletter. You must have previously uploaded a PDF document in order to choose it from this dropdown. Instructions for uploading PDF documents are available in [Help Topic 2142 \[pg:0388\]](#).
3. Click the **Save** button beneath the PDF File field to save the new link.

## Instructions

You can optionally include text instructions for the Home tab. Your instructions may appear at either the top or the bottom of the tab.

### Display these instructions on the Home tab for volunteers:

Use this space to enter (or [paste \[pg:0063\]](#)) any Home tab instructions you'd like to appear for *volunteers* who visit the Home tab.

### Locate these instructions at the...

Choose where you would like your volunteer instructions to appear on the Home tab.

### Display these instructions on the Home tab for Coordinators:

Use this space to enter (or [paste \[pg:0063\]](#)) any Home tab instructions you'd like to appear for *Coordinators* who visit the Home tab.

### Locate these instructions at the...

Choose where you would like your Coordinator instructions to appear on the Home tab.

Except for the Assignments section (which lists a volunteer's own assignments), and the Instructions section, all volunteers and Coordinators see the same Home tab when they visit VicNet. If you have information you want to send to certain volunteers only, [send a VIC mail message \[pg:0404\]](#) to just those volunteers and they will see your message on the VicNet Mail tab.

---

## Creating Links to VicNet

Help topic 2153

Added or revised 02-02-2010

---

Note: If you work with a web site developer, consider printing a copy of this help topic to give to them. It contains instructions they need to add VicNet to your web site.

Volunteers access [VicNet \[pg:1724\]](#) through a link on your organization's own web site. This brings traffic to your web site, and it's the logical place on the Internet for your volunteers to go to when they want to interact or check their records.

You can integrate VicNet with your own web pages so it appears to volunteers and other visitors to be part of your web site. You can also 'brand' (call) VicNet something other than 'VicNet' or the 'Volunteer Information Center' if you choose to, although you are welcome to use these terms if you'd like. You can also customize the appearance of VicNet by setting your own fonts, background colors, and graphics; so it matches the graphic style of your web site.

Adding VicNet to your web site can be as simple as adding a single HTML "hyperlink" to a web page. You can locate your link anyplace you'd like on your web site; and you can have multiple links to VicNet from several different locations on your web site if you want to.

You customize the way VicNet looks and works from within the Volgistics program. This means that once you've added a VicNet link to your web site, you can customize or alter the way VicNet works without having to make any changes to your web site. The person who maintains your web pages only needs to add the link: they do not necessarily need to be involved in customizing VicNet.

### **Full-page vs. Embedded**

There are two ways to add VicNet to your web site, the 'Full-page' method and the 'Embedded' approach. Each has advantages.

With the full-page method, VicNet fills an entire browser window. You can open VicNet in the same browser window as your web site; or you can open VicNet in a new browser window on-top of the window that contains your web site. This is the easiest way to add VicNet to your web site; however it may not appear as integrated as the embedded approach. To add VicNet using the Full-page method you (or your web developer) simply add a hyperlink to your web page (something that should not normally take more than a few minutes to complete).

With the embedded approach, you open VicNet in an HTML "frame" (or "Iframe"), with other elements of your own web site displayed in other frames above, beside, and/or below the VicNet form. This provides greater integration than the full-page method because the visitor will continue to see parts of your web site – such as menus and borders – while they're using VicNet; however it requires the use of HTML 'frames' on your web pages, and more work on the part of the person who develops your web site.

### **Important**

The HTML links described in this help topic include your account's *public account identifier* **not** your nine digit *account number*. Be sure you include your *public account identifier* and **not** your nine-digit *account number* where indicated in these links.

The *public account identifier* is different than your nine digit *account number*. The public account identifier is used in this link instead of your actual nine-digit account number for security purposes (using this public account identifier keeps your account number private).

### **Creating HTML links to VicNet**

To add VicNet to your web site using either the full-page method or the embedded approach you add an HTML hyperlink to the following Internet location:

<https://www.volgistics.com/ex/portal.dll/?From={public account identifier}>

You replace {public account identifier} with your Volgistics account's "public account identifier."

To find your public account identifier:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select VicNet.
3. Choose [Ground Rules \[pg:1447\]](#).
4. Your public account identifier is listed near the bottom of the page.

For example, if your public account identifier were "1234," links to VicNet for your account would be

<https://www.volgistics.com/ex/portal.dll/?From=1234>

When creating HTML links to VicNet, be certain you type the web address exactly as shown above (except with your own public account identifier rather than 1234) . The link won't work if it has misspellings, extra spaces, or it's missing *your* public account identifier.

### Full-page links

You can create links to VicNet that will open in the full-page mode two ways. The first way, shown in the example below, opens VicNet in a new browser window. When a volunteer is finished and closes the VicNet window, they will return to your own web page.

```
<A HREF="https://www.volgistics.com/ex/portal.dll/?From=1234" target="_blank">Volunteer Information Center</A>
```

The hyperlink show above will appear on your web page like this:

[Volunteer Information Center](https://www.volgistics.com/ex/portal.dll/?From=1234)

You can replace the words 'Volunteer Information Center' in this link with any other words you'd like; such as 'click here to check your records,' or 'Volunteers login here.'

If you want your VicNet link to be a 'clickable' image rather than words, that's easy too. Just add an image to the link using an HTML <IMG> tag, as shown in this example:

```
<A HREF="https://www.volgistics.com/ex/portal.dll/?From=1234" target="_blank"><IMG SRC="{path to any image you choose}"></A>
```

The second way to create links to VicNet in the full-page mode is to open VicNet in the same browser window as your own web page. You can configure your online form return navigation settings so a volunteer will return to your web site when they close VicNet. Here's an example of this kind of link:

```
<A HREF="https://www.volgistics.com/ex/portal.dll/?From=1234">Volunteer Information Center</A>
```

### Embedded links

If you want to create links to VicNet that are embedded in your own web page, simply include the following flag in the url:

**&Embedded=on**

For example:

**<https://www.volgistics.com/ex/portal.dll?From={public account identifier}&Embedded=on>**

Once again, be sure to replace {public account identifier} with your Volgistics account's "public account identifier." If your public account identifier were "1234" for example, embedded links to VicNet for your account would be

**<https://www.volgistics.com/ex/portal.dll?From=1234&Embedded=on>**

You would typically use the embedded link style when opening VicNet inside an HTML 'frame' or 'iframe.' An example of how your VicNet link would appear as the source for a frame is shown here:

**<FRAME SRC="https://www.volgistics.com/ex/portal.dll?From={public account identifier}&Embedded=on">**

How to build web pages that contain frames is beyond the scope of this help system, however these are a few tips:

- Use a borderless frame
- Set the padding style for the frame so the form is offset from the frame edges. In this example, VicNet will appear with a 10pt margin on each side and no frame border.

**<FRAME SRC="https://www.volgistics.com/ex/portal.dll?From={public account identifier}&Embedded=on" STYLE="padding: 10pt; border: 0pt;">**

---

## VIC Self-Scheduling

Help topic 2170

Added or revised 04-07-2017

---

With Volgistics, you can allow your volunteers to schedule themselves through the [VicNet \[pg:1724\]](#) and/or the [VicTouch \[pg:1778\]](#) module. This help topic has information on how to setup and manage this feature in your account. There are two ways to display self-scheduling: the list format and the calendar format. With VicTouch, only the calendar format is available.

### **Please Note:**

*The calendar and list format options are only available for the full-site view of VicNet. This is the view shown when users access the system from a desktop or laptop computer. If the user is accessing the system from a mobile device (such as a smart phone or tablet), and you have VicNet mobile enabled, your selections on the VIC Self Scheduling setup page will be changed to a mobile friendly format. You can learn more about VicNet Mobile in [help topic 1214 \[pg:1471\]](#).*

If you're not already on the VIC Self Scheduling setup page, you can get there by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *VicNet* or *VicTouch* link.
3. Select *Self scheduling*

You can click a link in the *Contents* box to go directly to a section of the help topic.

## **Contents**

### Allow volunteers to self-schedule

#### Offer schedules using a list format

List schedule openings between these dates

Volunteers must sign up for a minimum of (X) shifts between these dates

Volunteers cannot sign-up for more than (X) shifts between these dates

#### Offer schedules using a calendar format

The *Help Wanted* Icons Do Not Appear on the Calendar

Limit volunteers to scheduling themselves for no more than (X) shift(s) per day

Limit the number of shifts a volunteer may schedule themselves for through self-scheduling to a total of (X) shift(s)

How far in advance should volunteers be allowed to schedule themselves?

Allow volunteers to self-schedule on holidays in assignments that permit self-scheduling for "any times?"

Show the number of volunteers still needed for each opening

Confirmation Page

### Allow volunteers to remove themselves from schedules

Allow volunteers to remove themselves from the schedule up to (X) day(s) before the date scheduled

### Appearance in VicNet

Sign-up box heading

Large instruction

Small instructions

Confirmation heading

### **Allow volunteers to self-schedule**

This checkbox determines whether or not the self-scheduling features are available to your volunteers. When this checkbox is checked, volunteers can access the self-scheduling features through VicNet and/or VicTouch. When this checkbox is not checked, volunteers do not have access to the self-scheduling features and cannot schedule themselves.

The remaining settings on this page will have no effect if this checkbox is not selected.

### **Offer schedules using a list format**

This option is appropriate for organizations that want volunteers to see a list of [openings \[pg:0776\]](#) between a certain range of dates. It is particularly useful for special events, performing arts centers and other customers who want volunteers to see a list of possible openings by date. Here is an example of how the list format looks for volunteers:

Volunteer information for **Elsa Raven**

- Home
- Mail
- My Profile
- My Schedule**
- My Service History
- Time Sheet
- Account

**Instructions**

Your regularly scheduled volunteer shifts appear on the calendar. Click the "Next month" or "Previous Month" buttons to view a different month. For a printable view of your schedule click the "Printable view" button.

**Sign-Up!**

Schedule yourself for volunteer duty

	Date	Assignment	From	To	
<input type="checkbox"/> <a href="#">Check to sign-up</a>	October 25, 2016 (Tuesday)	Event Setup [Hill Valley Preservation Society Fundraiser]	12:00 p	1:30 p	Click the "Remove me" button to remove yourself from the schedule for a selected assignment and date
<input type="checkbox"/> <a href="#">Check to sign-up</a>	October 25, 2016 (Tuesday)	Event Tear Down [Hill Valley Preservation Society Fundraiser]	5:00 p	6:30 p

[Continue](#)

Click Continue to schedule yourself for the assignments and dates selected above

[Printable view](#)

Volunteers check the box by each opening they wish to fill and then click the **Continue** button to schedule themselves. You can setup an alert to go to the [In Box \[pg:0303\]](#) tab of your Volgistics mailbox, and/or to a [Coordinator's \[pg:0163\]](#) email address, to let you know the volunteer added herself to the schedule. This is done on an assignment-by-assignment basis on the [Rules tab \[pg:0781\]](#) of the assignment record.

Some important things to keep in mind when using the list format are:

- The list format will only work with [VicNet \[pg:1724\]](#). If you use both VicNet and [VicTouch \[pg:1778\]](#), volunteers will be able to see their schedule in a calendar format on VicTouch, but they will not be able to self-schedule through VicTouch.
- Volunteers will only see openings in assignments where they meet the criteria set on the [Rules tab \[pg:0781\]](#) of the assignment. If they do not meet the Rules tab criteria, they will not see an option to self-schedule for the assignment.
- With the list format, volunteers can only self-schedule for [openings \[pg:0776\]](#). Even if the [Rules tab \[pg:0781\]](#) of an assignment is setup to restrict self-scheduling to *Any times*, this setting will be ignored. If the assignment has openings in the date range selected, volunteers will be able to self-schedule for the openings.
- Volunteers can select multiple openings to fill at the same time using the list format. They will check the box by each opening they want to self-schedule for, and then click the **Continue** button to self-schedule for all of the openings that are checked.
- Volunteers will not be able to see details about the assignments with the list format. In the calendar format, volunteers can click a link to see information such as the assignment's address or the assignment's description.

- Volunteers will not see a confirmation page with assignment information with the list format. In the calendar format, a confirmation page with assignment details can be shown after volunteers self-schedule.
- Group leaders for [group records \[pg:1909\]](#) will not be able to fill multiple opening slots when self-scheduling is in list format. If this is important, you will need to use the Calendar format for self-scheduling.

Information about each setup option for the list format appears below:

#### List schedule openings between these dates

Enter the date range you want schedule openings to show for. *Please note that if the range is over one month long, volunteers will initially only see openings for the first month. To see openings in the latter months, they will need to click the link for that month.*

#### Volunteers must sign up for a minimum of (X) shifts between these dates

You can require your volunteers to sign-up for *at least* a certain number of shifts in the date range you select. If you want to enforce this, select the minimum they must sign-up for from the dropdown list.

This can come in handy in a circumstance such as if you run a festival and give volunteers free admission in exchange for a certain number of shifts worked. Volunteers will not be able to complete self-scheduling through VicNet until they have selected the number of shifts you specify when they are using the full-site view of VicNet.

#### **Please note!**

This setting is not enforced in [VicNet Mobile \[pg:1471\]](#). When volunteers are signed-in on a mobile device, they will see a warning that they must select a certain number of shifts *but they will still be able to schedule themselves for fewer shifts*. If enforcing this setting is important, you will need to disable VicNet Mobile so volunteers will see the full-site view even if they are signed-in on a mobile device.

#### Volunteers cannot sign-up for more than (X) shifts between these dates

You can prevent your volunteers from signing-up for *more than* a certain number of shifts in the date range you select. To do this, select the maximum number of shifts you want to allow from the dropdown list.

This can come in handy in situations such as if you want all volunteers to have an equal opportunity to sign-up, or you want to prevent possible "burn out" caused by volunteers serving too much. Volunteers will not be able to schedule for more than the maximum in both the full-site and the mobile view of VicNet.

#### **Offer schedules using a calendar format**

When this option is selected, volunteers view the schedule in a monthly calendar format. The calendar format works in both [VicNet \[pg:1724\]](#) and [VicTouch \[pg:1778\]](#) except where noted. VicNet is shown in the examples because it is used more routinely for self-scheduling.

The calendar shows the current month by default, but if you want the calendar to show a future month you can change the default on the [Scheduling Ground Rules \[pg:1392\]](#) page.

With the calendar format, volunteers see any assignments they are already scheduled for on the calendar. A

*Help Wanted*

icon will appear on dates where there is a need for volunteers and the volunteer matches the requirements set on the [Rules tab \[pg:0781\]](#) of the assignment.

<a href="#">Prev month</a>		<a href="#">Next month</a>		<b>October 2016</b>

30 	31					

Clicking on a date where there is a

*Help Wanted*

icon brings up the daily view of the schedule where volunteers can schedule themselves. You can setup an alert to go to the [In Box \[pg:0303\]](#) tab of your Volgistics mailbox, and/or to a [Coordinator's \[pg:0163\]](#) email address, to let you know the volunteer added herself to the schedule. This is done on an assignment-by-assignment basis on the [Rules tab \[pg:0781\]](#) of the assignment record.

Depending on your account's settings, the volunteers can also remove themselves from the schedule, see how many volunteers are still needed to fill the opening, see [other volunteers who are scheduled \[pg:1453\]](#), and/or click the *Description* link to view details for the assignment such as a job description, address, and phone number.

## Calendar view

In VicNet, group leaders for [group records \[pg:1909\]](#) will see an additional option to select how many group members will be serving after they click the button to schedule. You can find more information on this in [help topic 1198 \[pg:1673\]](#). *This option is not available in VicTouch.*

If there are many opportunities for the volunteer to self-schedule, a volunteer may see *Help Wanted* icons on almost every calendar date. In this case, VicNet offers a way to filter the calendar to show the icons on dates where there are openings in a particular assignment. To do this, the volunteer selects the name of the assignment they wish to see openings in from the *Sign-Up!* dropdown. *This option is not available in VicTouch.*

The screenshot shows a blue box with a 'HELP WANTED' icon and the text 'Sign-Up! We need volunteers on days that have the 'Help wanted' symbol. Click any of these days to learn more or to sign-up.' Below this is a dropdown menu labeled 'Show openings in' with the following options: 'All my assignments', 'All my assignments', 'Flyer Distribution', 'Master of Ceremonies', 'Ticket Booth', and 'Workshops'. The 'Flyer Distribution' option is highlighted. At the bottom of the box are 'Prev month' and 'Next month' buttons. Below the box is a calendar header with days of the week: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday.

The Appearance in VicNet section of this help topic has information on how to customize the text for the *Sign-Up!* box.

### Please note:

The assignments that appear in the dropdown list are all of the assignments where the volunteer meets the criteria for self-scheduling set on the [Rules tab \[pg:0781\]](#) of the assignment. This may, or may not, match the assignments where the volunteer has a [Role \[pg:0103\]](#) listed on the Service tab of her record.

## The

### ***Help Wanted***

#### **Icons Do Not Appear on the Calendar**

The Volgistics Support Team often answers [help inquires \[pg:0184\]](#) about why volunteers are not seeing the Help Wanted icons on the calendar. Here are four common reasons a volunteer will not see the icons:

1. There are not any opportunities to serve created in your account. If the [Rules tab \[pg:0781\]](#) of the assignment is configured for *Openings only*, there must be unfilled [openings \[pg:0776\]](#) on the assignment's schedule. If the Rules tab is configured for

*Any times on these days*

, there must be days of the week checked.

2. The volunteer must meet *all* of the requirements set on the [Rules tab \[pg:0781\]](#) of the assignment. For example, if the Rules tab is set to require the volunteer to have an Active [Status \[pg:1832\]](#), a [Role \[pg:0103\]](#) of Assigned or Substitute, and a [CPR Certified Flag \[pg:0212\]](#), only volunteers who meet *all three* requirements will see the Help Wanted icons.

3. The opportunities to serve are outside of the date range settings on the

*VIC Self Scheduling*

setup page. For example, let's say you allow volunteers to schedule themselves one month in advance. If a volunteer views the schedule on June 3rd, openings on July 18th will not show because they are more than one month away.

4. If your organization uses [Site Level Access \[pg:0092\]](#), volunteers must have the Site the assignment appears under listed on the [Core tab \[pg:1868\]](#) of their record in order to see the Help Wanted icons for the assignment. You can learn how to add Sites to the Core tab of a volunteer record in [help topic 2037 \[pg:0094\]](#).

Information about each setup option for the calendar format appears below:

#### Limit volunteers to scheduling themselves for no more than (X) shift(s) per day

It's sometimes desirable for an organization to limit the number of shifts volunteers are allowed to commit themselves to on a single day. This helps prevent well-meaning individuals from over committing, and to spread volunteer involvement over a broader group of people.

Check this option if you want to impose such a limitation, and then choose the maximum number of schedule shifts a volunteer should be allowed to commit herself to on a single day. Un-check this option if you do not want volunteers to have a limit to the number of shifts they can schedule themselves for on a single day.

For example, if you check this option and enter 2 shifts, a volunteer who has already scheduled herself for two shifts on a given date (such as June 3rd) will not be able to schedule themselves for any additional shifts *on that date*.

Checking this option does not limit the number of times a Volgistics [System Operator \[pg:0065\]](#) or a [Coordinator \[pg:0163\]](#) can schedule a volunteer on a single day (it only limits only what volunteers can schedule *themselves* for through the Volunteer Information Center).

Limit the number of shifts a volunteer may schedule themselves for through self-scheduling to a total of (X) shift(s)

This option gives you a way to limit the total number of shifts volunteers can schedule themselves for through self-scheduling. It differs from the previous option in that it limits the total number of schedule shifts volunteers may schedule themselves for overall, rather than on a specific date.

Check this option if you want to impose such a limitation, and then select the maximum number of shifts a volunteer should be allowed to sign-up for overall. Do not check this option if you do not want volunteers to have any limit to the number of shifts they can schedule themselves for.

For example, check this option and then choose "6" if you want to limit the total number of shifts a volunteer can schedule themselves for to six.

Checking this option does not limit the number of times a Volgistics [System Operator \[pg:0065\]](#) or a [Coordinator \[pg:0163\]](#) can schedule a volunteer from within the Volgistics system.

Reset this limit... If you choose to limit the number of shifts volunteers are allowed to schedule themselves for overall, you can use the *Reset this limit* setting to control when (if ever) this limit is reset. This option gives you control over the rate at which volunteers can self-schedule. There is not a way to reset the counter for just one volunteer, or a select group of volunteers. The options you select will impact all of your volunteer records.

Choose Daily if you would like the limit reset once per day. Volgistics automatically resets the limit for all volunteers during the overnight maintenance cycle. This takes place at approximately 3:00 am Eastern time.

Choose Monthly if you want the limit reset on a monthly basis. Volgistics automatically resets the limit for all volunteers on the 1st of each month.

Choose Never if you never want the limit reset automatically.

Click the **Reset it now** button if you want to manually reset the limit for all volunteers right now.

See [help topic 2171 \[pg:0780\]](#) for examples of how organizations might best tailor these controls.

How far in advance should volunteers be allowed to schedule themselves?

You can control how far in advance you would like volunteers to be able to schedule themselves with this option. Volunteers cannot schedule themselves for past dates.

Allow volunteers to schedule themselves for shifts up to (X) months in advance. If you want to limit how far in advance volunteers can self-schedule, and have the setting update dynamically, choose this option and select a number from 1 to 12 from the dropdown list. This selection is best for organizations that have ongoing schedule requirements because the calendar will update automatically.

Allow volunteers to schedule themselves for shifts between these dates only. Enter a beginning and ending date if you want to limit volunteers so they can only schedule themselves during a specific time frame. This selection works well for organizations who have special events where the schedule requirements are only in a fixed range of dates.

## Allow volunteer to self-schedule on holidays in assignments that permit self-scheduling for "any times?"

Volgistics allows you to list [holidays \[pg:1391\]](#) where your organization will not need any volunteers, or will operate with a skeleton crew. When a date is setup as a holiday, regularly scheduled volunteers are removed from that date and volunteers do not see an option to sign-up for [openings \[pg:0776\]](#) on that date unless you create a "one time" opening. If your assignment's [Rules tab \[pg:0781\]](#) is setup to allow volunteers to schedule for "any times," use the options below to control self-scheduling on holidays.

**Yes.** Choose Yes if you want volunteers to be able to self-schedule on holidays for assignments setup for "any times."

**No.** Choose No if you do not want volunteers to be able to self-schedule on holidays for assignments setup for "any times."

## Show the number of volunteers still needed for each opening

When this option is checked, the daily view of the schedule will display the number of volunteers who are still needed to fill all of the [opening \[pg:0776\]](#) slots created by the number entered in the *Volunteers needed* field of the opening.

If you allow volunteers to self-schedule, they will always see where there are any unfilled openings that exist in the assignments they are allowed to self-schedule for. However, they will not see how many openings there are for the same assignment, date, and times unless you check this checkbox.

For example, if there are currently 8 unfilled schedule opening slots for the same date and times in an assignment called *Event Tear Down*, volunteers who view the daily view of the schedule for that date will see this:

---

Event Tear Down [Description](#)  
5:00 p to 6:30 p Open  
8 volunteers still needed   
 Would you like to serve on this date? Click the **Schedule me** button to   
schedule yourself here  
5:00 p to 6:30 p Parker Jr., Danny  
5:00 p to 6:30 p Strickland, Gerald

---

The number of volunteers still needed does not appear if this option is not selected.

## Confirmation Page

When you offer schedules using a calendar format, once a volunteer schedules herself for duty, Volgistics shows her a confirmation page with the date, assignment, and times she has selected.

You can optionally include additional information about the assignment she selected on this page. This can help to ensure that the volunteer understands the nature of the assignment.

Check the fields of information from the assignment record that you want to appear on the confirmation page. For example, if you would like the confirmation page to include the *Minimum age* and *Duties* for the assignment the volunteer scheduled herself for, check the box beside those fields on this list.

**Hint:** If you include phone number fields for the assignment or [Coordinator \[pg:0163\]](#) information, the *OK to call* checkbox by the phone number on the assignment or Coordinator's record must be checked in order for the phone number to appear.

## **Allow volunteers to remove themselves from the schedule**

Check this box if you'd like to allow volunteers to take themselves off from the schedule. This is available for both the list and calendar format. When you enable this option, there will be a

### **Remove me**

button when the volunteer selects a date she is scheduled on from the calendar. You can setup an alert to go to the [In Box \[pg:0303\]](#) tab of your Volgistics mailbox, and/or to the [Coordinator's \[pg:0163\]](#) email address, to notify you that the volunteer removed herself from the schedule. The alerts are setup on an assignment-by-assignment basis on the [Rules tab \[pg:0781\]](#) of the assignment record.

### **Allow volunteers to remove themselves from the schedule up to (X) day(s) before the date scheduled**

This setting allows you to control when volunteers are allowed to take themselves off from the schedule. If this option is not checked, but you have allowed volunteers to take themselves off from the schedule, volunteers can remove themselves from any date--past, present and future.

If you enable this setting, enter the number of days before the shift that you want volunteers to be able to take themselves off from the schedule. For example, if you want volunteers to be able to remove themselves the same day they are scheduled, enter 0. To allow them to remove themselves from the schedule the day before, enter 1, for two days before enter 2, and so on. When the restricted date arrives, the **Remove me** button will no longer appear so the volunteer will need to contact you if she cannot make it for the shift.

**Please note:** The date settings for this are based strictly on the calendar date--not a 24-hour period. For example, if you allow volunteers to remove themselves one day before they are scheduled, a volunteer who is scheduled at 7:00 am on June 7th will be able to remove herself from the schedule up to 11:59 pm on June 6th.

## **Appearance in VicNet**

In [VicNet \[pg:1724\]](#), you can customize the headings and directions that your volunteers will see regarding self-scheduling. Because [VicTouch \[pg:1778\]](#) is a more structured environment, there is not a way to add custom information regarding self-scheduling in all of the same locations. The one exception is the Confirmation instructions field. This will appear after a volunteer indicates she would like to serve in an assignment in both VicNet and VicTouch.

To change the headings and instructions on the schedule pages for VicNet or VicTouch that are not related to self-scheduling, go to the [VIC My Schedule Tab \[pg:1453\]](#) setup page.

### **Sign-up box heading**

If you choose the calendar format, the My Schedule tab will have a box at the top of the calendar. Volunteers use this box to filter the calendar to only show Help Wanted icons for a specific assignment. The default text for this box is *Sign-Up!*. You can customize the heading for the box by replacing the default text with your own information. An example of where this field appears is shown by item 1 in the Sign-Up Box Example picture below.

The *Sign-up box heading* also appears in several other locations. In the calendar format, the heading appears at the top of the page volunteers see that asks them to confirm that they would like to schedule themselves for the assignment. An example of this location appears in item 3 in the Yes/No Page Example photo below.

Additionally, the heading is displayed at the top of the selection fields if you use the list format. An example of this location appears in item 5 in the List Format Example photo below.

## Large instruction

The *Large instruction* field allows you to customize the information that appears in the *Sign-up box* at the top of the calendar. The default directions are *We need volunteers on days that have the 'Help wanted' symbol. Click any of these days to learn more or to sign-up.* You can customize the directions by replacing the default text with your own information.

The *Large instruction* field's information is not shown anywhere if you use the list format. You can see an example of where the directions in the *Large instruction* field appear in item 2 in the Sign-Up Box Example picture below.

## Small instructions

With the calendar format, you can customize the directions that show on the page that asks volunteers to confirm that they'd like to schedule themselves for an assignment. The default directions are *Schedule yourself for volunteer duty.* You can replace the default text with your own if you'd like different directions to be shown.

You can see an example of where the directions appear for the calendar format in item 4 in the Yes/No Page Example photo below.

If you use the list format, the directions will show above the page where volunteers select which assignments they'd like to serve in. You can see an example of this in item 6 in the List Format Example picture below.

## Confirmation heading

Once a volunteer indicates that she would like to serve in an assignment, a page displays showing the assignment, date, and times the volunteer is scheduled for. The default heading for this page is *Thank you!* You may change the default by replacing the text with your own heading.

Customized confirmation page headings will only display with the calendar format. In VicTouch, the heading uses the default *Thank you!* and there is not a way to change this. You can see an example of where the heading will appear in item 7 in the Confirmation Page Example picture below.

## Confirmation instructions

If you'd like the volunteer to receive additional information after she confirms that she'd like to serve, enter it into this field. This field is blank by default. The confirmation instructions are displayed in both VicNet and VicTouch when the calendar format is used. You can see an example of where the instructions appear in item 8 in the Confirmation Page Example picture below.

# VicTouch PIN Screen Setup Page

Help topic 1176

Added or revised 04-17-2008

---

The PIN screen setup page allows you to customize the appearance of the first screen volunteers see when they begin the VicTouch check-in process. If you're not already on this setup page, you can get to it like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "VicTouch."
3. Select "Check-in Sequence."
4. Click on the PIN screen setup link.

Note that any setup changes made to VicTouch will not be applied until a new VicTouch session is started. If VicTouch is running while you make setup changes, you will need to [shut down \[pg:1762\]](#) and then re-start VicTouch to view your changes. If volunteers are signed in at VicTouch when you shut down the session, they will be able to sign-out as usual, and their hours will be recorded correctly when you re-start VicTouch.

## System name

The VicTouch system name is "Volunteer Information Center" by default, but you can change the text that appears at the top of the PIN screen by entering a new system name in this field.

## Display logo graphic

If this checkbox is marked, the logo graphic you have uploaded on the [Vic graphics page \[pg:1451\]](#) will be displayed in the upper left corner on the initial VicTouch PIN screen.

If this checkbox is not marked, no logo graphic will be displayed on this screen.

## Greeting

Use the Greeting field to customize the message that will appear to the left of the PIN number keypad. Volgistics provides a default greeting, but you can change the message by entering your own text in this field.

## PIN keypad instructions

### Main instruction for this page:

Use this field to enter the instructional heading for this screen. For example, type "Enter your volunteer PIN number" in this field.

### Additional instructions:

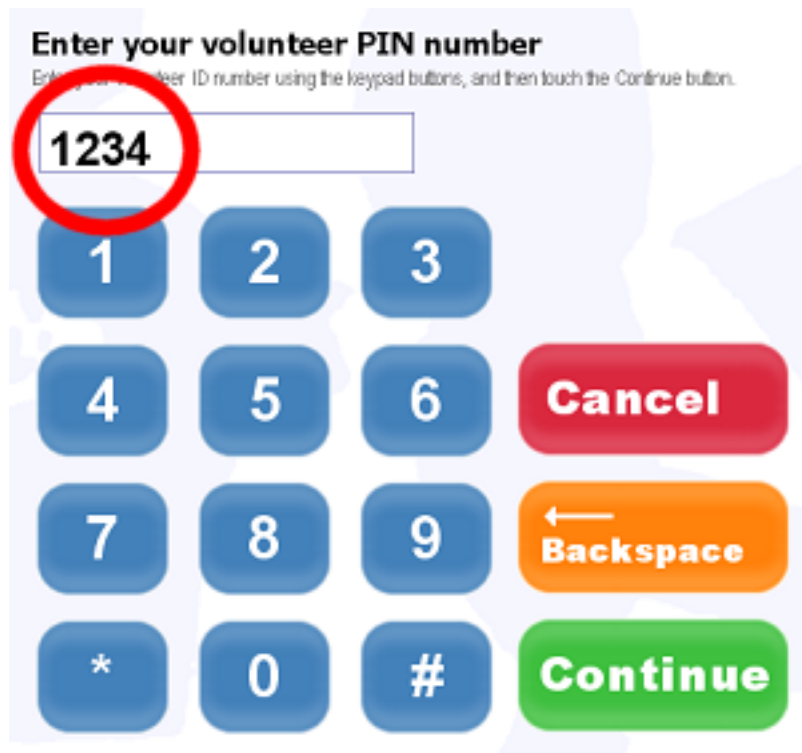

Use this field to provide any further instructions to volunteers.

## Pin Display

Select one of the following options to choose how the PIN will appear when volunteers select their number on the keypad.

Show the actual numbers as they are entered (less secure)

Choose this option if you want the numbers the volunteer is selecting on the keypad to appear as numbers on the VicTouch screen. This option can be helpful if volunteers are having trouble signing in, as it allows them to confirm the numbers they are actually entering when attempting to check-in.

Show an asterisk for each number entered (more secure)

Choose this option if you want the volunteer to see asterisks on the VicTouch screen as they select the digits in their PIN number on the keypad. This is more secure, as other individuals will not see the volunteer's actual PIN number if they view the number field on this screen.

---

## Menu Screen Setup Page

Help topic 1211

Added or revised 01-09-2014

---

The menu screen setup page allows you to customize the appearance of the page volunteers see when they check-in and out at the [VicTouch \[pg:1778\]](#) station. This is the part of the check-in process where volunteers choose what action they'd like to take. If you're not already on this page, you can get to it by:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the VicTouch link.

3. Select *Check-in sequence*.

4. Select *Menu screen setup*.

Note that any setup changes made to VicTouch will not be applied until a new VicTouch session is started. If VicTouch is running while you make setup changes, you will need to [shut down \[pg:1762\]](#) and then re-start VicTouch to view your changes. If volunteers are signed in at VicTouch when you shut down the session, they will be able to sign-out as usual, and their hours will be recorded correctly when you re-start VicTouch.

Volunteers will see a **Sign-in** or **Sign-out** button on this page depending on if they have already signed-in for service. They may also see **Switch assignments**, **View my schedule** and/or **View my service** buttons depending on if these options are setup in your account.

#### Switch assignments button

The *Include a "Switch Assignments" button* section below explains how to enable this button.

#### View my schedule button

To enable the **View my schedule** button, please:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the VicTouch link.
3. Select *Schedule screen*.
4. Check the box for *Use this tab at VicTouch* under the *Volunteers can* heading.
5. Click the **Save** button.

You might also find help topics [1171 \[pg:1453\]](#) and [2170 \[pg:1494\]](#) useful.

#### View my service button

To enable the **View my service** button, please:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the VicTouch link.
3. Select *Service history screen*.
4. Check the box for *View their service history at VicTouch* under the *Volunteers can* heading.
5. Click the **Save** button.

You might also find [help topic 1207 \[pg:1465\]](#) useful.

An **Exit** button will also always appear in case volunteers have just entered their PIN to view their service or schedule. In this case, they should click this button to exit the module without signing-in or out.

The following sections explain more about the setup options available on this page:

### Include a "Switch Assignments" button

If you want volunteers to be able to choose a different [assignment \[pg:0096\]](#) instead of just signing-out, check this box. Volunteers who are already signed-in will then see a

#### Switch assignments

button in addition to the

#### Sign-out

button. They can press this button to select a different assignment instead of just signing-out. You control which assignments volunteers can select on the [Assignment Selection Screen Setup \[pg:1515\]](#) page.

### Allow groups to enter the number of volunteers serving

If you want [group \[pg:1909\]](#) records to be able to enter the number of volunteers who have come to serve when signing-in or out, check this box. You can learn more about how this option will work in [help topic 1212 \[pg:1759\]](#). When this box is *not* checked, the default value of the Volunteers field will be used when a group record signs-in to VicTouch. If no default value is setup for the Volunteers field, the default is one (1).

To setup a default value for the Volunteers field:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the *Field options* link.
3. Select *Service tab*.
4. Select Volunteers.
5. Enter a number in the *Default entry* field.
6. Click the **Save** button.

#### Main instruction for this page

Enter or [paste \[pg:0063\]](#) the heading you would like for this page.

#### Additional instructions

---

## Enabling Message Delivery at VicTouch

Help topic 2126

Added or revised 10-19-2007

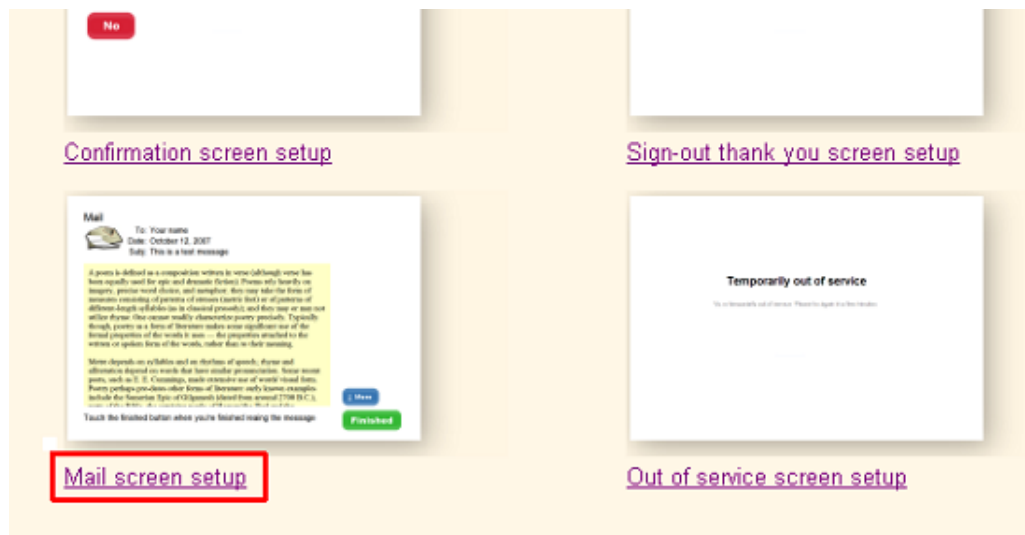

---

When you send Vic Mail messages, volunteers receive your messages at [VicNet \[pg:1724\]](#), [VicTouch \[pg:1778\]](#), or through both modules. This help topic explains how to setup VicTouch so volunteers will see new Vic Mail messages when they check-in or out at VicTouch.

To enable the delivery of Vic Mail at the VicTouch station you may need to turn on this option in [Setup \[pg:0887\]](#) and then restart VicTouch.

To turn-on Vic Mail delivery at VicTouch:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select VicTouch.
3. Select 'Check-in sequence.'

4. Click the image labeled 'Mail screen setup' (shown above). This opens the 'VicTouch Check-in Setup' page for the mail screen.

5. Under Options, un-check 'Do not show volunteers their messages at VicTouch' (if it is currently checked).

6. Click the **Save** button.

It may be necessary for you to [stop \[pg:1762\]](#) and then re-start each of your VicTouch stations for this change to take effect at that station. To restart VicTouch at the VicTouch station simply double click the VicTouch shortcut you created when you [setup VicTouch \[pg:1527\]](#).

---

## VicTouch Ground Rules

Help topic 2214

Added or revised 09-30-2016

---

You use the [VicTouch \[pg:1778\]](#) Ground Rules page to setup the basic operating rules for the touch-screen kiosk Volunteer Information Center (VicTouch for short). If you're not already on the VicTouch Ground Rules page you can get there by selecting Setup from [menu \[pg:0215\]](#), selecting "VicTouch," and then clicking the "Ground Rules" link.

Note that any setup changes made to VicTouch will not be applied until a new VicTouch session is started. If VicTouch is running while you make setup changes, you will need to [shut down \[pg:1762\]](#) and then re-start VicTouch to view your changes. If volunteers are signed in at VicTouch when you shut down the session, they will be able to sign-out as usual, and their hours will be recorded correctly when you re-start VicTouch.

## Who can use VicTouch?

You can prevent volunteers with a certain Status – such as Inactive – from being able to use VicTouch. Check the volunteer Status (or Statuses) volunteers must have in order to use VicTouch. If a volunteer has a Status that is not checked here, they will be unable to check-in at VicTouch.

## Rounding

One of the functions of VicTouch is collect volunteer time. It does this in a time-clock manner: Volunteers sign-in when they arrive, and sign-out when they depart. Once a volunteer signs-out, VicTouch makes a service entry for them that shows the amount of time they served.

You can setup VicTouch so these service entries show exact number of hours and minutes a volunteer served; or you can have these service entries rounded to 5, 10, or 15 minute intervals.

Choose "Without rounding" if you always want the exact number of hours and minutes a volunteer served recorded. For example, if four hours and eleven minutes passed between the time a volunteer signed-in, and the time they signed out, their service record will show four hours, eleven minutes. This setting yields the most accurate service statistics.

Choose "Rounded" if you want these service records rounded to 5, 10, or 15 minute intervals; and then choose the interval you prefer (5, 10, or 15 minutes).

If you choose 'Rounded to the **nearest**,' your service records will be rounded to the nearest 5, 10 or 15 minute interval. For example, if you want rounding to the nearest 15 minute intervals, four hours eleven minutes would be rounded up to four hours fifteen minutes, and four hours and two minutes would be rounded down to four hours exactly.

If you choose 'Rounded to the **next**,' your service records will always be rounded **up** to the nearest interval. For example, if you want rounding to the nearest 15 minute interval, four hours two minutes would round to four hour fifteen minutes.

For the most accurate service tracking, choose "Without rounding." Some people prefer to see rounded hour entries in their service records. If this is your preference, choose one of the rounding options.

## Appearance

The options in this section of the VicTouch Ground Rules setup page allow you to customize the appearance of the VicTouch screen text and background.

Title font name: Enter the name of the font you would like to use for the main title displayed on the VicTouch screen.

Title font color: Use this field to choose a custom font color for the title at the top of the page. Enter the font color in RGB color notation (see "A note about RGB color notation" below if you're not sure what this is).

Title font size: Select the font size for the title on the VicTouch screen by choosing the appropriate font size from the dropdown menu.

Instructions font name: Enter the name of the font you would like to use for any instructions text, located on the left side of the screen.

Instructions font color: Use this field to choose a custom font color for the instructions text. Enter the font color in RGB color notation (see "A note about RGB color notation" below for more information).

Instructions font size: Select the font size for the instructions on the VicTouch screen by choosing the appropriate font size from the dropdown menu.

Background: This selection lets you change the appearance of the background for the VicTouch screen. Use the radio buttons to select one of six solid color options, a custom color, or a background image.

Volgistics provides pre-set options for a solid white, solid light blue, solid light green, solid light yellow, solid light salmon or solid light tan background color. You can also select the custom color option and enter your own background color in RGB color notation (see "A note about RGB color notation" below for more information). If you choose a custom color, a light color is advised. A lighter background color will allow you to achieve the best contrast with the content on the screen.

If you do not want a solid color background, you can use an image as the background for VicTouch. Volgistics comes with a default background image. To use this image, simply mark the "Use this background image" radio button. If you would like to use your own image, such as your logo, as the background image, choose the "Use this background image" button, and click the "Change background image" link beneath the graphic.

Once you are on the VicTouch background image page:

1. Click the Browse button below the current image.
2. Use the "Choose file" window to locate the custom graphic file you want to load, then click the Open or Ok button.
3. Click the Install button. It may take a minute or two for your computer to upload the new file, so do not close your browser or go to another web page until you receive the upload confirmation.

If you choose to upload a custom background image, select a light image with a limited number of colors. You might choose to edit your image to fade or wash out some of the color before uploading it in Volgistics.

#### *A note about RGB color notation*

There are several fields on this page for setting background and font colors. Enter color information in these fields using standard 'hexadecimal' RGB color notation. This is the color notation used in HTML (Hypertext markup language) to specify color attributes for web page elements. Hexadecimal RGB color notation includes the '#' character followed by a six character RGB color value in hexadecimal notation (hex).

These are some examples of this notation:

#FFFFFF (white)  
#000000 (black)  
#FF0000 (red)  
#1D9945 (green)

## Startup

This section provides information you need to create desktop shortcuts for starting VicTouch at the computer(s) where you will run the VicTouch module.

[Help topic 2289 \[pg:1765\]](#) explains how to create these desktop shortcuts.

### Always require login credentials for VicTouch startup

When this checkbox is un-checked, desktop shortcuts to VicTouch that you configure with your *public account identifier* and your *VicTouch access code* will launch VicTouch without asking for Volgistics login credentials.

Check this checkbox only if you want the VicTouch module to always require account credentials each time it is started. When this checkbox is checked, VicTouch cannot be started (or re-started) at any computer except by a Volgistics system operator, even if the desktop shortcut to VicTouch is configured with your *public account identifier* and your *VicTouch access code*.

It's best to leave this un-checked if you find that it's necessary to re-start VicTouch periodically, or if you want computers that run VicTouch to launch the VicTouch module automatically anytime the computer is restarted.

### Public account identifier

Your *public account identifier* is used to identify your account in any desktop shortcuts you create for launching VicTouch. Your public account identifier is not changeable (it's how Volgistics identifies your account).

### VicTouch access code

Your *VicTouch access code* is also used in any desktop shortcuts you create for launching VicTouch.

You can optionally change your account's VicTouch access code here at any time. If you change your VicTouch access code, any desktop shortcuts created previously that contain your old VicTouch access code must be changed to include the new access code in order for them to launch VicTouch without the need for someone to enter your account credentials.

### Use this URL in your desktop shortcut to VicTouch

An example of the URL that should appear in the desktop shortcut(s) you create to launch VicTouch. [Help topic 2289 \[pg:1765\]](#) explains how to create desktop shortcuts for VicTouch using this URL.

## Exit code

By design, there is not an obvious way to [stop VicTouch from running \[pg:1762\]](#) at a VicTouch workstation. This is to prevent volunteers or others who are not authorized to do so, from stopping VicTouch.

To stop VicTouch, an operator must know the special numeric "exit code" you enter here. To stop VicTouch, touch the "#" key, followed by the Exit Code you specify here. For example, if you set your exit code to be '123' you would enter '#123' at VicTouch to shut-down VicTouch.

## If volunteers forget to sign-out

When you use VicTouch, Volunteers sign-in when they arrive, and sign-out when they depart. Once a volunteer signs-out, VicTouch makes a service entry for them that shows the amount of time they served.

On occasion, a volunteer may sign-in, but then forget to sign-out when they leave. Volgistics can detect when this happens, and sign the volunteer out automatically.

Use these settings to specify the maximum number of hours a volunteer should be allowed to be signed-in before VicTouch assumes they forgot to sign-out; and then enter the number of hours and minutes that should be given in this situation.

For example, if your longest possible volunteer shift is nine hours, then it's safe to assume that a volunteer who has been signed-in for more than ten hours has forgotten to sign out. In this case you would choose 10 hours as the longest amount of time a volunteer should be logged in.

When a volunteer has been logged-in longer than you allow, VicTouch will automatically sign-out the volunteer. Since the actual time the volunteer left is unknown, VicTouch will give the volunteer the pre-set number of hours you specify.

If you want the number of hours that a volunteer should be given if they forget to sign-in to depend on the Assignment they performed, click on the Assignment name and enter the number of hours and minutes they should receive if they forget to sign-out from *that* assignment.

Check "If volunteers forget to sign-out, post their service records for auditing" if you want the service entries VicTouch makes automatically for volunteers who have forgotten to sign-out to appear on your service [audit list \[pg:1408\]](#). This makes it easy for you to later adjust these service entries to reflect the actual number of hours served, if you choose to do that.

### **Advanced**

Volgistics allows VicTouch sessions to remain idle for up to 96 hours before they expire. However, some organization's networks require Internet connections to remain active or be terminated. This ends any VicTouch session active on the network. The keep-alive pulse keeps the session "active" when the kiosk is not in use by sending a signal to the computer running the VicTouch module. This allows the kiosk to remain connected to Volgistics for up to the full 96 hours.

---

## **Assignment Selection Screen Setup**

Help topic 2224

Added or revised 10-04-2016

---

When volunteers sign-in at VicTouch, you can optionally ask them to indicate which assignment they have come to perform. Use the options on this page to customize the way VicTouch displays the assignment buttons volunteers use to indicate their assignment. If you're not already on this setup page, you can get to it like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "VicTouch."
3. Select "Check-in Sequence."
4. Click on the Assignment selection screen setup link.

Note that any setup changes made to VicTouch will not be applied until a new VicTouch session is started. If VicTouch is running while you make setup changes, you will need to [shut down \[pg:1762\]](#) and then re-start VicTouch to view your changes. If volunteers are signed in at VicTouch when you shut down the session, they

will be able to sign-out as usual, and their hours will be recorded correctly when you re-start VicTouch.

### **We want volunteers to indicate their assignment when they sign-in**

Check this checkbox if you want volunteers to indicate their assignment when they use VicNet to sign-in and out. If your organization wants to track volunteer service according to the assignment volunteers serve in, you should check this box.

#### When this box is checked

Volunteers will see this screen during the sign-in sequence, and asked to indicate which assignment they have come to perform. The service records created by VicTouch will include the assignment service was performed in, and you will be able to produce service reports that show how much service volunteers performed in each assignment.

#### When this checkbox is not checked

VicTouch will not ask volunteers to indicate their assignment (this screen will not appear as part of the check-in sequence if this is not checked). VicTouch will record volunteer service, however the service records created through VicTouch will not include the assignment service was performed in. You will not be able to produce service reports that show how much service volunteers performed in each assignment.

### **Main instruction for this page**

Enter the primary instruction that you want to appear at the top of this screen. Your entry may be up to 100 characters long. The default entry is "Which assignment are you here to perform?"

### **Additional instructions**

Additional instructions appear under the main instruction, usually in a smaller font. Enter any additional directions you want volunteers to see on this page. The default entry is "Touch the button for the assignment you have come to perform."

### **Display assignment buttons for...**

Use these setting to control which assignments volunteers will see buttons for when they reach this screen.

#### All active assignments

Choose 'All active assignments' if you want all of the volunteers who use VicTouch to be able to select from any of the *active* assignments in your database when they sign-in. Volunteers will see a button for all of the active assignments in your database when you choose this option. Select this option only if it's okay for any volunteer to record service in any assignment.

#### The volunteer's assignments, if their Role in the assignment is...

Choose this option if you want volunteers to see buttons only for the assignments they normally serve in. When you check this option, volunteers will see a button for each of the assignments listed in the Assignment box on the 'Service' tab in *their* record, if their **Role** [pg:0103] in the assignment is one of those selected.

Here's an example of how this works. In the following illustration, the "Assigned," "Substitute," and "Trainee" Roles are selected.

- The volunteer's assignments, if their Role in the assignment is...
  - Assigned
  - Former
  - Preference
  - Substitute
  - Trainee

Given these settings, any assignments that are listed in the Assignment box on the Service tab in a volunteer's record that have the Role "Assigned," "Substitute," or "Trainee" will appear as a button. Here's an example of the Service tab for the sample volunteer "Harry Bailey:"

## Bailey, Harry

Core

Profile

Service

Schedule

History

Contacts

Notes

Vic

Tagged

### Assignments

Assignment	Role	From	To		
Client Advocate [Sample Agency Name\Client Services]	Former	01-22-2001	12-31-2005	<a href="#">Edit</a>	<a href="#">Delete</a>
Info Desk [Site Two\Volunteer Services]	Assigned	09-24-1996		<a href="#">Edit</a>	<a href="#">Delete</a>
Transporation Driver [Sample Agency Name\Client Services]	Assigned	01-01-2001		<a href="#">Edit</a>	<a href="#">Delete</a>

Add

Given the settings in this example, this is what "Harry Bailey" would see at VicTouch...

## Which assignment are you here to perform?

Touch the button for the assignment you have come to perform today.

Harry sees buttons for "Info Desk" and "Transportation driver" because he has these assignments listed on the Service tab in his record, and his Role in these assignments is "Assigned," one of the Roles selected. Note that Harry does not see a button for the "Client Advocate" assignment, even though he has the "Client Advocate" button on his Service tab. The reason for this is that Harry's Role in the "Client Advocate" assignment is "Former," and Former assignments are not included in our example configuration.

### Display assignment buttons *with* Site and Place names

Choose this option if the Assignment buttons should include the name of the Site and Place that Assignment is associated with.

### Display assignment buttons *without* Site and Place names

Select this option if only the Assignment name should be displayed on the Assignment selection buttons.

### **Provide a 'Not sure' button for volunteers who do not know which assignment they have come to perform at the time they sign-in.**

Checking this box provides volunteers with a "Not sure" button they can touch if they are not sure which assignment they will perform, or if they do not see a button from their assignment. Do not check this box if you do not want volunteers to have a 'Not sure' button.

If you provide a 'Not sure' button, service entries created when the volunteer signs-in and out will not have an assignment in the assignment field. You can, however, audit these service entries (see the next option) to enter an assignment if you choose.

If there is a chance that volunteers might not know which assignment they have come to perform when they arrive, check this checkbox.

### If volunteers sign-in and out without selecting an assignment, place their service entries in the Mailbox for auditing

If you provide a 'Not sure' button, check this box if you want to audit the service entries created when volunteers choose 'Not sure.' This means that the service entries for volunteers who choose 'Not sure' for their assignment will appear on the 'Service' tab in your Volgistics mailbox for you to review. You could optionally edit these service entries to add the appropriate assignment as you audit them.

Do not check this box if you don't need to audit the service entries for volunteers who choose 'Not sure.'

**Buttons for assignments with "Sign-in option" checked are always displayed.**

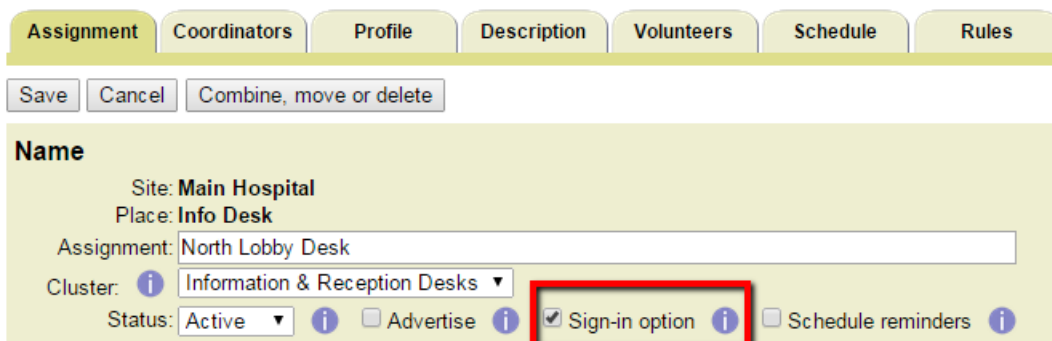

You can optionally make assignment buttons appear for selected assignments, that all volunteers will see when they sign-in; even if these assignments do not appear on their Service tab.

Here are some examples of situations in which you might want an assignment button to appear for all volunteers:

- If you create a generic assignment called "Training" that you use to schedule training or track volunteer training time, you can force VicTouch to always include a 'Training' assignment button on this screen. Volunteers who arrive for a training event could then select this assignment (their hours will be recorded under the 'training' assignment).
- If you have a special event or project for which many volunteers might serve, you can create a 'Special Event' assignment that will appear as a button for all volunteers, even though it's not anyone's regular assignment. Volunteers arriving to serve at the event can choose the 'Special Event' button when they sign-in (their hours will be recorded under the 'special event' assignment).

To make an assignment button appear on this screen for all volunteers:

1. Choose Assignments from the [menu \[pg:0215\]](#).
2. Select the Assignment.
3. On the Assignment tab, check the "Sign-in option" checkbox.

---

## How do I control which assignments a volunteer can choose when they s

Help topic 2226

Added or revised 04-17-2008

---

You control which assignments volunteers can choose from when they sign-in at VicTouch on the Assignment Selection Screen Setup page.

To get to this Setup page:

1. Choose Setup from the [menu \[pg:0215\]](#).

2. Select "VicTouch."
3. Select "Check-in Sequence."
4. Click on the "Assignment Selection Screen Setup" link.

# VIC Greeting Cards Setup

Help topic 2327

Added or revised 10-26-2007

---

Use the VIC Greeting Card setup page to configure the automatic delivery of [greeting cards \[pg:1776\]](#) at [VicTouch \[pg:1778\]](#). If you're not already on the VIC Greeting Card setup page you can get there by choosing Setup from the [menu \[pg:0215\]](#), selecting 'VicTouch,' and then choosing 'Greeting cards.'

## Greeting card fonts

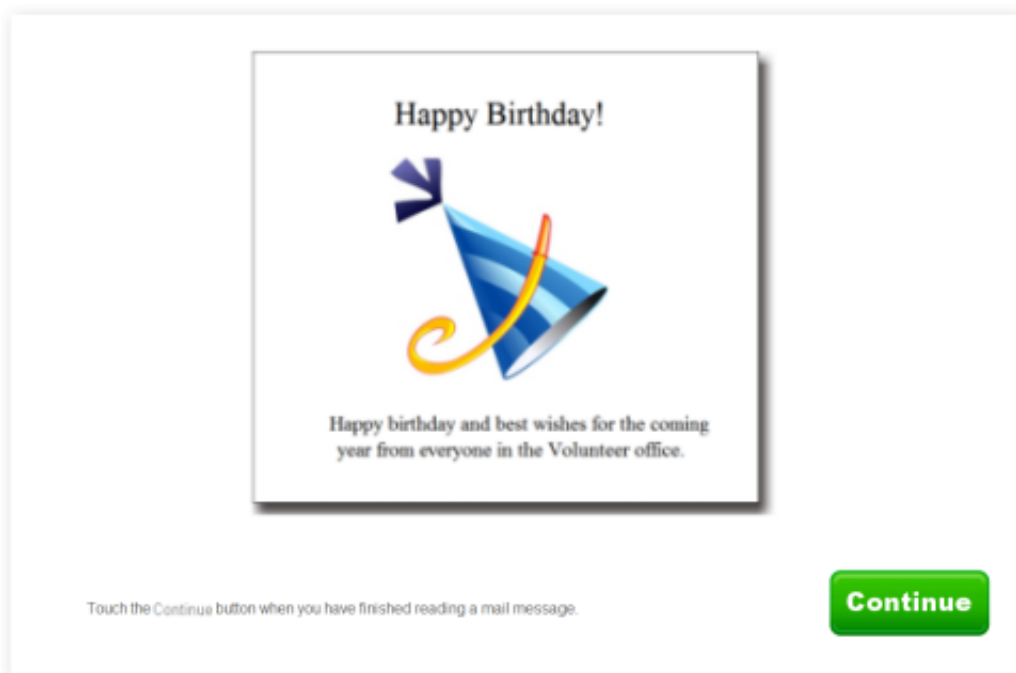

Use these settings to customize the font used on greeting cards.

Use this font for greeting cards:

Choose the font family you want for your greeting card font.

Heading font size:

Greeting cards can have a heading at the top, an image in the middle, and a message at the bottom, as shown in the example below. Use this control to choose the size of the font (in 'points') for the heading at the top of your cards.

### Message font size:

Use this control to choose the size of the font (in 'points') for the message at the bottom of your cards.

### **Birthday cards**

Use the controls in this section to setup automatic birthday card delivery.

#### Send birthday cards

Check 'Send birthday cards' if you want VicTouch to deliver birthday cards. If this is not checked, no birthday cards will be delivered at VicTouch.

#### Change graphic

Click the **Change graphic** button if you want to change the graphic image that appears on the birthday card to an image you provide. For best results, the custom image you provide should have a white (or transparent) background. Your custom birthday card image must meet these image type and size requirements:

File type: GIF, JPG, or PNG

Height: 600 pixels (maximum)

Width: 300 pixels (maximum)

File size: 48 Kb

#### Deliver birthday cards when a volunteer visits within \_\_\_ days of their birthday

Select this option if you want VicTouch to deliver a birthday card if a volunteer checks-in at VicTouch anytime within this number of days before or after their actual birthday. For example, if you choose this option and specify 5 days, a volunteer will receive a birthday card *the first time they check-in* starting 5 days before their birthday, until 5 days after their birthday. In this example, a volunteer would not receive a birthday card at VicTouch only if they never check-in during this 10 day time frame.

#### Only deliver birthday cards if a volunteer visits on their birthday

Select this option if you want VicTouch to deliver birthday cards only if a volunteer checks-in on their birthday. When you select this option, a volunteer would not receive a birthday card at VicTouch if they did not check-in on their birthday.

Volunteers receive birthday cards at VicTouch just once each year. Once a volunteer receives their birthday card for a given year, they would not receive another birthday card until the following year.

#### Heading for birthday cards

Enter the text you want to appear at the top of your birthday cards. Your entry may be up to 40 characters long. For example, 'Happy Birthday!'

#### Display this message on birthday cards:

Enter the message you want to appear at the bottom of your birthday cards. For example, 'Happy birthday and best wishes for the coming year from everyone in the Volunteer office.'

### **Start Date Anniversary Cards**

VicTouch can also deliver greeting cards on or around the anniversary of when a volunteer started their volunteer service in your organization. These cards are delivered automatically based on the **Start date** [pg:1890] that appears on the History tab in each volunteer's record.

Use the controls in this section to setup automatic Start date anniversary card delivery.

#### Send start date anniversary cards

Check 'Send start date anniversary cards' if you want VicTouch to deliver these anniversary cards. If this is not checked, no start date anniversary cards will be delivered at VicTouch.

#### Change graphic

Click the **Change graphic** button if you want to change the graphic image that appears on these cards to an image you provide. For best results, any custom image you provide should have a white (or transparent) background. Your custom image must meet these image type and size requirements:

File type: GIF, JPG, or PNG  
Height: 600 pixels (maximum)  
Width: 300 pixels (maximum)  
File size: 48 Kb

#### Deliver anniversary cards when a volunteer visits within \_\_\_ days of their "start date" anniversary

Select this option if you want VicTouch to deliver an anniversary card if a volunteer checks-in at VicTouch anytime within this number of days before or after their actual Start date. For example, if you choose this option and specify 5 days, a volunteer will receive an anniversary card *the first time they check-in* starting 5 days before their Start date anniversary, until 5 days after this anniversary. In this example, a volunteer would not receive an anniversary card at VicTouch only if they never check-in during this 10 day time frame.

#### Only deliver anniversary cards if a volunteer visits on their anniversary

Select this option if you want VicTouch to deliver these anniversary cards only if a volunteer checks-in on the anniversary of their Start date exactly. When you select this option, a volunteer would not receive an anniversary card at VicTouch if they did not check-in on their anniversary.

Volunteers receive Start date anniversary cards at VicTouch just once each year. Once a volunteer receives their anniversary card for a given year, they would not receive another anniversary card until the following year.

#### Heading for anniversary cards

Enter the text you want to appear at the top of your anniversary cards. Your entry may be up to 40 characters long. For example, 'Thank you!'

#### Display this greeting on anniversary cards:

Enter the message you want to appear at the bottom of your anniversary cards. For example, 'On the anniversary of your enrollment as a volunteer we would like to take this opportunity to thank you for your valuable service contribution.'

#### **Holiday card (1)**

## Holiday card (2)

In addition to birthday and anniversary cards, you can use VicTouch to deliver greeting cards for holidays or any other date you might want to present a card (for example, to thank volunteers for their help with a special event or project).

You can post up to two holiday cards at the same time, in case you have overlapping holidays.

Use the controls in this section to setup automatic holiday card delivery.

### Send this holiday card between (date) and (date)

If you want to deliver this holiday card at VicTouch, check this checkbox and enter the date range during which this holiday card is to be delivered. If you do not want this holiday card to be delivered, un-check this checkbox.

### Change graphic

Click the **Change graphic** button if you want to change the graphic image that appears on these cards to an image you provide. For best results, any custom image you provide should have a white (or transparent) background. Your custom image must meet these image type and size requirements:

File type: GIF, JPG, or PNG  
Height: 600 pixels (maximum)  
Width: 300 pixels (maximum)  
File size: 48 Kb

### Show this card every time a volunteer visits between the selected dates

Select this option if you want VicTouch to deliver this holiday card every time a volunteer checks-in or out at VicTouch during the date range you entered for the card.

### Once a volunteer receives this card, do not show it to that volunteer again this year

Select this option if you want VicTouch to deliver this holiday card to each volunteer only once, the first time they check-in during the date range you entered for the card.

### Heading for this holiday card

Enter the text you want to appear at the top of this holiday card. Your entry may be up to 40 characters long. For example, 'Season's Greetings!'

### Display this greeting on this holiday card

---

## Setting-Up Internet Explorer for VicTouch

Help topic 8270

Added or revised 05-10-2016

---

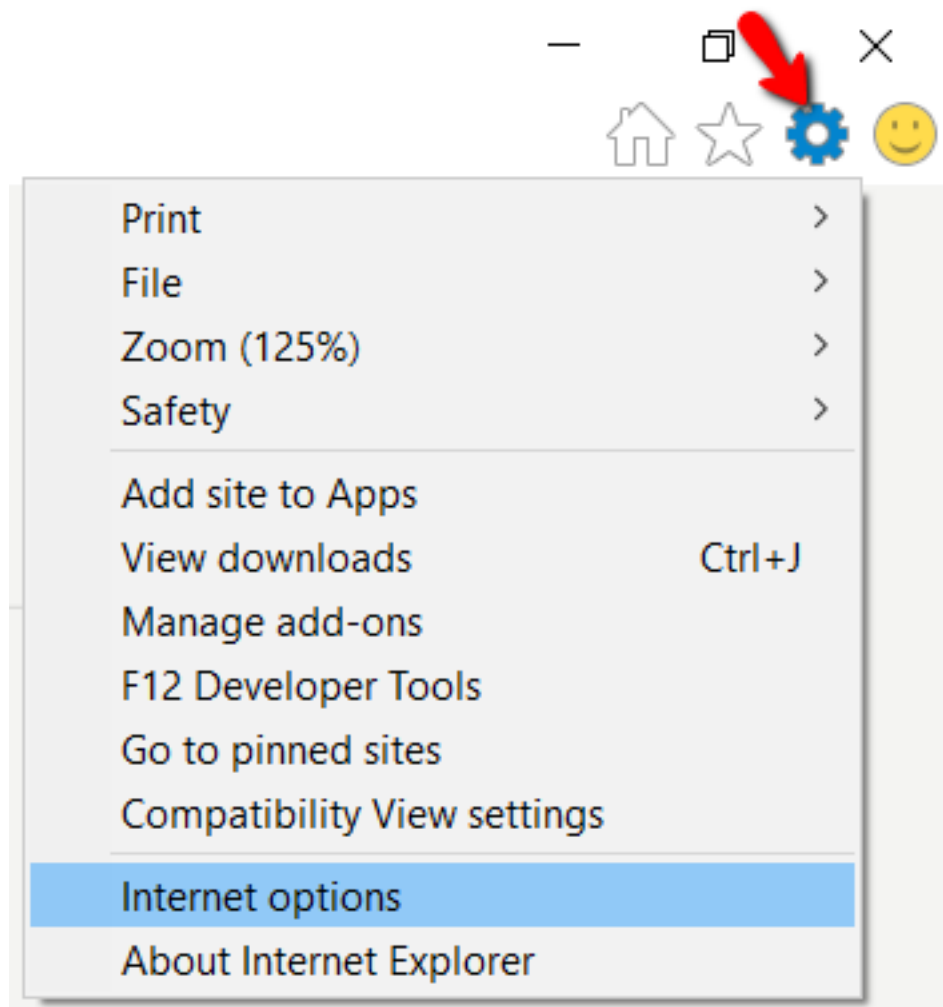

The **VicTouch** [pg:1778] module runs in a web browser at each VicTouch station you choose to install in your organization. Currently, VicTouch works with Internet Explorer Version 11 or Google Chrome. Internet Explorer is available free from Microsoft for Windows, and Chrome is available free from Google for Windows, Mac, or Linux.

To work properly in Internet Explorer, VicTouch requires certain Internet Explorer browser settings. These settings may not be required at the computers where you use Volgistics, however they are required at any computer where you will use VicTouch.

Complete each of the following sections at each computer where you will run the VicTouch module. If VicTouch is currently running in kiosk mode, you will need to shut it down by following the steps in [help topic 2283 \[pg:1762\]](#) before you proceed.

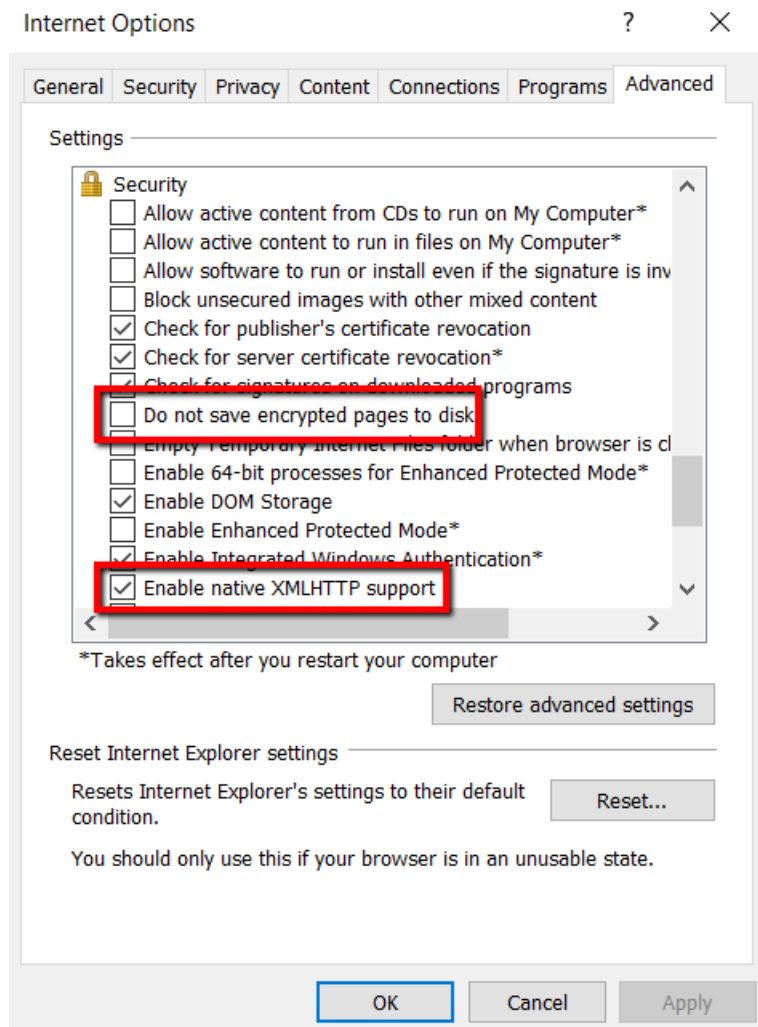

### Set Internet Explorer Advanced Options

1. Start Microsoft Internet Explorer at your VicTouch workstation. In Windows 10, select *All apps* from the Start menu and go to *Windows Accessories*.
2. Choose *Internet Options* from the Tools menu in Internet Explorer.

3. Select the Advanced tab.
4. Scroll to the Security heading and locate the *Do not save encrypted pages to disk* checkbox. If this checkbox is checked, un-check it as shown below (*Do not save encrypted pages to disk* should **not** be checked).

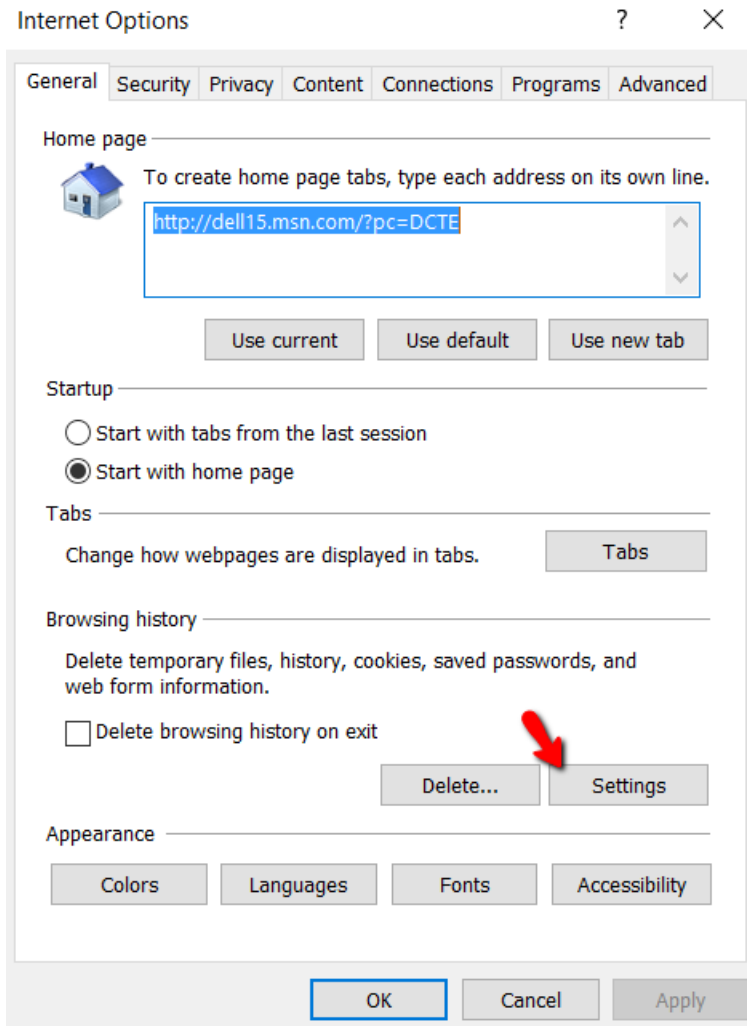

5. Also in the Security section, locate the *Enable native XMLHTTP support* checkbox. If this checkbox is **not** checked, check it as shown below (*Enable native XMLHTTP support must be checked*).

6. Click the **OK** button in the Internet Options dialog box.

### **Optimize Internet Explorer file caching**

1. Follow steps 1 & 2 in the *Set Internet Explorer Advanced Options* section above.
2. Select the General tab.
3. Click the **Settings** button in the *Browsing history* section.

4. On the *Temporary Internet Files* tab, be sure *Automatically* is selected under *Check for newer versions of stored pages*.

5. Click the **OK** button.

Now that Internet Explorer is setup properly, you can [create a desktop shortcut \[pg:1765\]](#) to launch VicTouch if one is not setup already.

#### Related help

---

## Setup a VicTouch computer

Help topic 8271

Added or revised 05-16-2016

---

To setup the VicTouch component:

#### Step 1

The VicTouch module works with Microsoft Internet Explorer or Google Chrome. Internet Explorer is available free from Microsoft, and is included automatically with any Windows installation. Chrome is available free from Google. If your VicTouch computer does not currently have Internet Explorer or Chrome installed, install Internet Explorer or Chrome before continuing. This limitation applies only to the VicTouch module. You can use Volgistics and VicNet from any popular web browser.

## Step 2

VicTouch has the best appearance when the screen resolution on the VicTouch computer is set to a value no smaller than 1024 by 768 pixels, and no larger than 1280 x 1024.

To check or set the screen resolution:

1. In Windows, click on the Start button, and select Settings.
2. Click System
3. On the left side, select "Display"
4. On the right side, scroll down and click "Advanced display settings"
5. Under "Resolution" select the resolution you would like to use and click **Apply**
6. Click **Keep changes**

## Step 3

If you will use a touch screen monitor at the VicTouch computer, install any touch screen drivers that accompanied your touch screen monitor, and perform any touch screen calibration recommended by the touch screen manufacturer before installing VicTouch. Refer to the documentation from your touch screen monitor manufacturer for instructions on installing touch screen drivers or calibration.

## Step 4

Check your Internet connection. From the VicTouch computer, be sure you have a working Internet connection by visiting the Volgistics web site at <https://www.volgistics.com>.

## Step 5

If you're using Internet Explorer, make the recommended [changes to its settings \[pg:1523\]](#). Then create a [shortcut to launch VicTouch in kiosk mode \[pg:1765\]](#). This can be done with either the Internet Explorer or Google Chrome web browsers.

Perform any additional security configuration of the VicTouch computer you prefer.

## Step 6

Start Microsoft Internet Explorer or Google Chrome in kiosk mode. If you configured kiosk mode as recommended, VicTouch will start in kiosk mode when you touch or click the shortcut you created. Or, if you choose to add the shortcut to your computer's Startup folder, when you restart the computer.

If you choose not to use kiosk mode to run VicTouch, visit <https://www.volgistics.com/touch> to load VicTouch. There are more instructions on this in [help topic 1203 \[pg:1933\]](#).

## Step 7

Follow the VicTouch Start-up instructions that appear on the screen to complete the setup process. Once you complete the Start-up instructions VicTouch is ready for volunteer interaction.

## To stop VicTouch

---

## Tags

Help topic 2136

Added or revised 09-30-2016

---

Tags provide an easy way for you to temporarily mark selected volunteer records. Tags save you time by letting you perform certain tasks for all of the tagged volunteers at once. After you [tag \[pg:1538\]](#) one or more volunteers you can:

- View just the tagged volunteers
- Post hours for the tagged volunteers
- Send email to all of the tagged volunteers
- Send text messages to all of the tagged volunteers
- Print reports that include just the tagged volunteers
- Insert a Date record for all of the tagged volunteers
- Change the Status for all of the tagged volunteers
- Add or insert a Type or Flag into all of the tagged records
- Archive the tagged volunteer records
- Delete the tagged volunteer records

You can determine if a particular volunteer is tagged or not by looking at the *Tagged* checkbox in the volunteer's record. If the *Tagged* checkbox is checked, the record is tagged. If it is not checked, the record is not tagged. You can see the *Tagged* checkbox on the list of volunteers, as well as inside individual volunteer records.

On the volunteer list, the *Tagged* checkbox looks like this:

Name	Tag	Number	Status	Type	Last Activity	Start
<input type="text" value="Search"/>		<input type="text" value="Search"/>	<input type="text" value=""/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>
Armstrong, Mary	<input type="checkbox"/>	816	Inactive	Adult	06-11-2013	
Baccus, Lydia	<input type="checkbox"/>	774	Active	Adult	01-28-2016	08-08-2012
Bailey, Victor	<input type="checkbox"/>	1155	Applicant	Adult	06-11-2013	
Bargas, Jessica	<input checked="" type="checkbox"/>	830	Applicant	Adult	06-11-2013	
Barker, Geraldine	<input type="checkbox"/>	910	Active	Adult	01-27-2016	03-01-1993
Barnes, Merry	<input type="checkbox"/>	69	Active	Adult	01-27-2016	11-07-2012

Inside a volunteer's record the *Tagged* checkbox looks like this:

## Bargas, Jessica

Core Profile Service Schedule History Contacts Notes Vic Docs

Save Cancel Archive Delete Combine New Previous Next

Tagged  Copy

**Name**

Last name:  Number:  

First name:  Status:  

When you first login to Volgistics, none of your volunteer records are tagged.

You can tag a volunteer simply by checking the *Tagged* checkbox in their record (there are [other ways to tag \[pg:1538\]](#) volunteer records, too).

You can tag as many volunteers as you want to.

Once you tag a volunteer's record, it stays tagged until you un-tag it, exit from Volgistics, or your Volgistics [session ends \[pg:1589\]](#). (If you want tagged records to be available each time you login, see [How to permanently mark tagged records \[pg:1541\]](#)). You can un-tag all of the tagged records in a single step by:

1. From the [menu \[pg:0215\]](#), choose *Tags*.
2. Click the **Clear all tags** button.

Tags apply only to your Volgistics sessions. If you and someone else from your organization use Volgistics at the same time, your tags will not affect the other operator's, and their tags will not affect you. In other words, the records that you tag will only appear tagged at your computer.

## Working with Tags

Help topic 2137

Added or revised 04-19-2017

---

Once you've [tagged \[pg:1538\]](#) one or more volunteer records, there are a variety of useful things you can do for the entire group of tagged records. Please keep in mind that tags are cumulative for your session unless they are cleared. For example, if you tag 8 records and perform a task, and then tag 5 more records without clearing your tags, the next task you perform for tagged records will be made on 13 records. See the Clear Tags section of this help topic for information on how to clear tags between tasks.

Click on a link in the *Contents* box below to be taken directly to that section of this help topic.

### Contents

- View the tagged volunteers
- Print a report for the tagged volunteers
- Send email, VIC mail, or text messages to the tagged volunteers

- Change the Status for all of the tagged records
- Add a Type or Flag entry to the tagged records
- Delete the tagged records
- Archive the tagged records
- Send a VicNet password link to the tagged records
- Set temporary VicNet passwords for all tagged volunteers
- Send the text messaging opt-in email to the tagged records
- Add a Site to the tagged records
- Insert Date records for the tagged volunteers
- Add an Assignment to all of the tagged records
- Add a Mandate to all of the tagged records
- Send a schedule reminder to all of the tagged volunteers

### View the tagged volunteers

You can view a list of the volunteer records that are currently tagged (or un-tagged).

1. From the [menu \[pg:0215\]](#), choose Volunteers.
2. Under the Include section, click the Clear link to clear any previous include settings.
3. Under the Include section, select *Tagged* from the Tags field (or *Not tagged* to see the list of un-tagged volunteers).

## Volunteers

### Print a report for the tagged volunteers

Most reports provide a way for you to print the report for just the tagged records. For example, you can tag a group of volunteers and then print mailing labels for them. For more information on stock reports, please see [help topic 2104 \[pg:0595\]](#). For more information on custom reports, please see [help topic 2223 \[pg:0467\]](#).

1. From the [menu \[pg:0215\]](#), choose Print.
2. Choose the kind of report you would like to print, for example Address labels.
3. Click on the name of the report you want to print.
4. Click the **Print it** button.
5. On the Include page, check *Tagged volunteers* and uncheck *These volunteers*, as shown here:

Which **volunteers** do you want to include in this report?

Tagged volunteers ( 50)

These volunteers:

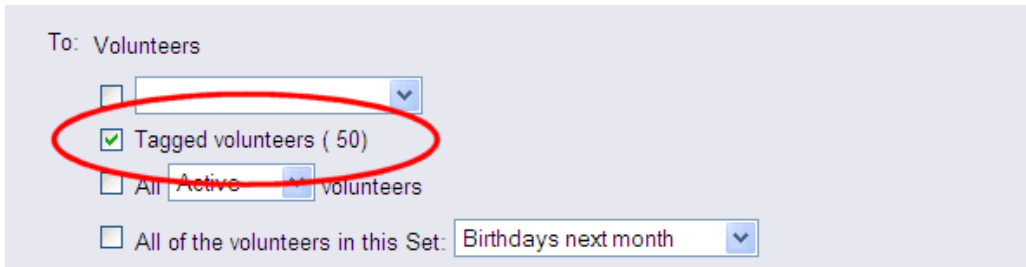

Not all reports are driven by volunteer records. Those that are not, do not offer the *Tagged volunteers* checkbox on the Include page.

6. Click the **Start printing** button.

### Send email, VIC mail, or text messages to the tagged volunteers

It's easy to send an [email \[pg:0404\]](#), [VIC mail \[pg:0315\]](#), or [text message \[pg:0343\]](#) to a group of tagged volunteers.

1. From the [menu \[pg:0215\]](#), choose Mailbox.
2. Select the [Out Box tab \[pg:0362\]](#), and then click the **Send a message** button.
3. In the *To* section, check *Tagged volunteers*.

4. Compose and then send your message.
- Change the Status for all of the tagged records**

To change the volunteer [Status \[pg:1832\]](#) for multiple volunteers at one time, take these steps:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. Next to *Change the **Status** of all tagged volunteer records to*, select the Status you would like to switch your tagged volunteers to from the dropdown list.
3. Click the **Go** button.

**Add a Type or Flag entry to the tagged records**

There may be occasions when you want to add the same [Type or Flag \[pg:0212\]](#) entry to a lot of volunteer records. You can add these all at once using tags.

If the Type or Flag entry you want to make does not already appear as a Type or Flag option on the [Core tab \[pg:1868\]](#), you should start by creating it (you can skip this step if the Type or Flag entry you want to add already exists in your database):

1. From the [menu \[pg:0215\]](#), select Setup.
2. Click *Field options*, and then select *Core tab* (the Core tab is where the Flag and Type fields are found).
3. Select Types or Flags, as appropriate.
4. Enter the new Type or Flag in the *Add a new item* field, and then click the **Save** button.

Once the Type or Flag value you want to add exists in your database, it's easy to insert it into all of the tagged records:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. If you want to add a Type entry to all of the tagged records, use the *Change the **Type** of all of the tagged volunteers to* field to choose the Type you want to add.

If you want to add a Flag entry to all of the tagged records, use the *Add this **Flag** to all of the tagged records* field to choose the Flag you want to add.

3. Click the **Go** button.

Volgistics inserts the Type or Flag entry into all of the tagged records.

### **Delete the tagged records**

You can delete multiple volunteer records at once by using the tags feature. Because deleting a record can have a permanent impact on your volunteer recordkeeping, *we recommend reading the [Important Considerations Before Deleting Records](#)* [pg: ] section of help topic 2309 before proceeding.

After you have tagged the volunteer records you want to delete, follow these steps to delete the records:

1. From the [menu](#) [pg:0215], choose Tags.
2. Click the **Go** button located next to *Delete the tagged volunteer records*.
3. Because deleting records permanently removes them from the account, a confirmation box will appear where you must verify that you want to delete the records.

If your account has the [VicDocs](#) [pg:1648] feature enabled, the confirmation box will also include an option to save or delete the documents associated with the records. If you select to save the documents, they will be available on the [In Box](#) [pg:0303] in your mailbox for 5 days. If you do not save the documents locally during these 5 days, there will not be a way to recover them.

### **Operator Rights and Deleting Tagged Records**

If you do not see the *Delete the tagged volunteer records* option on the Tags menu, your Volgistics [System Operator rights](#) [pg: ] do not permit you to delete volunteer records. Your System Operator rights are set by your organization's [Volgistics Administrator](#) [pg:0052].

### **Archive the tagged records**

Archiving volunteer records allows you to move records for volunteers who are not actively serving to a separate section of your database. If you are not familiar with how this affects volunteer records, we recommend reviewing help topic 1999 "[Archived Versus Non-archived Records](#)" [pg:0709] before proceeding.

If you want to [archive](#) [pg:1819] a group of volunteer records, you can tag those volunteers and then archive all of their records in one step:

1. From the [menu](#) [pg:0215], choose Tags.
2. Click the **Go** button located next to *Archive the tagged volunteer records*.

Volgistics will archive all of the tagged records.

### **Operator Rights and Archiving Tagged Records**

If you do not see the *Archive the tagged volunteer records* option on the Tags menu, your Volgistics [System Operator rights](#) [pg: ] do not permit you to archive volunteer records. Your System Operator rights are set by your organization's [Volgistics Administrator](#) [pg:0052].

## Send a VicNet password link to the tagged records

If you want to provide a number of volunteers with their VicNet password at once, using tags will allow you to do so more efficiently than sending password messages from each individual volunteer's Vic tab. Volunteers who have [opted-in to text messaging \[pg:0323\]](#) will receive the password by text and by email. Volunteers who have not opted-in to text messaging will only receive the password by email.

You can customize the content of the email message volunteers receive with the link. The

### *Send a Message with Login Information*

section of help topic 1158 has more information on how to do this. You can find this section of the help topic [here \[ \]](#).

To send all tagged volunteers a message containing a VicNet password link:

1. Choose Tags from the [menu \[pg:0215\]](#).
2. Click the **Go** button located next to *Send a VicNet password link to the tagged volunteers*.

### **Set temporary VicNet passwords for all tagged volunteers**

There may be times when you want to set a temporary password that volunteers use to login to VicNet for the first time. For example, if you have volunteer orientations where you will train groups of volunteers all at once, you can set the same temporary password for the entire group and tell them the temporary password. Or, you may give out packets to new volunteers where you have instructions on how to login, and you give the temporary password in the instructions. When volunteers login with the temporary password the first time, they will be prompted to select a permanent password.

To assign a temporary password to all tagged volunteers:

1. Choose Tags from the [menu \[pg:0215\]](#).
2. Enter the temporary password in the field located next to *Set temporary VicNet passwords for all tagged volunteers*. This password does not need to meet any [password strength rules \[pg:1447\]](#) you have set for volunteers because volunteers are required to set a permanent password the first time they login.
3. Click the **Go** button.

### **Send the text messaging opt-in email to the tagged records**

If you have [enabled text messaging \[pg:0321\]](#) for your account, you will see an option to send volunteers an email message asking them to opt-in to text messaging. To send this email message:

1. Choose Tags from the [menu \[pg:0215\]](#).
2. Click the **Go** button located next to *Send the text message opt-in email message to the tagged volunteer records*.

The system will send the default message from the [Messages Ground Rules \[pg:0929\]](#) page to all of the tagged records except for the ones where the volunteer has already opted-in to text messaging. You can find more information on how to edit the default message in the *Communicate that Text Messaging is Available* section of [help topic 1301 \[ \]](#).

### **Add a Site to the tagged records**

If you use [Site Level Access \[pg:0092\]](#), you can use tags to [add a Site \[pg:0094\]](#) to the Core tabs of a group of volunteers in a single step. To do this:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. Select the name of the Site you would like to add from the dropdown list next to *Add this **Site** to the tagged volunteer records*.
3. Click the **Go** button.

#### **Insert Date records for the tagged volunteers**

There may be times when you want to add the same Date record for many volunteers. For example, you might want to enter the same Training Date record for all of the volunteers who attended a particular orientation session. Start by tagging the volunteers, who attended the session, then:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. In the

*Add this*

**Date**

*to all of the tagged volunteer records*

section, enter the date record information you want to add to all of the tagged records.

**Please note:** If you're adding a [Checklist \[pg:0142\]](#) date and the Checklist item recurs on an annual or periodic basis, you will need to manually calculate the next due date and enter this in the Expires field. The system will *not* automatically calculate and insert an expiration date when the date is added from the Tags menu.

3. Click the **Go** button.

Volgistics inserts the Date record into all of the tagged records.

#### **Add an Assignment to all of the tagged records**

If you would like to add the same [Assignment to the Service tab \[pg:0138\]](#) of multiple volunteers at once, you can do this by:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. In the *Add this **Assignment** to all of the tagged volunteer records* section, choose the name of the Assignment to be added from the dropdown list.
3. Select the [Role \[pg:0103\]](#) that tagged volunteers should be given in the chosen Assignment.
4. Enter an Assignment "From" date and "To" date, if applicable.
5. Click **Go**.

#### **Add a Mandate to all of the tagged records**

If your organization uses Volgistics' [Mandatory Service \[pg:1419\]](#) features to track volunteer progress toward service goals or requirements, there might be a need to add a service mandate to numerous records at once. You can do this by:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. In the *Add this **Mandate** to all of the tagged volunteer records* section, select the applicable Mandatory Service program from the dropdown list.
3. Choose a Starting date for the service mandate, if applicable.
4. Enter a Due by date for the service mandate, if applicable.
5. Enter the number of Hours and/or [Service Measures \[pg:1557\]](#) required.
6. Click the **Go** button.

### **Send a schedule reminder to all of the tagged volunteers**

If you use Volgistics' [on-demand schedule reminders \[pg:1396\]](#) feature, you can send schedule reminders for a range of dates you specify. When you send schedule reminders through the

#### *Monthly & on-demand volunteer reminders*

setup page, they are sent to every volunteer who has an email address and/or text number on their record, is scheduled during the selected date range in any of the assignments for which the *Schedule reminders* checkbox is checked, and has not declined [schedule reminder messages \[pg:0409\]](#).

There may be a situation, however, when an organization wants to send schedule reminders only to a specific sub-group of those who would normally receive the reminders. In this case, they should take the following steps to send schedule reminders for specific dates to tagged volunteers:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. Next to *Send a **schedule reminder** to all of the tagged volunteers for these dates*, choose the dates for which the schedule reminder should be sent.
3. Click the **Go** button.

The message will be sent by email or text depending on if the volunteer has [opted-in to text messaging \[pg:0323\]](#) and his or her [message preferences \[pg:0381\]](#).

### **Clear Tags**

It's a good idea to clear the tags whenever you finish using them to perform a particular task. You can always clear tags from individual records by un-checking the Tags checkbox. You can also clear tags from all records at once by:

1. From the [menu \[pg:0215\]](#), choose Tags.
2. Click the **Clear all tags** button.

If the button appears grayed out, there are not any tagged records to clear.

## Tagging Volunteer Records

Help topic 2139

Added or revised 09-30-2016

---

A tag is a temporary way to mark a volunteer record (or a group of records) so you can work with the record(s). This help topic explains the different ways that you can tag records. You can learn more about the tags feature itself in [help topic 2136 \[pg:1529\]](#).

### Helpful Hints for Working with Tags

• Tags are a temporary way to mark records so they only stay in place during your current **session** [\[pg:1589\]](#) or until they are cleared.

• Each **System Operator** [\[pg:0065\]](#) only sees her or his tagged records. If other operators for your account are logged in at the same time as you, you will not see their tags--and vice versa.

• Tags are cumulative for your session unless they are cleared. For example, if you tag 8 records and perform a task, and then tag 5 more records without clearing your tags, the next task you perform with tags will affect 13 records.

• You can clear tags by un-checking the box on individual records, or you can clear all tags at once by selecting **Tags** from the **menu** [\[pg:0215\]](#) and clicking the **Clear all tags** button.

### Tagging single volunteer records

To tag (or un-tag) a single record:

1. Locate the volunteer you want to tag (or un-tag). You can learn more about how to locate the record you need in [help topic 2023 \[pg:1982\]](#).
2. Click the **Tag** checkbox (un-check the checkbox to remove a tag).

If you're looking at the alphabetical list of volunteers, the checkbox appears in the Tag column next to the volunteer names:

Name	Tag	Number	Status	Type	Last Activity	Start
<input type="text" value="Search"/>		<input type="text" value="Search"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>
Armstrong, Mary	<input type="checkbox"/>	816	Inactive	Adult	06-11-2013	
Baccus, Lydia	<input type="checkbox"/>	774	Active	Adult	01-28-2016	08-08-2012
Bailey, Victor	<input type="checkbox"/>	1155	Applicant	Adult	06-11-2013	
Bargas, Jessica	<input checked="" type="checkbox"/>	830	Applicant	Adult	06-11-2013	
Barker, Geraldine	<input type="checkbox"/>	910	Active	Adult	01-27-2016	03-01-1993
Barnes, Merry	<input type="checkbox"/>	69	Active	Adult	01-27-2016	11-07-2012

If you're inside a volunteer's record, the Tagged checkbox is located near the top of the page:

### Bargas, Jessica

Core Profile Service Schedule History Contacts Notes Vic Docs

Save Cancel Archive Delete Combine New Previous Next

Tagged  Copy

**Name**

Last name:  Number:  

First name:  Status:  

A record is tagged if the checkbox is checked. You do not need to save a volunteer record to make a tag "stick."

### Tagging a group of volunteer records

There are various ways to bring up a list of volunteer records. For example, you can bring up groups of records on the Volunteers page using one of the methods shown in [help topic 2023 \[pg:1982\]](#). Or you can bring up a list of volunteers for an assignment as shown in [help topic 2221 \[pg:0131\]](#).

Regardless of how the list of volunteers was created, in most cases there will be an option to tag (or un-tag) all of the records on the page at once. The majority of time this will be done with the **Tag these** or **Un-tag these** buttons. Here is how these buttons look on the daily view of your master schedule:

	11:00 a	3:00 p	<input type="checkbox"/>	Parker, Louise	<input checked="" type="checkbox"/>	<a href="#">Edit</a>	<a href="#">Remove</a>
2 volunteers scheduled, 1 unfilled openings							
<b>Surgery Waiting Room [Main Hospital\Surgery]</b>							
<input type="checkbox"/>	7:00 a	11:00 a				<a href="#">Fill</a>	<a href="#">Close</a>
	11:00 a	3:00 p	<input type="checkbox"/>	Farr, Cody	<input checked="" type="checkbox"/>	<a href="#">Edit</a>	<a href="#">Remove</a>
1 volunteers scheduled, 1 unfilled openings							
<b>Total</b>							
39 volunteers scheduled, 14 unfilled openings							
<input type="button" value="Tag these"/>		<input type="button" value="Un-tag these"/>					

On the Volunteers page, the **Tag these** and **Un-tag these** buttons are simply called **Tag** and **Un-tag** as shown below:

## Volunteers

### Progressively adding tags

There may be times when you need to identify all of the volunteers who have any one of several different items. You can do this using tags. Here's an example:

An organization has a series of volunteer teams identified by color. For instance, they have a Red team, Green team, Blue team, and so forth. Each volunteer's team designation is recorded on their [Core tab \[pg:1868\]](#) with a [Flag \[pg:0212\]](#).

Today the organization needs to send an email message to all of the volunteers who serve on any of the Yellow, Orange, or Red teams. There's an easy way, using tags.

Start by clearing any tags that may have already been set:

1. Choose Tags from the [menu \[pg:0215\]](#).
2. Click the **Clear all tags** button.

Next, tag all of the volunteers on the Yellow team:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Under *Include*, select *Yellow team* from the Flag field.
3. Click the *All* link near the top of the page.
4. If necessary, select *All* from the *Show XXXX entries* dropdown so that all Yellow team volunteers are listed.

The screenshot shows the 'Volunteers' page in the Volgistics system. At the top left, there is a sidebar with navigation links: Volunteers (highlighted), Assignments, Coordinators, Schedule, Tickler, Post, Tags, Sets, Print, Mailbox, and Who's Here. The main content area is titled 'Volunteers' and features a navigation bar with letters A-Z and 'All'. Below this, there are buttons for 'Tag' and 'Un-tag', and an information icon. A 'Show' dropdown menu is open, showing options for 'All', '1000', '2500', and '5000' entries. A red arrow points to the 'Tag' button. Below the dropdown, there are search fields for 'Name', 'Tag', 'Group name', and 'Street'. The table below shows two volunteer records:

Name	Tag	Group name	Street	City
Anderson, Lionel	<input type="checkbox"/>	Puritan Food Stores, Inc.	810 Bostwick Blvd.	Hamil
Armstrong, Marv F	<input type="checkbox"/>		4985 Malow Court	Casc

5. Click the **Tag** button located in the upper left corner.

Now you have all of the Yellow team volunteers tagged. Next you tag all of the Orange team volunteers, by following the same steps except select the *Orange team* Flag in step 2. Note that if an individual volunteer serves on both the Yellow team and the Orange team, their record is only tagged once.

Finally, follow the same steps except select the

*Red team*

Flag in step 2. When you're finished, you have all of the Yellow, Orange, and Red team volunteers tagged. Now you're ready to send your email to all your tagged records as shown in [help topic 2194 \[pg:0403\]](#).

## Related help

### How to Permanently Mark Tagged Records

Help topic 2140

Added or revised 10-02-2012

[Tags \[pg:1529\]](#) are a useful tool for temporarily marking volunteer records, but what if you've tagged some volunteer records, and now you want to make the marking permanent so you can pull the same group up again later? You can do this by adding a 'Flag' to the tagged records, and then using that Flag to locate the same group again in the future, or at other computers.

Here's a step-by-step example of how to do this:

Suppose you've tagged the volunteers you want to invite to serve on a new 'Policy Review' committee and now you want to permanently mark these volunteers so you can easily locate them again in the future. You can do this by adding a 'Policy Review Committee' *Flag* to their records.

Start by creating a new Flag for the 'Policy Review Committee:'

1. From the [menu \[pg:0215\]](#), select 'Setup.'
2. Click 'Field options,' and then select the 'Core tab' (the Core tab is where the Flag field is located).

3. Select 'Flags.'

4. Enter 'Policy Review Committee' in the "Add a new item" field, and then click the **Save** button.

Now you're ready to add the 'Policy Review Committee' Flag to all of the tagged records:

1. From the [menu \[pg:0215\]](#), select 'Tags.'

2. Select 'Policy Review Committee' from the *Add this **Flag** to all of the tagged records* field.

3. Click the **Go** button.

Once you click 'Go,' Volgistics adds the Flag you selected to each of the volunteer records currently tagged.

Now you can clear the tags or close Volgistics, and you'll still be able to easily locate all of the 'Policy Review Committee' volunteers in the future.

To view a list of all of the 'Policy Review Committee' volunteers later:

1. From the [menu \[pg:0215\]](#), choose 'Volunteers.'

2. If you currently have any other *Include* options selected, click the 'Clear' link that appears under the *Include* section to clear them.

## Volunteers

## How do I enter a training course for lots of volunteers in one step?

Help topic 2151

Added or revised 05-19-2011

---

**Question:** How do I enter a training course for lots of volunteers in one step?

A number of volunteers all attended a training course that I track in the Dates box on the History tab. Is there a way to enter a training record for all of these volunteers in a single step?

**Answer:** Yes. You can tag the volunteers who attended the course, and then use the Tag feature to insert a training record for all of the tagged records in one step.

If you haven't done so already, start by adding the training activity you want to record training for to the 'Class event' field on the History tab. For step-by-step instructions on how do this visit [How do I track volunteer training? \[pg:1853\]](#).

Then:

1. Use the Tag checkbox to tag each of the volunteers who attended the course.
2. Choose Tags from the [menu \[pg:0215\]](#).
3. In the "Add this Date to all of the tagged records" section, make the following entries:

**Add a:** Select "Class" from the drop down list

**Event:** Choose the class the tagged volunteers attended

**Date:** Enter the date of class

**Notation:** select "Attended"

4. Click the **Go** button.

The "Dates" box on the History tab will now show that the tagged volunteers each attended the selected training event on the date you specified.

Anytime you use the Tag feature, be sure you clear the tags from the tagged records before you start another task using tags.

To clear the tags:

1. Choose Tags from the [menu \[pg:0215\]](#).
2. Click the **Clear all tags** button.

---

## Using Tags with Sets

Help topic 2186

Added or revised 07-22-2009

---

You can use the [Sets \[pg:0858\]](#) and Tags features together to mark very specific groups of volunteers for reporting or mailing purposes.

Combining Sets Example:

You have these three separate Sets already defined:

2005 Corporate Volunteers

2004 Corporate Volunteers

2003 Corporate Volunteers

Today you want to send an email message to everyone who was a corporate volunteer in 2003, 2004, or 2005. Rather than create a brand new Set, you simply tag all of the volunteers in the '2005 Corporate Volunteers' Set, then you tag all of the volunteers in the '2004 Corporate Volunteers' Set, and lastly you tag all of the volunteers in the '2003 Corporate Volunteers' Set. Now your tagged records include the 2003, 2004, and 2005 corporate volunteers, and you simply send your email message to the tagged volunteers.

## Excluding Sets Example:

You've been asked to print a list of all volunteers, except for 'auxiliary volunteers,' 'interns,' and 'student volunteers.' You already have three different Sets defined that *include* 'Auxiliary volunteers,' 'Interns,' and 'Student volunteers.' To get a list that contains all volunteers *except* these, you first tag all of the volunteers in your database, then you un-tag the volunteers in the "Auxiliary Volunteers" Set, the volunteers in the 'Interns' Set, and the volunteers in the 'Student Volunteers' Set. Now your tagged records include all volunteers except any that are auxiliary, intern, or student, and you simply print a list that includes all of the tagged volunteers.

## Clearing tags

Before you begin working with tags it's a good idea to make sure you don't already have any tagged records left over from an earlier task where you used tags. To clear any tags that might exist:

1. Choose 'Tags' from the [menu \[pg:0215\]](#).
2. If there are any records currently tagged, click the **Clear all tags** button.

## Tag all of the volunteers in a Set:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Under the "Include" section, use the "Sets" dropdown list to select the Set you want to test, as shown here:

3. Click the 'All' link near the top of the Volunteers page to display a list of all of the volunteers in the Set.

31 volunteers listed

[New volunteer](#) [Tag these](#) [Un-tag these](#)

[Top](#)

All of the volunteers in the Set you selected are now tagged.

#### Un-tag all of the volunteers in a Set:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Under the "Include" section, use the "Sets" dropdown list to select the Set you want to test, as shown here:
3. Click the 'All' link near the top of the Volunteers page to display a list of all of the volunteers in the Set.
4. Click the **Un-tag these** button at the bottom of the list.

The screenshot shows the 'Volunteers' page in the Volgistics interface. On the left is a navigation menu with 'Volunteers' selected. The main content area displays a list of four volunteers with their names, checkboxes, addresses, and locations. Below the list, it indicates '31 volunteers listed' and provides buttons for 'New volunteer', 'Tag these', and 'Un-tag these'. The 'Tag these' and 'Un-tag these' buttons are circled in red.

Name	Checkbox	Address	Location
<a href="#">Watson, Elizabeth</a>	<input type="checkbox"/>	8192 Third Street	Mt. Pilot
<a href="#">Weinwright, Sam</a>	<input type="checkbox"/>	2371 Maple Street	Bedford Falls
<a href="#">Willis, Ron</a>	<input type="checkbox"/>	9122 Ellsworth	Bedford Falls
<a href="#">Wilson, Nancy</a>	<input type="checkbox"/>	812 1st Street Apt 56	Bedford Falls

**Tag all of the volunteers in your database:**

Start by checking to be sure there are not any Include options set on the Volunteers page like this:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Under the "Include" section click the "Clear" link.

The screenshot shows the 'Volunteers' page with the 'Include' filter section expanded. It contains several dropdown menus for filtering: Status (Active), Type (Any), Flag (Any), Site (Any), Set (Expired Texting & Driving), Tags (Any), and Kind (Any). Below these filters is a 'Clear' link with an upward arrow, which is circled in red. An 'Advanced options' button is also visible at the bottom of the filter section.

Next:

1. Click the 'All' link near the top of the Volunteers page to display a list of all of the volunteers in the Set.

## Entering a Volunteer's Past Awards

Help topic 2146

Added or revised 01-29-2013

---

If you want to [manage volunteer recognition \[pg:1551\]](#) information in Volgistics, and you have records (in another program or on paper) of when volunteers received awards in the past, you should enter these past awards into Volgistics (if they're not already there). Entering a volunteer's past awards makes your Volgistics database more complete, and it gives Volgistics a way to know which award a volunteer received last (Volgistics needs to know this in order to determine which award they should receive next).

If your award names are already setup in Volgistics, you're ready to start entering your old award records. If you have not setup your award names in Volgistics yet, you should do this first. [Help topic 2287 \[pg:0909\]](#) explains how to do this.

If your awards are setup to be sequential (meaning a volunteer is eligible for a 100 hour award, a 500 hour award, a 1,000 hour award, etc.), you should decide whether you will enter each of your volunteers' previous awards or just their highest award received. Entering all of their previous awards will give you a complete history of awards received. However, this will take more time than just entering the highest award given.

If you decide to enter just the highest or most recent award, and your awards are setup to be given sequentially, you will want to make sure your settings on the Awards Ground Rules page are setup to only show eligibility for the highest level achieved. Otherwise all the sequential awards will appear on the volunteer's History tab. [Help topic 2286 \[pg:0908\]](#) explains how to do this.

There are two ways you can enter past awards for volunteers. One individual at a time, or for an entire group if they all received the same award on the same date.

### To enter a past award for an individual volunteer:

1. Open the volunteer record for a volunteer for whom you want to enter a past award.
2. Choose the History tab
3. Under "Dates," use the "Add" box to make the following entries:
  - **Add a:** Select "Award" from the drop down list
  - **Event:** Choose the award you want to enter from the dropdown list
  - **Date:** Enter the date the past award was given
  - **Notation:** select "Presented"
4. Click the **Save** button in the Add box.

The *Dates* box will now show that this volunteer received the selected award.

### To enter past awards for an entire group of volunteers at once if they all received the same award on the same date:

1. Use the Tag checkbox to tag each of the volunteers who received a particular award on a particular date. [Help topic 2139 \[pg:1538\]](#) shows some of the ways this can be done.
2. Choose Tags from the [menu \[pg:0215\]](#).

3. In the "Add this Date to all of the tagged records" section, make the following entries:

- **Add a:** Select "Award" from the dropdown list
- **Event:** Choose the award the tagged volunteers received
- **Date:** Enter the date the past award was given to the tagged volunteers
- **Notation:** select "Presented"

4. Click the **Go** button.

The *Dates* box on the History tab will now show that the tagged volunteers each received the selected award on the date you specified.

If you use the Tag feature to enter past awards like this, be sure to clear the tags from the tagged records before you move on to the next award.

To clear the tags before starting the next award:

1. Choose Tags from the [menu \[pg:0215\]](#).

2. Click the **Clear all tags** button.

---

## How can I create an award based on service performed in a 12 month period?

Help topic 2331

Added or revised 05-09-2008

---

Volgistics can automatically identify volunteers as eligible for awards that are based on volunteer service, such as the number of hours served, or the number of years a volunteer has served. Awards may be based on a volunteer's 'life' service through the current date or a particular cut-off date; or they may be based on service performed during the last year only.

Typically, when an award is based on service performed during a specific year, the award is presented at some point *after* that year has ended. For example, awards based on service performed in 2007 are typically given sometime in 2008 (once volunteers have completed all of their 2007 service).

To setup these awards in Volgistics you set the award criteria so the award is based on volunteer service performed during the last calendar or fiscal year, as shown below (more detailed instructions on how to setup award criteria are available in [help topic 2287 \[pg:0909\]](#)).

The screenshot shows a configuration window for award criteria. At the top, there is a dropdown menu set to "Any assignment". Below this, a checkbox is checked, followed by the text "They have at least" and a text input field containing "100", and another dropdown menu set to "Hours". Below that, there is another "in" dropdown menu set to "Any assignment". At the bottom, there are two rows of radio button options. The first row has three options: "each year for at least" (with a text input field containing "0"), "consecutive", "fiscal" (which is selected), and "calendar years". The second row has three options: "during the last", "fiscal", and "calendar year" (which is selected).

In the example pictured above, the award is given to volunteers who perform at least 100 hours during a calendar year.

Since you cannot know for sure how many hours each volunteer will serve in 2007 until 2007 has ended, volunteers who meet the award criteria will appear eligible for this award beginning on January 1, 2008. You can prepare for volunteer recognition based on 2007 hours using Volgistics anytime after December 31, 2007 in this example.

Awards based on service during the last year may be based on service performed during the last calendar year (January through December), or during the last **fiscal year** [pg:0062]. If the award is based on service performed during the last *fiscal year*, volunteers who meet the award criteria will appear eligible for the award as soon as a fiscal year ends. For example, an award based on service performed during a fiscal year that ends on June 30th will appear eligible for the award beginning on July 1st.

# Tracking Volunteer Recognition

Help topic 3022

Added or revised 11-17-2016

---

If your organization gives formal volunteer recognition, such as Awards for volunteer service, you can use Volgistics to manage your recognition program. You can track Awards based on measurable volunteer service (such as hours and years of service), as well as "subjective" Awards (the kind where a committee decides who the recipient will be).

For Awards based on measurable volunteer service - such as hours served or years of service - Volgistics will automatically keep track of who is eligible for each Award based on the service recorded for them in the database. You can view which volunteers are eligible for any Award at any time, print lists of Awards and which volunteers are eligible for them (such as "pin lists"), easily post the Awards you've presented; and view or print each volunteer's Award history. You can present Awards as often as you choose: monthly, semi-annually, or annually for example.

This help topic starts by looking at two steps you must perform when you're just getting started with Volgistics. You need to complete these two steps before Volgistics can begin managing your Awards automatically:

- Setting up Awards
- Catching-up Volgistics by recording the Awards volunteers have already received

This help topic also describes the steps you take to manage volunteer recognition activities in the order they're often performed:

- Determining who is ready to receive Awards
- Printing reports listing volunteers eligible for each Award
- Printing reports of volunteers' Award history
- Recording the Awards you have presented in the database once they have been given

## Setting up Awards

If you've converted data from another program or if you've inherited a Volgistics database someone else created, some or all of the Awards you give volunteers may already be setup. In this case you can follow along with this section to learn about how to setup Awards, or you can skip ahead to the next section.

If you're just getting started from scratch, you'll need to initially setup your volunteer Awards. This is something you only need to do once when you're getting started (unless you later want to change the rules you use for giving Awards, or add more Awards).

To setup a new Award:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "Awards."
3. Click the "Add a new Award" link. This opens the Award setup page. Help topic [2287 \[pg:0909\]](#) explains how to use the Award setup page to setup an Award. Follow those instructions to setup your first Award.
4. Click the Save button.

Your new Award is now setup in Volgistics.

You can change the way any of your Awards are setup later if you want to. To change the way an Award is setup, simply return to Setup, click "Awards," and then click on the name of the Award you want to change. Remember to click the Save button when you're finished to save your changes.

Repeat the steps listed above to create each of the Awards you want to track in Volgistics. You can track up to 120 different Awards.

### **Catching-up Volgistics to your old system**

This is the second step you'll need to perform if you're just getting started with Volgistics, or if this is the first time you're using Volgistics to prepare for volunteer recognition.

If you've never had a formal recognition program before, or you do not have any records that show which Awards volunteers have received in the past you can skip this step. However if you have an existing database or list of Awards presented to volunteers in the past, you should enter that information into Volgistics. Specifically, Volgistics needs to know what the last Award was that each volunteer received.

Here's why:

When it comes to Awards based on measurable volunteer service—like hour or years-of-service Awards—Volgistics determines which Awards a volunteer is currently eligible to receive by looking at two things:

1. How much service they have recorded
2. Which Award they received last

For example, suppose you give Awards for 500 hours of service, 1000 hours of service, and so forth. If volunteer George Bailey has 1,050 hours of service, and he has already been given the "500 hour Award" you know that he has now earned the "1,000 hour Award."

If you track volunteer service using Volgistics, Volgistics knows how many hours and years of service each volunteer has, so all it needs to know to get started with automatic Award tracking is what the highest Award is that each volunteer has already received. Once you enter this information, Volgistics can take it from there.

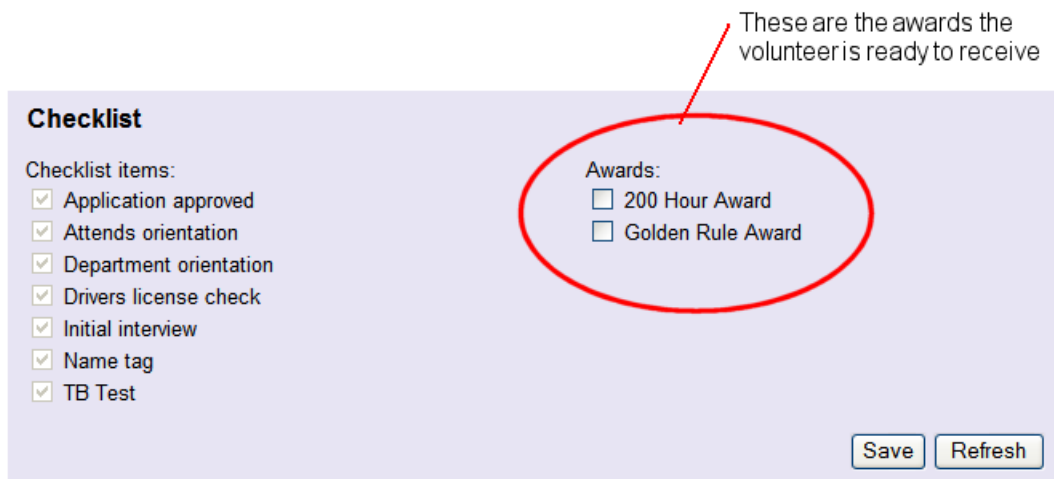

Instructions on how to enter your volunteer's past Awards are available in help topic [2146 \[pg:1549\]](#). You can either enter all of your volunteers' past Awards (if you want to keep their Award history), or you can just enter their most recent Award. If you enter only their most recent Award, and your Awards are setup to be given sequentially, make sure your settings on the Awards Ground Rules page are setup to only show eligibility for the

highest level achieved. Otherwise all the sequential Awards will appear on the volunteer's History tab. [Help topic 2286 \[pg:0908\]](#) explains how to do this.

Once you've setup your Awards, and entered (at least) each volunteer's most recent Award, you're ready to start using Volgistics to manage volunteer recognition.

### See who is ready to receive Awards

Once you've setup your Awards as explained above, you can see which Awards individual volunteers are *currently* eligible to receive by looking at the Checklist box on the History tab of their volunteer record. The Checklist box displays each of the Awards the selected volunteer is ready to receive, as shown here:

The screenshot shows a web interface titled "Checklist". On the left, under "Checklist items:", there is a list of seven items, each with a checked checkbox: "Application approved", "Attends orientation", "Department orientation", "Drivers license check", "Initial interview", "Name tag", and "TB Test". On the right, under "Awards:", there are two items with unchecked checkboxes: "200 Hour Award" and "Golden Rule Award". A red oval highlights the "Awards:" section, and a red arrow points from the text "These are the awards the volunteer is ready to receive" to the oval. At the bottom right of the interface are two buttons: "Save" and "Refresh".

You can also see lists of *all* of the volunteers who are ready to receive Awards by using the Tickler like this:

1. Choose Tickler from the [menu \[pg:0215\]](#).
2. The Tickler page includes two sections. A "Checklist" section and an "Awards" section. If any of the items in the "Checklist" section are currently checked, uncheck them. In the "Awards" section, check the Award (or Awards) you want to view a list for.
3. Click the **Go** button. You'll see a list of all of the volunteers who are ready to receive the Award or Awards you select on the Tickler page.

Volunteer eligibility for Awards based on service is updated nightly during the overnight maintenance cycle. If you have entered service hours since the last overnight maintenance cycle and want the Tickler to find eligible volunteers based on the latest service entered, click the **Re-evaluate now** button. When the date and time in the message update, the Tickler will reflect Award eligibility based on the latest service entries.

**Note:** If you setup Awards to be based on service performed "through a certain date," it will affect when volunteers will appear ready to receive the Award. Volunteers are shown to be ready for Awards that have cut-off dates if they have the required amount of service recorded *and* the cut-off date for the Award has past.

For example, if you setup a service Award to be based on service performed through the end of December 31st each year, volunteers will not appear ready to receive that Award until after December 31st (if they have the required amount of service).

### Printing reports listing volunteers eligible for Awards

You can print lists that show the Awards volunteers are currently eligible to receive like this:

1. Choose Print from the [menu \[pg:0215\]](#).
2. Expand the Awards link.
3. Choose "Award eligibility (stock)."
4. Click the "Print it" button.
5. Choose the format (PDF or Excel spreadsheet) in which you want this report to be printed, and choose which volunteers you want to include on the report. Then click the **Start printing** button.

Your report will appear in your Volgistics Mailbox within several minutes.

### **See which Awards a volunteer has received in the past**

You can see which Awards an individual volunteer has received in the past by looking at the History tab in their record.

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Locate the record for the volunteer whose Awards you want to review.
3. Open their record and click on their History tab. The volunteer's Award history is included in the Dates box.

### **Printing volunteers' Award history**

You can also print reports that include all (or certain) volunteers, and their Award history. To do this:

1. Choose Print from the [menu \[pg:0215\]](#).
2. Expand the "Volunteer List" link.
3. Choose "Volunteer Award list (stock)."
4. Click the **Print it** button.
5. Choose the format (PDF or Excel spreadsheet) in which you want this report to be printed, and choose which volunteers you want to include on the report. Then click the **Start printing** button.

Your report will appear in your Volgistics Mailbox within several minutes.

### **Recording the Awards you have presented in the database once they have been given**

Once a volunteer is eligible to receive an Award, a [System Operator \[pg:0065\]](#) must indicate when he or she is presented with that Award. Recording the Awards a volunteer receives is an important part of tracking recognition in Volgistics as the system uses this information to determine Award eligibility, volunteer inclusion in Sets based on Award dates, and more.

There are two ways to record that an Award was presented to a volunteer: by marking the checkbox next to the Award name on the History tab Awards list, and by adding an Award date entry in the History tab Dates box.

#### Marking an Award checkbox to record that an Award has been presented

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Choose the first letter of the Award recipient's last name at the top of the page.
3. Click on the Award recipient's name to open their volunteer record.
4. Go to the History tab.
5. Locate the Awards list, and click the checkbox next to the Award this volunteer has received.

6. Click the **Save** button.

Once the Award has been marked, an Award date entry will automatically be recorded in the Dates box on the History tab.

<b>Dates</b>		Start date: 12-22-1996	Date entered: 08-08-2007			
		Stop date:				
	Event	Date	Expires	Notation	type of test	
Status	Active	12-22-1996				Edit
Award	200+ Service Hours	01-25-2009		Presented		Edit Delete
Award	5 Hours by end of January	01-25-2009		Presented		Edit Delete

In addition, the Award will no longer be listed as one the volunteer is eligible to receive.

Making an Award date entry to record that an Award has been presented

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Choose the first letter of the Award recipient's last name at the top of the page.
3. Click on the Award recipient's name to open their volunteer record.
4. Go to the History tab.
5. In the Dates box, scroll down to the Add box.
6. Choose "Award" from the "Add a – date" dropdown field.

7. Select the Award name from the "Event" dropdown field.

**Add**

Add a:  date

Event:

Date:   Expires:  

Notation:

8. Click the **Save** button.

---

## Service Measures

Help topic 1016

Added or revised 03-29-2016

---

Since many volunteer offices record volunteer service by tracking hours, Volgistics tracks volunteer hours by default; however, some organizations want to track additional types of volunteer activity. For example, an agency might want to track the number of phone calls answered by a volunteer; the number of absences a volunteer has; the number of miles put on a volunteer's vehicle during service, or the number of tours a museum volunteer has given during a particular shift. By providing service measures, Volgistics makes this possible too.

In addition to hours, an organization can track up to 14 service measures customized for their volunteers. To learn how to create a new service measure, read the help topic on [service measure setup \[pg:1406\]](#).

### Collecting or entering service measure data

As a [System Operator \[pg:0065\]](#) or volunteer posts service entries, service measure information may be entered along with volunteer hours.

When service entries are made manually, service measures appear on the Service tab in the volunteer's record. In the example shown below, three additional service measures are tracked. They are called *Phone calls*, *Mileage*, and *Tours*. Each time you add volunteer hours (or instead of entering volunteer hours) you could also enter the number phone calls made, miles driven, or tours given.

**Add**

Assignment:

Date:   From time:  am

To time:  pm

Hours:

Phone Calls:  

Mileage:  

Tours:  

To enter a value for a particular service measure, follow the procedure for [making service entries manually \[pg:1569\]](#) and enter the appropriate number in the service measure field. If, for example, a volunteer served for 3 hours and answered 20 phone calls in this time period, the System Operator would enter 3 hours and enter 20 in the Phone calls field.

You can also post service measure information if you post service using the Post page. Follow the instructions for posting hours with the Post feature detailed in the [Post page \[pg:1559\]](#) help topic.

If it suits your needs, and your account's [service level \[pg:0719\]](#) includes the [VicNet \[pg:1724\]](#) module, you can also allow volunteers to enter their own service information through the [VicNet Time Sheet tab \[pg:1460\]](#).

20	21	22	23	24	25	26
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
27	28	29				
<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>				

What times did you serve?  :   until  :

Which assignment did you serve in?

How many Phone calls?

How much Mileage?

How many Tours?

**Continue**

### Including service measures on service reports

While none of the [stock report \[pg:0595\]](#) formats in Volgistics are configured to automatically include service measure information, both [Service Summary \[pg:0580\]](#) and [Service Detail \[pg:0560\]](#) reports can be customized to include service measures.

Add service measures to a new or stock service report on the report's Fields tab. If customizing a stock report, remember to choose the desired type of report and click **Clone it** to make and save any changes.

Once on the Fields tab, check the boxes next to the names of any service measures to be included as a column in the report.

Options | **Fields** | Page design | Include | Save

## Fields

[Help](#)

Choose the fields you want to appear in this report.

For each service record include...

<input checked="" type="checkbox"/> From date	<input type="checkbox"/> Source
<input type="checkbox"/> Time in	<input type="checkbox"/> Batch
<input checked="" type="checkbox"/> To date	<input type="checkbox"/> Directive
<input type="checkbox"/> Time out	
<input type="checkbox"/> Site	
<input type="checkbox"/> Place	
<input checked="" type="checkbox"/> Assignment	
<input checked="" type="checkbox"/> Hours	
<input type="checkbox"/> Hours value	
<input type="checkbox"/> Hours FTE comparison	
<input type="checkbox"/> Phone calls	
<input type="checkbox"/> Phone calls value	
<input type="checkbox"/> Mileage	
<input type="checkbox"/> Mileage value	
<input type="checkbox"/> Tours	
<input type="checkbox"/> Tours value	
<input type="checkbox"/> Unduplicated volunteer count	

Save and print the report, and retrieve it in the [Volgistics In Box \[pg:0303\]](#).

## The Post page

Help topic 1021

Added or revised 09-30-2016

---

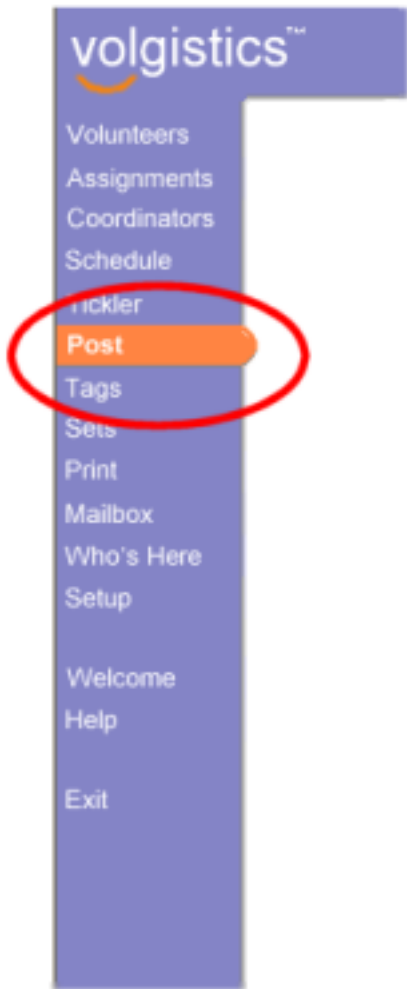

If you post volunteer service manually, the Post page provides a fast way to enter multiple service entries at the same time.

If you do not collect all (or any) of your volunteer service information with [VicTouch \[pg:1778\]](#), [VicNet \[pg:1724\]](#), or [directly from the schedule \[pg:1576\]](#), you probably post service records [manually \[pg:1569\]](#). If you post hours for many volunteers manually, the process can become cumbersome. In this situation, you can use the Post page to post hours for a whole series of volunteers at one time. This help topic explains how to use the Post page to efficiently post service records for multiple volunteers.

**Introductory page: A brief explanation of the Post feature**

The first time you select *Post* from the menu, you will see a page giving a brief explanation about what the page is used for.

If you do not want this page to show on future visits, check the box in front of "Don't show me this introduction screen in the future." Click the **Continue** button to proceed to the next page.

### **The first Post page: Choose which volunteers you want to post hours for**

The Post menu option requires a series of three pages where you will need to enter information to post hours for multiple volunteers.

On the first page, you will identify the volunteers you want to post hours for.

#### Post hours for...

Choose one of the following options:

Tagged volunteers. If you have already tagged [pg:1529] a group of volunteers for the purpose of posting hours to their records, choose this option. This option is only available when at least one volunteer is tagged in your system.

### Volunteers scheduled on this date...

. Many organizations choose to post hours for all volunteers who were scheduled on a particular day in one step. If you would like to do this, choose this option and enter the date you would like to post hours for. [Help topic 2202 \[pg:1576\]](#) explains more about how to use this option.

Volunteers in this assignment. Choose this option if you would like to post hours only for volunteers with the [Role\(s\) \[pg:0103\]](#) you selected on the [Service Posting Setup Page \[pg:1432\]](#) in a particular [assignment \[pg:0096\]](#). Select the shared assignment from the dropdown list.

Volunteers with this Type. To post hours for volunteers with a particular [Type \[pg:0212\]](#), for example all "Adult" volunteers, choose this option and select the Type of volunteer you want to post hours for from the dropdown list.

Volunteers with this Flag. To post hours for volunteers with a particular [Flag \[pg:0212\]](#), choose this option and select the Flag held by volunteers you want to post hours for from the dropdown list.

### Volunteers with last names starting with...

. You may want to post hours for groups of volunteers alphabetically by last name. This option is the most efficient if you have collected volunteer hours on time sheets as shown in [help topic 1153 \[pg:1565\]](#). To post hours by last name, choose this option and select the first letter of the volunteers' last names from the dropdown list.

### Post hours for volunteers if their **status** is...

You can choose to limit the volunteers you want to post hours for by [Status \[pg:1832\]](#) by checking one or more volunteer Statuses here. If, for instance, you chose to post hours for *Volunteers with this Type and Adult* and then marked just the box for the Status of Active, you would only be able to post hours for Adult volunteers with an Active Status. If you selected *Volunteers with this Type and Adult* and then marked all possible Statuses, you could post hours for any Adult volunteer. Please note that if no boxes are selected, volunteers with *all* Statuses will appear the same as if all of the boxes were checked.

### Sort volunteers

Choose whether you want the list of volunteers to be sorted alphabetically by their last name, or by their volunteer number.

Click the **Continue** button to view the second page in the Post procedure.

### **The second Post page: Choose the way you want service entries to appear for each volunteer in this batch**

The appearance of the second Post page will differ based on the options you select on the first Post page. If you choose to post hours for volunteers scheduled on a particular date, the only fields that will be displayed on the second Post page are service measures you have created. Otherwise, you will see options for an Assignment field, Date & time fields, an Hours field, and Service Measure fields.

### Assignment field

If all of the service you are posting is in one [assignment \[pg:0096\]](#), choose the first option (*All of the service I'm posting was performed in this assignment*) and select that assignment from the dropdown list.

If you want to choose the assignment for each volunteer from a list of their assignments only, select the second option (

*Let me choose the assignment from a list of each volunteer's assignments*

). Volunteers are linked to assignments based on the [Role\(s\) \[pg:0103\]](#) recorded for assignments on the [Service tab \[pg:0138\]](#) of their record.

If you want to choose the assignment for each volunteer and want to select it from a list of all assignments (not just the ones they have a Role in), select the third option (*Let me choose the assignment from a list of all assignments*).

#### Date & time fields

The fields that appear for entering date and time may vary depending on how you have setup your account for manual service entries. You can find more information on this in [help topic 2325 \[pg:1429\]](#).

To enter different dates and/or times on each entry, select the first option (*Let me enter the date and times on each entry*).

To post hours for volunteers who all served the same shift on the same date, select the second option (*All of the hours I'm posting are for this date and these times*) and enter the date(s) and/or time(s) of the service to be applied.

#### Hours field

If you do not want to enter the same number of hours on each entry, choose the first option (*Let me enter the hours on each entry*).

If you want to post the same number of hours to all service entries, choose the second option (*Post this many hours XX on every entry*). If you entered times in the time fields above, the correct number of hours to be applied will automatically be entered in the Hours field.

#### Service measure fields

If you have created [Service Measures \[pg:1557\]](#) to track volunteer activity other than hours (such as mileage or absences), these fields will be displayed here. For each, decide if you want to omit the information for that Service Measure, enter a number for that Service Measure on each individual entry, or apply the same number for each entry you are posting.

#### How many entries?

You might choose to post several service entries for each volunteer at the same time. For example, if you are posting hours for Active Adult volunteers and choosing the assignment from a list of each volunteer's assignments while also entering the date and time on each entry. In this case, you might want to post a particular volunteer's service in more than one assignment, or for more than one date or time. To do this, use the dropdown list to select the number of service entries you'd like to make on each volunteer's record. You can select from 1 to 12.

When you select to make multiple service entries, you do not need to use all of the spots you create. Just leave the ones you do not need blank. Having the option of creating more than one entry per volunteer can help you make more efficient use of your time.

Click the **Start posting** button to move to the next page for Posting service.

### The third Post page: Start posting

The top of this page identifies the common characteristics of entries in this batch. For instance, if all the postings will be in the same assignment, or for the same date, this will be listed at the top of the page.

Service records will be displayed for each volunteer identified by your selections on the first Post page. Enter the appropriate information in the fields for each record, or mark the "Skip" box to choose not to post an entry for a particular volunteer.

If you are [posting hours from the schedule \[pg:1576\]](#) and there is a group [scheduled to fill multiple openings slots \[pg:0753\]](#), you will see a listing for each opening slot the group is filling. There are two ways you can handle this.

One is to use each entry and set the Volunteers field to one (1). When this is done each entry will be shown on the [Service tab \[pg:1579\]](#) of the group record.

Another option is to tally the number of slots the group is filling and enter this number in the Volunteers field on one entry. Check the "Skip" box on the other entries so service is not posted for those entries. Please remember with this option that some entries for the group may appear on upcoming pages. Because there is not a way to return to a Post page after you have passed it, you may want to refer to the Schedule tab of the group's record to get the total number of opening slots the group is filling.

At the bottom of the page, choose the **Post this page**, **Post then quit** or **Skip this page** button until you're done entering service.

Once you have posted hours for this batch, you can click the **Print batch report** button to print a [Batch Report \[pg:0599\]](#) listing each of the hour entries you made in this batch. A Batch Report is often used to compare the information you posted to the information on a written time sheet.

---

## FTE

Help topic 1036

Added or revised 10-14-2015

---

Many businesses and organizations use 'full-time-equivalent employees,' or FTE' as a unit of measurement for counting employees. A full-time-employee is usually considered one who works 40 hours per week (although this number may vary by organization). Using FTE to describe the human resources allocated to - or needed to perform - a particular task lets you compare apples to apples. A department that has six half-time workers and a department that has three full-time workers both have three FTEs, as an example (because six half-time workers equal three full-time workers).

While volunteers are generally classified differently than employees, FTE can be a useful method for leaders of volunteer programs to describe the amount of service performed by volunteers (overall or in a particular area) in terms understood by human resource professionals and board members. Several Volgistics reports ( [Service details \[pg:0560\]](#), Service summary) can translate the number of hours served by volunteers into an FTE value for this purpose.

Volgistics uses the FTE measurement to describe the number of full-time workers that it would take to serve the same number of hours as an individual volunteer or group of volunteers (not the number of volunteers who individually serve 'full-time').

For example, suppose ten volunteers each serve four hours per week providing visitor information at an organization's information desk. Collectively these ten volunteers work the same amount of time as one FTE (ten times four hours each equals 40 hours per week, or one FTE). Or, suppose 200 volunteers each serve six hours during a week-long festival. Collectively these festival volunteers work the same amount of time as thirty FTEs (200 times six equals 1,200 hours per week, divided by 40 hours equals 30 FTEs).

### How Volgistics calculates FTEs

By default, Volgistics calculates FTEs at the rate of 40 hours per week, although you can tailor this rate to your organization (see below). So, every 40 hours served by volunteers in a one week period equals one FTE.

Most Volgistics reports calculate volunteer hours monthly (or quarterly, or annually), rather than weekly. When you calculate FTE for monthly periods rather than weekly periods you must convert the weekly rate into a monthly rate. To make this conversion Volgistics multiplies the weekly rate by 52 (the number of weeks in a year), and then divides the result by 12 (the number of months in a year). Using the default rate of 40 hours per week, the monthly FTE would be 173.3 hours per month. Here's the math:

40 hours per week times 52 weeks equals 2,080 hours per year.  
2,080 hours per year divided by 12 months equals 173.3 hours per month.

So, if your service report is for a period of one month, every 173.3 hours served by volunteers equals one FTE. If volunteers collectively serve 6,280 hours in one month they worked the same amount of time as 36.24 full-time workers that month (6,280 divided by 173.3 equals 36.24, when rounded). If a service report is for a period of one year, every 2,080 hours served collectively by volunteers in a year equals one FTE. (173.3 hours per month, times 12 months equals 2,080 hours per year). If volunteers collectively serve 66,560 hours during a one year period they worked the same amount of time as 32 FTEs during that year (66,560 divided by 2,080 equals 32).

### Setting your FTE rate

Volgistics defaults to an FTE rate of 40 hours per week. You can change this if your organization uses a different rate (such as 38.5 hours per week). To change the rate used to calculate FTE:

1. Click [Setup \[pg:0887\]](#) on the [menu \[pg:0215\]](#).
2. Click *Service tracking*, and then choose *Ground rules*.
3. Scroll down to the *Full time equivalent* section and enter the weekly rate you want to use.

---

## Merit Hours

Help topic 1100

Added or revised 12-18-2013

---

In some situations, it may be desirable to adjust volunteer hours to reflect more or fewer hours than were actually served. The optional merit hours feature allows an organization to do so.

For example, merit hours can be used to give "time-and-a-half" or "double time" for special reasons, such as volunteer Assignments that are more complex or difficult to recruit for; shifts that take place on a [holiday \[pg:1391\]](#); to account for additional drive or preparation time; or to deduct time spent at lunch or on break.

By defining up to four merit hour rules, which can be based on a broad range of volunteer and service characteristics, a Volgistics [System Operator \[pg:0065\]](#) can apply merit hours as needed. Merit hours can also be based on drive or travel times separately from the four merit hour rules. If merit hours are used, Volgistics automatically calculates the additional or deducted time indicated by the merit hour rules.

These adjusted hours appear on the [Service tab \[pg:1581\]](#) in volunteer records by default, and optionally on [reports \[pg:0430\]](#) under the heading *Merit hours*. Volgistics continues to track actual volunteer hours as well.

Merit hours can be included on reports regardless of whether or not they are included on the Service tab in the volunteer record.

## How to Efficiently Collect Volunteer Hours with Time Sheets

Help topic 1153

Added or revised 09-30-2016

---

The VicTouch module is the best way to collect volunteer hours, as it can eliminate manual hour entry entirely. Likewise, VicNet can reduce or eliminate a volunteer office's need to gather service information. Still, some organizations must continue to collect hours on printed time sheets and then [post them manually \[pg:1569\]](#) in Volgistics.

If most volunteers are scheduled in advance, an organization can print [time sheet views of the schedule \[pg:1578\]](#), and then [post hours from the schedule \[pg:1576\]](#) later. What follows is a suggestion for organizations where volunteers are not typically scheduled in advance to efficiently organize manual time sheets.

1. Pre-print time sheets like these:

<b>Volunteer Sign-in Sheet</b>					
This page is for volunteers whose last name begins with the letter <b>"A"</b>					
<b>Please print!</b>					
Your name	Volunteer Assignment you have come to perform	Date	Time in	Time out	Office use only

2. Put them in a binder with tabs like these:

When volunteers arrive and depart, they should open the time sheet binder to the tab for the first letter of their last name and sign-in and sign-out on that page.

Then a system operator should use the [Post page \[pg:1559\]](#) in Volgistics to post hours manually. When choosing the volunteers you want to post hours for, select "Volunteers with last names starting with 'A'."

Post hours for...

- Tagged volunteers
- Volunteers scheduled on this date:
- Volunteers in this assignment:
- Volunteers with this Type
- Volunteers with this Flag
- Volunteers with last names starting with

Follow the Post procedure for this group of volunteers, referring to the time sheet book's alphabetized pages to determine how many hours should be posted for each volunteer in the "A" section. Follow the same process for volunteers in the "B" section, "C" section, and so forth. Initial the "Office use only" column on each line as the hours are posted.

As an alternative to pre-printing time sheets by letter for volunteers to sign-in and out by last name, you might choose to pre-print time sheets for each Assignment volunteers are serving in. In this way, volunteers would open the book to the appropriate Assignment and sign-in and out on that page. Then you would post hours by Assignment on the Post page in Volgistics, like this:

---

## How can I find all of the volunteers with a service record missing an Assignment?

Help topic 1164

Added or revised 04-08-2016

---

While most Volgistics users collect the name of the Assignment as part of their service records, a user might occasionally find that a number of hours are not attributed to any Assignment. This can happen when the Assignment name is unintentionally omitted when posting a service entry.

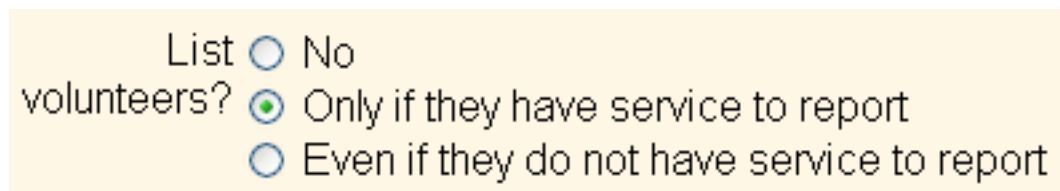

On a report, these hours are attributed to Assignments called "(None)." When this happens, there are two things users often want to know:

1. Which volunteer records are the sources of the service entries not attributed to an Assignment *in this particular service report*?

2. Do other volunteers besides those represented in this report have service entries not associated with an Assignment? If so, who are they?

### **Which volunteer records are the sources of the service entries not attributed to an Assignment in this report?**

This first question can often be answered with one simple step. Unless a report is organized by volunteer, neither the service summary nor service details reports list volunteer names by default. That is, when a service report is organized by Site; Site and Place; Site, Place and Assignment; Type, Date; Cluster, or Cluster, Site, Place and Assignment, it does not automatically include the names of volunteers responsible for the service. To determine which volunteer records are associated with the service, you will need to choose to list volunteers on the report's Options tab and print the report again.

List  No  
volunteers?  Only if they have service to report  
 Even if they do not have service to report

Service entries with the "None" Assignment will now be associated with the name of the volunteer who completed that service.

### **Do other volunteers besides those represented in this report have service entries not associated with an Assignment? If so, who are they?**

Answering this question requires that you first create a Set to identify such volunteers and then print a volunteer list report including only volunteers in the Set.

Create the Set like this:

1. Choose Sets from the menu.
2. Click on Create a new set.

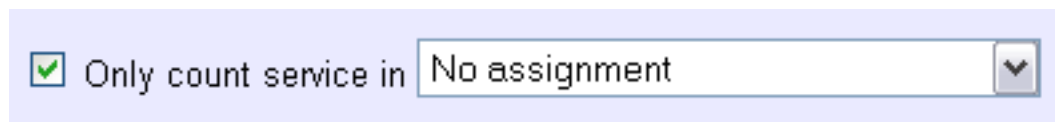

3. Give the Set a name (i.e. "Service records without Assignments") and choose to include volunteers in the Set based on "their service."

4. Click Go.

5. Define the Set rule to include volunteers if they have at least 0:01 hours in the time period of interest (i.e. the previous month, as illustrated below, the last year, etc.).

6. At the bottom of the rule definition box, mark the checkbox next to "Only count service in..." and select "No assignment" from the drop down list.

7. Click Finished.

Now you should create a new volunteer list report that includes only volunteers in the Set. A volunteer list report will show the names of volunteers with service records not associated with an Assignment. You can use this list to identify which volunteer records you should go into and edit service records to include Assignment names.

---

## How do service records get into Volgistics?

Help topic 1166

Added or revised 09-30-2016

---

There are several ways you can enter or collect volunteer service information in Volgistics:

1. If your volunteers all serve at primarily one or several fixed locations, such as a hospital, clinic, museum, zoo, or a performing arts center, you can use the [VicTouch \[pg:1778\]](#) module to collect volunteer service. The VicTouch module provides an interactive computer station (optionally with a touch screen monitor) where volunteers can sign-in and out, and also receive messages, check their schedules, and more. VicTouch can eliminate manual hour record keeping entirely in many organizations.

2. You can use the [VicNet \[pg:1724\]](#) module if you would like some or all of your volunteers to post their own volunteer hours online from home (or any computer with an Internet connection). This option can also reduce or eliminate the need for manual hour record keeping. You will need to setup the VicNet [Time Sheet tab \[pg:1460\]](#) in order to do this.

3. If you pre-schedule all or most of your volunteers in advance, you can use the Volgistics Post page to [post volunteer hours directly from your schedules \[pg:1576\]](#). In addition to posting hours from the schedule, the Post page also lets you post hours for tagged volunteers, volunteers in a particular Assignment, with a certain Type, with a certain Flag, or with last names starting with a specific letter. You can find out more about how the Post page works in [help topic 1021 \[pg:1559\]](#).

4. If you want to track volunteers, and you cannot use any of the methods described above to collect or post volunteer hours, you can collect hours "on paper" and then enter them manually later. If you enter volunteer hours manually from [paper time sheets \[pg:0666\]](#), you can use the Post page to speed-up the manual hour entry process; or you can always [post hours manually \[pg:1569\]](#) in individual volunteer records.

Choose the method that best suits your needs. No matter which way you choose to collect service, hours will appear in Volgistics as part of service records, and these drive your reports. You can collect some hours one way, and other hours a different way, and they'll be in a standard format in your database. You can also start out entering hours manually and then switch to VicTouch. They all feed into the same database.

---

## How do I make a single hour entry manually?

Help topic 2021

Added or revised 09-30-2016

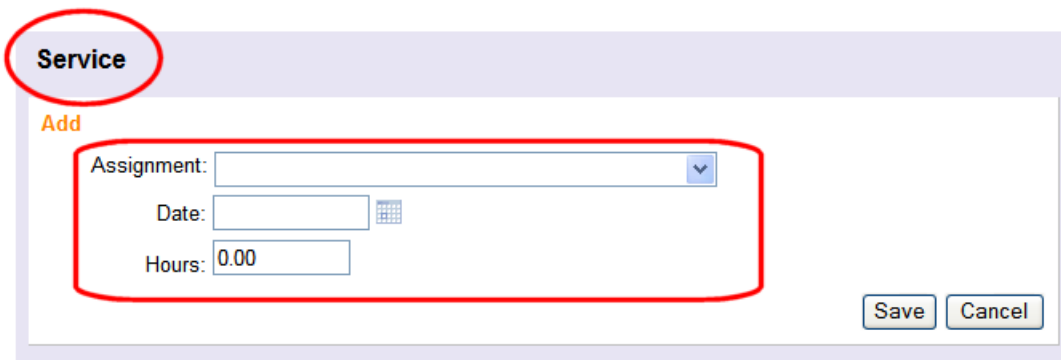

---

This help topic explains how you post an hour record manually for an individual volunteer. If you want to post hours manually for a group record, see the [Posting Service for Groups \[\\_\\_\\_\\_\\_\]](#) section of help topic 1045.

Please note that in addition to making hour entries manually for individuals and groups, service hours can also be recorded through the methods shown in [help topic 1166 \[pg:1568\]](#).

To post an hour record manually for an individual volunteer:

1. Choose *Volunteers* from the [menu \[pg:0215\]](#).
2. Locate the record for the volunteer for whom you want to make an hour entry.
3. Open the selected volunteer's record and click the *Service tab*.
4. Use the *Add* box in the Service section to enter the information for the new hour entry.

The screenshot shows a software interface with a tab labeled "Service" circled in red. Below the tab is an "Add" section, also circled in red. This section contains three input fields: "Assignment:" with a dropdown arrow, "Date:" with a calendar icon, and "Hours:" with the value "0.00". At the bottom right of the "Add" section are two buttons: "Save" and "Cancel".

5. Click the **Save** button to save the new hour record.

**Service**

**Add**

Assignment:  ▼

Date:  

Hours:

The new hour record is now added to the database for this volunteer.

You can customize the kinds of information that are collected as part of a service entry. To do this:

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Select *Service Tracking*.
3. Select *Ground Rules*.
4. Choose the kinds of information you want to collect for each service entry under *Manual volunteer service entries*. You may find [help topic 2325 \[pg:1429\]](#) useful because it shows examples of each option.
5. Click the **Save** button.

Your selection here will affect the way you - and all other [System Operators \[pg:0065\]](#) in your organization – make manual hour entries.

## How to Make All Volunteers with No Recent Activity Inactive

Help topic 2031

Added or revised 05-10-2013

---

If volunteers in your system do not have any recent activity, you may want to change their status to inactive. You can do this for all of the volunteers who have not had any recent service, at the same time. If, for instance, you want to change the volunteer status to 'Inactive' for any volunteer who has not had any hours recorded in the last 6 months, you can do this in three simple steps: Create a Set that finds these volunteers; tag their records; and then change the status on the tagged records to Inactive.

### Create the Set

Create a Set to find volunteers who have not had any service recorded recently.

1. Choose Sets from the [menu \[pg:0215\]](#).
2. Click the **Create a new Set** button.
3. Enter a name for the Set (e.g. No service in 6 months).
4. Under "Include volunteers in this set based on" choose 'Their Service' and then click the **Go** button.
5. Define your Set rule like this...

"Exactly 0:00 hours in the Last 6 months"

(or choose a different time frame to suit your needs).

6. Click the **Finished** button.

### Tag these volunteer records

Now you have a Set that includes all of the volunteers who do not have any service recorded recently.. Load the Set on the Volunteers page, and tag these volunteers like this:

1. Start by making sure there are not any tagged volunteer records already. To do this choose Tags from the [menu \[pg:0215\]](#) and then click the **Clear all tags** button. If the **Clear all tags** button is disabled it means there are not currently any tagged records. Continue with the next step in this case.
2. Choose Volunteers from the [menu \[pg:0215\]](#).
3. Under 'Include' choose the Set you created above from the Set drop-down list.
4. Also under 'Include' choose 'Active' from the Status drop-down list.

5. Click the **All** link at the top of the page (Next to the letter Z).

6. Now you should see a list of all active volunteers who have no hours recorded in the last 6 months (or the time frame you chose in your Set rule). You might spot check a few of these just to be sure these are the volunteers whose Status you want to change (click on a volunteer's name and view their Service tab to see when they last served).

5. Click the **Tag these** button at the bottom of the list to tag all of these records.

The active volunteers with no recent activity are now all tagged, and you're ready to change their status.

### **Change their status to Inactive**

To change the Status on the tagged records:

1. Choose Tags from the [menu \[pg:0215\]](#).

2. Next go to "Change the Status of all tagged volunteer records to:" select 'Inactive' and then click the **Go** button.

--

Any time you use Tags, it is good practice to 'clear' the tags when you're finished with them. To clear the tags choose Tags from the [menu \[pg:0215\]](#) and then click the **Clear all tags** button.

---

## **Entering Negative Service Values**

Help topic 2118

Added or revised 06-24-2004

---

**Q.** I want to make service entry with a negative value to compensate for another entry that was made for too many hours. How do I do this?

**A.** Service entries cannot have a negative value. Rather than making one entry to fix another, edit the original incorrect entry so it contains the correct value. This keeps your service records more accurate.

### **Related help**

---

## **How do I enter a volunteer's past hours?**

Help topic 2157

Added or revised 05-03-2013

---

You may have volunteer service records going back a number of years that you want to enter into Volgistics.

While it's certainly possible for you to enter each of these old service records into Volgistics on a record-by-record basis, it's usually more practical to enter them as 'lump-sum' entries, especially if these old records are from past years for which service reports have already been completed.

You can make lump-sum entries several ways:

- A single entry for each volunteer (for whom you have old service records) with the sum of all of their previous hours. This is the easiest way to enter old hour information: However, you should recognize that making a single entry that covers more than one year or one assignment will mean that you won't be able to break-out the volunteer's old hour entries by year or assignment in Volgistics.

For example, if a volunteer served 2,345 hours between 1994 and the end of 2004 you would enter these values in the Volgistics service entry:

**From date:** 01-01-1994

**To date:** 12-31-2004

**Hours:** 2,345

- One entry for each year with the sum of the volunteer's service for that year. This involves more data entry, but gives you the ability to break-out the volunteer's past service by year in Volgistics.

For example, if a volunteer served 1,234 hours in 2003, you would enter these values in the Volgistics service entry:

**From date:** 01-01-2003

**To date:** 12-31-2003

**Hours:** 1,234

- One entry for each year and each different assignment the volunteer served in, with the sum of the volunteer's service for that year and assignment. This involves the most data entry, but gives you the ability to break-out the volunteer's past service by year as well as by assignment in Volgistics.

For example, if a volunteer served 89 hours in 2003, in an assignment called "Docent," you would enter these values in the Volgistics service entry:

**Assignment:** Docent

**From date:** 01-01-2003

**To date:** 12-31-2003

**Hours:** 89

You can enter these lump-sum service entries in Volgistics by adding new service entries on the Service tab in the volunteer's record, or by using the Post features.

To add new service entries for volunteers from within the volunteer's record:

1. Select Volunteers from the [menu \[pg:0215\]](#) and then locate a volunteer for whom you want to post a service entry.
2. Click this volunteer's Service tab.
3. If necessary, scroll down to the Service box and then locate the white "Add" box.
4. Enter the information for the volunteer's lump-sum service entry, and then click the **Save** button.

If you would like to make additional lump-sum entries for the same volunteer, simply locate the white "Add" box again and make the next entry.

If you're posting lump-sum service entries for many volunteers, and if the lump-sum entries you're making are all for the time period (e.g. 01-01-2003 to 12-31-2003), you can optionally use the Post feature to make data entry easier. Select "Post" from the [menu \[pg:0215\]](#) to access the Post feature.

If a single lump-sum entry is greater than 9,999 hours (or 9,999,999 for other service measures), you will need to [post the service in multiple entries \[pg:1575\]](#).

The volunteer's "Life hours" will increase with each new entry. Once you have entered all of a volunteer's old hour records, the "Life Hours" value for the volunteer in Volgistics will correctly show you the sum of all of the hours you've entered for the volunteer.

## Pre-1990 Hours

For efficient and fast database operations Volgistics has a lower and an upper limit on the dates that hour entries can have. The lower limit is January 1, 1990; and the upper limit is December 31st of the current calendar year. This means that hour entries for hours served in past years should have From Date that is not earlier than 01-01-1990. Help Topic [2281 \[pg:1577\]](#) includes more information.

---

## How do I change an hour entry that's already been posted?

Help topic 2167

Added or revised 09-01-2011

---

If you've made a service entry for a volunteer that you want to change, you can do so like this:

1. Choose Volunteers from the menu.
2. Locate the record for the volunteer whose service entry you want to modify.
3. Click on the Service tab for the selected volunteer.
4. Locate the "Service" box on the service tab. The service box includes a list of all of the service entries posted for the selected volunteer. Service entries for previous months and years initially appear on this list as a consolidated entry. You can click on any consolidated month or year entry to expand the list of service entries to include that month or year. Locate the entry you want to edit on this list. If the entry you want to edit is for a previous month or year, click on the appropriate month or year to see the detailed service entries for that period.
5. Click the Edit link that appears next to the service entry. This opens the selected service entry in the "Edit" box ([Don't have an Edit link? \[pg:1601\]](#)).
6. Make the necessary change to the service entry in the Edit box.
7. Click the Save button to save your changes.

Locate the entry you want to edit, and then click the Edit link for that entry

## Posting Large Service Entries

Help topic 2168

Added or revised 08-22-2005

---

The largest single service entry you can make in Volgistics is 9,999 for hour entries, and 9,999,999 for other kinds of service measures.

This does not mean that you cannot record more service than this in a volunteer's record: only that the largest single service entry in their record cannot exceed these values (there is no practical limit to amount of service you can record in an individual volunteer's record).

In nearly all cases the only time this upper limit might present an issue is when you're [posting past service for a volunteer \[pg:1572\]](#) to transfer their previous cumulative service records into Volgistics. In these cases, simply make multiple entries that will total the amount of service you want to post for the volunteer.

---

## How do I post hours from the schedule?

Help topic 2202

Added or revised 09-30-2016

---

If you track volunteer hours, and you schedule volunteers in advance using Volgistics, you can post volunteer hours directly from the schedule.

You would normally post hours from the schedule for dates which have already passed (since volunteers may not always serve as scheduled, it's best to post their service once a date has passed and you know which volunteers served).

To post volunteer hours from the schedule for a selected date:

1. Select "Post" from the [menu \[pg:0215\]](#).
2. Under "Post hours for..." select "Volunteers scheduled on this date" and then enter the date you want to post the hours for.
3. Click the **Continue** button. Volgistics will list each volunteer scheduled on the date you selected, along with their scheduled assignment and times.
  - For volunteers who served the times and assignment they were scheduled for, you do not need to change anything next to their name. Volgistics will calculate and post their hours automatically when you post the page.
  - For volunteers who served, but in an assignment other than the assignment they were scheduled for, simply change the assignment next to their name to the appropriate assignment.
  - For volunteers who served, but for times other than the times they were scheduled for, simply change the times next to their name to the actual times they served.
  - For volunteers who did not serve as scheduled, check the "Skip" checkbox across from their name. Volgistics will not post hours for these volunteers.
  - If you there is a group [scheduled to fill multiple openings slots \[pg:0753\]](#), you will see a listing for each opening slot the group is filling. There are two ways you can handle this.

One is to use each entry and set the Volunteers field to one (1). When this is done each entry will be shown on the [Service tab \[pg:1579\]](#) of the group record.

Another option is to tally the number of slots the group is filling and enter this number in the Volunteers field on one entry. Check the "Skip" box on the other entries so service is not posted for those entries. Please remember with this option that some entries for the group may appear on upcoming pages. Because there is not a way to return to a Post page after you have passed it, you may want to refer to the Schedule tab of the group's record to get the total number of opening slots the group is filling.

4. Click the **Post this page** button to post service for the first page of volunteers and then continue with the next page. Repeat until you reach the end of the list for the selected date.
5. If you'd like, you may print a Batch Report when you're finished by clicking the

### Print batch report

button (this button appears after you post the final page). Batch reports are helpful if you want to compare what you entered in Volgistics to a sign-in sheet in order to verify your entries. If you do discover that a mistake was made posting hours for a volunteer, you can easily [edit the individual hour entry \[pg:1574\]](#) that contains the mistake.

You can post some volunteer hours from a schedule, and still collect other hour entries through other methods. For example, if there are some assignments (such as assignments related to a special event) for which volunteers are scheduled through Volgistics, and other assignments where volunteers are not scheduled through Volgistics, you can use the Post feature to post the hours for the assignments that *were* scheduled and then use VicNet or VicTouch (or make manual hour entries) to record hours for the *other* Assignments.

## Why are hour entry dates sometimes changed when I post hours?

Help topic 2281

Added or revised 01-07-2013

---

For efficient and fast database operations Volgistics has a lower and an upper limit on the dates that hour entries can have. The lower limit is always January 1, 1990; and the upper limit is always December 31st of the current calendar year.

You should not make hour entries for dates before or after this date range. If you're [catching-up Volgistics by posting old service records \[pg:1572\]](#) for volunteers, entries for time periods earlier than 1990 must be dated 1-1-1990 or later (the volunteers original 'start date' on their History tab can be any date, including dates before 1990).

In order to save all of the hour records you post for a volunteer, Volgistics will automatically adjust service entry dates that are out of range. If you make an hour entry for a date that is earlier than January 1, 1990, Volgistics will change the date on the entry to January 1, 1990. If you make an hour entry for a date that is later than December 31st of current year, Volgistics will change the date on the entry to December 31st of current year.

You can always [change the date on a service entry \[pg:1574\]](#) that has already been posted (to any date within the permitted range) if you'd like.

---

## Time Sheets

Help topic 2293

Added or revised 01-03-2012

---

This help topic shows one option for creating time sheets in Volgistics. You may also be interested in the Daily sign-in sheets (stock) report. [Help topic 8047 \[pg:0666\]](#) has more information on this report.

If you don't use [VicTouch \[pg:1778\]](#) to collect volunteer hours, you can pre-print time-sheets using the 'Time sheet view' from your volunteer schedules. Time sheet views provide a list of the volunteers scheduled for duty on a selected date (overall, or for a selected Site, Place, Assignment, or Coordinator); with columns for volunteers to enter their actual time-in and time-out. Plus, there's an additional 'Office-use' column you can use to mark records as you post them for any other notation you might want to make.

The list can be printed in alphabetical or chronological order. The settings for this are under the "Time sheet view options" on the [Scheduling Ground Rules \[pg:1392\]](#) page.

Volunteers can use time sheets to sign-in and out when they arrive and depart, and you can use them when you [post hours from the schedule \[pg:1576\]](#) to confirm each volunteer's service.

Time Sheet						
Volunteer Schedule						
Sunday, September 10, 2006						
Volunteer	Time In	Time Out	Assignment	Scheduled Times		Office Use
Bailey, Mary			Tour Guide	10:00 a	12:00 p	
Dakin, Ruth			Info Desk	9:45 a	12:00 p	
Ross, Benjamin			Info Desk	9:30 a	2:00 p	
Yohn, Marcie			Docent	7:00 p	8:00 p	

To print time sheets from a schedule:

1. Choose Schedule from the [menu \[pg:0215\]](#).
2. If the schedule opens to the Calendar view, click the **Daily schedule** button.
3. Choose the date you want to print a time sheet for.
4. Click the 'Time sheet view' link near the top of the schedule. This opens a "printable" time sheet that should suit your needs. You can print this from your browser.

You can also view time sheets for an individual assignment, or for all of the assignments at a selected Site or Place; or for a selected Coordinator. To do this:

1. Open a Site, Place, Assignment, or Coordinator record.
2. Select the Schedule tab.

3. If the schedule opens to the Calendar view, click the **Daily schedule** button.
4. Choose the date you want to print a time sheet for.

---

## How do I view a selected volunteer's hours?

Help topic 2305

Added or revised 09-17-2013

---

To see a selected volunteer's hours:

1. Select Volunteers from the [menu \[pg:0215\]](#).
2. Locate the volunteer's record.
3. Click the volunteer's name to open their record
4. Click the 'Service' tab.

The volunteer's hours are listed in the 'Service' box, on the Service tab as shown here:

**Service**

---

## How to Delete a Batch of Posted Service

Help topic 2313

Added or revised 04-02-2015

---

If you post volunteer service manually, the [Post page \[pg:1559\]](#) provides a fast way to enter service entries for multiple volunteers at the same time. Each time you finish posting, a batch record is created for all the service posted during the session. Each batch has a unique identification number and you can see a record of the service created for the batch by running a [Batch Report \[pg:0426\]](#).

There may be times an entire batch of service was entered incorrectly. For example, if the operator meant to enter all the service for April 1, 2015, but selected April 2, 2015 by mistake. In this case, one option is to go to each volunteer's record in the batch and [edit the service entry \[pg:1574\]](#). However, if there were a large number of records in the batch it may be quicker to delete the entire batch of service and then re-enter it. This option should only be used if you wish to delete *all* [service entries \[pg:1581\]](#) (or service records) for the entire batch.

To delete an entire batch of service, an [Administrator \[pg:0052\]](#) level [System Operator \[pg:0065\]](#) will need to follow these steps:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Account management* link.
3. Select *Delete a batch*.
4. At this point a screen will appear warning you that the action of deleting the batch of service cannot be reversed and that it will delete *all* service entries for the batch. If you are sure this is what you wish to do, continue to step 5. Otherwise, click the **Cancel** button.
5. Enter the number for the batch you wish to delete in the field after *Delete all of the service records that were posted in batch number* and click the **Continue** button.
6. You can still opt to discontinue deleting the batch by clicking the **Cancel** button. If you wish to proceed, enter the password you use to login to Volgistics with in the *Password* field and click the **Continue** button.

---

## Tracking Volunteer Service on the Service Tab

Help topic 2400

Added or revised 04-01-2015

---

Each volunteer's service is tracked on the Service tab of the volunteer record. To get to a volunteer's Service tab, choose Volunteers from the [menu \[pg:0215\]](#), locate and click on the name of the volunteer of interest, and click on the Service tab in that volunteer's record. You will see that the Service tab contains three boxes: Assignments, Service and Mandatory Service. This help topic addresses only the second box, Service; help topic 2399 explains the [Assignments box \[pg:0138\]](#), and help topic 2156 explains how to [track mandatory service \[pg:1419\]](#) in Volgistics.

### Service Records

Most Volgistics users track the amount of service completed by their volunteers. There are [several ways to get service records into Volgistics \[pg:1568\]](#), including the use of the optional [VicTouch \[pg:1778\]](#) or [VicNet \[pg:1724\]](#) modules, the [Post page \[pg:1559\]](#), or by collecting hours from paper time sheets and then [manually](#)

posting hours [pg:1569] in individual volunteer records. No matter which way(s) you collect service information, it will end up as a service record in the Service box on the Service tab in the volunteer record. Note that service records are the source of data for all service reports in Volgistics, so it is important that they accurately represent your volunteers' service.

The image below shows an example of how a volunteer's Service box might look. Note that service completed in previous years is grouped together as a total entry for the entire year, and service completed in the current year is grouped together by month.

Service										
Expand all										
Date	Assignment	Apply to	To time	Hours	Merit hours	Absences	Animals Fed	Tours Given	Training Hours	Caregiver 1
<a href="#">Sep 2008</a>				5:00	5:00	0	0	0	0:00	0:00
<a href="#">2007</a>				12:00	13:00	0	0	0	0:00	0:00
<a href="#">2003</a>				462:30	462:30	0	0	0	0:00	0:00
<a href="#">2002</a>				110:45	110:45	0	0	0	0:00	0:00
<a href="#">2001</a>				326:30	326:30	0	0	0	0:00	0:00
<a href="#">2000</a>				12:30	12:30	0	0	0	0:00	0:00
<a href="#">1998</a>				5:00	5:00	0	0	0	0:00	0:00
<a href="#">1997</a>				30:25	30:25	0	0	0	0:00	0:00
<a href="#">1990</a>				492:00	492:00	0	0	0	0:00	0:00
Life total:				1,456:40	1,457:40	0	0	0	0:00	0:00

To expand a previous year's service information into the months during which service was recorded, click on the year in the Date column. To expand monthly service information into the individual service records that comprise a given month's total service, click on the month and year of interest in the Date column. To see each individual entry for all years listed at once, click on the orange "Expand all" link in the upper left corner of the Service box.

You can use the grid columns in the Service box on the Service tab to display [service measure \[pg:1557\]](#) information linked to individual service records. You can choose whether or not to display service measures as a grid column when you [set up the service measure \[pg:1406\]](#).

### Editing a Service Record

When the Service box is expanded to show individual service records, you will see an orange "Edit" link next to each entry. Click the Edit link to change any of the information that is part of a service record, or to see how a service record was entered or modified

**Edit**

Assignment: Records [Headquarters \ Volunteer Office] ▼

Date: 09-01-2008  From time: 8:00 am ▼

To time: 1:00 pm ▼

Apply to: None ▼

Hours: 5:00  Merit hours: 5:00

Absences: 0  Animals Fed: 0  Tours Given: 0

Mileage: 0.00  Vacation: 0  Visits: 0

Group Hours: 0  Training Hours: 0:00

Source: This service record was entered as part of Batch number 32.

In the image above, one can see (in faint gray type at the bottom of the Edit box) the source of this service record. In this example, the service record was entered as part of a Batch, indicating the [Post \[pg:1559\]](#) feature was used. Use any of the fields in this box to adjust the service information pertaining to this record. Be sure to click the **Save** button when you are finished making any updates.

Note that while a service record tracks the service a volunteer has actually completed in an Assignment, an [Assignment record \[pg:0138\]](#) tracks a volunteer's relationship to a particular Assignment, which may or may not mean that a volunteer has completed service in that Assignment.

---

## Session in use

Help topic 1006

Added or revised 02-19-13

---

Each time an operator logs-in to Volgistics they start a new session. Sessions stay "open" or "active" until the operator clicks Exit on the Volgistics [menu \[pg:0215\]](#). For security purposes, Volgistics also closes sessions automatically when they are inactive for approximately 60 minutes. One way the system "senses" activity is when items are selected from the menu. So if you're doing something where you do not interact with the system (such as tagging a large number of records or writing a long email message), you may want to periodically select a different page from the menu.

If the **Session in use** message appears when you login, it means one of two things:

1. You were using Volgistics within the last 60 minutes and your Internet connection dropped, or you closed your browser without clicking Exit in Volgistics. In this case your earlier Volgistics session is still considered open. You can click the **Continue** button to close your earlier session and login again.
2. You share your Volgistics login name with another [System Operator \[pg:0065\]](#), and that person is currently using Volgistics. Because there can be only one session at a time for each operator in your Volgistics account, you cannot login until the session is closed for the other person using the shared login name. In this case, clicking the **Continue** button will allow you to login. However, it will also close the other person's session (they will receive a *Session expired* notice). Clicking the **Cancel** button will allow the other person to continue working.

An individual Volgistics operator can have only one session open at a time. However, your Volgistics account may have multiple operators and each of these may have a session open at the same time. You can upgrade your Volgistics account to provide additional operators if you would like more people to have access to the system at the same time. To add additional operators to your account, see [Help topic 2026 \[pg:1440\]](#) The number of system operators you are allowed to add is controlled by your account's [service level \[pg:0719\]](#).

## Incorrect Time on the Who's Here Page

Help topic 1009

Added or revised 06-04-2012

---

The [Who's Here \[pg:1772\]](#) page is used to monitor which volunteers are on-site in organizations where volunteers serve primarily at one or several fixed locations. In some instances, a System Operator might view the Who's Here page and find that the time displayed on the page is incorrect. This occurs when a System Operator's time zone setting is inaccurate.

To fix this problem, [set the appropriate time zone for each System Operator \[pg:1383\]](#). The change will take effect the next time the System Operator logs into Volgistics. Note that if you change the time zone setting for the System Operator you are logged in as, you must exit and login again to see the changed time zone setting.

---

## Error messages

Help topic 1031

Added or revised 02-14-2012

---

The following is a list of the error messages which could be reported by Volgistics and the conditions under which they would occur.

### **Error 301**

Irregular web request

Volgistics received a request from your computer, but the content of the request was incomplete, or too large to send.

If you receive this error when saving a Volgistics form with a very large text entry, the text entry may be too large. The maximum length of a text entry in a single Volgistics field is 4,600 characters. Check to be sure you are not attempting to save more than 4,600 characters in a single field.

If you continue to receive this error, please report it to the Volgistics Team in a help inquiry. Include the error number 301, and a description of what you are doing in Volgistics when you receive the error.

### **Error 305**

Irregular web request or expired session

Volgistics received a request from your computer, but the content of the request was incomplete or incorrectly formed.

This could happen if a web request was corrupted by a faulty network device.

This error could also occur if you bookmark a page within a secure part of Volgistics, and then later attempt to return to the bookmarked link. Secure pages cannot be bookmarked. To visit a particular page within the system later, you must login normally and then navigate to that page again. This ensures that only authorized system operators can return to secure pages.

### **Error 306**

Blocked

For security purposes your computer has been temporarily blocked. It has sent too many requests with incomplete or incorrectly formed data.

[Help topic 2163 "Security Blocks" \[pg:1604\]](#) explains more.

### **Session Expired**

This Volgistics session has expired. To continue working, click Exit and then login again.

Volgistics sessions expire after a certain period of inactivity (about 60 minutes). If you have a Volgistics session running on your computer and you do not use the system for 60 minutes or more, Volgistics automatically closes your session and automatically logs off.

Automatic log off is primarily a security provision. If you leave your computer unattended with Volgistics running, another person could potentially use your session to access the system (of course, it's always a good idea to close your Volgistics session by clicking Exit on the menu when if you're leaving your computer, especially if you are working from a computer accessible by others).

To start a new session and continue working, simply click Exit on the menu and then login again.

### **Invalid link or bookmark**

The link or bookmark you clicked is incomplete.

If you are attempting to add a link to the Volunteer Information Center from your web site when you receive this error, the link you've created does not contain your organization's *public* account number. [Help topic 2153 "Creating Links to VicNet" \[pg:1491\]](#) explains how to create these links using your *public* account number.

### **Page not found**

The link or bookmark you clicked is incomplete, or the page no longer exists on the web site.

The web page you were looking for was not found.

### **Internal Application Error**

#### **Catastrophic failure**

#### **Server error 500**

These errors would indicate a problem on the Volgistics system itself.

If you receive any of these error messages while using Volgistics, please contact the Volgistics Team for assistance:

When you contact the Volgistics team, please explain what you were doing in Volgistics when the error occurred, and the exact wording of the error message.

Normally such errors will not result in a loss of any previously saved information. Such errors may occur if the system encounters data which is outside of an expected range.

You should be able to continue working in other areas or on other records after such an error occurs. If the error occurs consistently in a particular location it may be necessary for the Volgistics Team to make an adjustment to the system.

### **Browser Errors**

You use Volgistics through a standard web browser. Web browsers can report error conditions as well, and these will generally relate to Internet connection or internal web browser problems.

---

## Orange slider bar on menu does not move to menu selection

Help topic 1032

Added or revised 01-14-2004

---

When you select an item from the Volgistics [menu \[pg:0215\]](#), the orange 'slider bar' normally moves to the menu item you selected. If you open Volgistics and then select a menu item before your web browser finishes loading the menu's graphic images, the orange slider bar may appear to remain 'stuck' on one menu item, although the menu will continue to function normally otherwise.

Once your browser has completed loading all of the menu's graphics the orange slider bar will move to selected item on subsequent menu clicks.

---

## Configuring your organization's firewall for Volgistics

Help topic 1046

Added or revised 04-21-2015

---

Some organizations use "firewalls" to protect their networks and computers. Often, organizations configure their firewalls to limit the web sites that network users are permitted to go to. If your organization uses a firewall for this purpose you (or the person who maintains the firewall) may need to make an adjustment that will permit you to reach the Volgistics web site.

This help topic includes technical instructions related to basic computer networking. Some of the trouble shooting commands in this help topic may require administrative access to your computer. If you do not have administrative access to your computer you should ask the person who maintains your computer for assistance.

If your firewall is configured to limit web access, be sure it permits network users to access this domain:

[www.volgistics.com](http://www.volgistics.com)

If you are using a software firewall, you may also need to permit access to these domains necessary to validate Volgistics' security certificates with DigiCert:

- <http://crl3.digicert.com/sha2-ev-server-g1.crl>
- <http://crl4.digicert.com/sha2-ev-server-g1.crl>

While it's best to configure firewall permission by domain name rather than IP address, this is the IP address and ports to which network traffic must be permitted:

69.87.157.201 port 80 (HTTP) and port 443 (HTTPS)

### Access tests

If you have experienced difficulty reaching the Volgistics web site from a computer running Microsoft Windows – or if you have experienced access issues from a computer running the VicTouch module, you should perform these tests to identify the cause of the problem.

1. Open a command window.

- a. Choose Start from the task bar.
- b. Choose Run.
- c. Enter "cmd" in the Run dialog box, and then click **OK**.

A command window like the one shown below will appear. You will perform the remaining tests at the command prompt in this window.

2. Flush the computer DNS (domain name system) cache. This will ensure that there are no "stale" DNS records on the computer itself. At the command prompt enter...

### **ipconfig /flushdns**

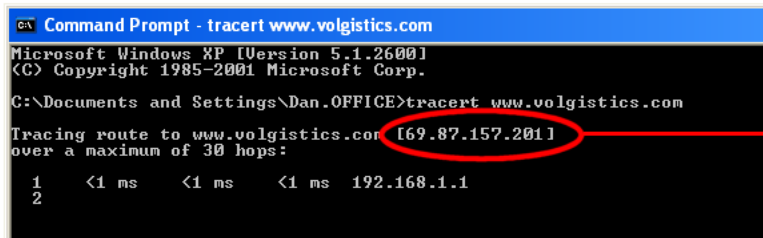

...then press the **ENTER** key.

3. Trace the route to www.volgistics.com. At the command prompt enter...

### **tracert www.volgistics.com**

...then press the **ENTER** key.

You should see the response "Tracing route to www.volgistics.com [ip address]" where the bracketed IP address is the one listed above. If the IP address in the brackets *is not* the one listed above, there is outdated DNS information on the network. Ask your network administrator or ISP to update cached DNS entries.

```
Command Prompt - tracert www.volgistics.com
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\Dan.OFFICE>tracert www.volgistics.com

Tracing route to www.volgistics.com [69.87.157.201]
over a maximum of 30 hops:
  1  <1 ms  <1 ms  <1 ms  192.168.1.1
  2
```

The bracketed IP address shown here must be the one listed above

4. Test access to the IP address. At the command prompt enter...

### **tracert 69.87.157.201**

...then press the **ENTER** key.

The trace may take a minute or longer to complete. When complete, you should see one of the final "hops" listed as 69.87.150.226 or as 69.87.157.201. If the trace stops before either of the IP addresses is listed, there could be a firewall blocking the IP address on your network. Please check with your IT support staff for further assistance.

Note that you may receive a "Destination host unreachable" or a "Request timed out" message before either of the above IP addresses appear. This is normal. Some networks may not permit ICMP traffic for security purposes so the result of this trace test may not yield useful information.

---

## Why can't I open Excel files from my Volgistics Mailbox?

Help topic 1109

Added or revised 08-08-2011

---

Microsoft Office files in your Volgistics Mailbox will typically open automatically when you click on the name of the report. If you click on an Excel report and get a message that states the report is no longer available, you may have created a report that's larger than the Excel report limits allow. In this case, please see help topic 2169 "[My Excel Spread Sheet Report Gives Me an Error Message](#)" [[pg:0462](#)] for help separating the large report into smaller reports.

If you don't get an error message but the report does not open automatically, it is likely that your web browser needs to be configured to open Microsoft Office files with the appropriate Microsoft Office applications (or other compatible programs).

The browser settings must be changed so that there is an association between files ending in .XLS and the Excel program (or other compatible spreadsheet program) you run on the computer. (Look for an option with a name like "File Associations.") For assistance with procedure, please contact your organization's IT staff.

---

## Session Expired

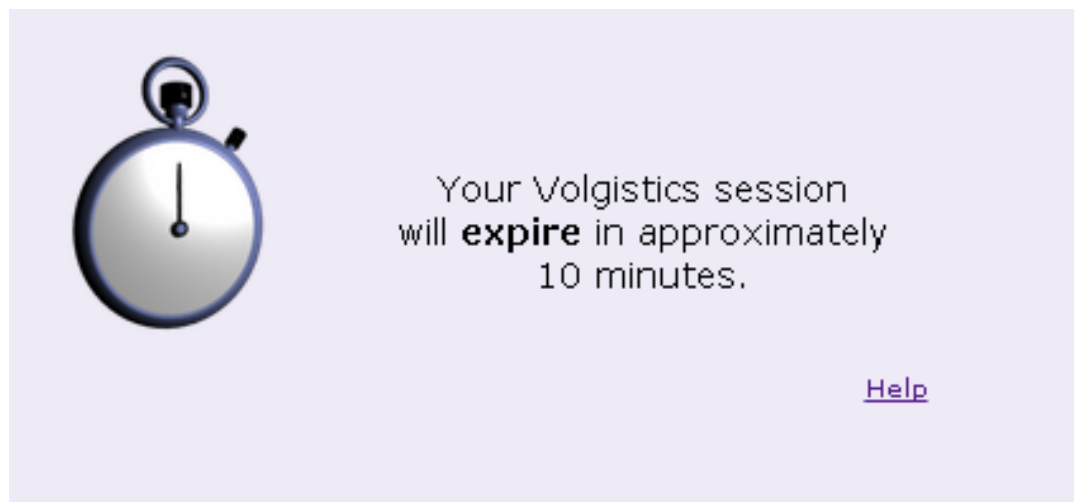

Help topic 1146

Added or revised 04-04-2016

---

As a matter of basic system security, Volgistics sessions expire after a period of approximately 60 minutes of inactivity. Not all activities in Volgistics interact with the database so there are cases where you may be working, but the system will see you as inactive. For example, if you're composing a long email message or tagging a large group of volunteer records, the system will see you as inactive because the activity you're engaged in does not send any information to or from the database.

To protect you from accidental automatic sign-outs, a warning box similar to the one shown below will pop-up when you have approximately 10 minutes before the session expires:

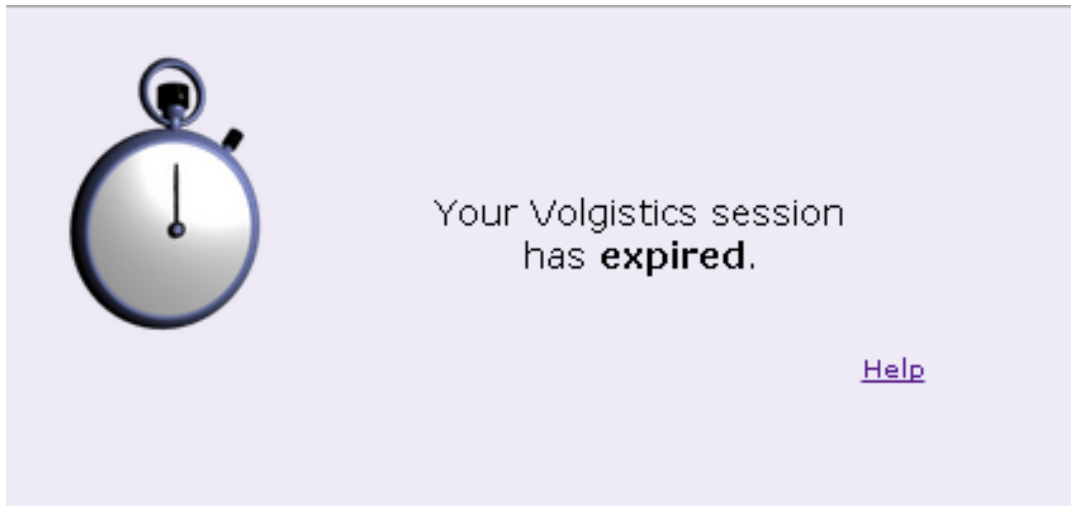

If you're still working with the database when you see the warning box, simply perform an action where you will send or pull information from the database. For example, if you are composing an email message, click the

### **Save to send later**

button. This will reset the timer and then you can re-open the message and begin working on it again. Or, if you are tagging volunteer records, select Schedule from the [menu \[pg:0215\]](#). This will make a call to the database which will reset the timer.

If the system still does not sense activity for the session after the 10 minute warning box appears, the session will be closed to protect the account's information. In this case, a warning box like the one shown below will appear:

The operator will also get a

### *Session Expired*

message when they try to perform an action that interacts with the database. If the session has expired, the user can continue working by selecting Exit from the [menu \[pg:0215\]](#), clicking [Login \[pg:0220\]](#) at the top of the page, and re-entering their credentials.

A *Session Expired* message can also appear if [System Operator \[pg:0065\]](#) login credentials are shared between two people and the second person logs in while the first person is already using the system. Because there can only be one session at a time for each operator, the second person cannot login until the session is closed for the other person using the shared login name.

In this case, the second person attempting to login will see a *Session in use [\_\_\_\_\_]* message. If this person clicks **Continue**, they will be able to login but the other person's session will be closed. This will cause the operator who was already logged in to see the *Session expired* notice. If the second person clicks **Cancel**, the person who was already logged in will be allowed to continue working.

### **Can I Prevent My Sessions From Expiring?**

The Volgistics feature that closes idle sessions after 60 minutes prevents open sessions from posing a security

vulnerability. It is a requirement of many security standards, and meets best practice standards for security.

*For this reason there is not a way to disable this feature or set an account to permit a longer period of session inactivity.*

If a System Operator knows they are going to be away from the system for more than a few minutes, we recommend they save the page they are working on before leaving to avoid losing any work.

You can optionally disable the alert messages warning that the session will be expiring on an operator-by-operator basis.

*However, this will not prevent the session from expiring. It will only prevent the alert messages from appearing.* You can find information on how to turn off the alert messages for an operator [here](#) [  ].

---

## Volgistics Seems Slow

Help topic 1168

Added or revised 01-29-2013

---

There are a number of variables that affect the speed at which Volgistics pages refresh in your web browser. The most significant is the speed of your Internet connection. For comparison purposes, here is an estimate of the amount of time required for your web browser to receive a list of 500 volunteers on the Volgistics Volunteers page at various connection speeds:

1.54 Mbps full T1, cable modem or DSL: 1 second

512 Kbps fractional T1: 3 seconds

128 Kbps ISDN: 12 seconds

56 Kbps dial-up: 29 seconds

As you can see, faster Internet connections dramatically improve performance. Volgistics recommends that you have a broadband connection (a connection faster than 56 Kbps dial-up) at the computers where you use Volgistics most often.

Keep in mind that if you share your Internet connection with other people, your actual bandwidth may be less than the overall speed of your connection. For example, if your office has a full T1 connection but it's shared among 20 computers on your network, the amount of bandwidth available to you will depend on what your co-workers are doing online at any given time.

Internet traffic between your computer and other computers on the Internet travels across many different networks, switches, and service providers. Occasionally bottlenecks along the way may reduce your connection speed further.

The Volgistics system can generally always process your requests for information very quickly (usually in milliseconds), although an additional factor affecting speed is the current workload at Volgistics. During peak periods – mid day for example – some activities like receiving a printed PDF report file may take a bit longer than at other times.

There are several web sites that can show your approximate connection speed. One of these is located at <http://www.speedtest.net>. Click the **BEGIN TEST** button to start the test.

For accuracy, perform the bandwidth test from your computer at a time when you notice slower performance and at a time when performance seems normal. If you submit an inquiry about slow response times, please let the Support Team know the results of your tests.

# VicTouch is Slow or Does Not Always Respond When Buttons Are Touched

Help topic 1169

Added or revised 05-13-2016

---

If VicTouch seems slow to respond when you touch a button, or if volunteers must sometimes touch a button more than once to get a response, you can perform these two simple tests to pin-point the problem:

### First test

If there is not a mouse attached to the VicTouch computer, attach a standard computer mouse. Using the mouse rather than the touch screen, check-in and out a few times using a known PIN number. Simply click once on the buttons using the mouse rather than touching the buttons on the touch screen surface.

If you find that VicTouch responds promptly to your mouse clicks and you do not need to click a button more than once, you most likely need to recalibrate or adjust the sensitivity of your touch screen monitor.

The touch screen monitor works by "watching" for touches to the surface of the monitor. When the monitor detects that it has been touched, it converts the location where the screen was touched into a standard mouse click (as if you used the mouse to click that spot on the screen), which it then passes on to VicTouch. If the touch screen monitor itself is not working properly, it may not always recognize that the surface of the monitor has been touched (a sensitivity issue), or it may not correctly see the location where the screen was touched (a calibration issue).

When you test VicTouch using a mouse rather than the touch screen monitor, you bypass the touch screen monitor hardware. If VicTouch responds as expected when you do this, it points to a sensitivity or calibration issue with the touch screen monitor itself rather than an issue with the VicTouch system.

Most touch screen monitors come with a software program or driver that you can use to set the monitor's sensitivity, and to re-calibrate the monitor (this is called positioning on some monitors). If you need help adjusting these hardware settings you should consult the documentation that came with your touch screen monitor or contact your IT department or the monitor manufacturer or vendor.

If you find that VicTouch still seems slow, or does not always respond when you click buttons using the mouse rather than the touch screen monitor, proceed to the second test.

### Second test

Open the web browser at the VicTouch computer and then visit [www.volgistics.com](http://www.volgistics.com). Login to Volgistics as you would normally (using your regular account number, login name, and password). Navigate around within Volgistics to see how it performs speed-wise. For example, look-up any volunteer record or view the Assignments page. When you do this, does Volgistics respond as quickly as you expect? In other words, is the system performance similar to what you're used to in Volgistics?

If the answer is yes, there is probably not a connection issue from this computer. Instead it is likely that Microsoft Internet Explorer has not been set up to 'cache' the VicTouch image files. In this case you should follow the instructions in [help topic 8270 \[pg:1523\]](#). In particular, be sure you've performed the steps under "Set Internet Explorer Advanced Options", including the steps to un-check 'Do not save encrypted pages to disk'. If these steps were not followed, VicTouch reloads the graphics on each session which can slow things down.

If the answer is No, (if Volgistics itself is slower here than at your usual computer) then this computer may have a slower internet connection than the computer where you usually use Volgistics. [Help topic 1168 \[pg:1591\]](#) explains how to test your connection speed. Volgistics recommends that your VicTouch computer connects to the internet through a broadband connection.

## Related help

---

# The Buttons Are Too Small or Too Large at VicTouch

Help topic 1170

Added or revised 04-03-2008

---

If the buttons volunteers use to navigate through VicTouch appear too small or too large, you can adjust their size by changing the screen resolution on the VicTouch computer.

Follow these steps to adjust the VicTouch computer screen resolution (note that you may need to be logged into Windows as an "administrator" to make this change – contact the person who supports your computer for assistance if this is the case).

1. Minimize or [shut-down VicTouch \[pg:1762\]](#).
2. Click on the Start button, and select Settings and then Control Panel.
3. From the Control Panel, select Display to open the Display Properties screen.
4. Click on the Settings Tab.
5. Move the slider to a screen resolution that is no smaller than 1024 by 768 pixels, and no larger than 1280 x 1024. The smaller the resolution the larger the VicTouch buttons will appear.
6. Set the Color quality as high as your display adapter will support (at least 256 colors recommended).
7. Click Apply, and then click OK.

---

## Error 12152

Help topic 1201

Added or revised 12-08-2008

---

The error message 12152 comes from the Windows Internet (WinINet) application programming interface (API) and describes HTTP protocol status:

```
12152 ERROR_HTTP_INVALID_SERVER_RESPONSE
The server response could not be parsed.
```

The 12152 error is a non-specific error message which indicates a connectivity issue that prevents the web browser from being able to communicate with the Volgistics system.

Most of the time this problem is caused by

- Network connection instability
- Server maintenance at Volgistics
- Internal Windows issues
- Firewalls, routers, pop-up blockers

Try accessing Volgistics from a different computer or network. If you can connect from a different computer or network the problem is more likely on the computer where the error occurs. If you get the same error from a different computer or network, the Volgistics system may be under server maintenance. Except for emergency maintenance, all server maintenance is announced in advance on the Volgistics Welcome page.

These are some tips how to improve the quality of your internet connection:

1. On the computer that is receiving the 12152 error, test your internet connection outside of Volgistics (can you go to other web sites okay?)

---

## Error Message About the Volgistics Security Certificates

Help topic 1309

Added or revised 05-13-2016

---

Security certificates (SSL certificates) provide a way for Internet users to be sure the web site they're using is owned by the company it claims to represent. Volgistics uses DigiCert to provide its security certificates. The Volgistics security certificates are valid and up-to-date. However, sometimes users report that they get an error message regarding security certificates when they use Volgistics. While there are many different scenarios that could cause this, in the majority of cases the error messages our users get can be tracked to two different causes. If you have an IT or IS department at your organization, this department may need to check whether one of these, or something else, is causing the error messages. If you do not have an IT or IS department, you will need to check on these yourself. One problem we sometimes see is there is an anti-virus program, firewall, or other network setting that is blocking access to the URL addresses necessary to validate the security certificates for Volgistics. There should always be an exception in place for the www.volgistics.com domain. However, you may also need exceptions for the following URL addresses:

- <http://crl3.digicert.com/sha2-ev-server-g1.crl>
- <http://crl4.digicert.com/sha2-ev-server-g1.crl>

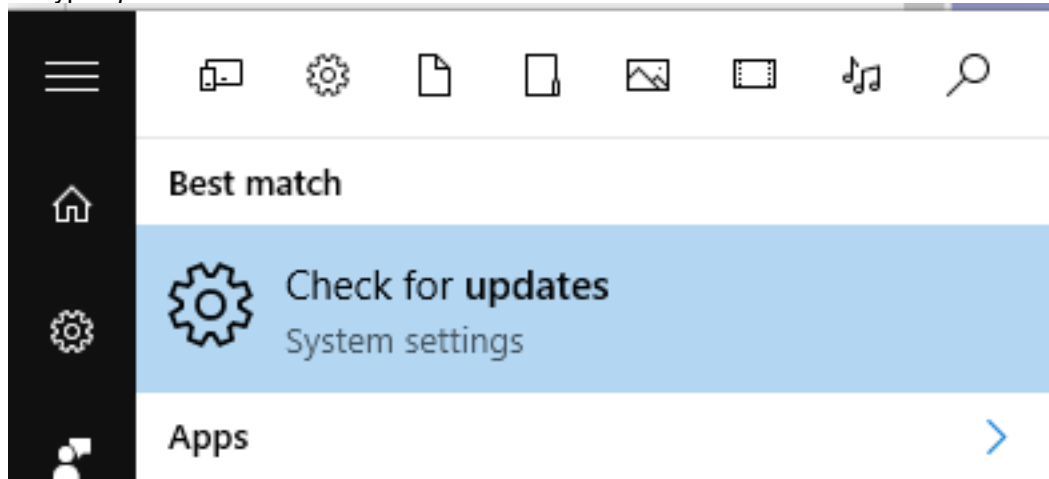

The second, and most common, problem we see is the root certificates for the Windows operating system need to be updated. Because certificates operate in a chain, a problem with the root (or base) certificates can cause all certificates up the line to appear invalid even though they are not. The process to update the root certificates varies depending on the version of Windows you are running. So when in doubt you should consult the help documentation for Windows. However, here are some steps for some common Windows platforms:

### **Windows Vista and Windows 7**

1. Click on the Windows Start menu.
2. Select "All Programs."
3. Select "Windows Update."
4. Select "Check for updates" from the menu on the left.
5. Select the optional updates link from the right side.
6. Check the box in front of "Update for Root Certificates for Windows . . . ." If this option does not appear, your root certificates are current and do not need updating.
7. Click the **OK** button in the bottom right corner.
8. Click the **Install updates** button.

## Windows 10

1. Click on the Windows Start menu.
2. Type *updates*

3. Click "Check for updates".
4. If you see a button to **Check for updates**, click it. If updates are currently available, you should have an option to install them. If updates have already been applied, you may see a message indicating the a restart has been scheduled. In this case, you'll need to restart the computer before the updates will take effect.

### Related help

[Help Topic 2290 \[pg:1619\]](#) - Internet Connection Problem at VicTouch

---

## "Email me a copy" and "Text me a copy" buttons on the VicTouch sched

Help topic 2008

Added or revised 04-24-2014

---

If you use the [VicTouch \[pg:1778\]](#) module, and you have [enabled the schedule page \[pg:1453\]](#), volunteers can click the *Email me a copy* or the *Text me a copy* button on the schedule to have a copy of the month's schedule sent to them. Here is how to set up this feature:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicTouch link.
3. Select *Schedule "Email/Text me a copy" messages*.
4. Check the box in front of *Use the "Email me a copy" and "Text me a copy" buttons for schedules in VicTouch*.
5. Enter and/or edit the text boxes for the email messages if you'd like. *There is not a way to customize the content of text messages due to the limited number of characters permitted.*
6. Click the **Save** button.

If the buttons do not appear for a volunteer when he or she views the schedule, one or more of the following may apply:

- The *Use the "Email me a copy" and "Text me a copy" buttons for schedules in VicTouch* is not checked. In this case, follow the steps above and be sure to check the box in step 4.
- For email, the volunteer does not have an email address entered on the [Core tab \[pg:1868\]](#) of their record. For text messages, the volunteer has not [opted-in to text messaging \[pg:0323\]](#)
- The volunteer's [email address is invalid \[pg:0377\]](#) or their [text number is invalid \[pg:0333\]](#).
- The volunteer has the "No email" or the "No text message" box checked on the [Core tab \[pg:1868\]](#) of their record.
- The volunteer is not scheduled in the month that is selected.

---

## Why do some fields in Volgistics appear to be highlighted?

Help topic 2033

Added or revised 11-25-2014

---

If you find that some of the fields in your Volgistics system have been shaded yellow or another color, you probably have a browser add-on (such as the Google Toolbar) that provides an *auto-fill* feature. This type of browser add-on creates colored fields to indicate that the browser can fill in the field with your name, email address, phone numbers, passwords, etc. These auto-fill add-ons are designed to help you enter your own information into web forms so it does not need to be typed.

These fields are **not** shaded this color by Volgistics. You can prevent these fields from being shaded by disabling the auto-fill feature in your browser add-on. For example, if you are using Google Toolbar, you can turn off the auto-fill feature like this:

1. Choose settings from the Google tool bar.
2. Select *Options*.
3. On the *Features* tab, uncheck *AutoFill*.

---

## Access Not Permitted from This Computer

Help topic 2053

Added or revised 02-11-2008

---

Your organization can setup Volgistics [system operators \[pg:0065\]](#) who are permitted to access the system only from certain computers.

If you see the message *Access not permitted from this computer* when you attempt to login to Volgistics it means your system operator profile includes this limitation and you are attempting to login from a computer that is not one of the computers from which you are permitted to access the system.

Specifically, this means that the public IP address used by the computer is neither of the two permitted IP addresses specified in your system operator profile. The Internet IP address currently being used by your computer is displayed as part of this message.

You will not be able to login until you are at one of the computers from which access is permitted, or your organization's [Volgistics Administrator \[pg:0052\]](#) modifies or removes this restriction.

Contact your organization's Volgistics Administrator for further assistance with this restriction. The Volgistics Team cannot remove this restriction from your system operator profile. This restriction may be removed or modified only by one of your organization's Volgistics Administrators. Your organization's Volgistics Administrator(s) can access the system from any computer.

To manage this restriction Volgistics Administrators may:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select System Operators
3. Click on your system operator name.
4. Examine or modify the setting for "Computers." The "permitted IP address" fields show which IP addresses the selected system operator may login from. [Help topic 1011 \[pg:1433\]](#) "System operator page" explains how to configure this setting.

---

## Clear Your Account Number or Login Name from the Secure Login Page

Help topic 2056

Added or revised 05-13-2016

---

If you previously set your web browser to remember your account number and login name for the secure Login page, your account number and login name are automatically entered for you each time you login.

There may be times when you no longer wish to have your account number and login name appear here automatically, or you might want to change the account number or login name that your web browser enters automatically (for example, if you have changed your login name and your browser remembers your old login name).

There are two ways to clear [cookies \[pg:1615\]](#) in Volgistics. If you have access to Setup in Volgistics, you can clear just the cookies from 'volgistics.com.' If you do not have access to Setup, you can simply clear cookies from all sites.

To clear only the Volgistics login credentials previously saved on *this* computer:

1. Choose Setup from the menu.
2. Click on Account management.
3. Click on Cookies.
4. In the Clear section, click the **Clear** button.

To clear all cookies from your web browser:

### Internet Explorer

To clear cookies from Microsoft Internet Explorer:

1. Click the gear icon in the top right corner, and then select Internet Options.
2. Under Browsing History click the **Delete** button.
3. Check "Cookies and website data", and optionally choose whichever other items you'd like to delete.
4. Click the **Delete** button.

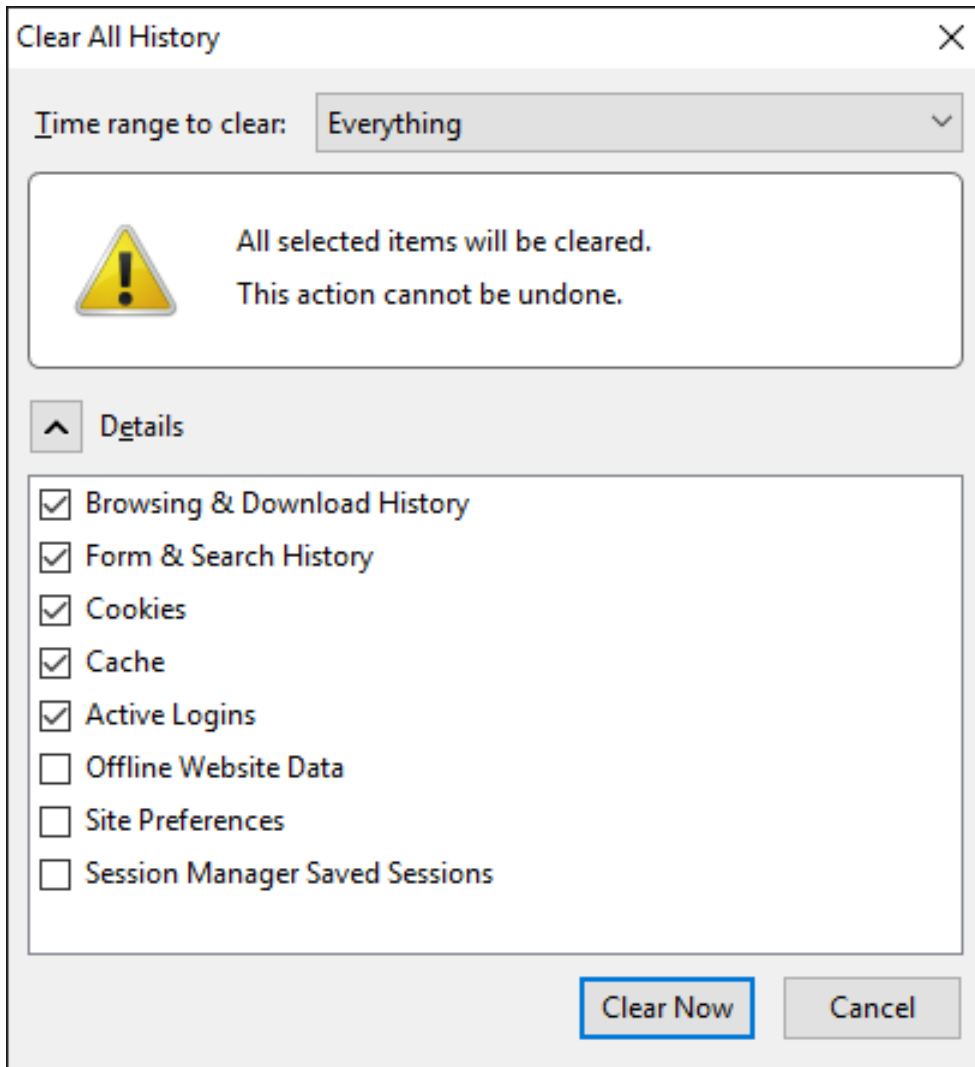

5. When Internet Explorer is finished deleting the files, a message will appear at the bottom of the page.

## **Firefox**

To clear cookies in Mozilla Firefox:

1. Click the menu icon in the top right corner.
2. Select the 'Options' Icon.
3. Choose "Privacy" from the menu on the left side.
4. Under "History" choose to "clear your recent history".
5. Next to "Time range to clear" select "Everything". Then check "Cookies" along with any other information you'd like to clear

6. Click the **Clear Now** button.

## Safari

To clear cookies in Safari:

1. Select 'Clear History..' from the Safari menu.
2. Select "all history" from the dropdown list.
3. Click the **Clear History** button.

The next time you login, your web browser will not automatically complete the Account number and Login name fields on the Secure login page. If you've changed your login name and you want your browser to remember your new login name, enter your account number, your new login name, and your password on the Secure login page, check "Remember my login credentials at this computer" and then click the **Login** button.

## Using web browser Back buttons

Help topic 2075

Added or revised 02-12-2013

---

To aid in web site navigation, most web browsers store a copy of the web pages you visited recently. A **back** button in the browser lets you back-up to the copies of pages you visited previously.

The web browser's **back** and **next** buttons work well with web sites that provide information that changes infrequently, such as news and shopping web sites. At these kinds of sites, clicking the **back** button will generally take you back sequentially to a copy of each web page you viewed most recently.

In the case of the Volgistics web site, many of the web pages you view contain information that could change from one moment to the next. When you visit such a web page in Volgistics, your web browser will *not* save a copy of that web page. This means that you cannot use your web browser's **back** button to return to a copy of that page. Instead, clicking the browser's **back** button may result in an error message.

While this might seem like it's just a nuisance, this procedure actually protects you from seeing information that may now be outdated, and prevents you from inadvertently saving outdated information from a copy of a web page.

**As a general rule, it's best to avoid using your web browser's**

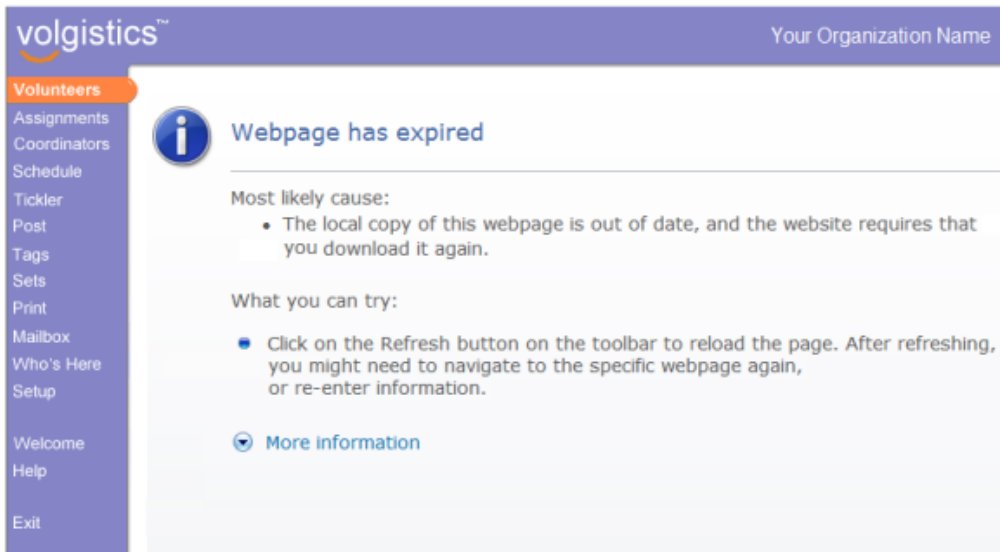

back

**and**

next

**button to navigate while you're using Volgistics. Instead, use the navigation controls that Volgistics provides within the system. For example, use the [Volgistics menu \[pg:0215\]](#) to move from one area of the system to next.**

If you use your web browser's **back** button to return to a web page for which your browser did not store a copy, you may see a message similar to this:

If this happens, simply use the [Volgistics menu \[pg:0215\]](#) to continue navigating. For example, you can choose Volunteers from the menu if you're looking for a volunteer's record.

If you use your web browser's

### back

button to backup past the point where you logged into Volgistics, you'll need to login again. In this case simply enter [www.volgistics.com](#) in your web browser and select [Login \[pg:0220\]](#) from the menu at the top of the page to login.

### ***Webpage expired is not the same as Session expired***

If your web browser tells you a web page you've "backed-up" to has expired, it does not necessarily mean that your [Volgistics session \[pg:1589\]](#) has expired. If you still see the Volgistics menu on the page, you can continue working in your Volgistics session by simply choosing any option from the [Volgistics menu \[pg:0215\]](#).

### **Related help**

## **Edit Button Does Not Appear on Service Entries**

Help topic 2117

Added or revised 06-24-2004

---

**Q.** I need to view or change an existing service entry; however there is no Edit button next to the entry. Why don't I see the Edit button?

**A.** Service entries normally include an Edit button you click to edit or view that entry, as shown here:

Date	Assignment	Hours		
06-24-2004	Information Desk	4:00	Edit	Delete

There are two circumstances in which this Edit button does not appear.

First, the Edit button does not appear for consolidated service records. Volgistics automatically consolidates service records for prior months and years. Since these consolidated records may represent many individual entries, they do not include an Edit button themselves. To expand a consolidated service entry for a selected month or year click on the Month or Year link, as shown here:

Date	Assignment	Hours		
06-24-2004	Information Desk	4:00	Edit	Delete
<a href="#">2003</a>		215:00		

Once you expand the consolidated entries for a selected month you'll see the individual service records for that month. These individual records normally include the Edit button.

Second, system operator rights may be set to prevent some system operators from changing existing service entries. The edit button will never appear on individual service entries for operators with this restriction.

If you are a Volgistics Administrator, you can set or remove this system operator restriction like this:

1. Choose 'Setup' from then [menu \[pg:0215\]](#).
2. Click 'System operators.'
3. Click on the name of the system operator in question.
4. Check or uncheck "Change or delete existing service records" as appropriate.

---

## What To Do if a Volunteer or Coordinator Reports That They Can't Login

Help topic 2162

Added or revised 03-23-2017

---

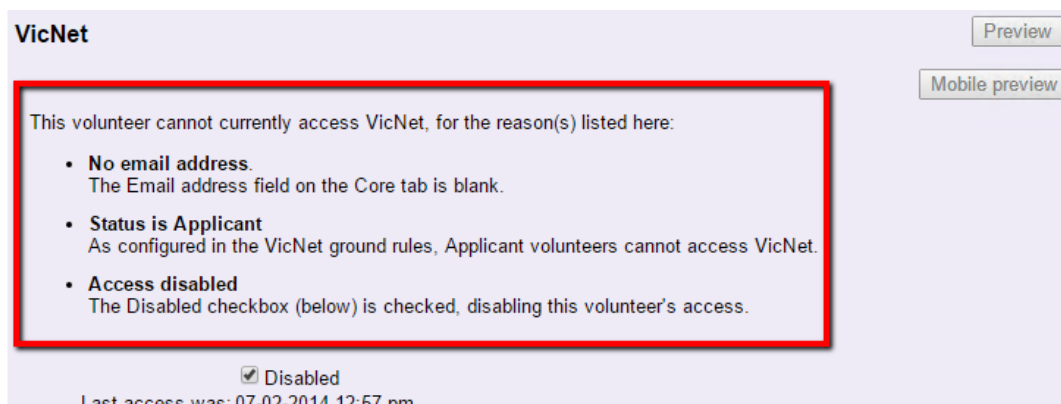

Follow the steps in this help topic if a volunteer or [Coordinator \[pg:0163\]](#) reports that they are unable to login to [VicNet \[pg:1724\]](#) or [VicTouch \[pg:1778\]](#).

If a volunteer or Coordinator reports a problem accessing **VicNet**

1. Choose Volunteers (or Coordinators) from the [menu \[pg:0215\]](#), and then locate the volunteer's (or Coordinator's) record.
2. Select the [Vic tab \[pg:1810\]](#).
3. Look at the VicNet box for the volunteer's or Coordinator's current access status to this module. If this box states *Access is OK*, jump to step 4.

If a volunteer or Coordinator does not have access to VicNet, the box will state *This volunteer (or Coordinator) cannot currently access VicNet, for the reason(s) listed here*. Beneath this statement there will be a list of reasons such as a blank Email address field or the *Disabled* checkbox is checked.

Use the reasons provided in the VicNet box to determine what needs to be done to assist your volunteer or Coordinator in gaining access to this module (for example, change their volunteer [Status \[pg:1832\]](#) to one that is [allowed to have access \[pg:1707\]](#)).

4. If the Access box shows *Access is OK*, click the **Preview** button. You should be able to preview VicNet for the volunteer's record. If you can, it means that the volunteer or Coordinator will be able to login as long as they enter the correct email address and password.

Complete these additional steps if *you* can preview VicNet from the volunteer or Coordinator's record, but the volunteer or Coordinator reports they cannot access the system:

**a.**

Be sure the volunteer or Coordinator is visiting your organization's VicNet login page to login to VicNet and

*not*

the Volgistics.com Login page

*you*

use to access Volgistics. Volunteers access VicNet through a VicNet login page you link to on your own web site as explained in [help topic 2153 \[pg:1491\]](#) "Creating Links to VicNet." They do not login to VicNet on the Volgistics.com login page as you do. If the volunteer is attempting to login through the same Volgistics.com Login page you use to access the system, they will not be able to login. They must visit your organization's VicNet login

page instead.

**b.** Confirm that the email address that appears in the Email address field on the **Core tab** [pg:1868] in the volunteer's record, or the Coordinator tab of the Coordinator's record, is entered correctly. Also check that this is the email address that the volunteer or Coordinator uses when they login to VicNet.

**c.**

If none of the ideas outlined above allow the volunteer or Coordinator to access VicNet, then the most likely problem is with the password being used. In this case, we recommend having the volunteer or Coordinator follow the steps shown in **help topic 1307** [pg:1975]. This will work even if a password has never been assigned for the record.

You can learn more about volunteer and Coordinator passwords in **help topic 1305** [pg:1699].

#### If a volunteer reports a problem accessing **VicTouch**

1. Choose Volunteers from the **menu** [pg:0215], and then locate the volunteer's record.
2. Select the Vic tab.

Like the VicNet box, the VicTouch box will indicate

*Access is OK*

or

*This volunteer cannot currently access VicTouch...*

Again, if a volunteer is not able to access the system, the reason(s) will be listed. One reason why a volunteer would not be permitted to access VicTouch is if the **VicTouch ground rules page** [pg:1511] was configured not to allow volunteers of their Status to use VicTouch. Use the reasons provided in the VicTouch box to determine what steps you should take to give your volunteer access to this module.

3. The VicTouch box also shows the volunteer's PIN number. If a volunteer is not able to log into VicTouch, confirm that they are attempting to sign-in with the PIN number listed here.

---

## **Security Blocks**

Help topic 2163

Added or revised 05-28-2014

---

Volgistics carefully safeguards access to your account. One way Volgistics does this is by blocking computers that appear to be attempting to guess an account's credentials.

When Volgistics sees a computer making a series of attempts to access an account using invalid login names and passwords, it automatically stops accepting login attempts from that computer. This helps prevent unauthorized individuals from accessing an account by trying different login names and passwords over and over again until a valid login name and password are discovered.

Unfortunately, this important security provision may occasionally block a legitimate [System Operator \[pg:0065\]](#) who has entered their account number, login name, or password incorrectly too many times in sequence. For example, when a legitimate operator has forgotten their password, and tries a series of possible (but incorrect) passwords over and over again.

To access the system if this has happened to you:

1. If it is not cleared by your organization, this block will automatically clear itself after a certain period.
2. Try accessing your account from a different Internet connection, or a different computer or device such as a smart phone. Because security blocks are specific to IP addresses, this will bypass the block that was put in place.
3. If your organization's [Volgistics Administrator \[pg:0052\]](#) (or another operator who has access to [Setup \[pg:0887\]](#) on the menu) is already signed-in (or can access the system through step 2), they can clear the block by selecting Setup, Account Management, and then Remove Block.

This security mechanism takes more than a few invalid login attempts to be triggered. If Volgistics tells you that you have entered an invalid login name or password, pause to verify that the account number and email address you're using are correct. If you may have forgotten your password, click the [Forget your password? \[pg:0044\]](#) link to reset your password by email before making repeated attempts to guess your password.

---

## Why don't I see the "Archive" button?

Help topic 2175

Added or revised 10-05-2016

---

When you visit the record for a volunteer whose record you want to archive, the **Archive** button may not be visible or it may be disabled. Or, after you [tag \[pg:1529\]](#) one or more volunteer records, the option to archive the tagged volunteer records may be disabled on the Tags page.

There are two reasons this can happen:

- If your Volgistics system operator rights do not include the ability to delete or archive volunteer records, you will not see the **Delete** or the **Archive** button when you open a volunteer record or use the Tags page.
- If you are out of room for archived volunteer records based on your account's [service level \[pg:0719\]](#), the **Archive** button will be disabled when you open a volunteer record, and you cannot archive tagged volunteer records.

If you have access to the [Setup \[pg:0887\]](#) area, you can determine how many archived volunteer records you have space for like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "Account Management."
3. Select "Account Status." The Account Status page shows the number of archived records you have in your account, and the maximum number of archived records you can store at your current service level.

If you need more space for archived volunteer records you can [increase your account's service level \[pg:0731\]](#).

---

## Problems opening PDF files

Help topic 2176

Added or revised 05-13-2016

---

You use [Adobe Reader \[pg:0449\]](#) to view and print reports you create in Volgistics as PDF files. Adobe Reader comes pre-installed on most computers, and most web browsers will automatically use Adobe Reader to show you PDF file content, including Volgistics reports you create as PDF files. This help topic addresses some common issues you may experience when opening these files.

Since problems opening PDF files in Adobe Reader are almost always related to settings on a specific computer, starting Volgistics at a different computer and opening the report from there will usually work as a temporary solution.

Also, some issues can be resolved by upgrading to the latest version of Adobe Reader. You can download Adobe Reader from the Adobe web site by clicking the 'Get Adobe Reader' link below.

If downloading and installing the latest copy of Adobe Reader does not help, here are some other things to try.

### **Saving PDF files to your computer before you open them**

Certain computer configuration issues could prevent Adobe Reader from opening a PDF file directly from your Volgistics Mailbox. In these situations you can save the report file to your own computer and then open it with Adobe Reader (until the underlying configuration problem is resolved).

1. From the Volgistics Mailbox [In Box tab \[pg:0303\]](#), right-click on the Subject name for the report you want to open, and then choose "Save target as..." (or "Save link as").

2. Use the "Save As" window to choose a location on your computer to save the PDF file. For example the "Desktop."

3. Once the download is complete, click the Open button, or locate the file on your computer and then double click on the file name.

4. If you're asked what program you want to use to open the file, choose "Select the program from a list," and then select Adobe Reader from the list of available programs (Adobe Reader must already be installed on your computer).

### **There was an error opening this document. Document cannot be found**

Adobe Reader may give the message *There was an error opening this document. Document cannot be found* when you click on a PDF report in your Volgistics Mailbox.

#### Quick solutions

A quick solution to this problem is to save a copy of the report file to your computer (follow the instructions above); start Adobe Reader; and then open the saved copy of the file from the File menu in Adobe Reader.

Clearing your browser's cache or temporary Internet files may solve the problem.

Updating the web browser and/or Adobe Reader may also solve the problem.

#### Causes

When you click on a link to a Volgistics report that you formatted as a PDF file, Volgistics returns the PDF file to your computer and tells your computer that the data being returned is a PDF file (technically, Volgistics sets content-type to "application/pdf" and the content-length to the size of the file). Your web browser saves the data in a temporary file on your computer, and then passes the name of the temporary file to Adobe Reader to open for you to view.

If Adobe Reader gives the error *There was an error opening this document. Document cannot be found*, it usually means that the web browser could not create the temporary file on your computer; or that Adobe Reader could not access it.

There are a number of possible conditions on your computer that could cause this error. Referring this problem to the person responsible for supporting your computer may be required. Causes may include:

- The %TEMP% folder (the folder referenced by the Windows environment variable %TEMP% for the current user) may have a size limitation smaller than the size of the PDF file you want to open.
- Adobe Reader may have inadequate permissions to the %TEMP% folder.
- Adobe Reader and the web browser may have been launched under different user accounts.

### **Adobe Reader does not open automatically when I click on a PDF report file in my Volgistics Mailbox**

If you use Microsoft Windows, the operating system may not be configured to associate web content formatted as a PDF file with Adobe Reader. Step-by-step instructions on how to associate PDF file content with Adobe Reader (so Adobe Reader will open automatically when you click a link to a PDF file in Internet Explorer) are available from Microsoft at: <http://support.microsoft.com/kb/307859>

Under certain circumstances there are additional technical issues with Adobe Reader when you configure Adobe Reader to open PDF files *within* Internet Explorer. In these circumstances, PDF files may not open properly, or they may be garbled when opened.

The specific circumstances that cause this problem and their solutions vary with Internet Explorer and Adobe Reader product versions. Use the Adobe web site for technical support with this issue.

### **Firefox will not open PDF documents from the Volgistics Mailbox**

If you use the Firefox web browser, Firefox may stop loading PDF files from your Volgistics Mailbox and display this "Stopped" message in the web browser's status bar:

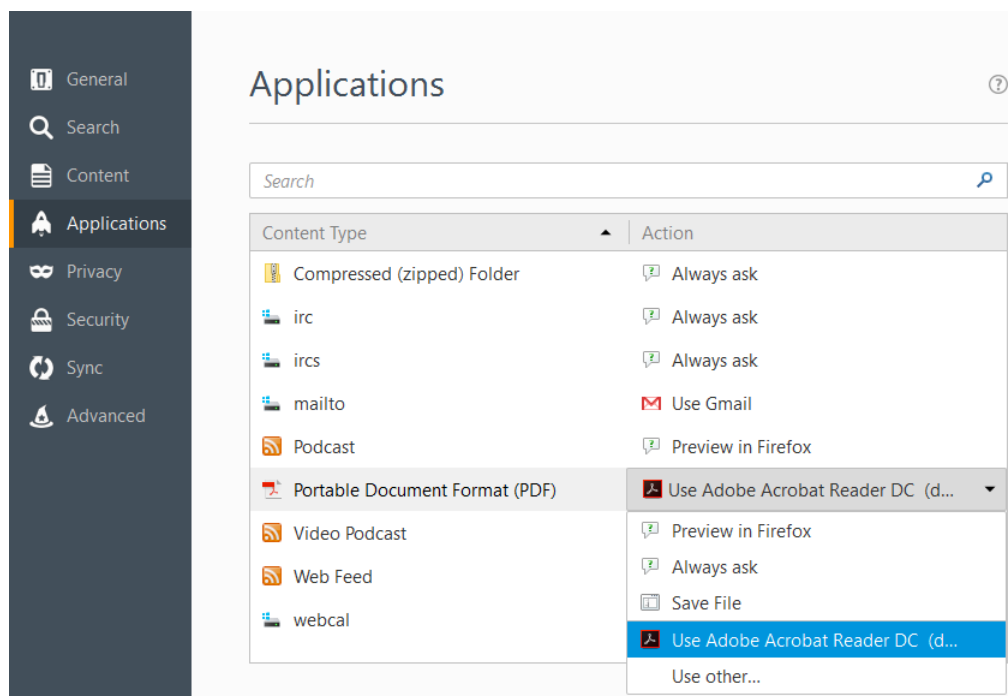

Or with newer versions of Firefox that use a built-in PDF viewer, it may appear like the file is trying to load but never completes the action. In this case, you may just get a blank (or black) screen.

In either case, you can usually correct the problem by making sure the Adobe Reader program is set up to be used to open PDF documents. Here is how to do this:

1. Be sure you have the latest version of Adobe Reader installed on your computer. There is a link to download this free program at the start of this help topic.
2. Open Firefox and click the menu button in the top right corner

3. Click on *Options* from the menu.
4. Click on *Portable Document Format (PDF)* on the list.

5. In the *Action* column, click the arrow in the dropdown list and select *Use Adobe Reader (default)*.
6. Close the Options tab.

### Chrome will not open PDF documents from the Volgistics Mailbox

If you use the Google Chrome web browser, it uses a built-in PDF viewer to open PDF files by default instead of the Adobe Reader program. In some cases, you may have a problem where PDF documents do not load so you can view them. In this case, you will either need to follow the steps in the *Saving PDF files to your computer before you open them* section above, or disable the built-in viewer. To disable the viewer:

1. Be sure you have the latest version of Adobe Reader installed on your computer.
2. Open a new tab in Chrome by using the new tab button or the "CTRL" + "T" keyboard combination.

3. Enter "chrome://plugins" in the omnibox (URL address bar) and press the Enter key on your keyboard.

## Plugins

### Plugins (4)

#### Widevine Content Decryption Module - Version: 1.4.8.885

Enables Widevine licenses for playback of HTML audio/video content. (version: 1.4.8.885)

[Disable](#)

Always allowed to run

#### Chrome PDF Viewer (2 files)

[Disable](#)

Always allowed to run

#### Native Client

[Disable](#)

Always allowed to run

#### Adobe Flash Player - Version: 21.0.0.242

Shockwave Flash 21.0 r0

[Disable](#)

Always allowed to run

4. Click the "Disable" link under the "Chrome PDF Viewer" heading.

---

## Why a Checklist item may not apply to every volunteer

Help topic 2246

Added or revised 05-29-2008

---

When you create a [Checklist \[pg:0142\]](#) item you have the option of specifying which volunteers the item will apply to. For example, a 'Health Screening' might be setup so it only applies to volunteers whose Status is Active; or a 'Drivers License Check' could be setup to apply only to volunteers who have an assignment that involves driving.

For this reason, not every volunteer will necessarily have the same items listed when you view their Checklist on the History tab.

If you have access to Setup on the menu, you can determine (or adjust) which volunteers a particular Checklist item applies to like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select Checklist.
3. Click on the name of the Checklist item in question. This opens the Checklist item setup page.

Locate the section titled "Which volunteers should this item apply to?" This is where you can see (or modify) which volunteers the selected Checklist item will apply to.

Which volunteers should this item apply to?

If their Status is:

- Active
- Applicant
- Inactive
- Prospect
- Resigned

If their Type  is  is not:

If their Flag  is  is not:

If they are in this set:

Those that have any assignment with:

- Spare dropdown 1
- Spare dropdown 2
- Spare dropdown 3
- Spare dropdown 4

If there is a particular volunteer whose Checklist does not include the selected Checklist item, compare the settings under "Which volunteers should this item apply to?" to the settings in the volunteer record.

For example, if the Checklist item is setup to apply to volunteers only if their Status is 'Active,' then the selected item will not appear on the Checklist for a volunteer's whose Status is currently something other than Active (changing the volunteer's Status to 'Active' will cause the item to appear in this example).

4. If you make any changes to the Checklist item setup page, click the Save button.

If your Volgistics menu does not have the Setup option, you should ask your organization's Volgistics Administrator to check or modify the Checklist item you're interested in.

If you change the settings under "Which volunteers should this item apply to?" the system will automatically adjust each volunteer's Checklist so that the appropriate items are listed based on your new settings.

---

## What to do if a System Operator reports they cannot login

Help topic 2248

Added or revised 06-02-2014

---

If a Volgistics [System Operator \[pg:0065\]](#) reports that they cannot login, the organization's [Volgistics Administrator \[pg:0052\]](#) (or another System Operator who can login and who has access to the [Setup \[pg:0887\]](#) menu) should perform the following System Operator check:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select System Operators.
3. Click on the name of the System Operator who cannot login. If this person's name does not appear on the list, there are two possible reasons.

One, they have not been setup as a System Operator yet (and therefore cannot login to the system). In this case, you should add a new System Operator profile for this person. [Help topic 2026 \[pg:1440\]](#) explains how to do this.

Two, the System Operator who is looking for the other operator is a [Site-Level Operator \[pg:1442\]](#) who is not assigned to the same Site as the operator they are looking for. Site-Level Operator's can only see operators assigned to the same Site as they are.

If the name of the person who cannot login is listed, click on their name so their [System Operator page \[pg:1433\]](#) appears.

4. Make a note of the email address as it appears in the "Email address" field. This is the email address the System Operator must use when they login. Email addresses are not case sensitive (capitalization does not matter).
5. To make sure the password is not a problem, either ask the System Operator to reset their own password as shown in [help topic 1306 \[pg:0044\]](#), or follow the directions below to assign a new password to the operator.

Enter a new password in the "Password" and "Confirm password" fields. Make a note of the new password. This will be the password the System Operator must use to login.

The new password should be easy to remember, but must meet the password security guidelines found on the [System Operator Ground Rules \[pg:1442\]](#) page. If the password did not meet the guidelines, you will receive a message listing password requirements when you click the **Save** button.

### Password does not meet the password strength rules for your account.

The password you entered does not meet one of the following password rules. Passwords must:

- Be between 6 and 30 characters long.
- Include both letter and number characters.
- Include some upper and some lower case letters.
- Include some characters that are not letters or numbers, such as !#\$% or ?.
- Must not contain any space characters.

Enter a new password that conforms to these rules, and then click the Save button again.

Last name:

#### Note:

This step gives the System Operator a new password in case they have forgotten their original password. To ensure strong password protection, it is recommended that the System Operator change their password once they have logged in. [Help topic 2203 \[pg:0064\]](#) explains how they do this. You could optionally check the box next to "Operator must change their password when they login next" so they are automatically taken to a screen that requires the operator to change his or her password.

6. Check these settings under the "Rights" heading.

a. Locate the checkbox for *Block this operator's access to the system*. If this checkbox is checked, this System Operator will not be able to login from any computer. Uncheck this checkbox if you want this System Operator to be able to access the system.

b. If *Login allowed only from computers that use one of these Internet addresses*: is checked, this System Operator is allowed to access the system only from the computer or network that has the IP address(es) listed. If you want this System Operator to be able to access the system from any computer, select *Login allowed from any computer on the Internet* instead.

7. Click the **Save** button to save the System Operator profile.

8. Give the System Operator the nine-digit account number; the email address exactly as you noted it in Step 4; and the new password you created for them in Step 5 if you opted to give them a new password. Ask them to login again by visiting

[www.volgistics.com](http://www.volgistics.com)

, selecting Login from the menu at the top of the page, and entering the credentials you've given them. You can find detailed directions for this in [help topic 2297 \[pg:0220\]](#).

#### Still cannot login

If you've followed the steps listed above and the System Operator still cannot login, check these things:

1. If a System Operator cannot login it is likely that they will receive a login error message. Ask them what this message says. Asking them what this login error message is may lead you to the cause of the login problem.
2. As a security measure, Volgistics will block access from computers that make repeated attempts to login using invalid account credentials. It is possible that this System Operator triggered this kind of security block. Follow the steps in [help topic 2163 \[pg:1604\]](#) to be sure there is not a security block in place for your account.
3. System operators login by selecting Login from the menu at [www.volgistics.com](http://www.volgistics.com), not from your [VicNet \[pg:1724\]](#) link (if you use VicNet). Be sure the System Operator is going to [www.volgistics.com](http://www.volgistics.com) and selecting Login from the menu at the top of the page to login.

---

## Is There a Phone Number for Volgistics?

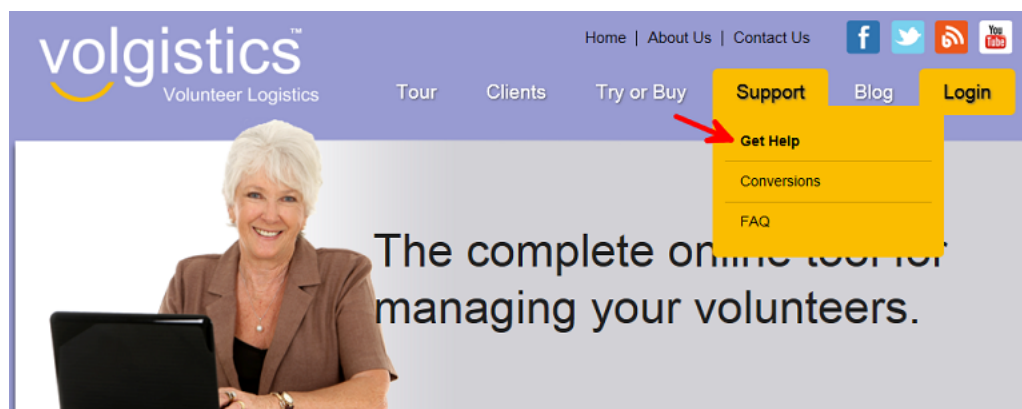

Help topic 2253

Added or revised 06-28-2013

---

Volgistics has developed an excellent system of providing support through electronic means rather than a call center. Therefore, we do not have a call center telephone number. At first this may seem surprising; however our customers soon learn to rely on our rapid response to questions and the accuracy and completeness of our answers. Not sure what help topic you need, post an inquiry. If you're questioning the best way to set something up, post an inquiry. The Volgistics Team will respond promptly. It's free, it's unlimited and it never expires.

If you have a question when you're logged into Volgistics, select Help from the [menu \[pg:0215\]](#) and post your inquiry. If you're not logged in, hover over Support on the menu at [www.volgistics.com](http://www.volgistics.com) and select "Get Help."

We can answer most inquiries right away. The final resolution of some technical inquiries or questions for our business office may take longer.

Our support team is available to answer your questions weekdays from 8am to 9pm EST. On Saturday, we are available from 11am to 4pm EST. Additionally, a support team member(s) will log in at least once Saturday evening and three times throughout the day on Sunday.

# Cookies

Help topic 2255

Added or revised 08-19-2016

---

"Cookies" are small computer files saved on your computer by some websites you visit. A website that leaves a cookie on your computer can read the information in that cookie if you visit that website again in the future. Cookies are often used by websites to remember something about you (such as your login name or customer number).

All popular web browsers - and many firewalls - give you the option of blocking cookies, or allowing cookies only from certain web sites.

You do not need to permit cookies in order to use Volgistics. However, if your browser and firewall *do* permit cookies from *volgistics.com* then Volgistics can **remember certain parts of your account credentials** [pg:0220] so you do not need to enter that information every time you log in.

If your web browser blocks all cookies, you can make an exception so cookies from Volgistics are allowed. This gives you the option of blocking cookies from all other sites, while still letting Volgistics remember your login information. Here is how to do this for the popular web browsers.

## Internet Explorer

To add Volgistics to the cookie exception list in Internet Explorer:

1. Click the gear icon in the top right, and select *Internet Options*.
2. Select the Privacy tab.
3. In the Settings box, click the **Sites** button.
4. Under *Address of web site*, enter *volgistics.com* and then click the **Allow** button.
5. Click **OK** to close the Sites window, and then click **OK** to save your Internet Options settings.

## Firefox

To add Volgistics to the cookie exception list in Firefox:

1. Select the Firefox menu in the top right, and select Options.
2. Select Privacy on the left hand menu.
3. In the History section, select *Use custom settings for history* from the *Firefox will* dropdown.
3. Next to *Accept cookies from sites* click the **Exceptions...** button.
4. Under *Address of website*, enter *www.volgistics.com* and click the **Allow** button.
5. Click the **Save Changes** button.

## Safari

Safari does not have a setting to allow just cookies from Volgistics. However, you can set it to allow cookies from Volgistics and other websites by:

1. Select Safari from the menu, and select Preferences.
2. Select the Privacy tab.
3. In the *Cookies and website data* section, select either *Allow from websites I visit* (recommended), or *Always allow*.

## Chrome

To configure Chrome to allow cookies from Volgistics

1. Select the Chrome menu in the top right, and select Settings.
2. Select *Show advanced settings...*
4. Under Privacy, click the **Content settings...** button.
5. Under Cookies, click the **Manage exceptions...** button.
6. Enter an exception for *www.volgistics.com* and be sure the Behavior dropdown is set to Allow.
7. Click the **Done** button.

## Can't get Volgistics to remember your account credentials?

If you've set your web browser to permit cookies from Volgistics, but your login credentials are still not saved when you check *Remember my credentials at this computer*, it may be that your browser is clearing cookies when it exits. You should double-check your browser settings to see if this is the case.

Another possibility is that your network has a *firewall* that blocks cookies. In this case, you will need to ask the person who manages your Internet connection to be sure the firewall permits cookies from *www.volgistics.com*.

## Blocking Cookies from Volgistics

If you have a computer that is shared by two or more different Volgistics [System Operators \[pg:0065\]](#), you may want to prevent Volgistics from saving any System Operator login credentials at

*that*

computer (so each system operator will be required to enter their own login name and password when they use this computer). If this is the case, and you have access to the [Setup \[pg:0887\]](#) page, you can prevent Volgistics from saving these account credentials like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Click on *Account management*.

3. Click on Cookies.
4. In the Block section, click the **Block** button.

When cookies from Volgistics are blocked from the Cookies page, the Login page remembers the account number but not any user's email address or password on that computer. The Login page also no longer contains the *Remember my credentials at this computer* checkbox.

If you have saved your login name or account number to a cookie previously, and you no longer want your saved account number or login name to appear when you open the Secure Login page, [clear the cookies \[pg:1597\]](#) in your web browser.

### Enable JavaScript

Help topic 2277

Added or revised 05-16-2016

---

Volgistics uses JavaScript to add program functionality to most pages. Your web browser (e.g. Internet Explorer, Chrome, or Firefox) has settings you can use to either allow, or prevent JavaScript from running on the web pages you visit. To use Volgistics, your browser must permit JavaScript, at least from the web pages at [www.volgistics.com](http://www.volgistics.com).

#### To enable JavaScript for all websites in Microsoft Internet Explorer

1. Start Internet Explorer.
2. Click the gear icon in the top right corner, and then select 'Internet Options'.
3. Select the 'Security' tab.
4. Click on the "Internet" icon.
5. Click the 'Custom level' button.
6. Scroll down to the 'Scripting' section. Set 'Active Scripting' to 'Enable' or 'Prompt.'
7. Click the **OK** Button.

#### To enable JavaScript in Microsoft Internet Explorer for Volgistics only

Follow these instructions if your web browser is Microsoft Internet Explorer, and you want to enable JavaScript only for Volgistics (and other sites you might specify).

1. Open Internet Explorer.
2. Click the gear icon in the top right corner, and then select 'Internet Options'.
3. Select the 'Security' tab.

4. Click on the "Trusted Sites" icon.
5. Click the 'Sites' button.
6. In the "Add this web site to the zone" field, enter <https://www.volgistics.com> and click **Add**
7. Click the **Close** button.
8. Click the **Custom level** button.
9. Scroll down to the 'Scripting' section. Set 'Active Scripting' to 'Enable.'
10. Click the OK Button.

### **To enable JavaScript in Safari**

Follow these instructions if your web browser is Apple Safari.

1. Start Safari.
2. From the Safari menu, select Preferences
3. Click on the "Security" icon.
4. In the "Web content" section, check "Enable JavaScript".
5. Close the Preferences window.

### **To enable JavaScript in Chrome for all websites**

1. Open Chrome
2. Click the menu icon in the top right corner, then click Settings
3. At the bottom of the page click "Show advanced settings"
4. Under "Privacy" click **Content settings**
5. Under "JavaScript" select "Allow all sites to run JavaScript (recommended)".
6. Click **Done**

### **To enable JavaScript in Chrome for Volgistics only**

1. Open Chrome
2. Click the menu icon in the top right corner, then click Settings
3. At the bottom of the page click "Show advanced settings"

4. Under "Privacy" click **Content settings**
5. Under "JavaScript" click **Manage exceptions**.
6. Under "Hostname pattern" enter `www.volgistics.com` and then select "Allow"
7. Click **Done**
8. Click **Done** again.

## JavaScript in FireFox

# Internet Connection Problem at VicTouch

Help topic 2290

Added or revised 07-21-2009

---

The [VicTouch \[pg:1778\]](#) station uses the Internet to interact with Volgistics. When volunteers use VicTouch, their PIN number is passed back and forth between the VicTouch station and the database via the Internet.

The "Internet Connection Error" message appears at VicTouch if the VicTouch station cannot connect to the database over the Internet.

### Internet Connection Error

There is a problem with the network or Internet connection from this Volunteer Information Center station.

The network error number is: **12029**

Please visit again in a few minutes. If the Volunteer Information Center is still not operating normally, please alert the appropriate person or department.

Thank you.

This message will appear until Internet connectivity is restored to the workstation. Once Internet connectivity is restored, this message will clear itself and VicTouch will return to normal operation automatically.

### What to do if you see this message at a VicTouch station

Perform these steps **at the VicTouch station** where the problem exists:

1. Make a note of the "network error number" that appears in the message.
2. [Shut down VicTouch \[pg:1762\]](#).
3. Using Internet Explorer at the VicTouch station, browse to [www.volgistics.com](http://www.volgistics.com). Also try browsing to any Web site other than [www.volgistics.com](http://www.volgistics.com) (e.g. visit <http://www.google.com>).

If you cannot connect to web sites other than [www.volgistics.com](http://www.volgistics.com) (such as [www.google.com](http://www.google.com)), you are probably not currently connected to the Internet from this computer (the Internet connection has dropped). You should consult your Internet Service Provider or IT department for further assistance. Tell them that you cannot connect to the Internet from the VicTouch station.

If you *can* connect to other web sites, but you cannot connect to [www.volgistics.com](http://www.volgistics.com), check to see if there is a firewall installed between the VicTouch station and the Internet, or if the VicTouch station has a software firewall. If there is, be sure it is configured to allow connections to <https://www.volgistics.com>. Also, check that port 443 (which is needed for secure Internet access) is not disabled. Refer to your firewall's documentation for instructions on how to adjust these settings.

If you can connect to other web sites, but you cannot connect to [www.volgistics.com](http://www.volgistics.com), and you have determined that you are not blocked by a firewall: [post a help inquiry \[pg:0184\]](#) for the Volgistics Team. Let them know you have received the 'Network Connection Error' page at VicTouch, and include the "network error number" you noted in step 1.

Restart VicTouch using your VicTouch shortcut, or visiting [www.volgistics.com/touch](http://www.volgistics.com/touch) once the network problem is resolved.

### **VicTouch connection requirements**

Each VicTouch computer must have access to the Internet through a *persistent connection*, such as through a local area network, DSL, or cable modem. VicTouch is robust. If a temporary Internet connection problem occurs, VicTouch will continue working as soon as the connection is restored without any intervention.

If you experience frequent internet connection problems from one specific computer but not others, it is likely the problem is related to a network configuration or network connection problem at that specific computer. Wireless network connections can sometimes cause connection problems from a specific computer. If the problem computer uses a wireless network connection it may be that the wireless signal is occasionally weak or intermittent. Consider using a wired connection instead. You should contact the person who supports your network for further assistance.

VicTouch computers do not need to be networked to any other computers in your organization. If you use more than one VIC computer, they do not need to be networked with one another.

## Why can't I see or find volunteer records?

Help topic 2291

Added or revised 04-08-2016

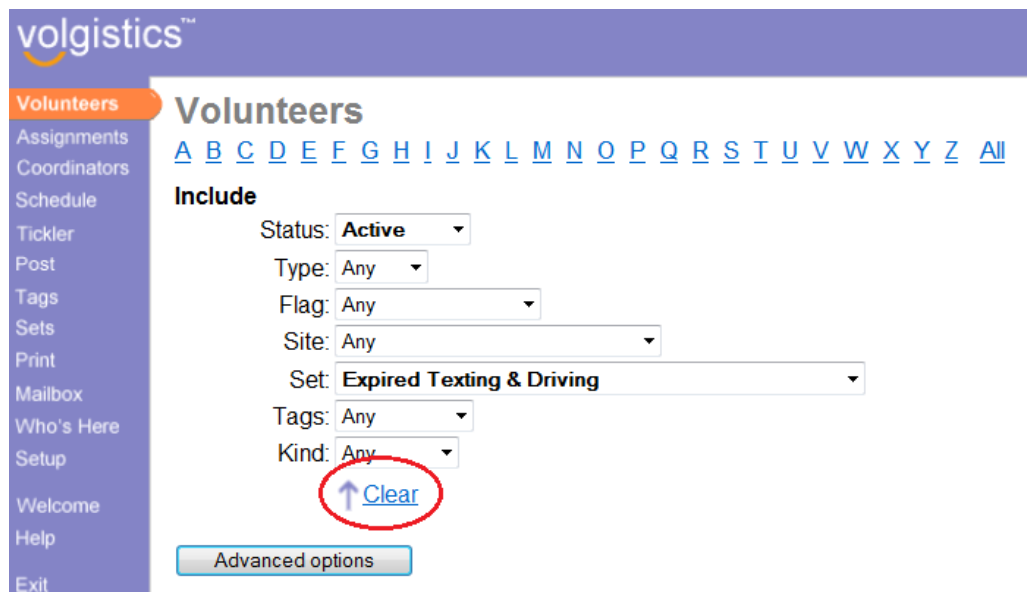

---

If there do not appear to be any volunteer records in your database or if you can't find certain records, but you know the records have been entered, follow these steps:

### Clear the "Include" options

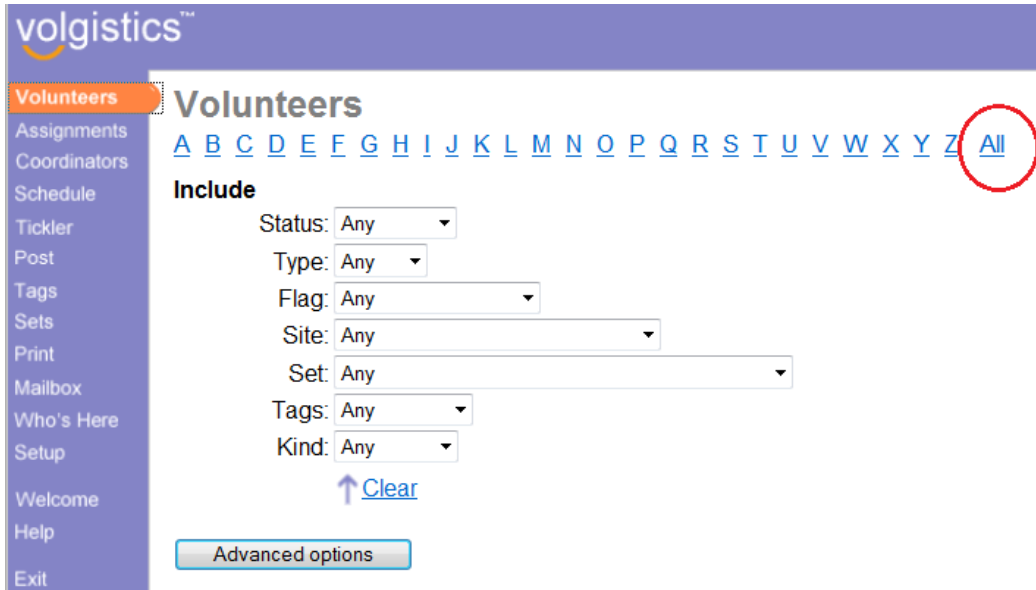

It's possible that you have selected an "Include" option on the Volunteers page that prevents you from seeing some, or all, of your volunteer records. Perform these steps to be sure no Include options are selected:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Click the "Clear" link under the "Include" section.

The screenshot shows the Volgistics interface. On the left is a navigation menu with 'Volunteers' highlighted. The main content area is titled 'Volunteers' and includes a list of letters for filtering (A through Z and All). Below this is the 'Include' section with several dropdown menus: Status (Active), Type (Any), Flag (Any), Site (Any), Set (Expired Texting & Driving), Tags (Any), and Kind (Any). A blue 'Clear' link with an upward arrow is circled in red. At the bottom of the 'Include' section is a button labeled 'Advanced options'.

3. Click the "All" link near the top of the Volunteers page.

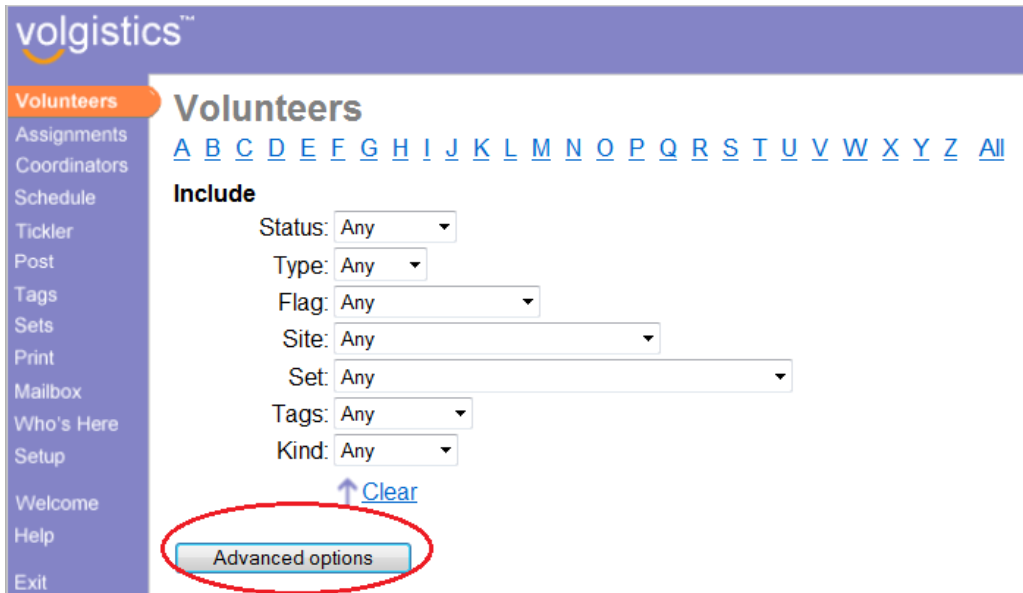

You should now see a list of your volunteer records. If the records you are looking for do not appear when you click the "All" link, continue to the next step.

### Check for archived records

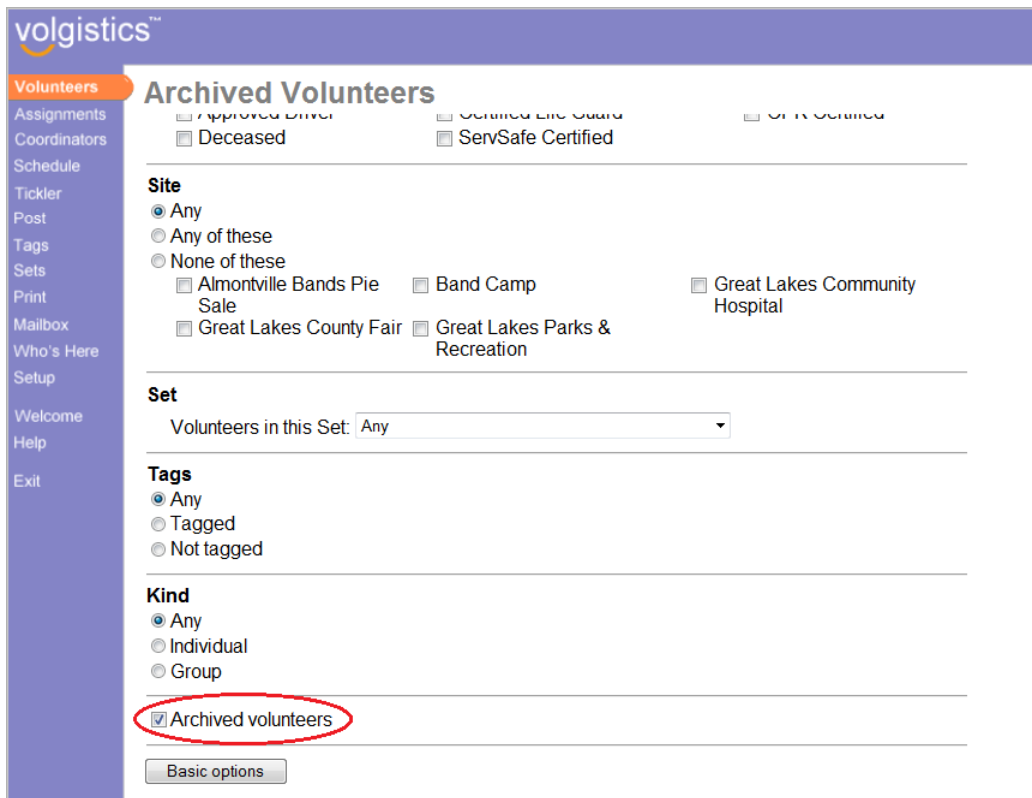

The volunteer record(s) you're looking for might be archived.

To check this:

1. Choose Volunteers from the menu.
2. Click the "Advanced options" button under the "Include" section.

3. Check the box next to "Archived Volunteers".

4. Click the "All" link near the top of the Volunteers page.

The archived volunteer records for your account will now be shown on the screen. If the record(s) you are looking for do not appear, continue to the next step.

### Check for Site Level Access

If your organization uses the [Site Level Access \[pg:0092\]](#) features, and your Volgistics [System Operator \[pg:0065\]](#) profile is setup to give you access only to the volunteer records for a specific site; the record(s) you are looking for may not be associated with your site.

To check this:

1. Choose Help from the [menu \[pg:0215\]](#).
2. Click the link for "Operator information."
3. On the "Operator profile" page, locate the "Site" field.

If the "Site" field lists the name of one of your organization's Sites, you only have access to the volunteer records associated with that Site. If the volunteer record(s) you're looking for have not been [associated with this Site \[pg:0094\]](#), they will not appear on your list of volunteer records. In this case, you should contact your organization's Volgistics Administrator (the person who setup your Volgistics system operator profile) for assistance.

If the "Site" field contains "All sites" you should continue to the next step.

## Check your volunteer record count

Check to be sure your Volgistics account contains volunteer records. To do this:

1. Choose Setup from the [menu \[pg:0215\]](#) (if you do not have a Setup option on the menu, contact your organization's Volgistics Administrator for assistance).
2. Select "Account management."
3. Select "Account status."
4. The "Number of volunteer records currently in your account:" field shows the number of volunteer records in your account.

The "Number of volunteer records currently in your account" would be zero if

- No volunteer records have been entered yet. If you have more than one Volgistics account, check to be sure you have accessed the account in which you've entered volunteer records.
- You or someone in your organization has [archived \[pg:1819\]](#) all of the volunteer records.
- You or someone in your organization has [cleared \[pg:0890\]](#) this account.

You may be able to determine if someone in your organization removed or archived volunteer records by viewing your Volgistics Event Log. To view the Event Log:

1. Choose Setup from the [menu \[pg:0215\]](#) (if you do not have a Setup option on the menu, contact your organization's Volgistics Administrator for assistance).
2. Select "Account management."
3. Select "Event log."

## Spell Checking

Help topic 2318

Added or revised 05-16-2016

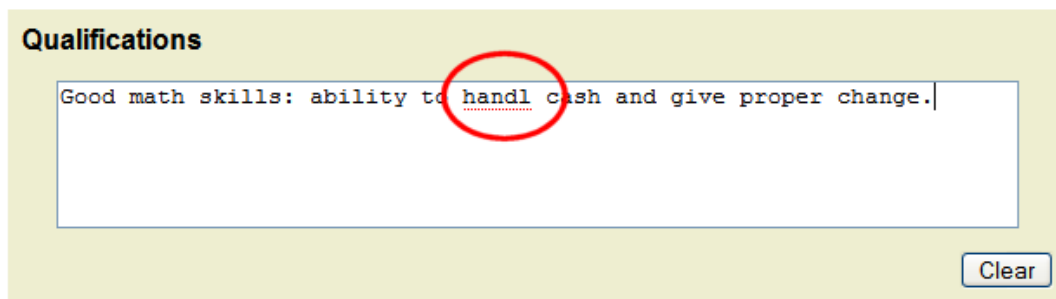

---

It's often useful to perform spell checking on volunteer notes, job descriptions, email messages, and other text as you enter them in Volgistics. Since Volgistics is a browser-based application, spell checking is a function your web browser must provide. Fortunately, most web browsers provide spell checking capabilities.

This help topic explains how to enable or use spell checking with Firefox, Chrome, Safari, and Internet Explorer web browsers.

### Firefox

Firefox supports both dynamic and context-based spell checking. This is automatically enabled. Firefox will check any text you enter and alert you to possible errors by adding a red underline to any potentially misspelled words, as shown here.

Right-clicking the underlined word (or on a Mac, press and hold the [CONTROL] key while left-clicking) will bring up a spelling menu that may include one or more possible corrections. Highlight the proper word and Firefox will replace it in the text field.

If the word is spelled correctly but still marked as a potential mistake, you can ignore it and move on, or choose "Add to Dictionary" to add the word to Firefox's dictionary.

## Chrome

The Chrome web browser also supports both dynamic and context-based spell checking. This is automatically enabled with the browser. Chrome spell checking works similar to the Firefox example shown above. Words that are possibly misspelled are identified with a red line under them. Right-clicking on the underlined word brings up possible corrections to choose from. You can highlight the correct word from the list and it will be inserted into the text field. If you do not see the correct word on the list, select "Ask Google for suggestions" to see additional possibilities.

If the word is spelled correctly but still marked as a potential mistake, you can ignore it or choose "Add to dictionary" to add the word to Chrome's dictionary on your computer, and/or for your Google account if you have one setup.

## Safari

The Safari browser also supports both dynamic and context-based spell checking. To activate the browser's native support for dynamic spell checking:

1. Place the cursor in a text entry field on any webpage.
2. Right-click in the text field and hover over Spelling and Grammar - then select "Check Spelling While Typing", "Check Grammar with Spelling," or both.
3. A small checkmark should appear to the left of the Check Spelling While Typing or Check Grammar with Spelling option indicating that spell checking is now active. From this point forward, Safari will check any text you enter and alert you to possible errors by adding a dashed red underline to any potentially misspelled word(s). Press and hold the [CONTROL] key while right-clicking the indicated word. A spelling menu will open and should present one or more possible corrections; highlight the proper word and Safari will replace it in the text field.

If the word is spelled correctly but still marked as a potential mistake, choose "Ignore Spelling" to skip the word or "Learn Spelling" to add the word to Safari's dictionary.

Note: On older versions of Safari the Check Spelling as You Type feature only remains active as long as Safari is open; it must be reactivated each time the browser starts. Newer versions save the previous setting.

Safari also supports context-based spell checking. To use this feature on a single word or phrase:

1. Highlight the text to be checked.
2. Press and hold the [CONTROL] key while right-clicking the indicated word(s).
3. Select the correct word from the context menu or choose "Ignore Spelling" or "Learn Spelling" as necessary.

To use context-based checking on every word in a text area (such as a large text box):

1. Place the cursor in the text area to be checked.
2. Press and hold the [CONTROL] key while right-clicking inside the text area.
3. Choose Spelling and Grammar -> Check Document Now from the menu.
4. Correct, ignore, or add each potential misspelling by [CONTROL] right-clicking the marked words in turn.
5. Both of these context-based methods of spell checking are also available by clicking Edit on the menu bar and selecting one of the options under Spelling and Grammar.

Note: Grammar corrections will highlight the words, but right-clicking on them will not offer suggested changes. However, hovering over them will suggest possible corrections.

### Internet Explorer

Internet Explorer 11 includes built-in spell checking features. This is automatically enabled with the browser. Spell checking works similar to the Firefox and Chrome examples above. Words that are possibly misspelled are identified with a red line under them. Right-clicking on the underlined word brings up possible corrections to choose from. You can highlight the correct word from the list and it will be inserted into the text field.

If the word is spelled correctly but still marked as a potential mistake, you can ignore it or choose "Add to dictionary" to add the word to Internet Explorer's dictionary on your computer.

### Spell Checking for HTML emails in Volgistics

---

## Nothing happens when you touch the Continue button on the VicTouch F

Help topic 2328

Added or revised 05-16-2016

---

Follow the steps below if you are using VicTouch with Internet Explorer and an error message appears with "Automation server can't create object," or no error message appears but the PIN Number page appears to freeze, after you enter a PIN number and then touch (or click) the **Continue** button.

1. Start Internet Explorer.
2. Click the gear icon in the top right and then select **Internet Options**.
3. Select the Advanced tab.
4. Under "Security" locate the option for "Enable native XMLHTTP support." Be sure the checkbox next to this option is checked.
5. Click the **OK** button in the Internet Options dialog box.

VicTouch makes XMLHTTP connections to the Volgistics system. If XMLHTTP support is turned-off in Internet Explorer, VicTouch will not function properly. The first XMLHTTP connection typically occurs when you click or touch the **Continue** button on the PIN number screen. If VicTouch appears to freeze (nothing happens) when you click or touch this **Continue** button, it is likely that XMLHTTP support is disabled. To solve this problem enable Internet Explorer support for XMLHTTP at the VicTouch computer as described above.

XMLHTTP support is not required at computers where you use Volgistics. XMLHTTP support is only required for the VicTouch module.

## Why am I receiving a "Webpage has expired" or "Session expired" message?

Help topic 2546

Added or revised 04-26-2016

---

There are a couple of screens that users may occasionally see when working in Volgistics. The

#### *Webpage has expired*

message appears when a user clicks on the browser's

**Back** button. The *Session expired* message appears after a period of inactivity or if two [System Operators \[pg:0065\]](#) try to login with the same credentials at the same time. This help topic explains these two messages and how to proceed when they appear in Volgistics.

#### **Webpage has expired**

To prevent you from seeing information that may now be outdated, and from inadvertently saving outdated information from a copy of a web page, clicking your [web browser's Back button \[pg:1600\]](#) when using Volgistics may result in a *Webpage has expired* message.

If you see the *Webpage has expired* message while you are still in Volgistics, simply use the Volgistics [menu \[pg:0215\]](#) to continue navigating through the system.

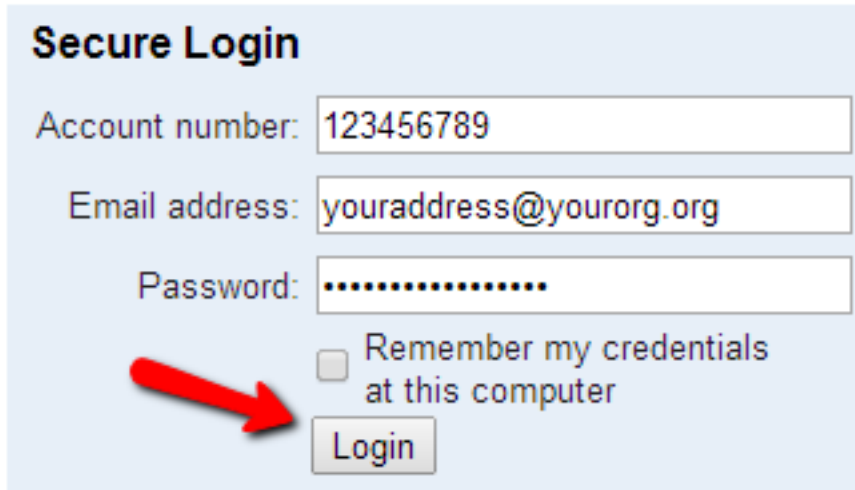

#### **Session expired**

In contrast to the

*Webpage has expired* message that appears as a result of using the **Back** button in your web browser, the *Session expired* [\[pg:1589\]](#) message appears after a period of approximately 60 minutes of inactivity while you are logged into Volgistics. This is a built-in security feature to prevent others from accessing your Volgistics session while you are away from your desk.

If the *Session expired* message appears, you can continue working by:

1. Visit [www.volgistics.com](http://www.volgistics.com).
2. Select Login from the menu at the top of the page.
3. Enter your account number, email address, and password in the Secure Login box. The email address field is not case sensitive, but the password field is.
4. Click the Login button.

**Secure Login**

Account number:

Email address:

Password:

Remember my credentials at this computer

A red arrow points to the Login button.

# Getting Started with VicDocs

Help topic 2547

Added or revised 02-11-2016

---

VicDocs is an optional Volgistics module used to upload and store electronic documents. You do not need to include VicDocs in your account's [service level \[pg:0719\]](#) to use Volgistics. However, if you do include VicDocs, the module provides paperless storage and management for documents associated with your organization. You can find answers to many questions about the VicDocs module in [help topic 3019 \[pg:1648\]](#).

This help topic explains the steps to take if you want to get started with the VicDocs module. Some of the steps require access to [Setup \[pg:0887\]](#) on the menu. If you are a [Volgistics Administrator \[pg:0052\]](#) for the account, you automatically have access to Setup. If you are a Power or Basic Level operator, you may or may not have access to Setup. If you do not have access to Setup, you will need to have an Administrator for your account complete the steps.

## 1. Check if VicDocs is included in your account's service level

The [service level \[pg:0719\]](#) for your account controls whether or not you will be able to use the VicDocs module to store electronic document files. You can determine if VicDocs is currently included in your account's service level by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Account management* link.
3. Select *Account status*.
4. Locate the *Service Level* section and look for the *VicDocs* item. It will say *No* after the item if your service level does not include VicDocs. It will say *Yes* after the item if your service level does include VicDocs.

If VicDocs is not included in your account's service level, you can add it by following the steps shown in [help topic 2007 \[pg:0050\]](#).

## 2. Set the operator rights for the Docs tabs

You can set the operator rights for VicDocs according to the operator's user level. This allows you to customize which operators can perform actions such as viewing documents, editing document names, uploading documents, etc. You can find directions on setting the operator rights for VicDocs in [help topic 2553 \[pg:1319\]](#).

## 3. Start using VicDocs

You are now ready to start using the VicDocs feature to store and manage electronic documents for your account. You can find information on how to use the Docs tab on the different records that allow document storage in the following help topics:

- [Help topic 2548 \[pg:1630\]](#) - Docs tab (Volunteer Record)
- [Help topic 2549 \[pg:1636\]](#) - Docs tab (Coordinator Record)
- [Help topic 2550 \[pg:1642\]](#) - Docs tab (Site, Place or Assignment Record)

The documents uploaded to individual volunteer, Coordinator, Site, Place, or Assignment records are consolidated on the Documents tab of your Volgistics mailbox. This gives you the ability to work with uploaded documents for multiple records. You can find more information on using the Documents tab of the mailbox in [help topic 2142 \[pg:0388\]](#).

---

## Docs Tab (Volunteer Record)

Help topic 2548

Added or revised 11-18-2015

---

The Docs tab is the last tab on the right hand side of volunteer records. If you are not able to see the tab, your [System Operator \[pg:0065\]](#) rights do not allow access to the tab. You will need to contact your account's [Administrator \[pg:0052\]](#) for further assistance in this case.

The tab stores electronic documents uploaded for the volunteer using the [VicDocs \[pg:1648\]](#) feature. If your account's [service level \[pg:0719\]](#) does not include VicDocs, the Docs tab is still used to store a [PDF \[pg:0449\]](#) copy of the volunteer's completed [application form \[pg:0413\]](#). You can find more information on this in [help topic 2552 \[pg:1373\]](#).

This help topic reviews some of the basic features of the Docs tab. You can click on an item in the *Contents* box below to go directly to that section of the help topic.

<input type="checkbox"/>	 <a href="#">Application-Individual Volunteer Form</a>	11/03/15 9:57 PM	<input type="button" value="Edit"/>

Click Delete to delete the **checked** documents:

The sections below have more information on how to use the controls for the top portion of the Docs tab.

## Open or Print Documents

In many cases you can just click on a document's file name to open the document. Your web browser will launch the program it needs to open the document. In some cases your web browser's settings are not configured to recognize the file type so the file will not open. In this case, you will either need to change your web browser's settings so that it associates the correct program with the file extension, or you can often save the document to your local computer and open it from the saved location. The Save Documents Locally section of this help topic shows how to do this.

Once the document has been opened with the appropriate program, you can send it to your local printer by using the print feature in whatever program you're using.

Many web browsers are using built-in PDF viewers now instead of the

Adobe Reader

program. This can also cause trouble with opening PDF documents. In this case you may need to disable the built-in viewer if you do not want to save the file locally. You can find more information on how to do this in [help topic 2176 \[pg:1606\]](#).

## Save Documents Locally

You can save uploaded documents to your local computer (flash drive or other storage medium) without opening the file if you wish. To do this, right-click on the name of the document and then select "Save target as...", "Save link as..." or "Save as..." from the prompt.

## Rename Documents

You can change the name that shows for an uploaded document if you'd like. To do this, click the **Edit** button on the right side of the row where the document appears. An *Edit Document* box will pop up. Edit or replace the document's title and click the **Save** button to keep your changes. Click the **Cancel** button to close the window without changing the document's name.

## Delete Documents

To delete uploaded documents, check the box in the column on the left side by each document you want to delete. If you want to delete all of the documents on the page, scroll down to the bottom of the Documents section and click the **Check all** button. Once the documents you want to delete are marked, click the **Delete** button. A pop-up will appear to make sure you want to completely delete the documents. Click the **OK** button to proceed or the **Cancel** button if you changed your mind and you would like to keep the documents.

*There is not a way to recover documents after they have been deleted so please make sure you want to delete the documents before you proceed.*

## The Delete button does not appear . . .

If the

### Delete

button does not appear on the Docs tab it means one of two things. There are either no documents uploaded for the volunteer yet, or your [System Operator \[pg:0065\]](#) rights do not allow you to delete documents. Your operator rights are controlled by the [Administrator \[pg:0052\]](#) of your Volgistics account as shown in [help topic 2553 \[pg:1319\]](#).

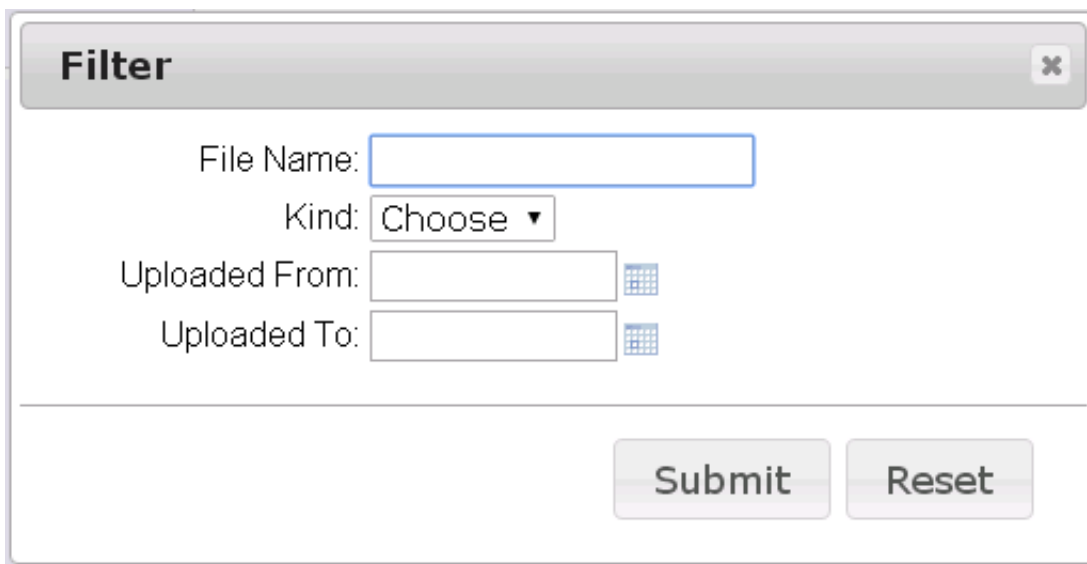

## Sorting Documents

By default the Docs tab is sorted according to the order the documents were added to your database. The most recently added documents will be at the top. You can change the view to be sorted by the *Kind*, *File Name* or *Uploaded* column instead. Just click on a column heading to sort the view based on that column's information.

## Filtering Documents

You can filter the Docs tab to only show certain documents. To do this, click the **Filter** button in the top left corner. This will open a dialogue box where you can select the filter options.

A screenshot of a 'Filter' dialog box. The dialog has a title bar with the word 'Filter' and a close button (X). Inside, there are four input fields: 'File Name:' with a text box, 'Kind:' with a dropdown menu showing 'Choose', 'Uploaded From:' with a text box and a calendar icon, and 'Uploaded To:' with a text box and a calendar icon. At the bottom, there are two buttons: 'Submit' and 'Reset'.

There is more information on how each item works below. Please note that you can use more than one option at the same time to refine the documents shown. The filtered view will only show documents that meet all of the requirements you select.

File Name: Type the first part of the first word in the name of the file(s) you want to see. The more characters you enter, the more refined the filter will be.

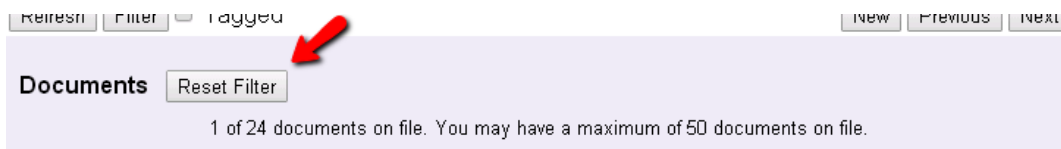

Kind: Use the dropdown to select which type of document files you want to have shown.

Uploaded From: Enter a date to limit the Docs tab to just documents uploaded on or after a certain date.

Uploaded To: Enter a date to limit the Docs tab to just documents uploaded on or before a certain date.

## Resetting the Filter

If your view of the Docs tab is currently filtered, there will be a **Reset Filter** button to the right of the word *Documents* at the top left of the page.

Click the **Reset Filter** button to return the Docs tab to the un-filtered view.

## **Uploading Documents**

The bottom section of the Docs tab is titled *Upload* and it is where you can upload documents for the volunteer.

**Upload**  
Upload new PDF, Word, Text, XLS documents or images.

*We recommend optimizing your PDF documents before uploading to make the most of your storage space. Click [here](#) for more information.*

**IMPORTANT**  
Please remember that Volgistics is not HIPAA compliant, and should not be used to store protected health information. Click [here](#) for more information.

**Step 1**  
Click the choose file button to select the file you want to upload.

No file chosen

**Step 2**  
Click the Upload button to start uploading.

The sections below have more information on how to use the controls for the bottom portion of the Docs tab.

### **The Upload section does not appear . . .**

If you do not see the Upload section at the bottom of the Docs tab, one of the following applies:

1. The **VicDocs** [pg:1648] module is not included in your account's **service level** [pg:0719]. In this case, the service level will need to be changed to **include VicDocs** [pg:0050].
2. Your **System Operator** [pg:0065] rights do not include the right to upload documents to this tab. In this case, you will need to contact your account's **Administrator** [pg:0052] to have him or her **change your operator rights** [pg:1319] for the tab.
3. The Docs tab has reached its capacity. In this case, you will need to delete older documents in order to upload new documents.

### **File Types**

The following file types can be uploaded for volunteers:

File Type	File Extension(s)
Image	.bmp, .gif, .jpeg, .jpg, .png
Microsoft Excel	.xls, .xlsx
Microsoft PowerPoint	.ppt, .pptx
Microsoft Word	.doc, .docx
Portable Document Format (PDF)	.pdf
Text	.rtf, .txt

### Capacity and File Size

The Docs tab can hold up to 50 electronic document files that are 10 megabytes (10,485,760 bytes) or smaller. There is not a way to upload over 50 documents, or upload files larger than 10 megabytes. If you have reached the 50 file limit, older files can be deleted. If a file is over the size limit, you can optimize or compress the file to make it smaller.

### Optimizing or Compressing Files

Before uploading larger files, we recommend optimizing or compressing the file first. This reduces the file size, which means it will upload, open and transfer faster. Optimization and compression usually apply only to image and PDF [pg:0449] files. Generally the program used to create the file will have features that allow you to optimize or compress the file.

We found these resources on how to optimize PDF files using some common programs:

- If you use Microsoft Word and the "Save as" function to save in the PDF format, select "Minimum Size (publishing online)" as the "Optimize for" option. More information.
- If you use Adobe Acrobat, use the PDF Optimizer under the Advanced menu. More information.
- If you use a Nuance program (such as PDF Converter Pro or PDF Converter Enterprise), select Tools then "Optimize PDF." More information.

You may need to search the Internet, or refer to the help documentation for the program you use, for more information on how to reduce the file's size.

### Uploading Files

You can upload files to the Docs tab by:

1. Click the **Choose File** or **Browse** button.
2. Select the file to upload and click the **Open** button. You can find acceptable file types here.
3. Click the **Upload** button. Once the upload is complete, your document will be listed in the Documents section of the Docs tab.

### Document Storage and HIPAA

Please keep in mind that Volgistics is designed to be a

*volunteer*

management system. As such it is

*not*

intended to be used to store, process or transmit HIPAA protected information so it is not a Covered Entity for HIPAA regulations. There is more information on this in [help topic 8273 \[pg:0091\]](#).

## **Virus Scanning**

To protect the system and your account, Volgistics automatically scans documents for possible viruses before making the document available. You will see a "(waiting to be scanned)" message after the document's name while this is being done, and the document's name will not be a clickable link. In some cases, you will need to click the **Refresh** button in the top or bottom left corner to have the tab update after the scan has been completed.

If a virus is found on a document, it will be removed from the system and an alert will be sent to the [In Box \[pg:0303\]](#) of your Volgistics mailbox.

---

## **Docs Tab (Coordinator Record)**

Help topic 2549

Added or revised 11-23-2015

---

The Docs tab is the last tab on the right hand side of [Coordinator \[pg:0163\]](#) records. It is used to store electronic documents uploaded for the Coordinator using the [VicDocs \[pg:1648\]](#) feature. If you are not able to see the tab, one (or both) of the following apply:

1. Your [System Operator \[pg:0065\]](#) rights do not allow access to the tab. You will need to contact your account's [Administrator \[pg:0052\]](#) for further assistance in this case.
2. Your account's [service level \[pg:0719\]](#) does not include VicDocs. You can find information about adding VicDocs to your service level in [help topic 2007 \[pg:0050\]](#).

This help topic reviews some of the basic features of the Docs tab. You can click on an item in the *Contents* box below to go directly to that section of the help topic.

### **Contents**

#### Stored Documents

Uploading Files  
Document Storage and HIPAA  
Virus Scanning

## Stored Documents

The top section of the Docs tab is titled *Documents* and it is where you will see documents that have been uploaded for the Coordinator.

### Saunders, Stephanie

Kind	File Name	Uploaded	
	<a href="#">Photo Release</a>	11/23/15 7:22 PM	<input type="checkbox"/> Edit
	<a href="#">Job Description</a>	11/17/15 9:09 AM	<input type="checkbox"/> Edit
	<a href="#">Interview Notes</a>	11/13/15 3:07 PM	<input type="checkbox"/> Edit
	<a href="#">Department Contacts</a>	11/09/15 11:25 AM	<input type="checkbox"/> Edit
	<a href="#">Badge Photo</a>	11/03/15 10:06 AM	<input type="checkbox"/> Edit

The sections below have more information on how to use the controls for the top portion of the Docs tab.

### Open or Print Documents

In many cases you can just click on a document's file name to open the document. Your web browser will launch the program it needs to open the document. In some cases your web browser's settings are not configured to recognize the file type so the file will not open. In this case, you will either need to change your web browser's settings so that it associates the correct program with the file extension, or you can often save the document to your local computer and open it from the saved location. The Save Documents Locally section of this help topic shows how to do this.

Once the document has been opened with the appropriate program, you can send it to your local printer by using the print feature in whatever program you're using.

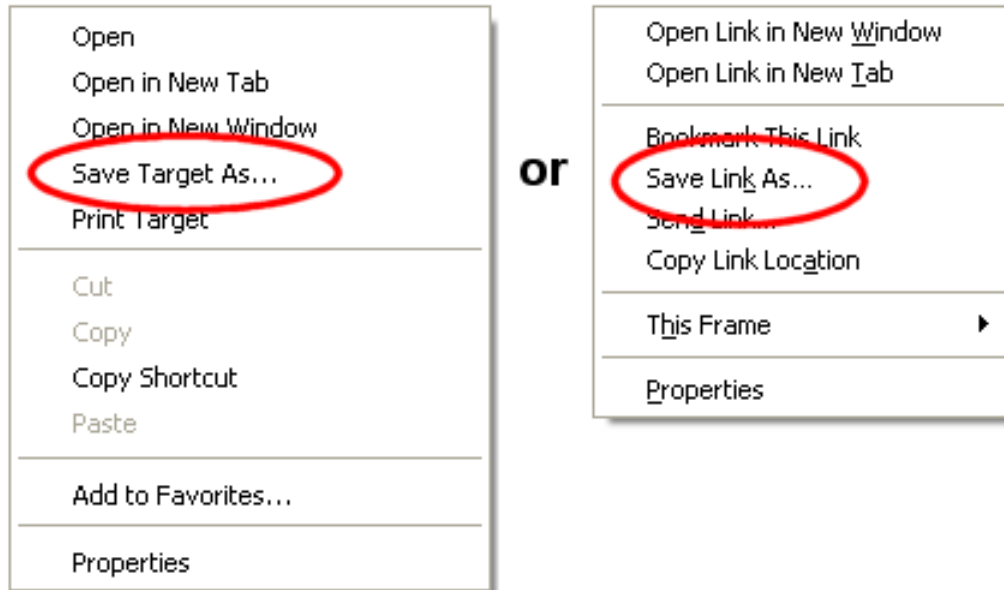

Many web browsers are using built-in PDF viewers now instead of the

Adobe Reader

program. This can also cause trouble with opening PDF documents. In this case you may need to disable the built-in viewer if you do not want to save the file locally. You can find more information on how to do this in [help topic 2176 \[pg:1606\]](#).

## Save Documents Locally

You can save uploaded documents to your local computer (flash drive or other storage medium) without opening the file if you wish. To do this, right-click on the name of the document and then select "Save target as...", "Save link as..." or "Save as..." from the prompt.

## Rename Documents

You can change the name that shows for an uploaded document if you'd like. To do this, click the **Edit** button on the right side of the row where the document appears. An *Edit Document* box will pop up. Edit or replace the document's title and click the **Save** button to keep your changes. Click the **Cancel** button to close the window without changing the document's name.

## Delete Documents

To delete uploaded documents, check the box in the column on the left side by each document you want to delete. If you want to delete all of the documents on the page, scroll down to the bottom of the Documents section and click the **Check all** button. Once the documents you want to delete are marked, click the **Delete** button. A pop-up will appear to make sure you want to completely delete the documents. Click the **OK** button to proceed or the **Cancel** button if you changed your mind and you would like to keep the documents.

*There is not a way to recover documents after they have been deleted so please make sure you want to delete the documents before you proceed.*

## The Delete button does not appear . . .

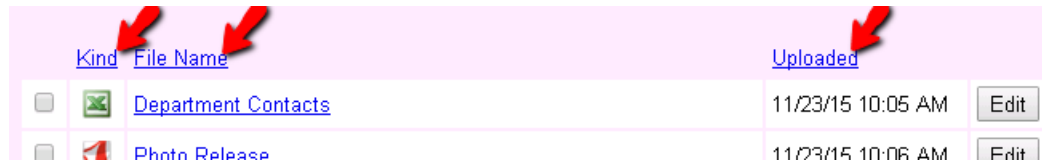

If the

**Delete**

button does not appear on the Docs tab it means one of two things. There are either no documents uploaded for the Coordinator yet, or your [System Operator \[pg:0065\]](#) rights do not allow you to delete documents. Your operator rights are controlled by the [Administrator \[pg:0052\]](#) of your Volgistics account as shown in [help topic 2553 \[pg:1319\]](#).

## Sorting Documents

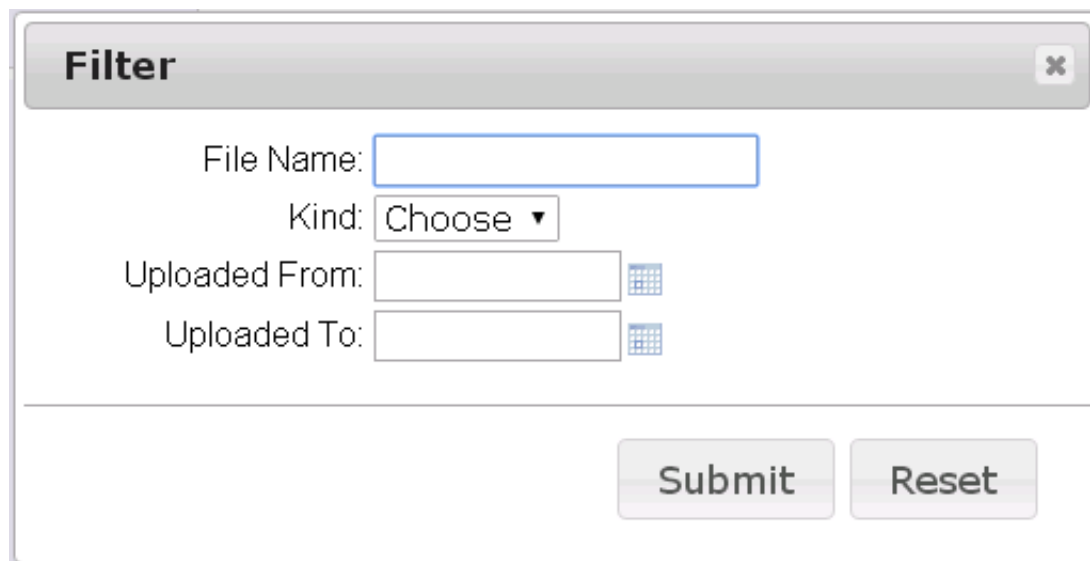

By default the Docs tab is sorted according to the order the documents were added to your database. The most recently added documents will be at the top. You can change the view to be sorted by the *Kind*, *File Name* or *Uploaded* column instead. Just click on a column heading to sort the view based on that column's information.

	Kind	File Name	Uploaded	
<input type="checkbox"/>		<a href="#">Department Contacts</a>	11/23/15 10:05 AM	<input type="button" value="Edit"/>
<input type="checkbox"/>		<a href="#">Photo Release</a>	11/23/15 10:06 AM	<input type="button" value="Edit"/>

## Filtering Documents

You can filter the Docs tab to only show certain documents. To do this, click the **Filter** button in the top left corner. This will open a dialogue box where you can select the filter options.

### Filter

File Name:

Kind:

Uploaded From:

Uploaded To:

There is more information on how each item works below. Please note that you can use more than one option at the same time to refine the documents shown. The filtered view will only show documents that meet all of the requirements you select.

**File Name:** Type the first part of the first word in the name of the file(s) you want to see. The more characters you enter, the more refined the filter will be.

**Uploaded To:** Enter a date to limit the Docs tab to just documents uploaded on or before a certain date.

## Resetting the Filter

If your view of the Docs tab is currently filtered, there will be a **Reset Filter** button to the right of the word *Documents* at the top left of the page.

Click the **Reset Filter** button to return the Docs tab to the un-filtered view.

## Uploading Documents

The bottom section of the Docs tab is titled *Upload* and it is where you can upload documents for the Coordinator.

### Upload

Upload new PDF, Word, Text, XLS documents or images.

*We recommend optimizing your PDF documents before uploading to make the most of your storage space. Click [here](#) for more information.*

### IMPORTANT

Please remember that Volgistics is not HIPAA compliant, and should not be used to store protected health information. Click [here](#) for more information.

#### Step 1

Click the choose file button to select the file you want to upload.

No file chosen

#### Step 2

Click the Upload button to start uploading.

The sections below have more information on how to use the controls for the bottom portion of the Docs tab.

## The Upload section does not appear . . .

If you do not see the Upload section at the bottom of the Docs tab, one of the following applies:

1. The **VicDocs** [pg:1648] module is not included in your account's **service level** [pg:0719]. In this case, the service level will need to be changed to **include VicDocs** [pg:0050].
2. Your **System Operator** [pg:0065] rights do not include the right to upload documents to this tab. In this case, you will need to contact your account's **Administrator** [pg:0052] to have him or her **change your operator rights** [pg:1319] for the tab.

3. The Docs tab has reached its capacity. In this case, you will need to delete older documents in order to upload new documents.

## File Types

The following file types can be uploaded for Coordinators:

File Type	File Extension(s)
Image	.bmp, .gif, .jpeg, .jpg, .png
Microsoft Excel	.xls, .xlsx
Microsoft PowerPoint	.ppt, .pptx
Microsoft Word	.doc, .docx
Portable Document Format (PDF)	.pdf
Text	.rtf, .txt

## Capacity and File Size

The Docs tab can hold up to 50 electronic document files that are 10 megabytes (10,485,760 bytes) or smaller. There is not a way to upload over 50 documents, or upload files larger than 10 megabytes. If you have reached the 50 file limit, older files can be deleted. If a file is over the size limit, you can optimize or compress the file to make it smaller.

## Optimizing or Compressing Files

Before uploading larger files, we recommend optimizing or compressing the file first. This reduces the file size, which means it will upload, open and transfer faster. Optimization and compression usually apply only to image and PDF [pg:0449] files. Generally the program used to create the file will have features that allow you to optimize or compress the file.

We found these resources on how to optimize PDF files using some common programs:

- If you use Microsoft Word and the "Save as" function to save in the PDF format, select "Minimum Size (publishing online)" as the "Optimize for" option. More information.

In some cases, you will need to click the **Refresh** button in the top or bottom left corner to have the tab update after the scan has been completed.

If a virus is found on a document, it will be removed from the system and an alert will be sent to the [In Box \[pg:0303\]](#) of your Volgistics mailbox.

---

## VicDocs

Help topic 3019

Added or revised 02-11-2016

---

VicDocs is an optional Volgistics module used to upload and store electronic documents. You do not need to include VicDocs in your account's [service level \[pg:0719\]](#) to use Volgistics. However, if you do include VicDocs, the module provides paperless storage and management for documents associated with your organization.

This help topic answers many common questions about the VicDocs feature. You can click on a question in the *Contents* box below to go directly to the answer to that question.

### Contents

Why is it called VicDocs?

Where can documents be uploaded?

What types of documents can be uploaded?

How many documents can be uploaded?

How big can the document files be?  
 Who can upload documents?  
 Who can access or view documents?  
 What happens to documents when a volunteer record is archived or an Assignment is made inactive?  
 What happens to documents if a record is deleted?  
 What happens to documents if an account is cleared or cancelled?  
 How can I find the price for adding VicDocs to my account's service level?  
 How do I get started with VicDocs?

### Why is it called VicDocs?

Vic stands for *Volunteer Information Center* and *Documents* (or Docs) are what the module stores and manages. Thus, the name *VicDocs*.

The name keeps the nomenclature used for the other Volgistics modules: *VicNet* and *VicTouch*. *VicNet* [pg:1724] is the optional module volunteers and *Coordinators* [pg:0163] use to interact with Volgistics from any Internet connected computer or device. *VicTouch* [pg:1778] is the optional module that uses an on-site touchscreen to track volunteer service. Volunteers sign-in and out with the module similar to how employees use a time clock to track the time they have worked.

### Where can documents be uploaded?

When VicDocs is included in your account's *service level* [pg:0719], you will be able to upload electronic document files to five (5) different types of records. You will be able to upload documents to *volunteer records*, *Coordinator* [pg:1849] records, as well as *Site, Place and Assignment* [pg:0096] *Coordinator* [pg:1849] records, as well as S

When VicDocs has been added, a Docs tab will be available as the last tab on the right side for each record type listed above.

## North Lobby Desk

The screenshot shows a web interface for 'North Lobby Desk'. At the top, there are several tabs: Assignment, Coordinators, Profile, Description, Volunteers, Schedule, Rules, and Docs. The 'Docs' tab is selected. Below the tabs are 'Refresh' and 'Filter' buttons. The main content area is titled 'Documents' and contains the text: '4 documents on file. You may have a maximum of 50 documents on file.' Below this is a table with columns for 'Kind', 'File Name', and 'Uploaded'. Each row has a checkbox on the left and an 'Edit' button on the right.

Kind	File Name	Uploaded
<input type="checkbox"/>	<a href="#">Volunteer PIN's</a>	11/23/15 11:59 AM
<input type="checkbox"/>	<a href="#">Weekly Announcements</a>	11/18/15 10:09 AM
<input type="checkbox"/>	<a href="#">Policy &amp; Procedure Manual</a>	11/03/15 4:13 PM
<input type="checkbox"/>	<a href="#">Admin. Staff Photo</a>	10/29/15 3:58 PM

At the bottom of the document list, there are 'Check all' and 'Un-check all' buttons. Below these is a message: 'Click Delete to delete the **checked** documents:' followed by a 'Delete' button.

### What types of documents can be uploaded?

The actual content of the documents you upload will vary depending on your organization's needs. For example, some organizations may need volunteers to keep a signed photo release on file, while others may need a copy of a completed parking permit form.

Because of this variety, Volgistics allows document uploads to have a number of different file formats (or extensions). The table below shows acceptable file formats:

File Type	File Extension(s)
Image	.bmp, .gif, .jpeg, .jpg, .png
Microsoft Excel	.xls, .xlsx
Microsoft PowerPoint	.ppt, .pptx
Microsoft Word	.doc, .docx
Portable Document Format (PDF)	.pdf
Text	.rtf, .txt

## Document Storage and HIPAA

Please keep in mind that Volgistics is designed to be a

*volunteer*

management system. As such it is

*not*

intended to be used to store, process or transmit HIPAA protected information so it is not a Covered Entity for HIPAA regulations. There is more information on this in [help topic 8273 \[pg:0091\]](#).

## How many documents can be uploaded?

The VicDocs module allows you to store fifty (50) documents on the Docs tab of each record type mentioned in the [Where can documents be uploaded?](#) section above. Because of this, the maximum number of documents you can store in your account varies depending on how many records you have. For example, if you have 100 non-archived volunteer records, 50 archived volunteer records, 1 Site record, 4 Place records, 25 Assignment records, and 20 Coordinator records, you have a total of 200 records where documents can be uploaded. Each of these record types can have a maximum of 50 documents uploaded to the Docs tab so your account can have 10,000 (200 x 50) documents. If you add 5 new Assignment records, you will now have 205 records where documents can be uploaded. This will make the maximum number of documents your account can hold increase to 10,250.

You can learn more about the Docs tab on each record type in the following help topics:

[Help topic 2548 \[pg:1630\]](#) - Docs tab (Volunteer Record)

[Help topic 2549 \[pg:1636\]](#) - Docs tab (Coordinator Record)

[Help topic 2550 \[pg:1642\]](#) - Docs tab (Site, Place or Assignment Record)

## How big can the document files be?

Document files must be 10 megabytes (10,485,760 bytes) or smaller. In many cases, larger files can be optimized or compressed to reduce their size. You can find more information on this in the help topics related to the Docs tabs.

### **Who can upload documents?**

Documents can only be uploaded by your account's [System Operators \[pg:0065\]](#). The [Administrator \[pg:0052\]](#) for each account controls which operators can, or cannot, upload documents to the Docs tab of each record type. [Help topic 2553 \[pg:1319\]](#) shows how Administrators control the operator's rights.

### **Who can access or view documents?**

Similarly to uploading documents, uploaded Documents can only be accessed or viewed by your account's [System Operators \[pg:0065\]](#). Again, the [Administrator \[pg:0052\]](#) for each account controls which operators can, or cannot, see the Docs tabs where the records are stored. [Help topic 2553 \[pg:1319\]](#) shows how Administrators control the operator's rights.

### **What happens to documents when a volunteer record is archived or an Assignment record is made inactive?**

In Volgistics, a record for a volunteer who is no longer actively serving can be stored in the [archived \[pg:0709\]](#) section of the account. Similarly, if an Assignment is no longer needed, you can make the [Assignment inactive \[pg:0140\]](#). Both of these options allow you to keep the basic information for the record, but remove the volunteer or Assignment from the regular view. When you do this, all documents uploaded for the volunteer or Assignment are still available to you, but you may need to take extra steps to access the documents.

If you [restore a volunteer record \[pg:1852\]](#) to the non-archived section, or make an inactive Assignment active again, the documents will be available again without taking extra steps.

### **What happens to documents if a record is deleted?**

When a [System Operator \[pg:0065\]](#) deletes a record (or records) where documents are uploaded, the operator will see a choice to save the documents uploaded for the record(s). If they opt to save the documents, the documents will be placed in a zip file that will be available on the [In Box \[pg:0303\]](#) tab of the Volgistics Mailbox. The zip files of downloaded documents will be available for five days so they can be saved locally. After the five days pass, the zip files of documents will be permanently deleted from the account.

### **What happens to documents if an account is cleared or cancelled?**

If an account's [Administrator \[pg:0052\]](#) opts to [clear an account \[pg:0890\]](#), the same basic procedure that happens when

records are deleted

occurs. The Administrator will see an option to save the documents and the saved documents will be placed in a zip file that will be available on the [In Box \[pg:0303\]](#) tab of the Volgistics Mailbox for five days.

If an [Administrator \[pg:0052\]](#) opts to [cancel an account \[pg:0894\]](#), the Administrator will see an option to save the documents. In this case, a link to the zip file containing the documents will be sent to the Administrator's email address. The Administrator will need to enter her or his password after clicking the link if she or he wishes to save the documents locally. This link will only stay active for 5 days and then the documents will be permanently deleted.

## How can I find out the price for adding VicDocs to my account's service level?

Because of added expenses such as equipment and increased bandwidth, adding VicDocs to your organization's [service level \[pg:0719\]](#) will increase your monthly service fee. However, Volgistics strived to keep the added expense for this to a minimum. You can use the Volgistics Price Calculator to determine what your organization's monthly service fee will be if you add VicDocs. If you do not know your account's current service level, find this first by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the *Account management* link.
3. Select *Account status*.

Note the settings for each item in the *Service Level* section, and then click here to go to the Price Calculator. Select the settings for your account's service level and then add the VicDocs module. The calculator will show what the monthly service fee for your account will be if VicDocs is included.

## How do I get started with VicDocs?

If you're ready to get started with VicDocs, just follow the steps in [help topic 2547 \[pg:1629\]](#) - "Getting Started with VicDocs."

---

## VicNet for People Who Are Both a Volunteer and a Coordinator

Help topic 1093

Added or revised 04-26-2016

---

As you can read about [here \[pg:1707\]](#), you can make [VicNet \[pg:1724\]](#) accessible to any volunteer or coordinator you track in Volgistics. However, there may be individuals in your Volgistics system who serve as both volunteers and coordinators. It is likely that these people have a volunteer record and a coordinator record. When such people use VicNet, the email address(es) and VicNet password(s) stored in their records become important.

### **When the email address in the volunteer record differs from the email address entered in the coordinator record**

If a separate email address is entered for each responsibility, then the person must use the email address in their volunteer record to login to VicNet as a volunteer and the email address stored in their coordinator record to login to VicNet as a coordinator. VicNet will display the correct information (volunteer or coordinator) based on the email address used to login. The person would need to logout of VicNet and then back in with the other email address to see the information pertaining to their other responsibility.

### **When the password on the Vic tab in the volunteer record differs from the password on the Vic tab in the coordinator record**

Much like having different email addresses in each record, having different passwords can determine which screen (volunteer or coordinator) a person will see upon logging into VicNet. If the emails in both the volunteer and coordinator records match, but the volunteer Vic tab includes a password of 'xxxxxx' and the coordinator Vic tab includes a password of 'yyyyyy,' the volunteer would login to VicNet with their (only) email, and choose the password that applies to the information they wish to view and manage.

### **When both the email address and password are unique to the record**

If the person's volunteer record contains one email address and password and their coordinator record contains a different email address *and* a different password, they simply use one set of login information to access VicNet as a volunteer and the other set to login as a coordinator.

### **When both email address and passwords are the same in each record**

If the person's VicNet login credentials are the same in their volunteer record and coordinator record, they login to VicNet normally. VicNet will then prompt them to choose which record they would like to access.

Login

### Which record?

Your login name and password provide access to multiple records. Choose which record you want to login to.

Choose one:

- George Bailey (volunteer)
- George Bailey (coordinator)

Go

---

## How to Use VicNet: a Brief Guide for Volunteers

Help topic 1148

Added or revised 03-23-2017

---

*This help topic is intended to help volunteers better understand how to use the VicNet module.*

If you prefer a video tutorial format instead of the written help topic, the following videos explain more about how to use VicNet. Each video shows a different way an organization may have VicNet setup. Choose the video that matches your organization's VicNet setup the closest.

The VicNet module is a tool the organization you volunteer with may use. You access the VicNet module over the Internet and you can use it to:

- View and manage your schedule
- Sign-up for vacant schedule openings
- Print your schedule
- Keep your personal information up-to-date
- Post your hours
- Receive news and messages from the volunteer office
- Check your service records, and print your own service reports
- Change your VicNet password
- Opt-in or out of text messaging and update your message preferences

Each organization sets up VicNet according to what works best for their needs--so you may not be able to do everything listed above. This will depend on how your organization opted to use the features.

You can click on a link in the *Contents* box below to go directly to a section in the help topic.

### Contents

[Logging into VicNet](#)

[Navigating VicNet](#)

[Home Tab](#)

- Mail Tab
- My Profile Tab
- My Schedule Tab
- My Service History Tab
- Time Sheet Tab
- Account Tab

**Logging into VicNet**

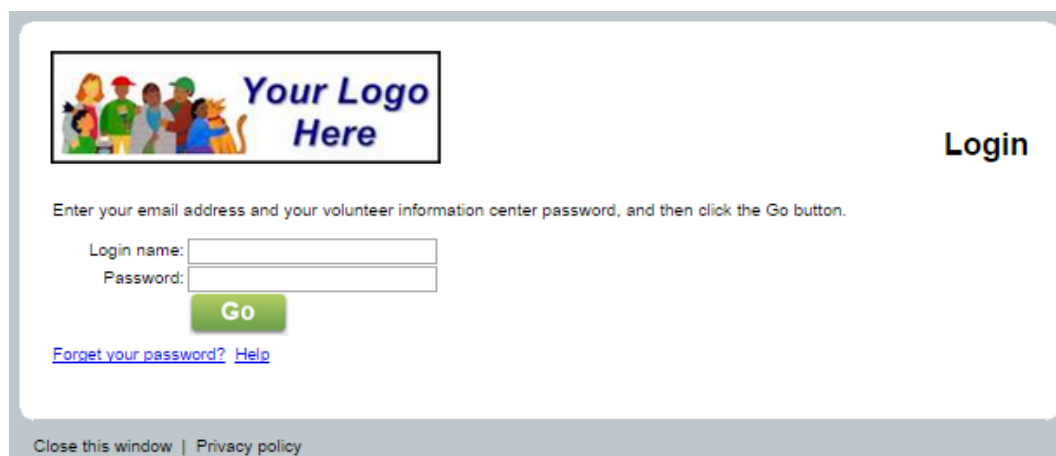

In most cases, you get to your organization's VicNet login page through the organization's website. An organization may choose to send you a URL address that you can use to login, but most of the time there will be a link to the VicNet login page somewhere on the organization's website. It may be a simple text link like this:

[Volunteer Login](#)

Or, it may be a graphic link like this:

Your organization should provide you with directions on how to locate the webpage you will need to use to login. When you click on the link (or go to the URL address your organization provides you with) you will see a login page similar to this one:

Enter the email address your organization has on file for you in the *Login name* field. If you do not know this email address, you will need to contact the organization you volunteer with for more information.

Enter your password in the *Password* field and then press the **Go** button.

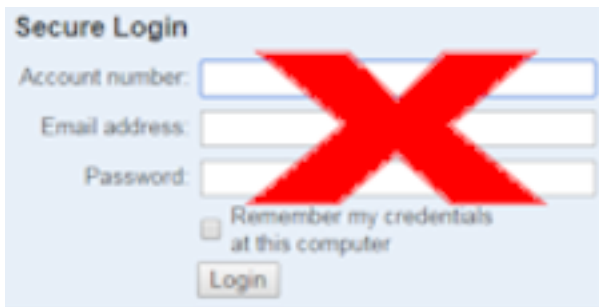

In most cases, you will receive a link to set your password in an email message from your organization. You follow the link to create the password you will use to login with.

In other cases, your organization may have set a temporary password for your record and let you know the temporary password. If your volunteer record was imported from another software program, your previous password may be the temporary password. When you login with the temporary password, you will need to enter a permanent password on the Account tab before you can go to other tabs. Remember the permanent password you select because you will need to use it the next time you login. You can find more information on the Account tab in the Account Tab section below.

One other thing that may occur is that your organization asked you to select a password when you filled out your application form. In this case, you use this password to login with and you will not need to go to the Account tab to select a permanent password the first time you login.

If you forget your password, or are not able to locate any password information from your organization, click the *Forget your password?* link that appears on the login screen. As long as the email address you enter matches the address on your volunteer record, this will send an email with a password link to you. You can follow this link to set a password to login with. **Please note that the password links only remain active for 24 hours. If you click on the link but it has expired, just click the *Forget your password?* link again to have a new link sent.**

You can find more information on how to use the *Forget your password?* link [here \[pg:1975\]](#).

The image shows a 'Secure Login' form with the following fields: 'Account number', 'Email address', and 'Password'. Below the password field is a checkbox labeled 'Remember my credentials at this computer' and a 'Login' button. A large red 'X' is superimposed over the form, indicating that the login attempt failed or the form is invalid.

## Navigating VicNet

All tabs in VicNet are highly customizable by individual organizations. Therefore, it is difficult to say exactly what type of content will be displayed on the various tabs, or even if a tab will be visible to you at all. The following information explains the basic purpose of each tab that can be displayed and provides visual examples of how the tab might look. Your view in VicNet may be different depending on how the organization you volunteer with has setup their VicNet module.

### The Home tab

The first tab displayed when you login is the Home tab. The following image is an example of what a VicNet Home tab might look like:

**Your Logo Here**

Close this window | Privacy policy

From the Home tab, you can access any of the other available tabs, or click on any buttons or links your organization has chosen to include. Depending on how your organization has VicNet setup, you may see news from your organization; links to documents that you can view, print or download; or links to other web sites with resources you may need.

### The Mail tab

The Mail tab in VicNet is where you can see messages (called Vic Mail) sent to you from the person who coordinates volunteers for your organization. New messages appear on top, and a list of read messages appears on the bottom. To read a message, click on the Subject of the message.

Here is an example of what a VicNet Mail tab might look like:

## Volunteer Information Center

<b>Bedford Falls 10K</b>	09-04-2014
If you haven't heard, we are proud to be a co-sponsor of this year's Bedford Falls 10K run. This event is an important fund raiser for our organization, plus it promotes health and wellness.	
This year's 10K run will be held on Saturday, October 18th at 9:30 am. As a co-sponsor, we will be responsible for staffing the registration booth from 7:00 am - 8:00 pm on Friday, October 17th, as well as from 7:00 am - 9:00 am on the morning of the race.	
Registration booth staff will be responsible for handing out race day packets and t-shirts to registered participants. If you're interested in helping us staff the booth, please call Carol at 555-892-3391.	
Thank you, Carol Luden

#### The My Profile tab

The My Profile tab lets you see and (if your organization permits) update your personal information. The form sections and fields that appear on the tab are selected by your organization. They can choose to make certain fields required so you need to enter information in them in order to save the page. Or they can make certain fields "read-only" so you can see the information in the field, but you will not be able to change it. Please remember to click the **Save** button if you make any changes.

The following is an example of what the VicNet My Profile might look like:

[Close this window](#) | [Privacy policy](#)

Notice that the service information is collapsed by year to start. You can click on a year to expand the view to show all service entries made for you during the year. Click on a date to show the service details for a particular entry.

#### The Time Sheet tab

If your organization wants you to enter service hours, you will see a Time Sheet tab. As with the other VicNet tabs, this can be setup in several different ways so do not be concerned if your Time Sheet tab does not match the one shown below:

**Your Logo Here**

**Volunteer Information Center**

**Volunteer information for Andrea Campbell**

Home Mail My Profile My Schedule My Service History **Time Sheet** Account

**Instructions**  
To post your hours, enter your service information in the Time Sheet box and then click the "Continue" button.

**Time Sheet**

What was the date of your service?  
 August 2014  
 S M T W T F S  
 25 26 27 28 29 30  
 31  
 September 2014  
 S M T W T F S  
 1 2 3 4

What times did you serve? 8 : :00 am until 9 : :00 am

Which assignment did you serve in? Choose one

**Continue**

**Your recent service entries:**

Date	Assignment	Hours
08-29-2014	Welcome Center Desk [Main Hospital/Info Desk]	4:00
08-28-2014	Welcome Center Desk [Main Hospital/Info Desk]	4:00
08-27-2014	Welcome Center Desk [Main Hospital/Info Desk]	4:00
08-26-2014	Welcome Center Desk [Main Hospital/Info Desk]	4:00
08-25-2014	Welcome Center Desk [Main Hospital/Info Desk]	4:00

For your complete service history select the "My Service History" tab.

**Exit**

Close this window | Privacy policy

To post hours, you will need to choose a date for the service and either the number of hours, or your start and stop times on the date you served. Your organization may also have you select the assignment and other service measure (such as mileage or travel times) for the service entry. Click the **Continue** button and confirm your entry when you are done posting your service.

### The Account tab

The Account tab is where you will go to set a permanent password, change your permanent password, opt-in or out of text messaging, and change your message preferences. If you sign-in with a temporary password, you will be directed to the Account tab before you can access the other tabs.

If you do not have a password, or have forgotten it, you can have a link sent to you so you can create a password. You can learn more about how this works [link here \[pg:1975\]](#).

If the organization you volunteer with has enabled text messaging, you will also see a section on the Account tab for text messaging. You can use this section to opt-in to text messaging, opt-out of text messaging, or change the types of messages you receive by text. You can find information on how to do these things [here \[pg:0323\]](#).

An example of how the Account tab may look is shown below:

**Your Logo Here**

**Volunteer Information Center**

**Volunteer information for Andrea Campbell**

Home Mail My Profile My Schedule My Service History Time Sheet **Account**

**Change your password**  
You can change the password you use to access your volunteer information. Enter your current password, enter your new password twice, and then click the Save button.

Your new password must:

- Be between 6 and 30 characters long
- Contain both letters and numbers.
- Contain a combination of both uppercase and lower case letters.
- Contain at least one character that is not a letter or number, such as !#\$% or ?.

Enter your **current** password here:  \*(Required)

Enter your **new** password here:  \*(Required)

Enter your **new** password again:  \*(Required)

[Help](#)

**Message Preferences (Email / Text Messaging)**  
Use this section to opt-in and opt-out of text messaging (also known as "SMS"). You can change preferences for how you would like to receive messages, whether as emails, text messages, or none.

1. Please Enter Your Mobile Device Number:

Volistics Volunteer Alerts sends reminders, alerts, and custom messages from System Operators and Coordinators using text messaging (SMS). Please tell us where we can send messages.

Enter a mobile phone number:  Your country:

*This is a required field.*

Supported Carriers: AT&T, Sprint, Nextel, Boost, Verizon Wireless, U.S. Cellular®, T-Mobile®, Cellular One Dobson, Cincinnati Bell, Alltel, Virgin Mobile USA, Cellular South, Unicel, Centennial and Ntelos.

2. How do you prefer to receive these types of messages?

**Automated Messages**

Email	Message	None

**If you have any questions about how to use VicNet, you should contact the volunteer office at your organization.**

The following videos explain more about how to use VicNet. Each video shows a different way an organization may have VicNet setup. Choose the video that matches your organization's VicNet setup the closest.

---

## How do volunteers get started with VicNet?

Help topic 1158

Added or revised 04-12-2017

---

Many organizations wonder how they create volunteer "accounts" to allow volunteers to sign-in to the [VicNet \[pg:1724\]](#) module. The good news is if the volunteer has a record in your database, the volunteer already has an "account." You can learn how volunteer records can be added to your database in [help topic 2299 \[pg:1878\]](#).

Once a volunteer has a record, they will need to meet three requirements in order to use VicNet:

- They will need a [Status \[pg:1832\]](#) (and optionally a [Type or Flag \[pg:0212\]](#)) that is allowed to access VicNet. You control access requirements on the [VicNet Ground Rules \[pg:1447\]](#) page.
- An email address on the [Core tab \[pg:1868\]](#) of their volunteer record.
- The *Disable access* box on the [Vic tab \[pg:1810\]](#) of the volunteer's record cannot be checked.

As long as a record meets all three items that are listed above, the volunteer will be able to use VicNet. The trick is often educating the volunteers on what they need to do. This help topic reviews some of the common strategies for using the VicNet portal, collecting volunteer information, and letting volunteers know about VicNet.

You should choose the strategy (or strategies) that works best for your organization's structure and requirements. For example, a festival may want applicants to be able to access VicNet right away without any onboarding requirements. So an option where the applicants choose their password on the application form will work best for them. However, an organization such as a hospital will likely have onboarding requirements so a method where the [System Operators \[pg:0065\]](#) send login information after the volunteers are approved will work best for them.

You can click on a link in the *Content* box below to go directly to a section of the help topic.

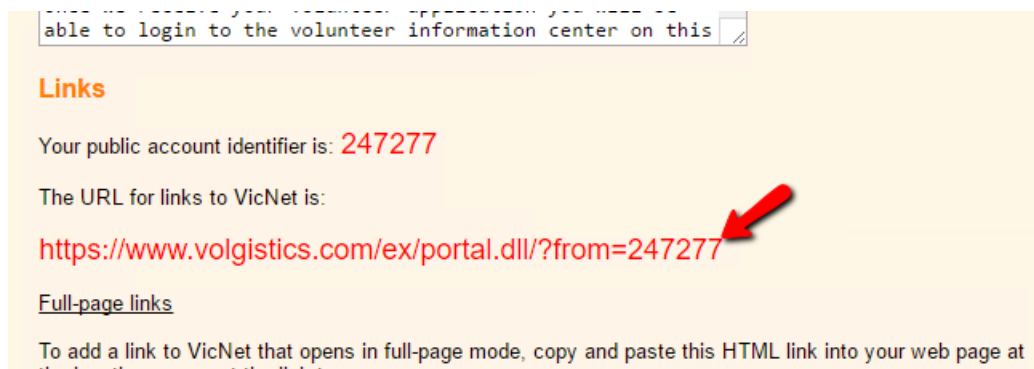

## Contents

- Where is the VicNet Portal?
- Collect Login Information on Application Forms
- Send a Message with Login Information
- Use the "Need a Password?" Link
- Set a Temporary Password

## Where is the VicNet Portal?

Each Volgistics account has a unique URL address for their VicNet portal. You can find this by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicNet link.
3. Select *Ground Rules*.
4. Scroll down to the Links heading. The URL will appear in red like the one pictured below. Please note that your account's URL will have different numbers than the one pictured.

able to login to the volunteer information center on this

### Links

Your public account identifier is: **247277**

The URL for links to VicNet is:

**<https://www.volgistics.com/ex/portal.dll/?from=247277>**

Full-page links

To add a link to VicNet that opens in full-page mode, copy and paste this HTML link into your web page at

For testing, you can simply copy and paste the URL into a web browser window. In the majority of cases, when your volunteers are ready to use VicNet you will want to place a link to the URL somewhere on your website. Or some organizations choose to embed VicNet into their web pages so it appears to be part of their website.

With this option, volunteers do not need to know the URL address for VicNet. You simply give them directions to the web page on your site where the link appears. You can find more information on how to place a link to VicNet on your organization's website in [help topic 2153 \[pg:1491\]](#).

There may be some cases where an organization cannot place a link to VicNet on their website. In these cases, it is perfectly alright to give the volunteers the URL address for your VicNet portal. If you do this, you may want to encourage the volunteers to bookmark the address so you do not get repeated questions about how to get to the portal.

## Collect Login Information on Application Forms

If your applicants will be accessing VicNet soon after they apply, you may want to collect the email address and password from your volunteers right on your [application form\(s\) \[pg:0413\]](#). This option works well for accounts that use Volgistics for events such as conferences or festivals where there may not be a long approval or onboarding process.

You can [create a section \[pg:1340\]](#) on the application form just for the VicNet access information, and link the email and password fields to the form section. You link fields to a form section by selecting the *Fields* link on the application form's [setup page \[pg:1334\]](#).

With this method, you can place directions about the location of your organization's VicNet portal right in the instructions field of the form section. Or you could give directions with the [receipt confirmation \[pg:1349\]](#) feature. This could be a page applicants view after they submit the form, or an automatic email sent to the applicant after they submit the form. If you send it as an email message, volunteers could find the directions again by referring back to the email message.

Here is an example of how this option may look on your application form:

Work phone:   OK to call me here

**Volunteer Information Center (VicNet)**  
You will schedule yourself for shifts through the Volunteer Information Center (VicNet). Please enter the email address and password you'd like to use to access VicNet. Once you've been approved, you can sign-in to VicNet by:

1. Go to our website ([www.organization.org](http://www.organization.org))
2. Select the Volunteer page.
3. Click the 'Volunteer portal' link.

Email address:  \*

Please enter a password that:

- Is between 6 and 30 characters long
- Contains both letters and numbers.
- Contains a combination of both uppercase and lower case letters.
- Contains at least one character that is not a letter or number, such as !#\$%& or ?.

Password:  \*

Confirm password:  \*

**Emergency Contact**  
In the event of an emergency, whom should we notify?

**Please note:** If your application forms are setup to be audited, you will need to [receive the application into your database \[pg:0415\]](#), and the volunteer must meet the three requirements at the top of this help topic, in order to sign-in.

## Send a Message with Login Information

If your volunteers need to go through some sort of an approval, or onboarding, process before they can serve, you may want to send them an email message they can use to get their login information. Volgistics has a template you can use to customize a message to use for this email. The same template is used for three purposes: 1) when the message is sent by a [System Operator \[pg:0065\]](#) to volunteers, 2) when the message is sent by a System Operator to [Coordinators \[pg:0163\]](#), and 3) when the message is sent because volunteers or Coordinators request a password on the VicNet login page.

Because of this, you may want to keep the content of the message generic so that it works for all three purposes. However, it is still useful to give directions on how users login in the message. You customize this message by:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicNet link.
3. Select *Ground Rules*.
4. Scroll to the *Password email* section and customize the message.
5. Click the **Save** button to keep your changes.

You can see a sample of what you could enter as the message's content below:

Expire every  days

### Password email

Volunteers and Coordinators can receive a link to set their password by email. You can customize the content of this message below. Volgistics inserts the person's login name (email address), and the password link, between the Top and Bottom parts

Top part:

Thank you for serving at "My organization." You can find login information for the Volunteer Information Center ([VicNet](#)) below. Click on the link to set your password. After you have successfully set a password, you will be directed to the login page.

Bottom part:

To login to VicNet in the future:

1. Go to our website ([www.organization.org](#))
2. Select the Volunteer page.
3. Click on the "Volunteer portal" link.
4. Enter your email address and password.

We appreciate your service! Please contact Jessica in Volunteer Services (555-444-3333) if you have trouble logging-in.

What should the subject line be for VicNet password emails?

Volunteer Information Center Password

**Heading**

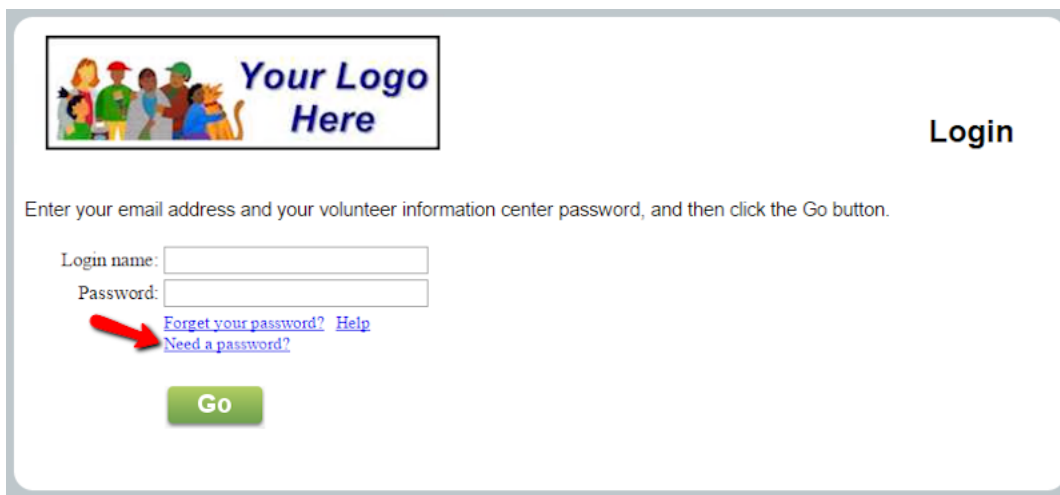

You can send the email with the link to individual volunteers and Coordinators on the Vic tab of their records. There is more information on how to do this in [help topic 2234 \[pg:1717\]](#).

You can also send the email with the link to multiple volunteers at once by [tagging the volunteers \[pg:1538\]](#) you want to send the email to. You can find information on how to do this in [help topic 2233 \[pg:2013\]](#).

## Use the "Need a Password?" Link

You may have a situation where you want your volunteers or Coordinators to get their own passwords so they do not need to rely on a System Operator. For example, if once the volunteers are approved to serve, you provide them with a packet of instructions on what to do next.

In this case, your volunteers can get their own passwords as long as your instructions include the location of your VicNet Portal, and they meet the three requirements to use VicNet. To do this, they will go to the login page for VicNet, and click the *Need a password?* link.

Enter your email address and your volunteer information center password, and then click the Go button.

Login name:

Password:

[Forget your password?](#) [Help](#)  
[Need a password?](#)

This will take them to a page where they can enter their email address to have the password link sent to them.

## Set a Temporary Password

There may be times when you want to set a temporary password that volunteers use to login to VicNet for the first time. For example, if you have volunteer orientations where you will train groups of volunteers all at once, you can set the same temporary password for the entire group and tell them the temporary password. Or, you may give out new volunteer packets where you have instructions on how to login and you give the temporary password in the instructions. When volunteers login with the temporary password the first time, they will be prompted to select a permanent password.

You can set a temporary password for volunteers (or Coordinators) on the [Vic tab \[pg:1810\]](#) of their record.

You can also set temporary passwords for multiple volunteers at once by [tagging the volunteers \[pg:1538\]](#). You can find information on how to assign a temporary password to tagged volunteers in [help topic 2137 \[ \]](#).

## Did you know?

Volgistics has resources you can use if you conduct trainings or orientations for new volunteers. There are video tutorials you can download

here

. There are also help topics you can direct volunteers to online, or you can print the help topic out for a handout. The help topic for the desk top view is [help topic 1148 \[pg:1654\]](#). The help topic for the mobile view is [help topic 1215 \[pg:1676\]](#).

If you are bringing in new volunteer records to your account using the free Import Utility program, you can also bring in a temporary password for the volunteers. This works well if you are just getting started with Volgistics and previously used another program that the volunteers accessed with a password. You can learn more about the free Import Utility program [here](#).

---

## Can I put a link to VicNet on the volunteer application form?

Help topic 1159

Added or revised 2-14-2008

---

There is not a way to include a link to VicNet on the volunteer application form. Note that the earliest point at which an applicant could log into VicNet is after their application has been received into the system. Until a system operator receives an application, the database does not contain a volunteer record - and therefore does not have an email address or password - for that individual.

Since it is not possible for an applicant to log into VicNet at the same time they are completing their application, linking to the VicNet login page from the application form is not very practical.

If you still want to provide applicants with information about the VicNet login procedures right away, consider implementing one of the options described in [help topic 1158 \[pg:1665\]](#) or place the link to VicNet on your web site adjacent to the link to the application form.

## Getting Started with VicNet

Help topic 1175

Added or revised 04-12-2017

---

[VicNet \[pg:1724\]](#) is an optional module that can be used along with Volgistics to give volunteers and [Coordinators \[pg:0163\]](#) a role in managing schedules, service, updating their information, and more from any computer or device with Internet access. The Volgistics system itself provides powerful volunteer tracking capabilities with, or without, use of the optional VicNet module. It is up to the organization to determine whether VicNet will be useful for their specific purposes. For example, an organization where volunteers all report to the same facility and volunteers do not need to schedule in advance, or update their information, may find the optional [VicTouch \[pg:1778\]](#) module more useful than VicNet. In many cases, though, VicNet will be a valuable asset to make the job of the volunteer manager(s) easier.

This help topic explains how Volgistics [System Operators \[pg:0065\]](#) should begin working with VicNet.

## 1. Understand what VicNet does.

With VicNet, volunteers and [Coordinators \[pg:0163\]](#) can log into a system separate from Volgistics that allows them to see only the information permitted by the account's [Administrator\(s\) \[pg:0052\]](#). The VicNet module can be accessed from any computer or device with an Internet connection with a login name (the email address recorded in Volgistics) and password. The module works somewhat differently for volunteers and Coordinators.

We recommend reviewing [help topic 3020 \[pg:1724\]](#) to get an understanding of how VicNet works before proceeding. The help topic shows some of the jobs and tasks volunteers can complete, and shows the general structure of the module.

## 2. Decide who should have access to VicNet.

You can control which volunteers can access VicNet based on the volunteer's [Status \[pg:1832\]](#), or whether they have a certain [Type or Flag \[pg:0212\]](#). This gives you the ability to prevent certain groups of volunteers from signing in. For example, if your organization has an onboarding process where volunteers need to be approved before they serve, and volunteers must meet certain qualifications to keep serving, you would likely setup VicNet so volunteers with the Applicant and Inactive Statuses cannot access VicNet. You do this on the VicNet Ground Rules page. To get to this page:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicNet link.
3. Select *Ground Rules*.

You may find [help topic 2161 \[pg:1707\]](#) "Who can access VicNet?" useful also.

## 3. Customize VicNet for your needs.

VicNet is very customizable so you can tailor it for your organization's needs. For example, you can hide tabs, change the layout of some tabs such as the Home tab, customize instruction fields, hide fields or make them view only, and even change the appearance of the tab and button elements. For the mobile version of VicNet, you can also easily customize the colors used for the different page elements so they match your organization's color scheme.

You can find detailed information about how to customize VicNet in the help topics listed under *Related help* at the bottom of this page. For example, to find information on adding a logo, select [help Topic 1187 \[pg:1353\]](#) "How to Upload Logo Graphics," or for information on customizing the Home tab, select [help topic 2019 \[pg:1486\]](#) "VicNet Home Tab."

## 4. Test VicNet for a sample volunteer record.

The best way to check to make sure VicNet is setup the way you'd like is to preview the module as a volunteer. First [create a volunteer record \[pg:1877\]](#) to use for testing, or go to a current volunteer's record. You can then click the

### Preview

or

### Mobile preview

button on the Vic tab of the record to see how VicNet will look for that volunteer. You can also preview VicNet as a [Coordinator \[pg:0163\]](#) by doing the same thing. You can learn more about how to preview VicNet in [help topic 2159 \[pg:1705\]](#) "Previewing VicNet."

## 5. Create a link to VicNet from your organization's web site.

Volunteers and Coordinators will access VicNet by going to the unique URL address for your organization's VicNet portal. While you can simply send users this URL address in an email message, this is not the recommended method because they will need to bookmark the URL in order to return to it. A better solution is to place a link to the URL address on your organization's website. You can do this yourself if you control your website's content, or you can give the URL to your organization's web master and have her place the link on a web page related to volunteers.

You can locate and access the URL for your account's VicNet login page like this:

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Click on VicNet.
3. Click on *Ground rules*.
4. Scroll down to the Links section.

Here you will find the URL address for your organization's VicNet portal without any formatting. There are also links that have some HTML formatting added if you prefer. You can find additional information on how to place a link to VicNet on your organization's website in [help topic 2153 \[pg:1491\]](#).

## 6. Let volunteers know VicNet is available.

Once you are familiar with the VicNet module and you are satisfied with its setup, it is time to involve your volunteers and/or Coordinators. There are several ways to [let volunteers know about VicNet \[pg:1665\]](#). You should review the available options and decide which option works best for your organization. Some things to consider are your on-boarding process for new volunteers, whether you have volunteer records in your account already, and whether you will provide access to all volunteers or just select groups of volunteers. In some cases you may want to start with one method for your current volunteers, and then switch to another method for new volunteers. After you have launched VicNet, you may want to check usage in a few weeks or a month to see if more training or communication is needed. You can find information on how to do this in [help topic 2278 \[pg:1718\]](#).

## How to Post Volunteer Newsletters at VicNet

Help topic 1188

Added or revised 05-16-2008

---

If your organization publishes newsletters that you would like to share with volunteers, you can post them online at VicNet for volunteers to read.

### To include volunteer newsletters on the VicNet Home Tab:

1. Save your newsletters as [PDF documents \[pg:0449\]](#).
2. [Upload the PDF documents \[pg:0388\]](#) to the Mailbox Documents tab in Volgistics.
3. Add links to documents to a Document Link Box on the [VicNet Home Tab setup page \[pg:1486\]](#).

Your newsletters will now be available to any volunteer or coordinator permitted to access VicNet.

---

## Using VicNet for groups

Help topic 1198

Added or revised 02-18-2011

---

If you use [VicNet \[pg:1724\]](#) and you track [volunteer groups \[pg:1909\]](#) in Volgistics, group contacts can use VicNet to self-schedule their group members, as well as to post volunteer hours for their group online.

Since you do not track the individual group members when you use Group records, Volgistics does not provide a way for each separate member of a group to access their group's records through VicNet. However the group contact who you list on the Core tab in a Group record *can* use VicNet to schedule and post service for their group online using the VicNet system (if you want them to).

Group contacts [access VicNet \[pg:1707\]](#) the same way that individual volunteers do: through your organization's VicNet link, using their email address and a password.

Once a group contact logs-in to VicNet, the VicNet system looks and works the same way that it does for *Individual* volunteers except when it comes to self-scheduling on the "My Schedule" tab, and the "Time Sheet" tab (if you use either of these tabs). This help topic explains how these two features work for Group records.

### Group self-scheduling

Group [self-scheduling \[pg:1494\]](#) is supported in VicNet when you "Offer schedules using a calendar format." Group scheduling is not available when you setup self-scheduling to "Offer schedules using a list format," as that format is designed specifically for individuals. To see which way your self-scheduling features are configured; choose Setup from the menu; select VicNet; and then choose Self-Scheduling.

If you permit self-scheduling at VicNet using the calendar format, a group contact has the ability to schedule their group members for any assignment you allow them to self-schedule for. When a group contact self-schedules their group, they can specify the number of group members they want to add to the schedule in a single schedule entry.

To self-schedule, a group contact visits the "My Schedule" tab in their VicNet account the same way that an Individual volunteer does, and then clicks on the date and then the assignment they would like to schedule themselves for.

When the "Sign-up" page appears (as shown below), the group contact has a *Volunteers* field where they enter the number of group members they want to schedule. This is the number of volunteers who will be scheduled for the group.

## Volunteer information for Downtown Rotary (Tom Applebe)

Home Mail My Profile My Schedule My Service History Time Sheet Account

### Sign-Up!

Schedule yourself for volunteer duty

**You are signing-up to serve:**

Date: **Thursday, February 24, 2011**

Assignment: **Client Advocate**

From: **8:45 a**

To: **1:15 p**

Volunteers:  (The number of volunteers from your group that you want to schedule for these times)

**Is this correct?**

The group contact can enter the number of group members they want to schedule using the *Volunteers* field

For example, if a group contact wants to schedule 10 group members for the selected assignment, date, and times, they would choose 10 in the *Volunteers* field. Ten volunteers will then be self-scheduled.

If the group contact selects an assignment that permits scheduling only for the **openings you have established [pg:0776]** for that assignment, they cannot schedule more group members than there are openings currently available.

Group contacts will see their schedule on the "My Schedule" tab just as individual volunteers see their schedules in VicNet.

### Group time sheets

If you use the VicNet *Time sheet* tab to give volunteers a way to post their hours online, then group contacts can also use the Time sheet tab to post their group's volunteer service (if you want them to).

When group contacts use the Time sheet tab to post their group's volunteer service, they have a

### *Volunteers*

field where they enter the number of group members who participated in the volunteer service they are posting. These volunteer counts can be factored into any [unduplicated volunteer counts \[pg:0452\]](#) you include on service reports.

### When volunteers must enter their starting and ending times

If you setup your VicNet time sheet tab so that volunteers *must enter their starting and ending times* on the time sheet, group contacts enter the number of group members who *each* served those hours, as shown here:

## Volunteer information for Downtown Rotary (Tom Applebe)

Home Mail My Profile My Schedule My Service History **Time Sheet** Account

### Instructions

To post your hours, enter your service information in the Time Sheet box and then click the "Continue" button.

### Group Time Sheet

What was the date of your service? February 24 2011

What times did you serve? 6:00 p until 9:00 p

Volunteers: 10 (How many members from your group served during these times?)

Which assignment did you serve in? Phone Bank [Volunteer Office]

Continue

If your time sheet tab is setup so that volunteers *must enter their starting and ending times*, as in the example pictured above, the time sheet will automatically multiply the Volunteers field by the elapsed time and then post the total number of hours served by the group. For example, if 10 group members served from 6:00 p.m. until 9:00 p.m., their service entry will be for 30 hours (10 x 3 = 30).

### When volunteers do not enter their starting and ending times

If you setup your VicNet time sheet tab so that volunteers *do not enter starting and ending times* on the time sheet, group contacts enter the total number of group members who participated in the service, and then the total number of hours they served collectively, as shown here:

## Volunteer information for Downtown Rotary (Tom Applebe)

[Home](#) [Mail](#) [My Profile](#) [My Schedule](#) [My Service History](#) [Time Sheet](#) [Account](#)

### Instructions

To post your hours, enter your service information in the Time Sheet box and then click the "Continue" button.

### Group Time Sheet

In which month did you serve?

Which assignment did you serve in?

What were the total number of hours served by your group?  
30 hours, 0 minutes

Volunteers:  (How many members from your group participated in this service?)

---

## How to Use VicNet Mobile: a Brief Guide for Volunteers

Help topic 1215

Added or revised 03-23-2017

---

*This help topic is intended to help volunteers better understand how to use the VicNet module when they access it from a smart phone, tablet, or other mobile device.*

The VicNet module is a tool the organization you volunteer with may use. You can access the VicNet module over the Internet on a mobile device such as a smart phone or tablet. You can use VicNet to:

- View and manage your schedule
- Sign-up for vacant schedule openings
- Keep your personal information up-to-date
- Post your hours
- Receive news and messages from the volunteer office
- Check your service records
- Change your VicNet password
- Opt-in or out of text messaging and update your message preferences

Each organization sets up VicNet according to what works best for their needs--so you may not be able to do everything listed above. This will depend on how your organization opted to use the features. **Please note:** *To make the user's VicNet experience mobile friendly, your experience with VicNet mobile may not be exactly the same as what you experience with the full-site view. For example, the Home page may not be laid out like you see it when you login on a desktop or laptop computer, and the Schedule page will not be shown in a calendar format.*

You can click on a link in the *Contents* box below to go directly to a section in the help topic.

My Service History Page

Time Sheet Page

Account Page

[Create a Website Shortcut](#)

Shortcut for iOS (iPhone, iPad, etc.) Devices

~~Logging into VicNet Mobile~~

In most cases, you get to your organization's VicNet login page through the organization's website. An organization may choose to send you a URL address that you can use to login, but most of the time there will be a link to the VicNet login page somewhere on the organization's website. It may be a simple text link like this:

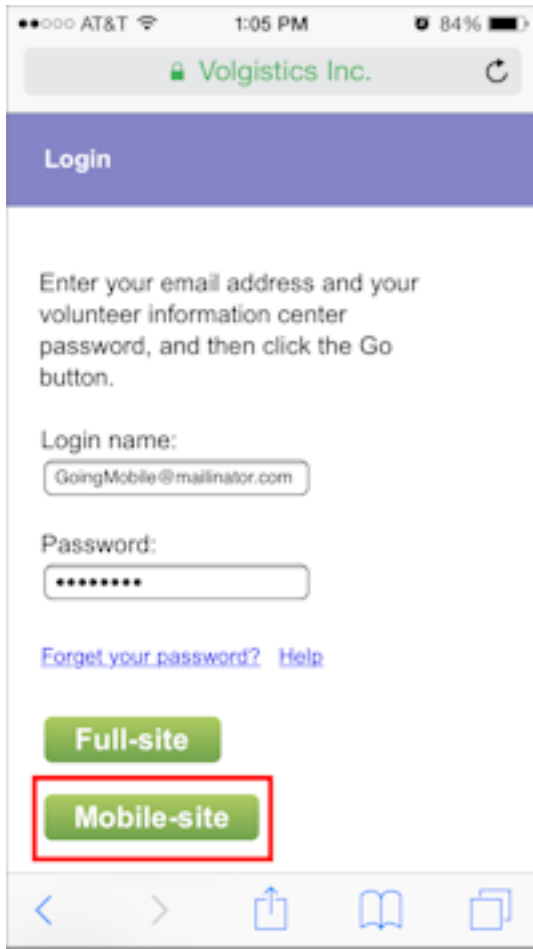

[Volunteer Login](#)

Or, it may be a graphic link like this:

Your organization should provide you with directions on how to locate the webpage you will need to use to login. Once you have located the webpage, you may wish to make a shortcut to it on your phone. This will allow you to go directly to the webpage by tapping the icon on your phone or tablet. See the Create a Website Shortcut section of this help topic for more information on this.

When you click on the link (or go to the URL address your organization provides you with) on your mobile device, you will see a login page. Enter your email address in the *Login name* field and your password in the *Password* field. Then tap the **Mobile site** button to go to a mobile friendly view for VicNet.

(If you'd rather use VicNet as it works when you sign-in on a desktop or laptop computer, tap the **Desktop site** button. In this case, VicNet will work as described in [help topic 1148 \[pg:1654\]](#).)

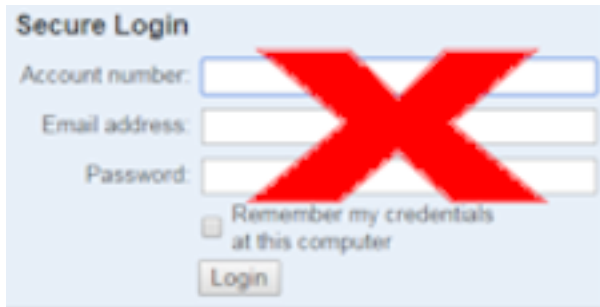

In most cases, you will receive a link to set your password in an email message from your organization. You follow the link to create the password you will use to login with.

In other cases, your organization may have set a temporary password for your record and let you know the temporary password. If your volunteer record was imported from another software program, your previous password may be the temporary password. When you login with the temporary password, you will need to enter a permanent password on the Account tab before you can go to other tabs. Remember the permanent password you select because you will need to use it the next time you login. You can find more information on the Account tab in the Account Tab section below.

One other thing that may occur is that your organization asked you to select a password when you filled out your application form. In this case, you use this password to login with and you will not need to go to the Account tab to select a permanent password the first time you login.

If you forget your password, or are not able to locate any password information from your organization, click the *Forget your password?* link that appears on the login screen. As long as the email address you enter matches the address on your volunteer record, this will send an email with a password link to you. You can follow this link to set a password to login with. **Please note that the password links only remain active for 24 hours. If you click on the link but it has expired, just click the *Forget your password?* link again to have a new link sent.**

You can find more information on how to use the *Forget your password?* link [here](#) [pg:1975].

The image shows a 'Secure Login' form with the following elements: 'Account number:' followed by a text input field; 'Email address:' followed by a text input field; 'Password:' followed by a text input field; a checkbox labeled 'Remember my credentials at this computer'; and a 'Login' button. A large, semi-transparent red 'X' is overlaid across the three input fields, indicating that the form is not to be used or is a placeholder.

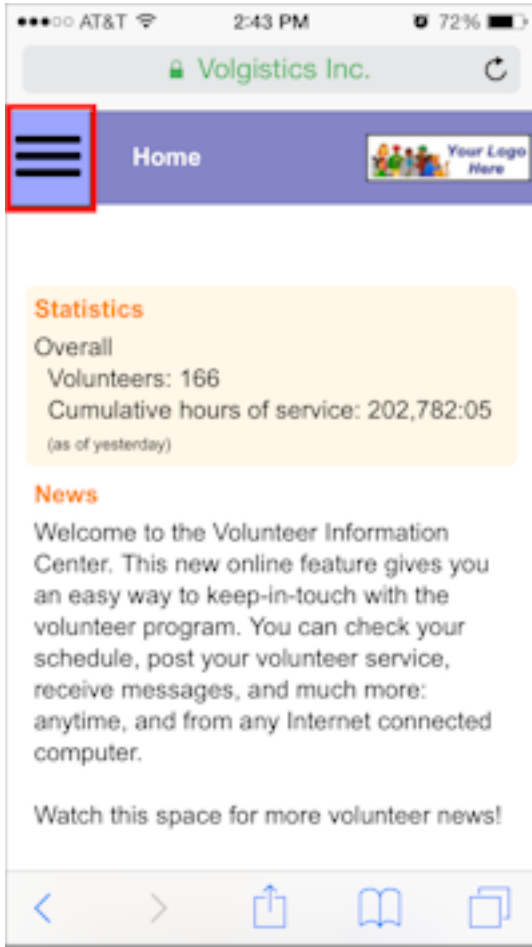

### **Navigating VicNet Mobile**

VicNet is highly customizable by each individual organization. Therefore, it is difficult to say exactly what type of content will be displayed on the various pages, or even if a page will be visible to you at all. The following information explains the basic purpose of each page that can be displayed, and provides visual examples of how the page might look. Your view in VicNet may be different depending on how the organization you volunteer with has setup their VicNet module.

When you first login to VicNet either the Home page or the Account page will be displayed. If you are directed to the Account page first, set a permanent password and then you will be sent to the Home page. If you need help setting a permanent password, see the Account Page section below.

Once you are on the Home page, you can use the expanding menu to navigate to other pages. This will appear collapsed in the top left corner to start.

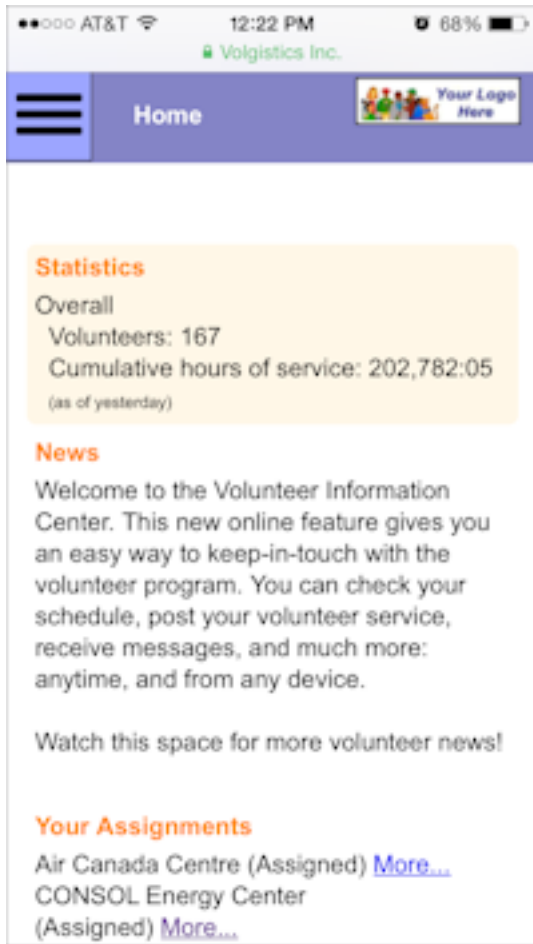

When you tap the menu, it will expand so that you can choose other pages.

Use the menu and tap a button to navigate to that page.

### Home Page

The following image is an example of what the mobile view of the VicNet Home page might look like:

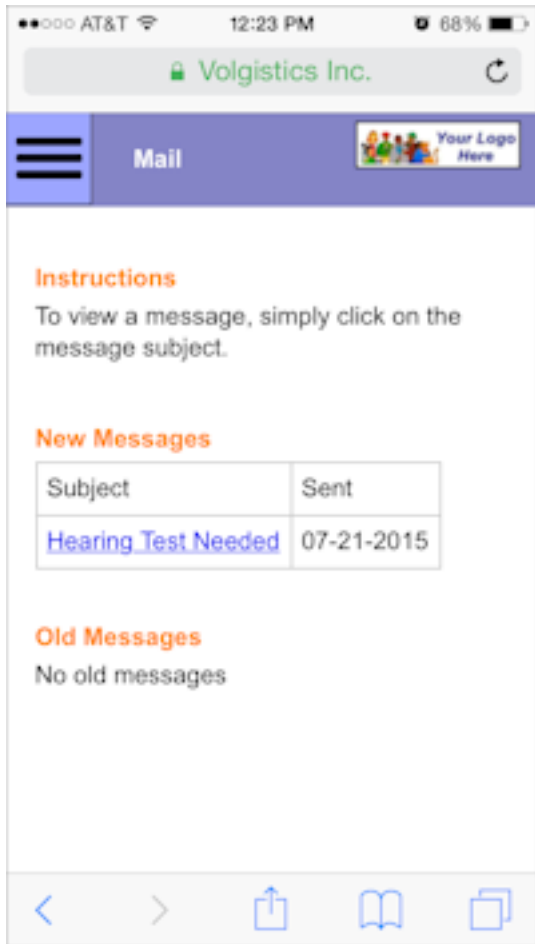

Depending on how your organization has VicNet setup, you may see statistics for your organization, news from your organization, links to documents or outside websites, and/or a list of your assignments.

### Mail Page

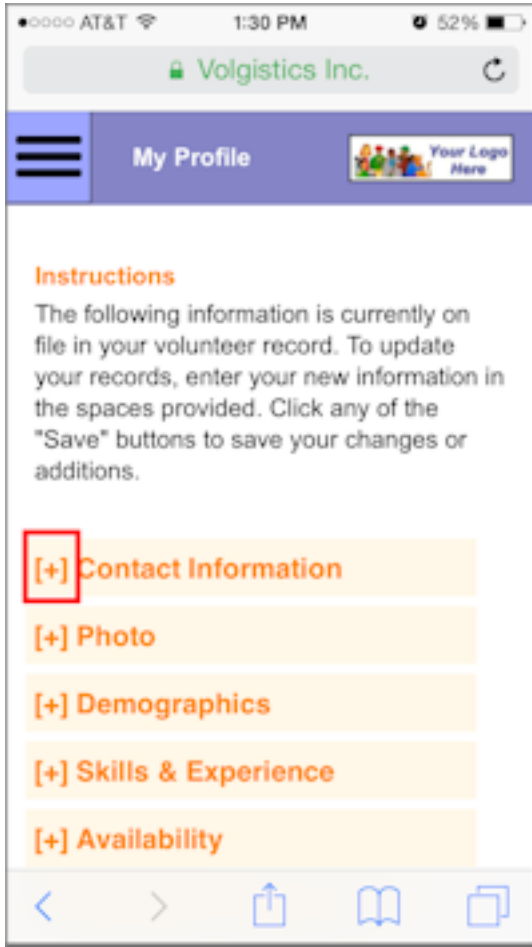

The Mail page is where you can see messages (called Vic Mail) sent to you from the person who coordinates volunteers for your organization. New messages appear on top, and a list of read messages appears on the bottom. To read a message, tap the Subject of the message.

Here is an example of what the Mail page might look like in VicNet mobile:

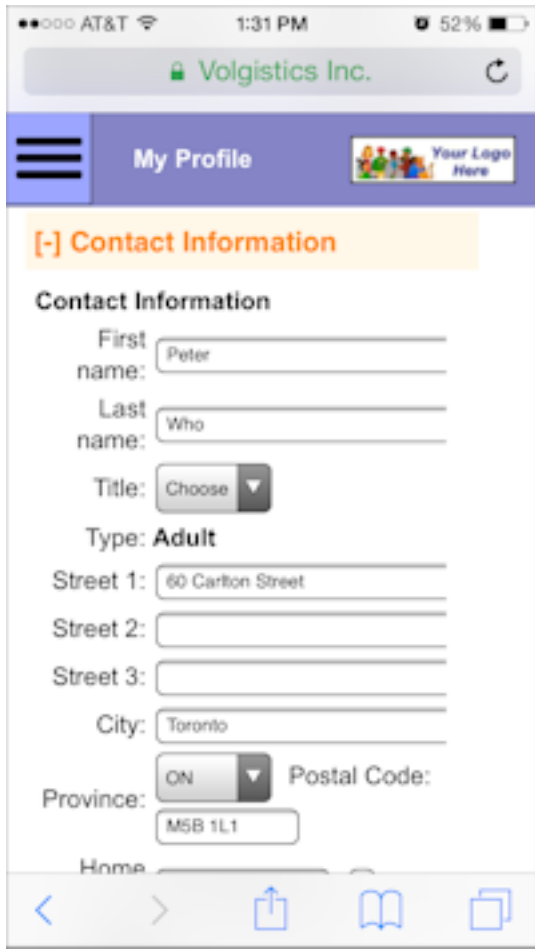

### My Profile Page

The My Profile page lets you see and (if your organization permits) update your personal information. The form sections and fields that appear on the tab are selected by your organization. Tap the plus sign (+) to expand a form section to see the fields in it.

The fields of information your organization has selected to appear in the form section will be shown.

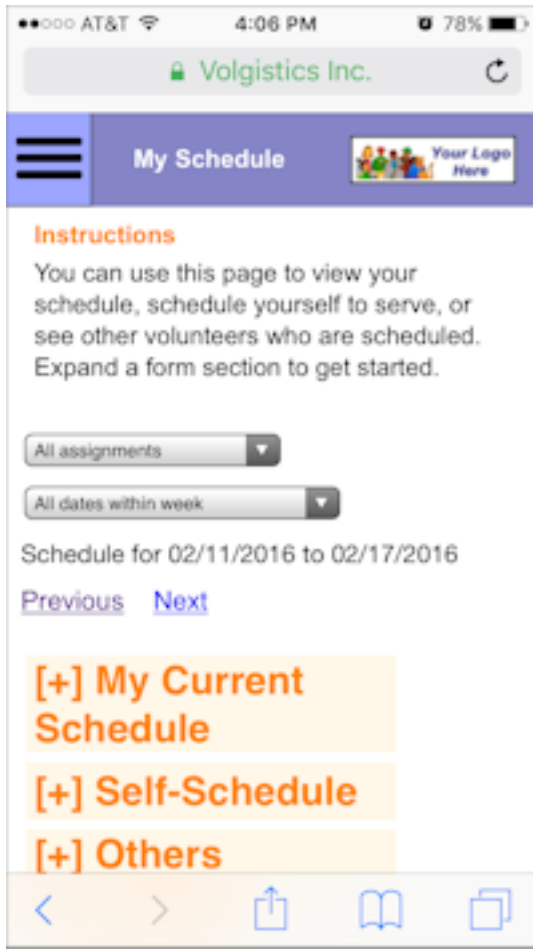

Your organization can choose to make certain fields required so you need to enter information in them in order to save the page. Or they can make certain fields *read-only* so you can see the information in the field, but you will not be able to change it. If you do make changes to a field, please remember to tap the **Save** button.

If the width of the fields in the form section exceeds the width of your mobile device's current screen orientation, you can scroll the section to the right to see the additional information. Or you can often just change from portrait to landscape orientation to increase your screen's width.

#### My Schedule Page

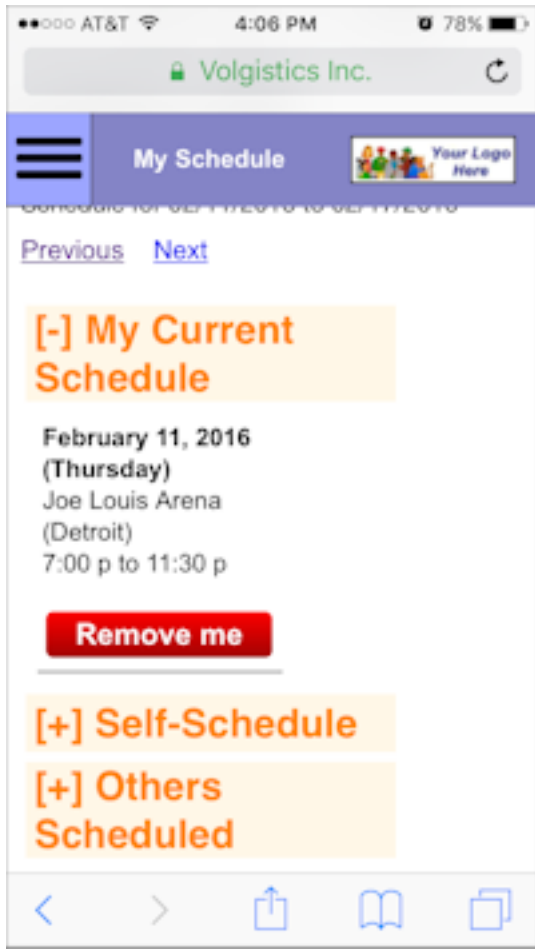

The My Schedule page allows you to view your schedule, and if your organization permits you can also self-schedule for assignments, remove yourself from the schedule, and/or see other volunteers who are scheduled. The image below shows an example of what the *My Schedule* page may look like in VicNet mobile.

The assignment dropdown can be used to select the assignment shown. If a particular assignment is selected from the dropdown instead of *All assignments*, the information in the sections on the page is limited to the schedule for whatever assignment is selected.

The schedule information is shown for a week at a time starting with the current week. (Or in some cases a default starting date range will be shown if your organization has selected to do this.) Use the *Next* and *Previous* links to move to a different week. If the date dropdown is set to *All dates within week* the schedule information for the entire week is shown. If a particular date in the week is selected from the dropdown, only schedule information for that date is shown.

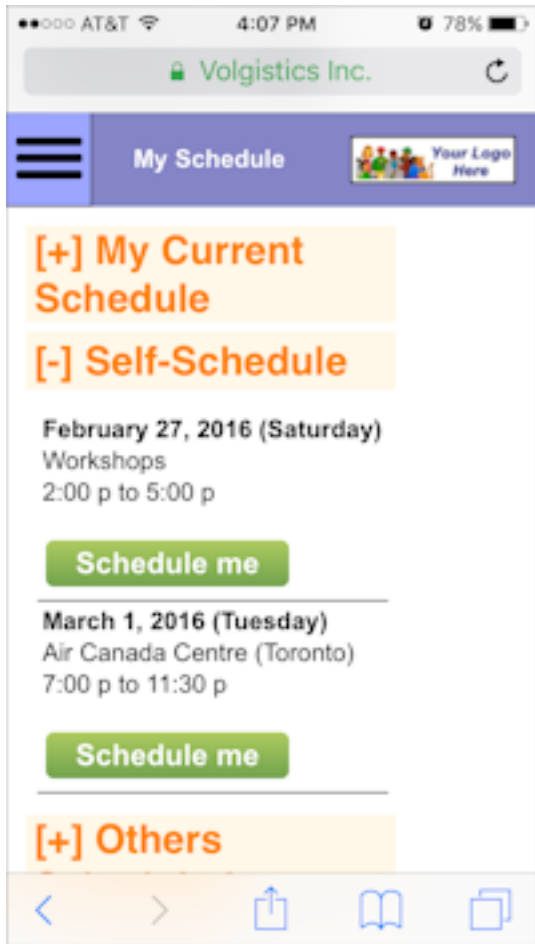

Tap the plus sign (+) by the *My Current Schedule* section to see your schedule for the week or date that is selected.

If your organization allows you to remove yourself from shifts, there will be a **Remove me** button as long as the time frame for when you can remove yourself has not passed. Tap this button if you cannot make it for your scheduled shift.

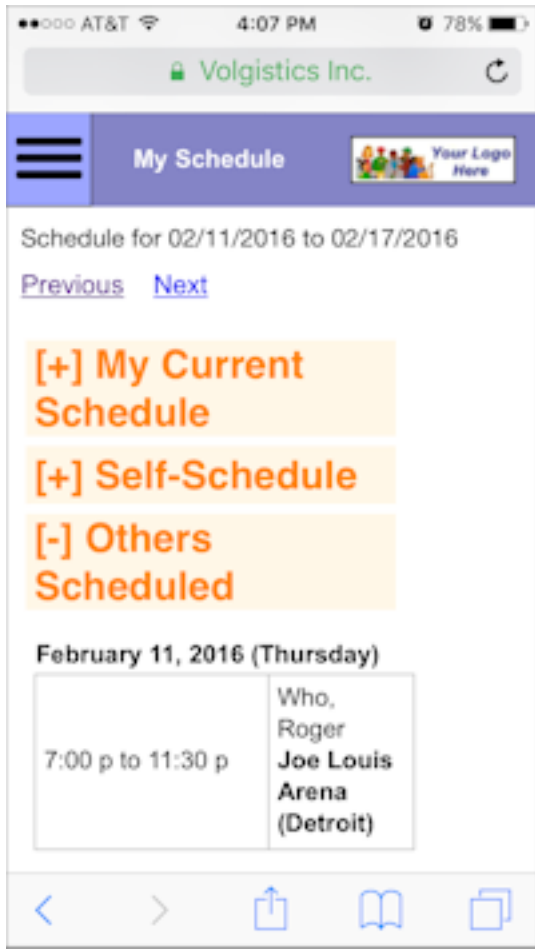

If your organization allows you to schedule yourselves for assignments, there will be a *Self-Schedule* section. Tap the plus sign (+) by this section to see opportunities to serve in the week or date that is selected.

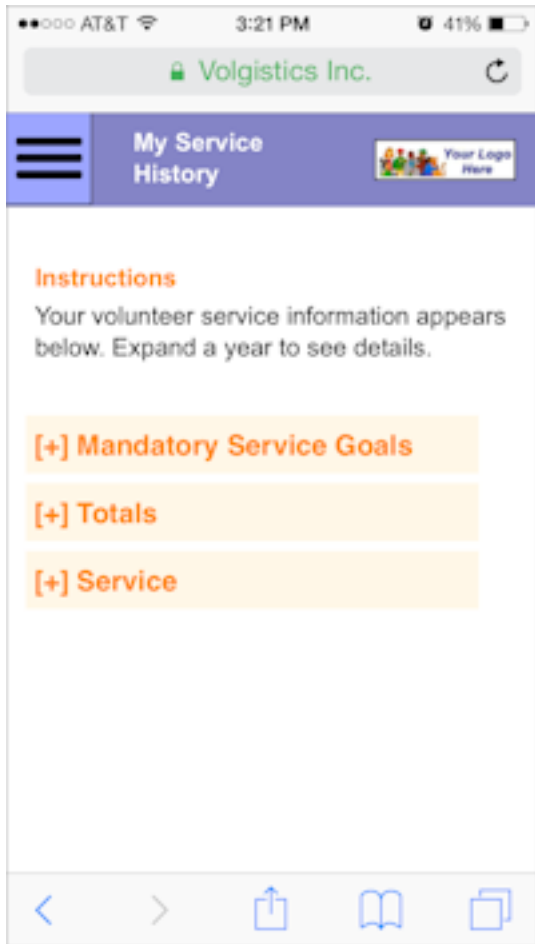

To schedule yourself to serve, tap the **Schedule me** button and then follow the prompts to sign-up.

Your organization may also allow you to see other volunteers who are scheduled. In this case, there will be an *Others Scheduled* section. You can tap the plus sign (+) to see the other volunteers who are serving in the week, or on the date, that is selected.

My Service History Page

The *My Service History* page shows volunteer service recorded on your volunteer record.

Expand a form section by tapping the plus (+) sign to see the service information recorded for you there. If the width of the display in the form section exceeds the width of your mobile device's current screen orientation, you can scroll the section to the right to see the additional information. Or you can often just change from portrait to landscape orientation to increase your screen's width.

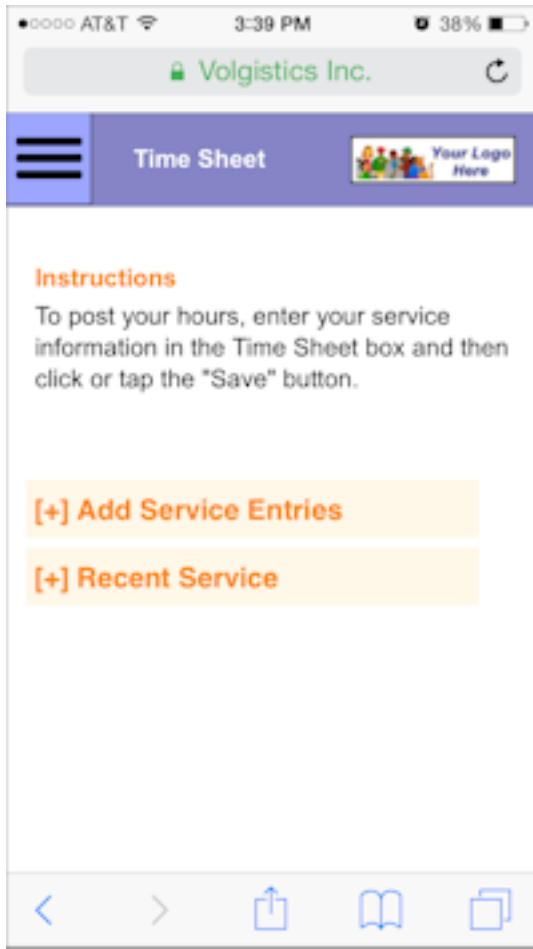

If your organization uses mandatory service programs where you are asked to perform a certain amount of service in a certain amount of time, expand the *Mandatory Service Goals* section to see a progress chart that shows your progress in meeting the goal.

The Totals section will show a summary of service information for your record. Depending on your organization's choices, you may see a start date, year-to-date (YTD) service hours, and life hours.

In the Service section, the service information is collapsed by year to start. You can tap on a year to expand the view to show all service entries made for you during the year. Tap a date to show the service details for a particular entry. Tap the *Back* link to return to the *My Service History* main page.

#### The Time Sheet Page

If your organization wants you to enter service hours, you will see a Time Sheet page.

You can make entries for new service hours you have performed in the *Add Service Entries* section. The *Recent Service* section will show up to five of your most recent service entries. To see entries beyond the first five, use the My Service History Page.

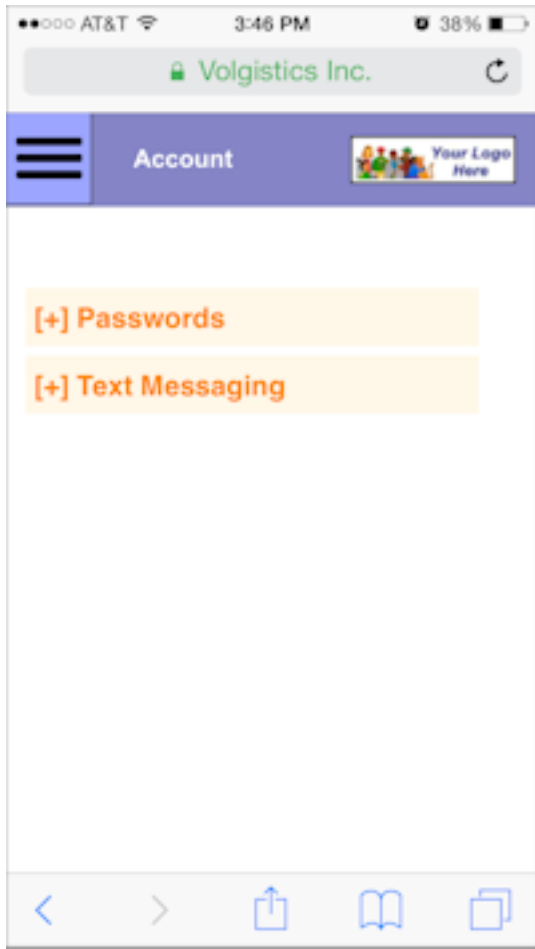

### Account Page

The Account page is where you will go to set a permanent password, change your permanent password, opt-in or out of text messaging, and change your message preferences. If you sign-in with a temporary password, you will be directed to the Account page before you can access the other tabs.

If you do not have a password, or have forgotten it, you can have a link sent to you so you can create a password. You can learn more about how this works [link here \[pg:1975\]](#).

If the organization you volunteer with has enabled text messaging, you will also see a section on the Account page for text messaging. You can use this section to opt-in to text messaging, opt-out of text messaging, or change the types of messages you receive by text. You can find information on how to do these things [here \[pg:0323\]](#).

An example of how the Account page may look is shown below:

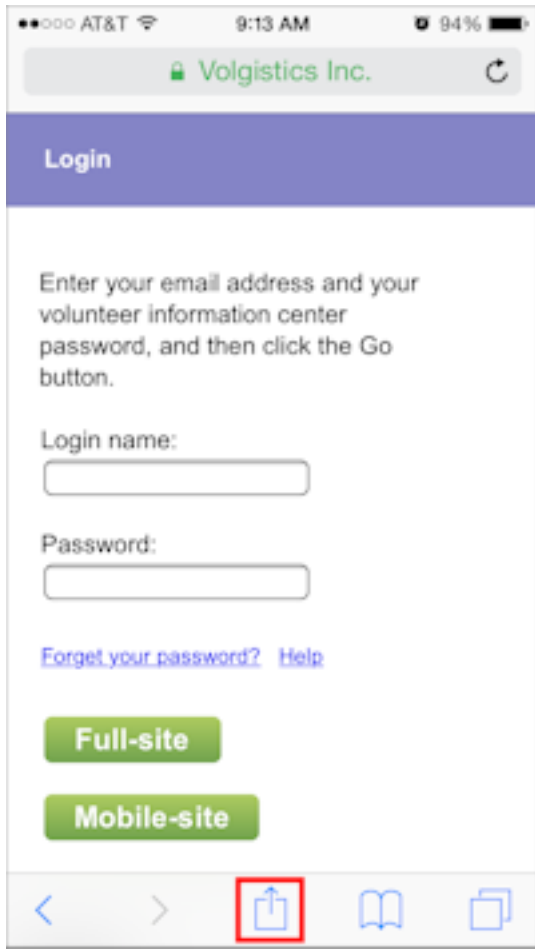

### **Create a Website Shortcut**

Instead of opening the web browser on your smart phone or tablet and then going to the URL address for your organization's portal each time you want to login, you may want to put a link directly to the webpage on your device's home screen. That way you can just tap the icon to go directly to the VicNet login portal. Go to the Shortcut for iOS (iPhone, iPad, etc.) Devices section if you have an Apple device. Or the Shortcut for Android Devices section if you have an Android device.

#### Shortcut for iOS (iPhone, iPad, etc.) Devices

To put a short shortcut on your Apple device, you will need to use the Safari web browser. The Google web browser will not allow you to make a shortcut. The screenshots and directions in this section are from an iPhone 5s. The process will be similar with other iPhone models or Apple devices.

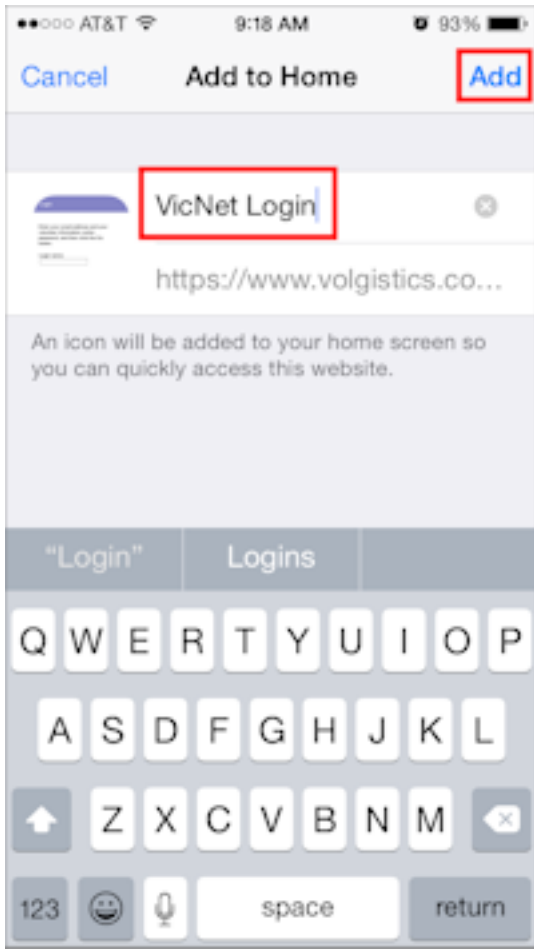

1. Open the Safari web browser.
2. Go to the login page for your organization's VicNet portal. The Logging into VicNet section above may be helpful if you do not know where this is.
3. When the screen to enter your email and password is displayed, tap the Share icon.

4. Select *Add to Home Screen*.

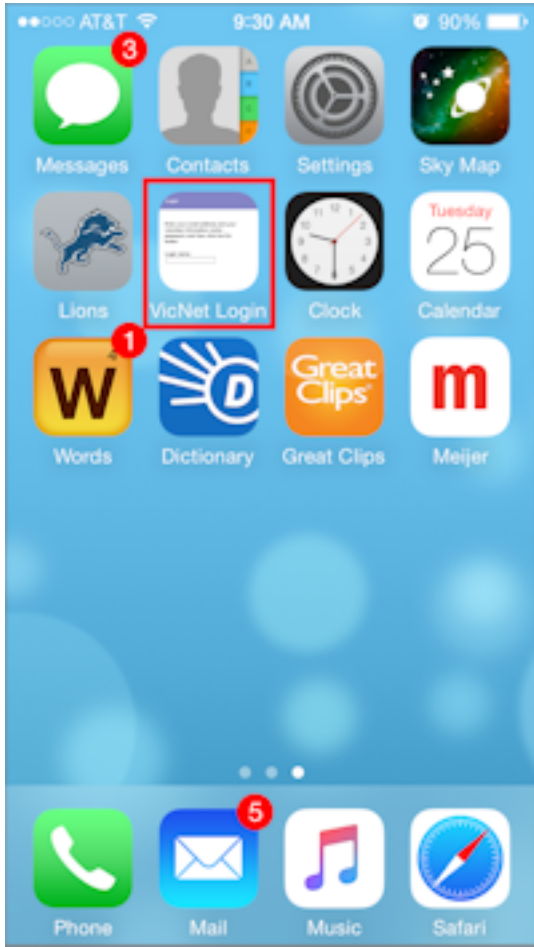

5. Create a name for the shortcut and tap the *Add* link.

You should now be able to simply tap the icon for the shortcut on your home screen to go to the VicNet portal to login.

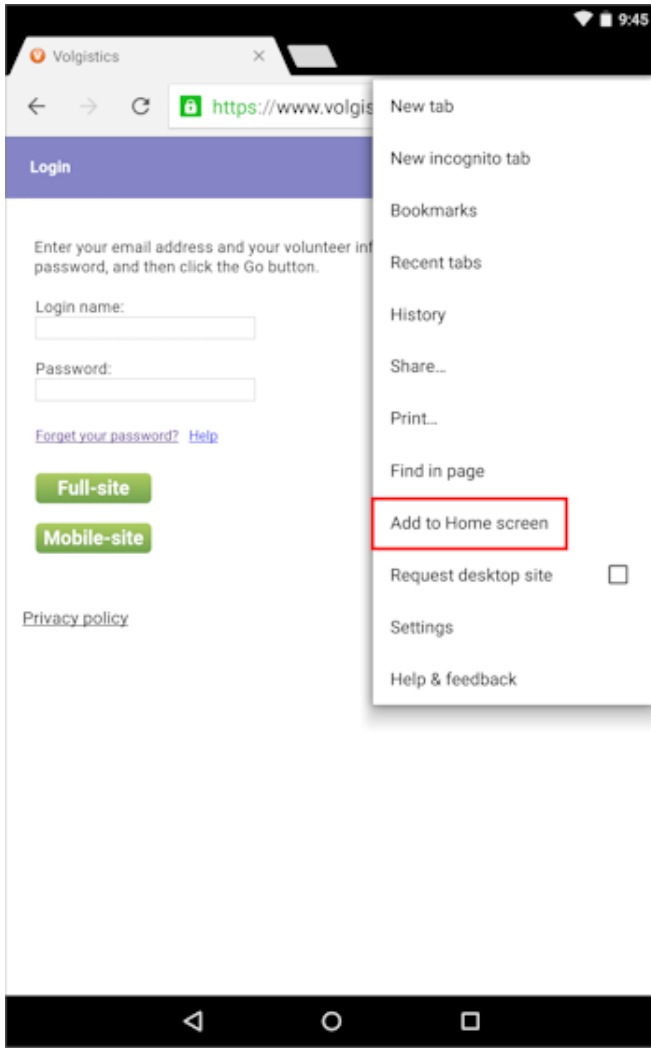

### Shortcut for Android Devices

With an Android device, you can use any web browser to place a shortcut on your home screen. The screenshots in this section show how to do this with the Chrome browser on an Android tablet. The process will be similar with other browsers and devices.

1. Open the web browser (Chrome, Firefox, or the default browser for the device).
2. Go to the login page for your organization's VicNet portal. The Logging into VicNet section above may be helpful if you do not know where this is.
3. When the screen to enter your email and password is displayed, tap the web browser's menu and select *Add to Home screen*. (In other browsers this may be *Add to homescreen* or *Add shortcut on Home Screen*.)

4. Enter a name for the shortcut and tap the *ADD* link. With some browsers there will not be an option to enter a name so you will need to use the default.

You should now be able to simply tap the icon for the shortcut on your home screen to go to the VicNet portal to login.

## Volunteer & Coordinator Passwords

Help topic 1305

Added or revised 03-23-2017

---

This help topic provides an overview of the password field volunteers and [Coordinators \[pg:0163\]](#) use to sign-in to the [VicNet \[pg:1724\]](#) module. It also has information on how this field can be reset if necessary. Click on a section of the help topic in the *Contents* box below to jump directly to that section.

### Contents

Initial Password Settings

Password Strength Rules

Change Password in VicNet

Reset Passwords

### Initial Password Settings

When a new volunteer or [Coordinator \[pg:0163\]](#) record is created, in the majority of cases it will not have a password. You simply send a link by email to the volunteer or Coordinator, and the person follows the link within 24 hours of receiving it to set her or his password. You can find information on how to send the link to individual volunteers or Coordinators in [help topic 2234 \[pg:1717\]](#). You can also send the email to multiple volunteers at once by [tagging the volunteers \[pg:1538\]](#) you want to send the message to. You can find information on how to do this in [help topic 2233 \[pg:2013\]](#).

If the new person knows the location of your [VicNet login portal \[pg:1491\]](#), she or he could also click the *Need a password?*

link on the login page and request the password link. The link will be sent as long as person meets the requirements to [access VicNet \[pg:1707\]](#).

There are also several less common ways a new volunteer record can have a password assigned. For example, an organization can setup their [application form\(s\) \[pg:0413\]](#) to let new applicants choose their own password. [Help topic 1158 \[pg:1665\]](#) shows an example of this.

Records can also be given a temporary password. With this option, the person uses the temporary password to login to VicNet the first time and then set a permanent password. You can set a temporary password for an individual volunteer or Coordinator on the Vic tab of the record as shown in [help topic 2234 \[pg:1717\]](#). You can set a temporary password for multiple volunteers at once by [tagging the records \[pg:1538\]](#) and then assigning the temporary password from the [Tags menu \[\\_\\_\\_\\_\\_\]](#).

Finally, if organizations use the Import Utility program to transfer existing records into Volgistics, they can choose to import a temporary password when they convert the volunteer records. These temporary passwords will work as described in the paragraph above.

### **Please Note**

For security there is not an automatic way to send an email with the temporary password. We recommend using temporary passwords only in cases where you have a method to tell the person the temporary password without sending an email. For example, if you will call the person, or tell her or him the temporary password in person. Or you have a volunteer orientation where you tell everyone attending their temporary password.

### **Password Strength Rules**

One important way you can increase the security of your account is to set strong password rules that volunteers and Coordinators must follow when creating a new, permanent password. You can require permanent passwords to have upper and lower case characters, be a certain number of characters long, contain both number and letter characters, and contain a character that is not a letter or number (such as an exclamation point symbol). You can learn more about this in the video here.

The password strength rules are not enforced when a temporary password is assigned. However, when the volunteers and Coordinators select a permanent password the first time they sign-in, they will need to select a new password that complies with the strength rules setup in your account.

### **Change Password in VicNet**

In addition to the password strength rules referred to in the

Password Strength Rules

section of this help topic, you can also select to allow volunteers and Coordinators to change their own passwords, and/or require them to change their passwords after a certain number of days. The settings for this are on the [VicNet Ground Rules \[pg:1447\]](#) page.

## Password strength rules

Make new VicNet passwords case sensitive

Must be at least  characters long

Must contain a combination of letters and numbers

Must contain a combination of lower case and uppercase letters

Must contain some characters that are not letters and numbers (such as !#\$%&?)

Never expire

Allow volunteers & coordinators to change their passwords

Do not allow volunteers & coordinators to change their passwords

Expire every  days

When you allow volunteers and Coordinators to change their own passwords, you should enable the Account tab in VicNet so it is available to make the password change. To do this, select [Setup \[pg:0887\]](#) from the menu, expand the VicNet link, and select Account tab.

When you require volunteers and Coordinators to select a new password after a certain number of days, they will be prompted that it is time to select a new password when the limit arrives.

## Reset Passwords

There may be times when a volunteer or Coordinator forgets their password. In these cases, the person can get the link to set a new password by clicking the *Forget your password?* link on the VicNet login page.

Your Logo Here

Login

Enter your email address and your volunteer information center password, and then click the Go button.

Login name:

Password:

[Forget your password?](#) [Help](#)  
[Need a password?](#)

This will take them to a page where they can enter their email address. An email message with a link to create a new password will be sent. The link will remain active for 24 hours. If a volunteer or Coordinator has [opted-in to text messaging \[pg:0323\]](#), the link will be sent by text message also.

As a [System Operator \[pg:0065\]](#), you could also use most of the methods shown in the Initial Password Settings section of this help topic to allow the volunteer or Coordinator to reset their password.

---

## Forget your password? (Volunteers and Coordinators)

Help topic 1307

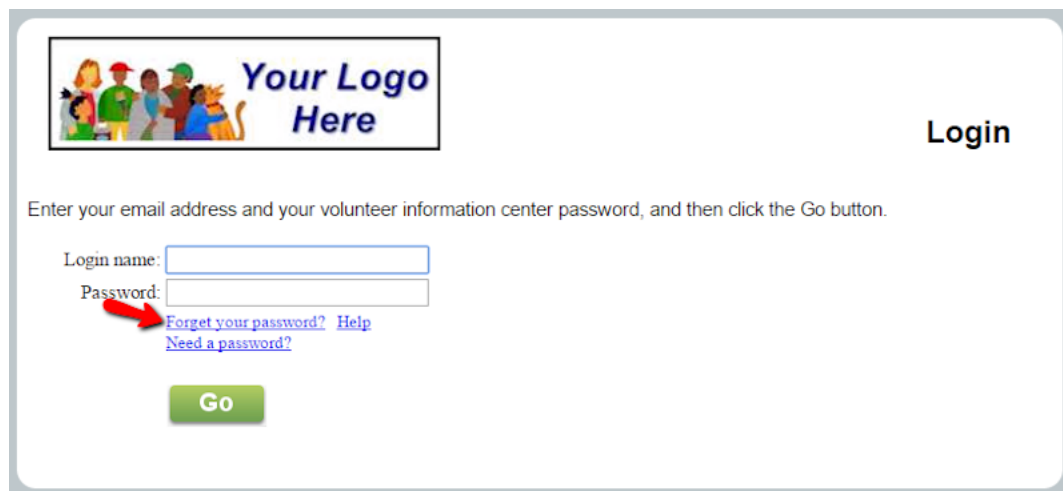

Added or revised 03-23-2017

---

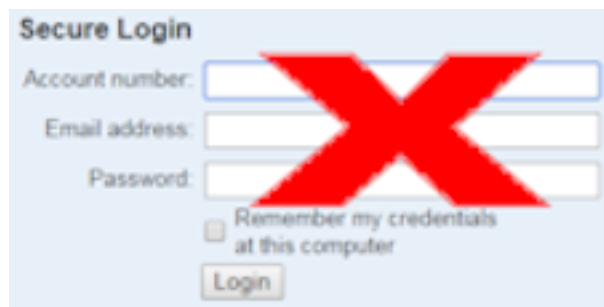

*This help topic is designed to show volunteers and Coordinators how to reset the password they need to login to VicNet.*

### 1. Click the *Forget your password?* link

If you have forgotten the password you use to login to your organization's VicNet portal, start by clicking the *Forget your password?* link on the login page. This will look something like the image below depending on how your organization has setup the account:

The screenshot shows a login interface. At the top left is a placeholder for a logo with the text "Your Logo Here" and an illustration of diverse people. To the right is the word "Login". Below this is the instruction: "Enter your email address and your volunteer information center password, and then click the Go button." There are two input fields: "Login name:" and "Password:". A red arrow points to the "Password:" field, which has two links below it: "Forget your password?" and "Need a password?". At the bottom is a green "Go" button.

The screenshot shows a "Secure Login" form. It has three input fields: "Account number:", "Email address:", and "Password:". Below the "Password:" field is a checkbox labeled "Remember my credentials at this computer". At the bottom is a "Login" button. A large red "X" is overlaid on the entire form, indicating it is not the correct interface for the current step.

### 2. Enter your email address and click the **Go** button

Enter the email address you use to login to the VicNet portal in the *Email address* field and click the **Go** button. The email address entered must match the email address on your volunteer or Coordinator record in order for the password to be sent. The system will send a link you can use to set a new password to your email address. **Please note:** The link will only remain active for 24 hours after it is sent. If you click the link and it says it expired, simply go back and click the *Forget your password?* link again.

**Your Logo Here**

**Login**

Forget your password?

Enter your email address and then click the **Go** button. We will send a **reset link** to you by email.

Email address:  
 **Go** **Cancel**

If you continue to experience difficulty accessing your information, please contact the volunteer office for further assistance.

If you have more than one record in the system that uses the same email address (for example if you have a volunteer and Coordinator record, or family members share an email address), you will see a screen similar to the one shown below. In this case, check the box next to the record (or records) you want to reset the password for and then click the **Go** button.

**Your Logo Here**

**Login**

Select Record(s)

There is more than one volunteer or coordinator record with the given email address (EmilyTate@mailinator.com). Please select from the list and click the **Go** button to **reset** the password(s) you would like. We will send you a password reset link via email.

Emily Tate (coordinator)  
 Emily Tate (volunteer)

**Go** **Cancel**

If you receive a message that the email address you entered does not have an account, it means the system could not find any records with access to Volgistics. The three most common reasons for this are: 1) A typo in the address you entered, or the address on file for your record, 2) There is no record in the system for the address entered, or 3) There is a record, but the access is not approved. Double check that you typed the address correctly. If the address was entered correctly, you will need to contact the volunteer office at the organization you serve with for further assistance.

### 3. Sign-in to your email account to set your password

Go to the email account that the password was sent to, sign-in, and check for new messages. You should receive the temporary password message within a few minutes. However, some email systems and ISPs may delay the delivery of email messages.

If you do not see the message in a few minutes and your email program uses a spam filter, check the junk mail or spam folder for the message.

When you receive the message, click the link in the message to set your password. If for some reason you cannot click the link, highlight the URL address beginning with *https://...* Once the complete address is highlighted, copy it and then paste it into a new web browser window.

You will see a screen that looks similar to the one below:

The screenshot shows a web form for password reset. At the top left, there is a placeholder for a logo with the text "Your Logo Here" and an illustration of diverse people. To the right of the logo is the title "Password Reset". Below the logo, the user is greeted with "Welcome Emily Tate". The instruction "Please enter your new password." is followed by two input fields: "New Password:" and "Confirm Password:". At the bottom of the form, there are two green buttons labeled "Go" and "Cancel".

Enter a new password into both the *New Password* and the *Confirm Password* fields, and then click the **Go** button. The new password you enter must be different than your previous password, *and* it must meet any password strength rules set by your organization.

Remember the new password you enter because this is what you will use to login to Volgistics the next time you access your account.

---

## How do I make VicNet so volunteers can only self-schedule for assignments

Help topic 2020

Added or revised 03-07-2016

---

If you allow volunteers to [self-schedule \[pg:1494\]](#) at [VicNet \[pg:1724\]](#), you can configure your schedules so volunteers are only allowed to schedule themselves for Assignments that are listed on the [Service tab \[pg:0138\]](#) in their volunteer record.

To do this:

1. Choose Assignments from the [menu \[pg:0215\]](#).
2. Click on the name of any Assignment.
3. Click on the Rules tab for the selected Assignment.
4. In the

*Who can sign-up for this schedule?*

section, select

*Volunteers can schedule themselves or be scheduled by a coordinator if their record has...*

Then check the desired [Status\(es\)](#) [pg:1832] and [Role\(s\)](#) [pg:0103]. If you want volunteers to be able to schedule themselves for their Assignment no matter what their Role is in that Assignment, check all of the Roles.

**Please note:** Your settings here control which volunteers [Coordinators](#) [pg:0163] can place on the schedule for the Assignment also.

Here is an example of how the Rules tab would look if you only want volunteers to be able to self-schedule if they have the Active Status and Roles of either Assigned or Substitute in the Assignment. Volunteers who do not meet these requirements would not see this Assignment as an option to self-schedule for.

The screenshot shows a 'Schedule setup' window with a title bar containing 'Help', 'Save', and 'Cancel' buttons. The main heading is 'Who can sign-up for this schedule?'. There are three radio button options:

- Volunteers cannot schedule themselves or be scheduled by coordinators
- Volunteers can schedule themselves or be scheduled by a coordinator if their record has...
  - One of these volunteer Statuses:
    - Active (indicated by a red arrow)
    - LOA
    - Applicant
    - Prospect
    - Inactive
  - One of these Roles in this assignment:
    - Assigned (indicated by a red arrow)
    - Preference
    - Former
    - Substitute (indicated by a red arrow)
    - Inactive
    - Trainee
- Any volunteer can schedule themselves or be scheduled by a coordinator

Below the radio buttons are two dropdown menus: 'This Flag:' and 'This Type:'.

6. Click the **Save** button.

Repeat these steps for each Assignment for which you want to restrict self-scheduling in this way.

---

## Previewing VicNet

Help topic 2159

Added or revised 04-12-2017

---

There may be times when you want to see what [VicNet](#) [pg:1724] will look like when a volunteer or [Coordinator](#) [pg:0163] visits. There are two ways you can do this: online, or from a volunteer or Coordinator's record.

### Online

If you've created a [link to VicNet](#) [pg:1491] from your own web site, you can simply click that link, and then enter a valid email address and password for any of the volunteer or Coordinator records in your database that are allowed to access VicNet. **Hint:** You may want to [create a "practice" record](#) [pg:1877] that you use for this kind of testing because the [password](#) [pg:1699] fields are not available to [System Operators](#) [pg:0065].

### From a volunteer or Coordinator's record

You can preview VicNet for any volunteer or Coordinator in your database from the [Vic tab](#) [pg:1810] of their record. This is useful if you need to answer questions volunteers or Coordinators might have about their VicNet records because it enables you to see exactly what they see based on their record.

To preview VicNet for a volunteer or Coordinator:

1. Choose Volunteers (or Coordinators) from the [menu \[pg:0215\]](#).
2. [Locate the record \[pg:1982\]](#) you want to preview, and then click on the name.
3. Click the Vic tab.
4. Check to make sure the tab says "Access is OK," meaning the volunteer or Coordinator can access VicNet.

If the Access box on the Vic tab shows that the volunteer or Coordinator cannot currently access VicNet, you will not be able to preview VicNet from their perspective (you must configure their record so their "Access is OK" first). [Help topic 2161 \[pg:1707\]](#) may be helpful to determine why the person cannot access VicNet.

5. Click the **Preview** button to see the *full-site* view. This is what the person will see if they login on a desktop or laptop computer. Click the **Mobile preview** button to see what the person will see if they login with a mobile device such as a smart phone or tablet.

*The mobile preview will not reflect the actual size of the screen the user will see because this is determined by the user's screen size. The mobile preview will reflect the color and graphics you [setup for the mobile view of VicNet \[pg:1471\]](#).*

## Who can access VicNet?

Help topic 2161

Added or revised 04-12-2017

---

You can make [VicNet \[pg:1724\]](#) accessible to any volunteer or [Coordinator \[pg:0163\]](#) you track in Volgistics.

Volunteers and Coordinators access VicNet by clicking the [HTML link \[pg:1491\]](#) you've created on your own web site, and then entering their email address and password.

Of course it isn't always desirable for everyone in your database to be able to use VicNet. For example, you might not want brand new applicants, or inactive volunteers to be able to use VicNet. You can control this by using your setup options to govern access.

You can use the [VicNet Ground Rules \[pg:1447\]](#) page in [Setup \[pg:0887\]](#) to

- Turn volunteer access to VicNet on or off
- Choose the volunteer [Status \[pg:1832\]](#) (or Statuses) volunteers must have to access VicNet (e.g. active, inactive, applicant, etc.).
- Turn Coordinator access to VicNet on or off

If necessary, you can also block an individual volunteer or Coordinator's access to VicNet on the [Vic tab \[pg:1810\]](#) of their volunteer or Coordinator record.

### Volunteers

In order to access VicNet, a volunteer must have:

- An email address recorded in the Email field on the [Core tab \[pg:1868\]](#) of their record.

If you collect volunteer [application forms \[pg:0413\]](#) online, this would be the email address the volunteer enters on their application. If you enter new [records manually \[pg:1877\]](#), this is the email address you've entered for the volunteer. A volunteer must have an email address recorded in their record in order to use VicNet. Generally, anyone who has Internet access also has an email address.

- A volunteer Status that is allowed to access VIC according to the way your [VIC Ground Rules \[pg:1447\]](#) are currently setup.

If you've configured Volgistics so that volunteers with a particular status (such as 'inactive') are not allowed to access VicNet, then any volunteer who currently has such a Status will not be able to login.

- The "Disable access" checkbox on the [Vic tab \[pg:1810\]](#) in their volunteer record must not be checked.

This checkbox is not checked by default. You can check this checkbox if you want to block an individual volunteer's access to VicNet for any reason.

## Coordinators

In order to access VicNet, a Coordinator must have:

- An email address recorded in the Email field on the Coordinator tab in their record.
- The "Disable access" checkbox on the Vic tab in their Coordinator record must not be checked.

This checkbox is not checked by default. You can check this checkbox if you want to block an individual Coordinator's access to VicNet for any reason.

### **New volunteer applicants**

Some organizations want brand new volunteer applicants to have access to VicNet; others prefer to introduce VicNet to volunteers later. Which approach is best for your organization will depend on the nature of your volunteer program and what you allow volunteers to do in VicNet.

For example, a special event organization with many 'one-time' volunteers and a simple application process might want volunteer applicants to have VicNet access as soon as they've submitted their online application form for the purpose of seeing their schedule or updating their email address. On the other hand, a hospital that develops ongoing volunteers and screens new applicants closely might not gain any benefit from giving new applicants VicNet access until some point later in their application process.

In new Volgistics accounts, new applicant records have the volunteer status 'Applicant,' and the 'Applicant' status does not have access to VicNet. This means that new applicants would not have access to VicNet by default.

### If you want new applicants to have access to VicNet

- Set the status on new application forms to one that is allowed to access VicNet.
1. Choose Setup from the [menu \[pg:0215\]](#).
  2. Select 'Online forms.'
  3. Select 'Volunteer Application Forms.'
  4. Click on the name of your volunteer application form.
  5. Scroll down to the "Status" section, and note which status new applicants will have initially.
  6. Choose Setup from the [menu \[pg:0215\]](#).
  7. Select 'VicNet'
  8. Select 'Ground Rules.'
  9. Under "Volunteers can use VIC if their Status is...", be sure the status you noted in step 5 is checked.
  10. Click the **Save** button to save any changes.
- Collect email address and password on your application form.

Be sure your application form asks applicants to provide their email address and choose a password. To do this:

1. Choose Setup from the [menu \[pg:0215\]](#).

2. Select 'Online forms.'
3. Select 'Volunteer application forms.'
4. Click on the name of your volunteer application form.
5. Click the 'Fields' link. The 'Fields' page shows you a list of the fields selected for the form. Be sure 'Email address' and 'Password' are both included in a form section.
6. Click the **Save** button to save any changes.
  - Tailor your application form and email acknowledgement to tell new applicants how they can access their records.

Optionally include instructions on how volunteers can access their records through your web site. These instructions will depend on how you [create your link to VicNet \[pg:1491\]](#). For example, if you create a link called "Volunteer login" on your home page, and your web site address is 'www.mywebsitename.org,' the instructions for new applicants would be something like:

"To review your volunteer record or check your volunteer schedule visit [www.mywebsitename.org](#) and click the 'Volunteer login' link."

You can include these instructions on the receipt conformation applicants see online once they submit their application form, and in the email confirmation you send to new applicants automatically. To do this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Online forms.'
3. Select 'Volunteer application forms.'
4. Click on the name of your volunteer application form.
5. Click the 'Receipt confirmation' link.
6. Add your instructions under "Enter or paste your acknowledgement message here," and "Enter or paste the content of the email confirmation message here."
7. Click the **Save** button to save your changes.

If you **do not** want new applicants to have access to VicNet:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Online forms.'
3. Select 'Volunteer application forms.'
4. Click on the name of your volunteer application form.
5. Scroll down to the "Status" section, and note which status new applicants will have initially.

6. Choose Setup from the [menu \[pg:0215\]](#).
7. Select 'Volunteer Information Center.'
8. Select 'Ground Rules.'
9. Under "Volunteers can use VIC if their Status is...", be sure the status you noted in step 5 is **not** checked.
10. Click the **Save** button to save any changes.

This will prevent new applicants from accessing VicNet until you change their volunteer Status to one which is allowed VicNet access on the [Ground Rules \[pg:1447\]](#) page.

Note that it's a good idea for you to collect volunteer email addresses and passwords on your online volunteer application form even if new applicants will not have access to VicNet right away. To do this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Online forms.'
3. Select 'Volunteer application forms.'
4. Click on the name of your volunteer application form.
5. Click the 'Fields;' link. The 'Fields' page shows you a list of the fields selected for the form. Be sure 'Email address' and 'Password' are both included in a form section.
6. Click the **Save** button to save any changes.

---

## New VicNet Self Scheduling Features

Help topic 2209

Added or revised 03-25-2008

---

On April 1, 2008 the VicNet self-scheduling features will be updated so they are easier to use and to provide some additional capabilities.

Prior to April 2008, the self-scheduling features in VicNet (if you used self-scheduling with the "calendar view" rather than the "list view") initially presented volunteers with a way to choose the day they wanted to volunteer, or the assignment they wanted to serve in. From there volunteers proceeded through a series of steps to select the specific assignment, date, and times they wanted to schedule themselves. This is how the self-scheduling page appeared before this update:

## Volunteer Information Center

### Volunteer information for **George Bailey**

[Home](#) [Mail](#) [My Profile](#) [My Schedule](#) [My Service History](#) [Time Sheet](#) [Account](#)

[Cancel](#)

With the April 2008 VicNet update, the "Calendar view" self schedule features have been improved, simplified, and combined with the volunteer's monthly schedule view. If you use the self-scheduling features, and you use the Calendar view, the "My Schedule" tab in VicNet will appear as shown here starting April 1, 2008:

**Volunteer Information Center**

Volunteer information for **George Bailey**

Home Mail My Profile **My Schedule** My Service History Time Sheet Account

**Instructions**  
Your regularly scheduled volunteer shifts appear on the calendar. Click the "Next month" or "Previous Month" buttons to view a different month. For a printable view of your schedule click the "Printable view" button.

**Sign-up!**  
We need volunteers on days that have the 'Help wanted' symbol. Click any of these days to learn more or to sign-up.  
Show openings in   
Schedule yourself for volunteer duty

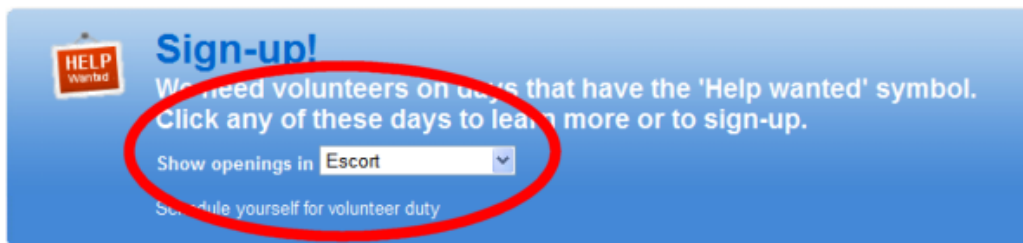

**April 2008**

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday

27	28	29	30			

Previous month Next month  
Printable view  
Exit

Each date where there is an assignment that the volunteer can self-schedule for includes a simple 'Help wanted' icon. Volunteers can click on any date that has this icon to see the assignments and times they can sign-up for on that date, and to actually sign-up.

If a volunteer wants to look for an opening in a specific assignment, they can choose that assignment from the 'Sign-up' drop down list. When they do, the 'Help wanted' icon appears only on the days of the month that have openings in the assignment they select.

**Sign-up!**  
We need volunteers on days that have the 'Help wanted' symbol. Click any of these days to learn more or to sign-up.  
Show openings in   
Schedule yourself for volunteer duty

This list of assignments a volunteer can self-schedule for are controlled by the settings on the Openings tab for each assignment. (The update does not change which assignments volunteers can sign-up for, only the way they are presented).

Volunteers can choose 'All my assignments' from the Sign-up drop down to see when there are openings in any of the assignments they are allowed to self-schedule for.

The update does not change how far in advance volunteers can self-schedule, how often they can self-schedule, or any of the settings that control which assignments they can schedule themselves for.

### **New "My Schedule" tab capabilities for volunteers:**

The April 2008 Self-Scheduling update includes several new "My Schedule" tab capabilities for volunteers who use VicNet.

#### View complete schedules

You can now let volunteers see the complete schedule at VicNet. Volunteers can click on any date to see when they are scheduled and to see which other volunteers are scheduled on that day. If you choose to enable this capability, volunteers can simply click any date on the "My Schedule" tab calendar to see who else is scheduled that day.

To enable this capability:

1. Choose Setup from the menu.
2. Select VicNet.
3. Select Schedule tab.
4. Locate the heading "When volunteers view the schedule, do you want them to see who else is scheduled?" choose the option you prefer.
5. Click the Save button.

There are three options for this setting:

- No

Choose no if you do not want volunteers to see anything other than the dates and times they are scheduled themselves. When you choose this option volunteers cannot see when other volunteers are scheduled at VicNet.

- Yes, but only in assignments they can sign-up for

Choose this option if you want volunteers to see when other volunteers are scheduled each day, but in only in assignments that a volunteer is allowed to schedule themselves for (in other words, only in their own assignments). This is the recommended setting.

- Yes, in all assignments

Choose "Yes, in all assignments" if you want volunteers to see who else is scheduled in all of the assignments you have in your database.

#### Links to assignment profiles

You can now include links to assignment profiles from each assignment name on the My Schedule tab in VicNet. This gives volunteers a way to learn more about each assignment by viewing the job description (and other assignment information you choose to post) for each assignment listed on the VicNet 'My Schedule' tab.

To enable this function:

1. Choose Setup from the menu.
2. Select VicNet.
3. Select Schedule tab.
4. Under Appearance, choose "Include links to assignment profiles for each assignment" if you want these links to appear. Choose "Do not include links to assignment profiles for each assignment" if you do not.
5. Click the Save button.

---

## Sending All Volunteers Their VicNet Passwords in One Step

Help topic 2233

Added or revised 04-27-2016

---

You can send volunteers a link to set their [VicNet \[pg:1724\]](#) password either [individually \[pg:1717\]](#), or to an entire group at once.

For example, if you're just getting started with VicNet, you may want to send all of your volunteers (or perhaps just all of your volunteers with the Active [Status \[pg:1832\]](#)) the VicNet password link in a single step. Or, if you've just approved a new group of applicants, you may want to send the password link to all of the new applicants at once. This help topic describes how to do this.

Click on a section of the help topic in the *Contents* box below to jump directly to that section.

### Contents

Password Email Message

Tag the Records To Send VicNet Passwords To

Send the Password Email To the Tagged Volunteers

### Password Email Message

Volgistics has a template for the VicNet password email message. The same template is used for three purposes: 1) when the message is sent by a [System Operator \[pg:0065\]](#) to volunteers, 2) when the message is sent by a System Operator to [Coordinators \[pg:0163\]](#), and 3) when the message is sent because volunteers or Coordinators request a password on the VicNet login page.

When the password email message is sent to a volunteer or Coordinator, the system automatically inserts the person's login name and the password link into the message. Here is how the default password email message appears for a volunteer with the email address of "greentree@hatmail.com."

Below is the password information you requested. Use the login name, and link to set your password, that appear below to access your information at the volunteer information center.

Your login name is: greentree@hatmail.com

Follow the URL to reset your password:

[https://www.volgistics.com/ex/core.dll/process?reset=%3DILM1rHHHidoZ8c3\\*^D95oM5P4f](https://www.volgistics.com/ex/core.dll/process?reset=%3DILM1rHHHidoZ8c3*^D95oM5P4f)

If you continue to have trouble accessing the volunteer information center with the credentials provided, please contact the volunteer office.

We recommend customizing the contents of the password email message to fit your organization's needs. For example, it is often useful to include instructions to the web page on your organization's website where you've [placed the link to the VicNet portal \[pg:1491\]](#).

Here is how you can customize this message for your account:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the *VicNet* link.
3. Select *Ground rules*.
4. Under *Password email*, enter what you want the email message to say.
5. Click the **Save** button after you are done customizing the password email's content.

Because the same email message is used for all three purposes mentioned at the beginning of this section, you will want to keep the message generic enough to apply to all three purposes while still educating the person on how to log-in. You can see a sample what you could enter as the message's content below:

Expire every  days

### Password email

Volunteers and Coordinators can receive a link to set their password by email. You can customize the content of this message below. Volgistics inserts the person's login name (email address), and the password link, between the Top and Bottom parts

Top part:

Thank you for serving at "My organization." You can find login information for the Volunteer Information Center ([VicNet](#)) below. Click on the link to set your password. After you have successfully set a password, you will be directed to the login page.

Bottom part:

To login to VicNet in the future:

1. Go to our website ([www.organization.org](http://www.organization.org))
2. Select the Volunteer page.
3. Click on the "Volunteer portal" link.
4. Enter your email address and password.

We appreciate your service! Please contact Jessica in Volunteer Services (555-444-3333) if you have trouble logging-in.

What should the subject line be for VicNet password emails?

Volunteer Information Center Password

### Heading

Please keep in mind that the text fields for customizing your password email message will only take plain text. So if you do not place a link to the VicNet portal on your web site, and choose to give the [URL address for the portal \[ \]](#) in your message, the URL address may not always appear as a clickable link when the volunteer or Coordinator receives the email. This will depend on how the recipient's email system treats URL addresses sent in plain text. To help with this, it may be beneficial to put text such as "If this does not appear as a clickable link, please copy and paste this address into your web browser" in your message.

## Password Message and Text Messaging

Please note that if your account has [enabled text messaging \[pg:0321\]](#) and a volunteer has [opted-in \[pg:0323\]](#) to text messaging, they will receive their password link by text as well as email. However, due to the limited length of text messages they will not receive the content of the message setup in the Password Email Message section of this help topic. They will only receive the password link in the text message.

## Tag the Records To Send VicNet Passwords To

You use the [Tags \[pg:1529\]](#) feature to send VicNet passwords to multiple volunteers in a single step. There is not a way to tag [Coordinator \[pg:0163\]](#) records so you will need to send passwords to them [individually \[pg:1717\]](#).

These instructions include an example of how to tag all of the volunteers with an Active [Status \[pg:1832\]](#). However, you can tag any group of volunteers you want to send VicNet passwords to. [Help topic 2139 \[pg:1538\]](#) shows different ways you can tag groups of volunteer records.

To tag all of the volunteers with an Active Status:

1. Select *Volunteers* from the [menu \[pg:0215\]](#).
2. Under the Include section, click the *Clear* link (this clears any Include settings you may have previously set).
3. Under the Include section, select *Active* from the Status dropdown.
4. Click the *All* link near the top of the Volunteers page.

## Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

A list of all records with the Active Status appears.

5. Click the **Tag** button in the top left corner. If more records are in your results than the page displays, a pop-up window will appear asking which records to tag. Select to tag all of the records.

All of your "Active" volunteer records are now tagged.

## Send the Password Message To the Tagged Volunteers

Now you're ready to send all of the tagged volunteers an email with a password link. If your account has [enabled text messaging \[pg:0321\]](#), and the volunteer has [opted-in to text messaging \[pg:0323\]](#), the password will be sent by text and email. However, the content of the message you setup in the Password Email Message section of this help topic will not be sent by text due to the limited number of characters text messages can contain.

1. Select Tags from the [menu \[pg:0215\]](#).
2. Click the **Go** button beside *Send a VicNet password link to the tagged volunteers*.

### Please Note

For security, the link in the password email only stays active for 24 hours after it is sent. If volunteers report they click the link and it says that it expired, simply ask them to click the *Forget your password?* or *Need a password?* link on the VicNet login page. This will send them a new link that they can use to get their password.

---

## How do I send an individual volunteer or Coordinator their VicNet password

Help topic 2234

Added or revised 03-23-2017

---

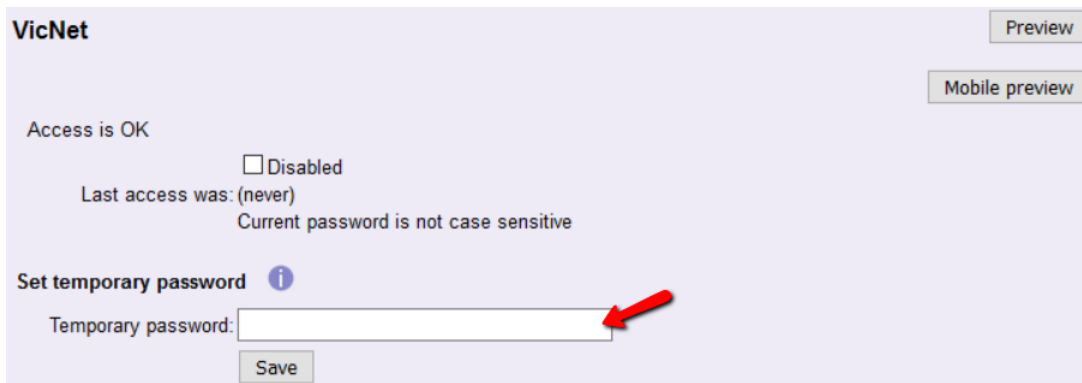

While you can't send passwords to volunteers or [Coordinators \[pg:0163\]](#) through Volgistics, you can set a temporary [VicNet \[pg:1724\]](#) password on the Vic tab of their volunteer record. Or you can send them a reset link so they can choose their own permanent password.

For volunteers, you can also set a temporary password or send a reset link to an entire group of volunteers at once by following the directions in [help topic 2233 \[pg:1714\]](#).

When the volunteer or Coordinator signs-in to VicNet with a temporary password, they will be required to create a permanent password. [Help topic 1307 \[ \]](#) shows how to do this.

### Set temporary password

1. Select *Volunteers* or *Coordinators* from the [menu \[pg:0215\]](#).
2. [Locate the record \[pg:1982\]](#) for the volunteer or Coordinator you need to reset the password for.
3. Select the *Vic* tab.
4. Under *Set temporary password*, enter a password in the *Temporary password* field. Because the volunteer or Coordinator will need to select a permanent password, the temporary password you choose does not need to meet any password strength requirements set up for your account.

The screenshot shows the 'VicNet' interface. At the top right, there are buttons for 'Preview' and 'Mobile preview'. Below these, the text 'Access is OK' is displayed. There is a checkbox for 'Disabled' which is currently unchecked. Below that, it says 'Last access was: (never)' and 'Current password is not case sensitive'. The main section is titled 'Set temporary password' with an information icon. Below this title is a text input field labeled 'Temporary password:'. A red arrow points to the right end of this input field. Below the input field is a 'Save' button.

5. Click the **Save** button. Note that Volgistics will **not** send the temporary password to the volunteer or coordinator, so you'll need to communicate this password to them through another channel.

### Send password reset link

1. Select *Volunteers* or *Coordinators* from the [menu \[pg:0215\]](#).
2. [Locate the record \[pg:1982\]](#) for the volunteer or Coordinator you need to reset the password for.
3. Select the *Vic* tab.
4. Under *Send password reset link*, click the **Send Reset Link** button. The system will generate a unique reset link and send it to the volunteer or Coordinator's email address.

Sending this reset link will not disable the volunteer's current password so they'll still be able to login without the link if they remember their password. If this reset link is not used within 24 hours, it will automatically expire. After that, if the volunteer still needs to reset her password, she'll need a new reset link. Volunteers can get this themselves by clicking the [Forget your password? \[pg:1702\]](#) link on the login page.

---

## Track Overall VicNet Usage and Last Access Date

Help topic 2278

Added or revised 04-17-2017

---

After you launch the [VicNet \[pg:1724\]](#) module for your organization, you may want to check how your campaign is going. Or, there may be times when you want to see which volunteers are using VicNet, or which ones are not. There are a couple of resources in Volgistics that can help you with this. This help topic explains more about how to use these resources. (By the way, if you're still trying to get the ball rolling with VicNet, you can find help in [help topic 1175 \[pg:1670\]](#) "Getting Started with VicNet.")

### Check Overall VicNet Usage

Volgistics keeps a tally of volunteer and [Coordinator \[pg:0163\]](#) logins to VicNet so it may be useful to review this sum to see if the module is being utilized. Follow these steps to get to this page:

1. Select [Setup \[pg:0887\]](#) from the menu.

2. Expand the *Account management* link.
3. Select *Account status*.
4. Find the *Vic Activity* section to view how many logins have been made to VicNet since the date listed.

The screenshot shows a section titled "Vic Activity" with the following data:

- Volunteer records: 95
- VicNet logins (since April 1, 2017): 241
- VicTouch transactions (since April 1, 2017): 143
- VicDocs uploaded: 481

Each login and transaction count has a "Reset" button next to it. The date "since April 1, 2017" is highlighted with a red box. At the bottom, there is a link: "To change your service level:".

You can click the **Reset** button if you want to set the date to the current date and return the count to zero. This makes it easy to return to the page to see logins since your last visit.

#### Check the Last Login Date for an Individual Volunteer or Coordinator

Volgistics keeps track of the last login date for volunteers and Coordinators on the Vic tab of their record. Follow the steps below to see the most recent login date:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and then [locate the volunteer's record \[pg:1982\]](#). (Select Coordinators from the menu if you want to check a Coordinator.)
2. Open the record and select the Vic tab.
3. The *Last access was* field on the Vic tab shows the date and time the person last logged-in to VicNet.

The screenshot shows a user profile for "VicNet". The "Last access was" field is highlighted with a red box and displays: "Last access was: 04-29-2016 1:37 pm". Other visible text includes "Access is OK", "Disabled", "Set temporary password", "Preview", and "Mobile preview".

If they have never accessed VicNet, this field will show *(never)*:

The screenshot shows a user profile for "VicNet". The "Last access was" field is highlighted with a red box and displays: "Last access was: (never)". Other visible text includes "Access is OK", "Disabled", "Set temporary password", "Preview", and "Mobile preview".

#### Check the Last Login Date for All Volunteers

There is not a way to include the last VicNet access date on [reports \[pg:0595\]](#), but you can include it on the Volunteers page. This allows you to review the dates for multiple volunteers at once and do things such as sort or filter the date column so you can easily see who has never logged-in.

The first thing to check is whether the field is included on the Volunteers page. You can find directions on how to do this in [help topic 1202 \[pg:1381\]](#) "How to customize which fields appear in the volunteer list." Be sure the *Last VicNet Access* field is selected. Remember to click the **Save** button if you make a change.

Once the

*Last VicNet Access*

field is on the Volunteers page, you can do a variety of things with it. Here is an example of how you can find all the volunteer records with an *Active* or *Active (Group)* [Status \[pg:1832\]](#) who have never logged-in to VicNet, and then send them a follow-up message:

1. Select Volunteers from the menu.
2. Click the **Advanced options** button so you can filter with more than one Status.

The screenshot shows the 'Volunteers' page interface. At the top, there are navigation links for each letter of the alphabet (A-Z) and an 'All' link. Below this is an 'Include' section with several dropdown menus for filtering: Status, Type, Flags, Site, Set, Tags, and Kind. Each dropdown menu currently shows 'Any'. Below the filters is a 'Clear' link with an upward-pointing arrow. At the bottom left of the filter section is a button labeled 'Advanced options', which is highlighted with a red arrow.

3. Select *Only these* in the Status section, check the *Active* and *Active (Group)* options, and then click the *All* link.

## Volunteers

4. The page will show all of the volunteers who have the Statuses you selected, and there will be blanks in the date field for the volunteers who have never logged-in.

Name	Tag	Number	Status	Type	Last VicNet Access
Albertson, Veronica	<input type="checkbox"/>	427	Active	Junior	03-12-2017
Alpin, Jerrold	<input type="checkbox"/>	623	Active	Adult	04-04-2017
Alpin, Susan	<input type="checkbox"/>	354	Active	Adult	04-14-2017
Anderson, Susanne	<input type="checkbox"/>	180	Active	Adult	04-10-2017
Appleton, Steve	<input type="checkbox"/>	116	Active	Adult	
Barclay, Andrea	<input type="checkbox"/>	215	Active	Adult	
Barman, Wendy	<input type="checkbox"/>	198	Active (Group)	Group	04-14-2017
Bartowski Marv Sue	<input type="checkbox"/>	333	Active	Adult	

5. To filter the page to only show the volunteers who have never logged in, enter the Regular Expression `^$` into the Search field in the column heading.

Name	Tag	Number	Status	Type	Last VicNet Access
Appleton, Steve	<input type="checkbox"/>	116	Active	Adult	
Barclay, Andrea	<input type="checkbox"/>	215	Active	Adult	
Bartowski Marv Sue	<input type="checkbox"/>	333	Active	Adult	

You can learn more ways to sort and filter the page in the More Tips call out box below.

6. Now you can send an email message to just the volunteers who are shown by clicking the Messages icon to the right of the All link at the top of the page.

[R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

(total entries)

Status	Type	Last VicNet Access
--------	------	--------------------

Be sure to select the option to send the message to just the shown records or the message will be sent to the volunteers who have signed-in in addition to those who have not.

**Send Message** ✕

Send a message to :

All 171 volunteers.

129 shown volunteers.

If you need help composing and sending the email message, you can find assistance in [help topic 2195 \[pg:0404\]](#) "How to send an email message."

### More Tips

There are several other things you can do with the column headings on the Volunteers page that you may find useful. Here are some examples:

If you want to have the page show all records that have a date recorded (instead of the records that do not have a date recorded), enter the [Regular Expression](#) `[_____]\d` into the *Search* field.

Click the *Last VicNet Access* column heading once to sort the page with all the records with a blank in the field grouped at the top, and the records with a date sorted from least to most recent at the bottom. Click the column

heading again to re-sort the page with the most recent dates at the top, and all the blank records grouped together at the bottom.

Enter two digits for a month to bring up all the records with a date in the month. For example, enter 04 in the *Search* field to bring up all the records with a date in April.

---

## Advertising on VicNet

Help topic 2288

Added or revised 08-23-2012

---

While Volgistics never places advertising anywhere in Volgistics, you are allowed to place ads in [VicNet \[pg:1724\]](#) as a fundraising tool for your own organization. Ads you choose to place in VicNet are seen only by your volunteers, and only when they visit VicNet.

Since your VicNet pages are visited by people in your local community; and your volunteers may represent a particular demographic, there may be local businesses that would find an advertising opportunity in VicNet appealing.

If you choose to, your organization may place ads in VicNet for which advertisers pay you a fee, or in exchange for a business' support of your program. For example, a local caterer might cater a volunteer recognition event in exchange for an ad. Or, you might ask a business to underwrite some (or all) of your Volgistics service fee in exchange for an ad.

Note that ads you place in VicNet do not have to be commercial in nature. You can place ads for your organization's own activities, such as upcoming special events, or activities your organization promotes in partnership with others.

Ads can include links to the advertiser's web site. These links open in a new browser window so the volunteer will continue to have VicNet open in its original browser window.

Advertising in VicNet is permitted under these guidelines

- Ads may be placed on the VicNet Home tab using up to four optional "Message" boxes.
  - Each message box may contain one graphic image. Graphics have specific file size and image dimension limitations. The maximum file size is 20Kb, and the maximum image dimension is 500 pixels high by 200 pixels wide. Graphic images may be provided in GIF, JPG, or PNG files.
  - Ads must meet general community standards for acceptable advertising.
  - Volgistics has no responsibility for ad pricing, ad sales, or collection of advertising fees. These activities are your responsibility.
  - Creating advertising images or content is the responsibility of your organization or the advertiser.
- Volgistics reserves the right to remove any advertising that does not conform to these guidelines.

To place an advertisement on the VicNet Home tab:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'VicNet.'
3. Select the 'Home tab' link.

4. There are four optional "message boxes." Choose the "Message box" you want to use for your advertisement; and then uncheck the "Omit message box" checkbox for the message box you choose.
5. Optionally enter any text you want to appear above or below the message box graphic in the fields provided.
6. To upload a graphic image for the ad, click the **Change image** button, and then follow the directions for uploading the image (the image you want to upload must be located on your computer or network).
7. If you want the ad to link to another web site, add the web site's address in the "Link" field.
8. Click the **Save** button.

The ad will now appear on the Home tab in VicNet.

To remove an advertisement from the VicNet Home tab:

1. Choose Setup from the menu.
2. Select 'VicNet.'
3. Select the 'Home tab' link.
4. There are four optional "message boxes." Locate the "Message box" that contains the ad you want to remove, and then check its "Omit message box" checkbox.
5. Click the **Save** button.

The ad will no longer appear on the Home tab in VicNet.

### VicNet

Help topic 3020

Added or revised 03-23-2017

---

With Volgistics, your volunteer tracking system is not constrained by your office computer or network. You can involve volunteers and others in a variety of activities *online* with the VicNet module. VicNet is an optional module you can add so volunteers can. . .

- View and manage their volunteer schedules
- Sign-up for vacant schedule openings
- Print their schedules
- Keep their personal information up-to-date
- Post their hours
- Receive news and messages from the volunteer office
- Check their service records, and print their own service reports
- Change their VicNet passwords
- Opt-in or out of text messaging and update their message preferences

In addition to giving volunteers a way to interact, you can also use VicNet to give [Coordinators \[pg:0163\]](#) (assignment level supervisors) access. With VicNet, Coordinators can:

- Manage the schedule for their volunteers
- View and print the schedule for their volunteers
- View and print lists of their volunteers
- Update key personal information about their volunteers
- Change their VicNet passwords
- Opt-in or out of text messaging and update their message preferences

Depending on your needs, you can use VicNet to give access to both volunteers and Coordinators, only to volunteers, or only to Coordinators.

VicNet is an optional module. When you use Volgistics, you don't have to use VicNet unless it makes sense for your organization. VicNet is a great tool for organizations that have volunteers who serve on an ongoing basis and for organizations that want assignment level supervisors to be able to manage the volunteer schedule for their areas.

VicNet is accessible only by volunteers and Coordinators you track in Volgistics. VicNet uses the same level of [Internet security \[pg:0181\]](#) as Volgistics, and only volunteers and Coordinators you authorize to use VicNet have access. Volunteers and Coordinators login to VicNet using a login name and password, and they can see only their own information.

Like Volgistics, the VicNet module is a hosted application, so there's no software to install or maintain on your own computer or network. This help topic explains more about how VicNet works, and what volunteers and Coordinators can see.

***Please Note:***

*This help topic shows the full-site view of VicNet. This is the view your users will see if they access VicNet from a desktop or laptop computer. Users may also access the system from a mobile device such as a smart phone or tablet and in this case their view will be different. You can learn more about the mobile view of VicNet in [help topic 1214 \[pg:1471\]](#).*

You can go directly to a section of the help topic by clicking the link for that section in the Contents window below:

## **How VicNet Works**

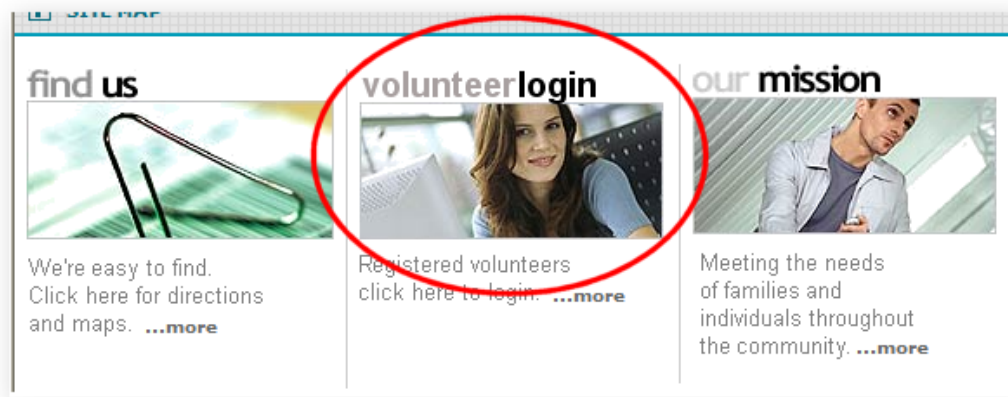

Volunteers and Coordinators get to VicNet online *through* your organization's own web site. To make this happen, you add a simple HTML link to one or more of your web pages.

Help topic 2153 [pg:1491] explains how to create a link to VicNet.

Your link can be located anywhere you'd like on your web site (even in multiple locations). It can be a simple text link (with any text you choose) like this:

## **Volunteer Login**

Or a graphic link, like this:

There's no software to install on your web server, and no other changes are required to your web site.

Having volunteers and Coordinators access VicNet through your own web site makes lots of sense. Users don't have to remember any web address other than your own, and it brings more visitors to your web site. It will appear to the volunteers and Coordinators that VicNet is part of your own web site (see the Branding sidebar below). However, the VicNet pages are actually powered by the Volgistics system so there's no additional bandwidth usage or overhead on your web server.

When volunteers or Coordinators click the VicNet link on your web site, they'll see a login page similar to this one where they enter their login name and password (you'll learn more about assigning VicNet login names and passwords in the Controlling Access to VicNet section below).

**Your Logo Here**

**Login**

Enter your email address and your volunteer information center password, and then click the Go button.

Login name:

Password:

**Go**

[Forget your password?](#) [Help](#)

[Close this window](#) | [Privacy policy](#)

## Branding

To use VicNet, volunteers and Coordinators don't have to go to the Volgistics web site, or even know anything at all about Volgistics. You can customize VicNet to match the graphic style of your own web site (if you want to), and even call it something other than

### *VicNet*

if you'd like. You can find information on how to customize VicNet (and other Volgistics features volunteers see) to appear similar to your organization's web site by watching our webinar on

### Customizing Your Online Forms

You will also need to customize the mobile view for when users access VicNet from a tablet or smart phone. You can find information on how to do this in [help topic 1214 \[pg:1471\]](#).

## **VicNet for Volunteers**

This section gives a review of the tabs available in VicNet and examples of what your volunteers may see. You can control which tabs and fields volunteers see in VicNet so your VicNet setup may not appear exactly the same. There's more about customizing VicNet in the help topics mentioned in the descriptions below.

In addition to this help topic, it may be helpful to watch the training videos designed to teach volunteers how to use VicNet. These videos can give you a good idea of the different ways VicNet can be set up, as well as giving you a chance to see what volunteers will see when they use the system. You can find the training videos here.

### **Home Tab**

A Home tab like the one shown below appears once a volunteer logs-in. You can customize your Home tab to include the latest volunteer News, links to other web pages, volunteer program statistics, and – if you choose – even ads (see [help topic 2288 \[pg:1723\]](#) for directions on placing advertisements on the Home tab).

You can find more information on how to configure the VicNet Home tab for your account in [help topic 2019 \[pg:1486\]](#).

## Mail Tab

In addition to regular [Internet email \[pg:0404\]](#) and [text messages \[pg:0343\]](#), Volgistics also lets you communicate with volunteers through VicNet. Volgistics [System Operators \[pg:0065\]](#) can send a message to individual volunteers, specific groups of volunteers (such as all volunteers who have a [specific assignment \[pg:0399\]](#), who are [scheduled on a specific date \[pg:0401\]](#), or who are in a [specific Set \[pg:0396\]](#)), or all volunteers through VicNet. You can find information on how to send Vic mail messages in [help topic 1127 \[pg:0315\]](#).

The Mail tab in VicNet is where volunteers see these messages. New messages appear on top and a list of read messages appears on the bottom so volunteers can re-read a message if they choose.

<b>Bedford Falls 10K</b>	09-04-2014
If you haven't heard, we are proud to be a co-sponsor of this year's Bedford Falls 10K run. This event is an important fund raiser for our organization, plus it promotes health and wellness.	
This year's 10K run will be held on Saturday, October 18th at 9:30 am. As a co-sponsor, we will be responsible for staffing the registration booth from 7:00 am - 8:00 pm on Friday, October 17th, as well as from 7:00 am - 9:00 am on the morning of the race.	
Registration booth staff will be responsible for handing out race day packets and t-shirts to registered participants. If you're interested in helping us staff the booth, please call Carol at 555-892-3391.	
Thank you, Carol Luden

You can customize whether or not this page appears, and the directions that appear on this page, by selecting [Setup \[pg:0887\]](#) from the menu, expanding the VicNet link, and selecting *Mail tab*.

### My Profile Tab

You can use the VicNet *My Profile* tab to let volunteers see – and optionally update – their volunteer record. For example, volunteers can keep their own email address, interests, skills, and availability up-to-date. Before VicNet, keeping these kinds of records current meant having to collect the new information and then manually update the records yourself--a time consuming task. With VicNet, volunteers can do this themselves as soon as there's a change in their information. The changes they make will automatically show on the volunteer records in your account.

You can also optionally give volunteers the ability to add or remove themselves from schedules by setting up self-scheduling for your account. Scheduling works dynamically in real-time, so volunteers will only see **openings** [pg:0776] on the schedule while they exist. Once a schedule is filled, no one else can add themselves to that schedule (unless an opening becomes available). You can set up self-scheduling to use a calendar format as shown below:

The calendar format is best for organizations that have ongoing volunteer participation, while the list format is well suited for special events that have volunteer needs for a fixed number of days.

You can find directions on how to configure the *My Schedule* tab to allow self-scheduling in [help topic 2170 \[pg:1494\]](#).

### My Service History Tab

If you track volunteer [service information \[pg:1581\]](#) in Volgistics, volunteers can select the *My Service History* tab in VicNet to see their service hours and other information. You can show volunteers just their service totals, or all their service history since they began volunteering. Volunteers can create printable views of their service records if they want a printed service report for themselves (for their tax records, for example).

If volunteers have [mandatory service \[pg:1419\]](#) (a certain number of hours they must perform by a given date), they can see their progress in fulfilling this goal on the *My Service History* tab.

You can control whether or not volunteers see this tab in VicNet, plus customize which fields appear. [Help topic 1207 \[pg:1465\]](#) has information on how to do this.

### Time Sheet Tab

If you'd like volunteers to post their own volunteer [service information \[pg:1581\]](#) online, they can do this using the VicNet

#### Time Sheet

tab. Entries the volunteers make will automatically be transferred to the Service tab of their volunteer record so you can [view the volunteer's service \[pg:1579\]](#) as a [System Operator \[pg:0065\]](#).

You can customize the time sheet to suit a variety of service recordkeeping needs. For example, you can limit the time period for which service can be posted; collect service on a daily or monthly basis; and even add fields to collect additional [service measures \[pg:1557\]](#) (for example, the number of *miles driven* or *meals delivered*). You can optionally audit the time sheet entries that volunteers make. [Help topic 1072 \[pg:1408\]](#) explains how to set up your account so you can audit entries a volunteer makes from the *Time Sheet* tab.

**Exit**

Close this window | [Privacy policy](#)

The Time Sheet tab can be configured to appear for all volunteers, for no volunteers, or for just the volunteers with a certain [Type or Flag \[pg:0212\]](#). [Help topic 1204 \[pg:1460\]](#) shows how to control whether or not the *Time Sheet* tab appears in your account, and which fields appear on it.

### Account Tab

The Account tab is where volunteers will select a permanent password after [logging-in with a temporary password \[pg:1702\]](#), change their permanent password, and [opt-in or opt-out \[pg:0323\]](#) of [text messaging \[pg:0352\]](#).

VicNet

Page 1736

You can set up the instructions that appear on the Account tab, and control access, by selecting [Setup \[pg:0887\]](#) from the menu, expanding the VicNet link, and selecting *Account tab*. If your account has [text messaging enabled \[pg:0321\]](#), there is not a way to disable the Account tab. This is because it is required so that volunteers can opt-in and out of text messaging.

## **VicNet for Coordinators**

If you use Volgistics to track assignment level supervisors as [Coordinators \[pg:0163\]](#), you can give these Coordinators access to VicNet. Coordinators do not need to be Volgistics [System Operators \[pg:0065\]](#), and there's no limit to the number of Coordinators you can track in Volgistics. Because Coordinators are people who manage or supervise specific volunteer assignments, they use VicNet a bit differently than volunteers.

The first thing to note is that there may be cases where one person has a volunteer record

*and*

a Coordinator record in your account. In this case, the volunteer record is used to track things such as the service hours, scheduling, and [Checklist \[pg:0142\]](#) information for the person, while the Coordinator record is used by them to manage the assignment(s) they oversee. [Help topic 1093 \[pg:1653\]](#) explains how the VicNet login process may differ for these individuals.

Coordinators can have access to 5 tabs in VicNet: Home, Mail, Volunteers, My Schedule and Account. The Home, Mail and Account tabs are very similar in VicNet for volunteer and Coordinator records. Please refer to the sections of the help topic above for information on how these work for Coordinator records. This section of the help topic will explain more about how the Volunteers and My Schedule tabs work for Coordinators.

In addition to this help topic, it may be helpful to watch the training videos designed to teach Coordinators how to use VicNet. These videos can give you a good idea of the different ways VicNet can be set up, as well as giving you a chance to see what Coordinators will see when they use the system. You can find the training videos here.

## Volunteers Tab for Coordinators

Volunteers and Coordinators are linked through the assignments they have in common. You can learn how to set up a Coordinator to oversee certain assignments in the [Connecting Coordinators and Assignments](#) [ ] section of help topic 1111. The Volunteers tab of the Coordinator record lists volunteers who have certain [Status\(es\)](#) [pg:1832] as well as a certain [Role\(s\)](#) [pg:0103] in an assignment(s) the Coordinator oversees.

You control which Status(es) or Role(s) a volunteer record must have to appear on the Volunteers tab by selecting [Setup](#) [pg:0887] from the menu, expanding the VicNet link, and selecting *Volunteers tab (for coordinators)*.

Coordinators can also view more fields from the volunteer's record, as well as update these fields if you allow. To do this, the Coordinator clicks on the name of a specific volunteer on the Volunteers tab. This will bring up a page showing the additional information for that volunteer.

You can also allow Coordinators to manage the schedule for their assignments. They will not be able to make [new openings \[pg:0776\]](#) for assignments, or schedule volunteers for assignments where scheduling is allowed for "any times"--only [System Operators \[pg:0065\]](#) can do this. However, they can schedule volunteers to fill unfilled openings, remove volunteers from the schedule, and edit existing schedule entries. To do this, they will need to go to the daily view of the schedule for a certain date, then click the *Change* link beside the schedule entry.

## Controlling Access to VicNet

You control which [Status\(es\)](#) [pg:1832] volunteers must have in order to access VicNet, and whether certain [Types or Flags](#) [pg:0212] are required on their records, on the VicNet Ground Rules page. To get to this page, select [Setup](#) [pg:0887] from the menu, expand the VicNet link, and select *Ground rules*. You also control whether or not [Coordinators](#) [pg:0163] can use VicNet on this page.

As explained in the

How VicNet Works

section of this help topic, volunteers and Coordinators access VicNet through the VicNet portal for your organization. In most cases, volunteers and Coordinators log-in initially with the email address and temporary password you assign to the record, and then select a permanent password. In some cases, the volunteers select a [password on the application form](#) [pg:1665], or have a temporary password imported using the free Import Utility program.

[Help topic 2233](#) [pg:1714] explains how to set up the password reset message volunteers and Coordinators will receive. It also shows how to send the message to multiple volunteers at once. There is not a way to send reset messages to multiple Coordinators at once. You will need to do this from the Vic tab of each Coordinator's record as shown in [help topic 2234](#) [pg:1717].

## **Previewing VicNet**

If you're new to Volgistics, you might like to see what VicNet looks like for a volunteer or Coordinator. You can do this by previewing VicNet for any volunteer in your database. You must have at least one volunteer in your database to do this. If you haven't entered any volunteers yet, back-up and [enter a volunteer record \[pg:1877\]](#) first.

You can preview VicNet for a selected volunteer or Coordinator before you create a link to VicNet from your web site.

To preview VicNet from a volunteer's perspective:

1. Choose Volunteers from the menu.
2. Select a volunteer. You can choose any volunteer you'd like. You'll preview VicNet from the perspective of the volunteer you choose.
3. Click on the [Vic tab \[pg:1810\]](#) for the selected volunteer.

If the Preview button on the VIC tab appears disabled, the selected volunteer does not currently have access to VicNet. The VIC tab will tell you why. In this case, select a different volunteer (one who does have access to VicNet), or adjust the selected volunteer's record so they can access VicNet.

4. Click the **Preview** or **Mobile preview** button.

Previewing VicNet for a Coordinator follows the same basic process except you select *Coordinators* from the menu instead of *Volunteers* in step 1.

Note that previewing VicNet for a selected volunteer is also a handy way to answer questions a volunteer might have about something they see when they visit VicNet. When you preview VicNet for a selected volunteer, you'll see the same thing they do. You can learn more about previewing VicNet in [help topic 2159 \[pg:1705\]](#).

## **Why is it called 'VicNet?'**

'Vic' stands for 'Volunteer Information Center' and 'Net' is how you access it (over the Internet). Thus the name 'VicNet.'

There is also a module called *VicTouch*. [VicTouch \[pg:1778\]](#) gives volunteers a way to interact with Volgistics through onsite touch screen kiosks.

---

# The VicTouch Touch Screen Monitor

Help topic 1030

Added or revised 12-26-2007

---

While it is possible to use [VicTouch \[pg:1778\]](#) at a PC that does not have a touch screen monitor (volunteers would use a computer mouse to select buttons), touch screen monitors generally provide an interface that is easier to use than a mouse. Some volunteers may not be familiar with the use of a mouse, others may be accustomed to a left-handed mouse rather than one that is setup for right-handed users. If your VicTouch station(s) are located in public areas, touch screen monitors are more secure than a computer mouse. This help topic explains the basics about touch screen monitors and provides guidance for choosing a touch screen monitor to use with VicTouch.

## **Where to get a touch screen monitor**

Volgistics does not sell touch screen monitors; however, there are many touch screen monitor vendors around. If your organization has an information services department, they may already have established sources for hardware from which they can purchase a touch screen monitor. You can find touch screen monitor vendors online. If you perform a web search for 'touch screen monitors' you'll find a variety of different vendors.

## **Cost**

Touch screen monitor prices are available online at many of the touch screen monitor vendor's web sites. Prices vary depending on the type and size of monitor you choose, and whether or not the monitor has a PC built into it (your touch screen monitor must either be attached to a PC, or have a PC built-in to it).

## **Resistive touch screens versus capacitive touch screens**

Touch screen monitors come in two varieties, resistive and capacitive. You can use VicTouch with either variety, although capacitive monitors are generally recommended.

Resistive monitors respond to pressure from anything on the screen, but their surfaces are a bit less durable. Capacitive monitors respond only to the touch of an ungloved finger, but are more durable.

With a resistive monitor, you can touch the screen with just about anything: gloved or ungloved fingers, the end of a pen or pencil, the edge of a credit card, and so forth. Choose a resistive monitor only if your VIC workstation will be in a location where arriving and departing volunteers would be wearing gloves.

While capacitive monitors respond only to the touch of an ungloved finger, their surfaces are harder and better suited to the kind of un-attended, high-volume access your VicTouch station may receive.

## **Flat panel versus regular monitor**

Either will work. Flat panel monitors are good if the space for your VicTouch station is limited, and a conventional computer monitor will not fit. Flat panel monitors typically cost more than conventional CRT displays but may last longer and have a sharper image.

## Monitor size

Touch screen monitors come in a variety of screen sizes, from 14 inches to 21 inches, or more. Since VicTouch will work with any size monitor, monitor dimensions are a matter of preference and budget.

---

# How to Sign-in and Sign-out at VicTouch: a Brief Guide for Volunteers

Help topic 1147

Added or revised 03-23-2017

---

*This help topic is intended to help volunteers better understand how to use the VicTouch module.*

VicTouch is a touchscreen based Volunteer Information Center (abbreviated as "Vic") that allows volunteers to check-in and out upon arrival and departure from the facility where you volunteer. Your volunteer service hours are recorded automatically when you sign-in and sign-out so it is important to do this so your organization has an accurate record of your volunteer service.

## **Sign-in For Individuals**

Here are the general steps for checking in at your organization's VicTouch station. Note that many aspects of the check-in sequence are customizable, so the pictures and directions provided may vary from what you will actually see when you sign-in to serve at your organization.

### 1. Enter your volunteer PIN

Each volunteer must have a PIN before he or she can sign-in at VicTouch. How you obtain your PIN is determined by your organization. In many cases they will assign one to you; however, they might ask you to choose your own PIN. Regardless of how you obtain your PIN, it is something you will need to be able to recall in order to sign-in. If you do not know your PIN, please contact the volunteer office at the organization you volunteer with.

To start, enter your PIN by touching the appropriate number buttons on the keypad.

# Volunteer Information Center

Welcome. The Volunteer Information Center is where volunteers check-in and out. If you are ready to check-in or out, enter your PIN to get started.

If you are interested in volunteering, or you have trouble checking-in or out, please contact Linda in Volunteer Services (ext. 302).

## Enter your volunteer PIN number

Enter your volunteer ID number using the keypad buttons, and then touch the Continue button.

1	2	3	
4	5	6	Cancel
7	8	9	← Backspace
*	0	#	Continue

After entering your PIN, touch the **Continue** button.

## 2. Confirm your name

The next screen in the check-in sequence will ask you to confirm your name.

### Is this Jennifer Boston ?

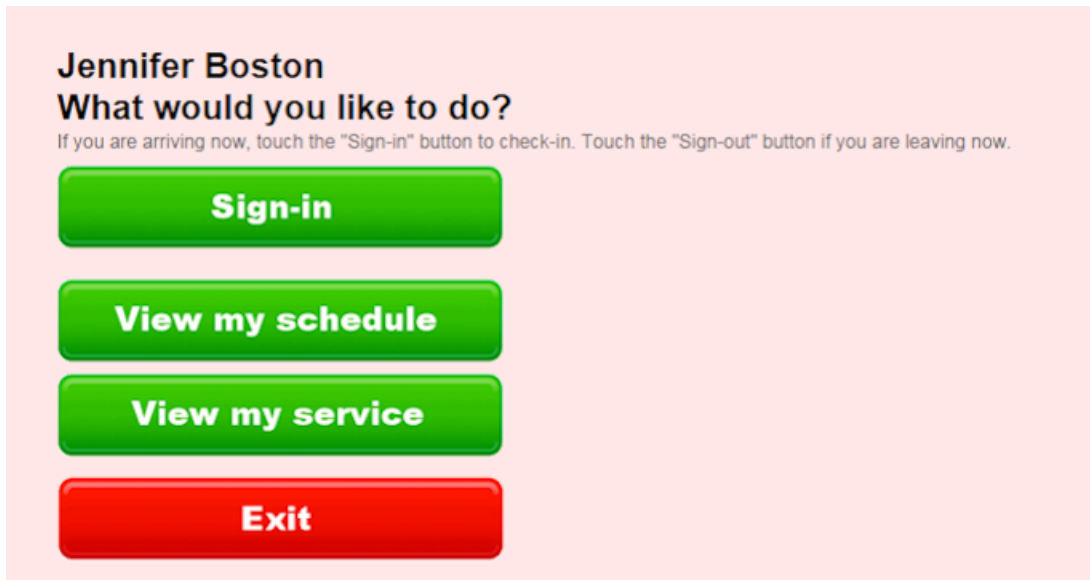

If you're not the volunteer whose name is shown, please press "No" and try to sign-in again. If you need additional help, please contact the Volunteer Services office.

Yes
No

If the screen displays the correct name, touch the **Yes** button. If the name displayed is not yours, touch the **No** button and try again.

## 3. What would you like to do?

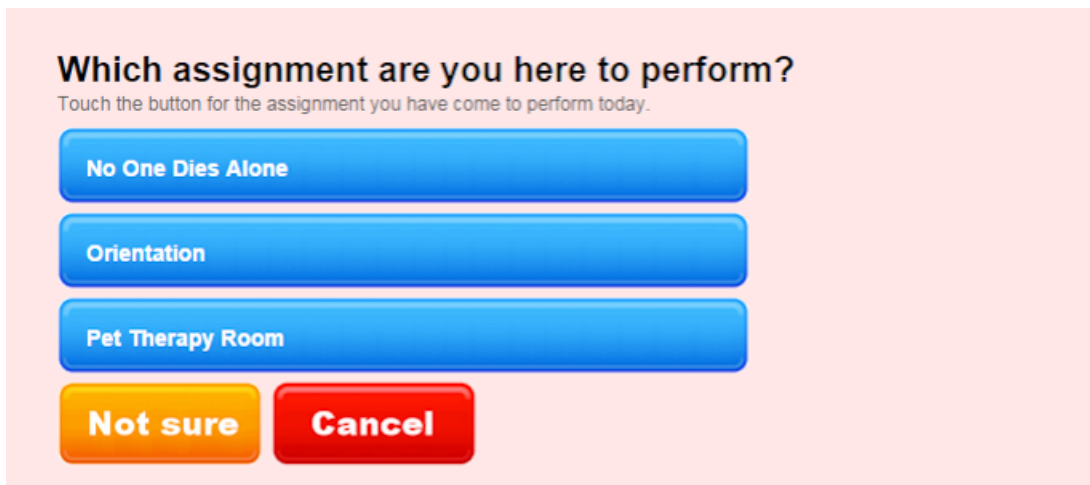

After you confirm your identity, the menu screen will appear and this allows you to choose what you'd like to do. In this case, you are signing-in to begin your shift so touch the **Sign-in** button.

If you are a group leader signing-in for a group, you will be asked how many volunteers are serving in your group. Please see the *Sign-in for Groups* section below for more information.

#### 4. Choose the Assignment you are here to perform

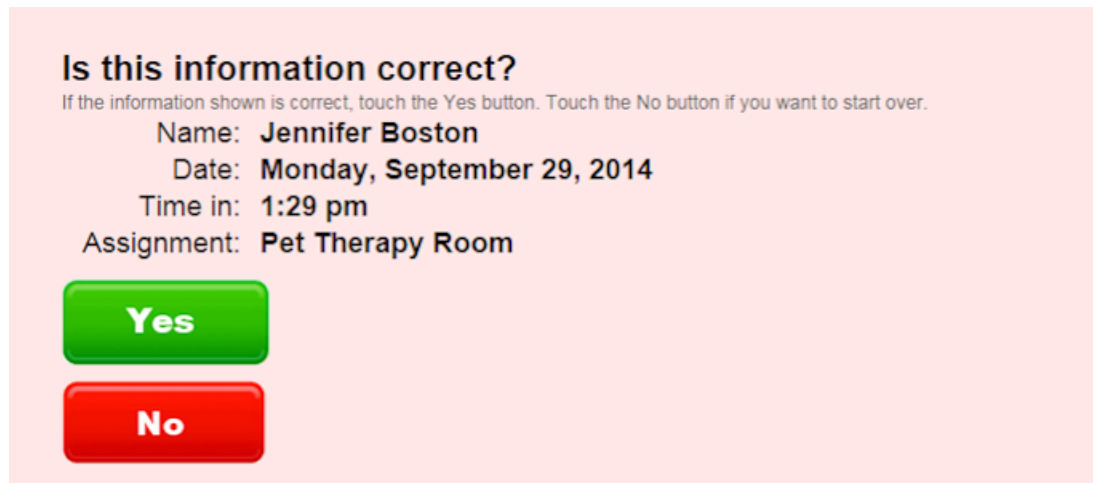

Many, but not all, organizations require volunteers to select the name of the Assignment they are working in as part of the sign-in process. Assignments are usually the job, or task, you will perform as a volunteer. Assignments may also be the name of an event or a department.

If you see this screen, touch the name of the Assignment you are there to perform. Some organizations also include a **Not sure** button that you can select if you're unsure of your Assignment.

## 5. Confirm the sign-in information

As long as you did not select the **Cancel** button, the next screen will ask you to confirm that the information shown is correct. This is important because the name, date, time and Assignment name indicated on this screen will be used to track your service.

**Is this information correct?**  
If the information shown is correct, touch the Yes button. Touch the No button if you want to start over.

Name: **Jennifer Boston**  
Date: **Monday, September 29, 2014**  
Time in: **1:29 pm**  
Assignment: **Pet Therapy Room**

**Yes**

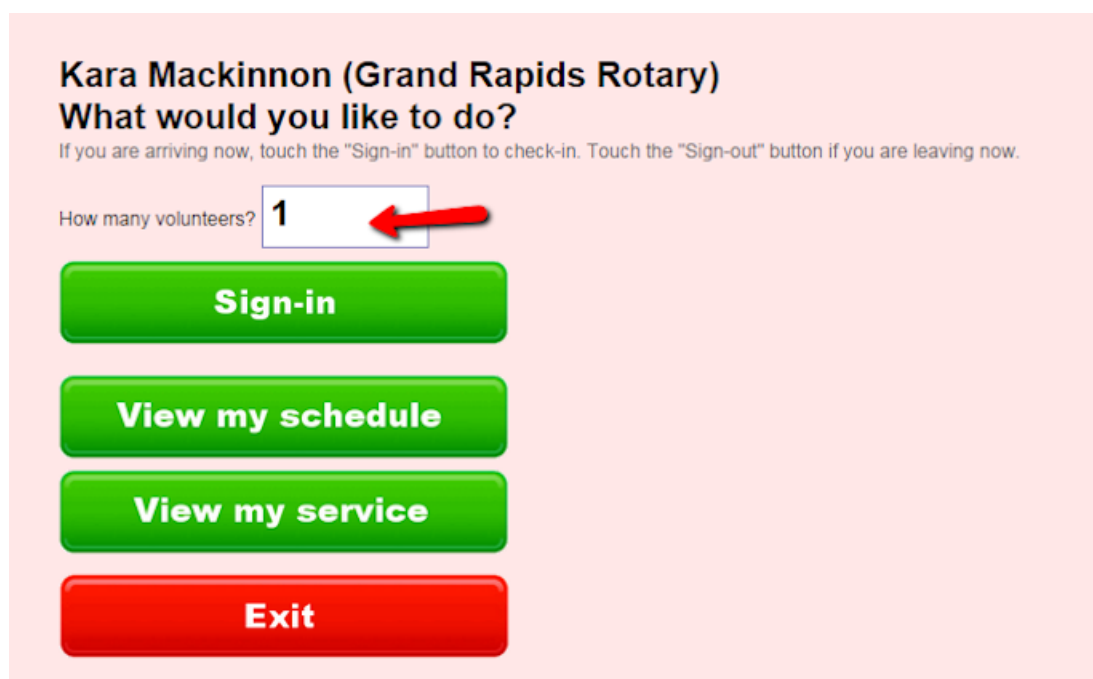

**No**

If the screen displays the correct information, touch the **Yes** button. If the information displayed is not accurate, touch the **No** button and try again.

Once you confirm your selections, you are officially signed in.

## **Sign-in For Groups**

If you are a group leader, the sign-in process will follow the same steps as the sign-in for individuals. The difference is that after you enter your PIN and confirm your identity, you will see a field asking how many volunteers are serving in your group.

**Kara Mackinnon (Grand Rapids Rotary)**  
**What would you like to do?**  
If you are arriving now, touch the "Sign-in" button to check-in. Touch the "Sign-out" button if you are leaving now.

How many volunteers?  ←

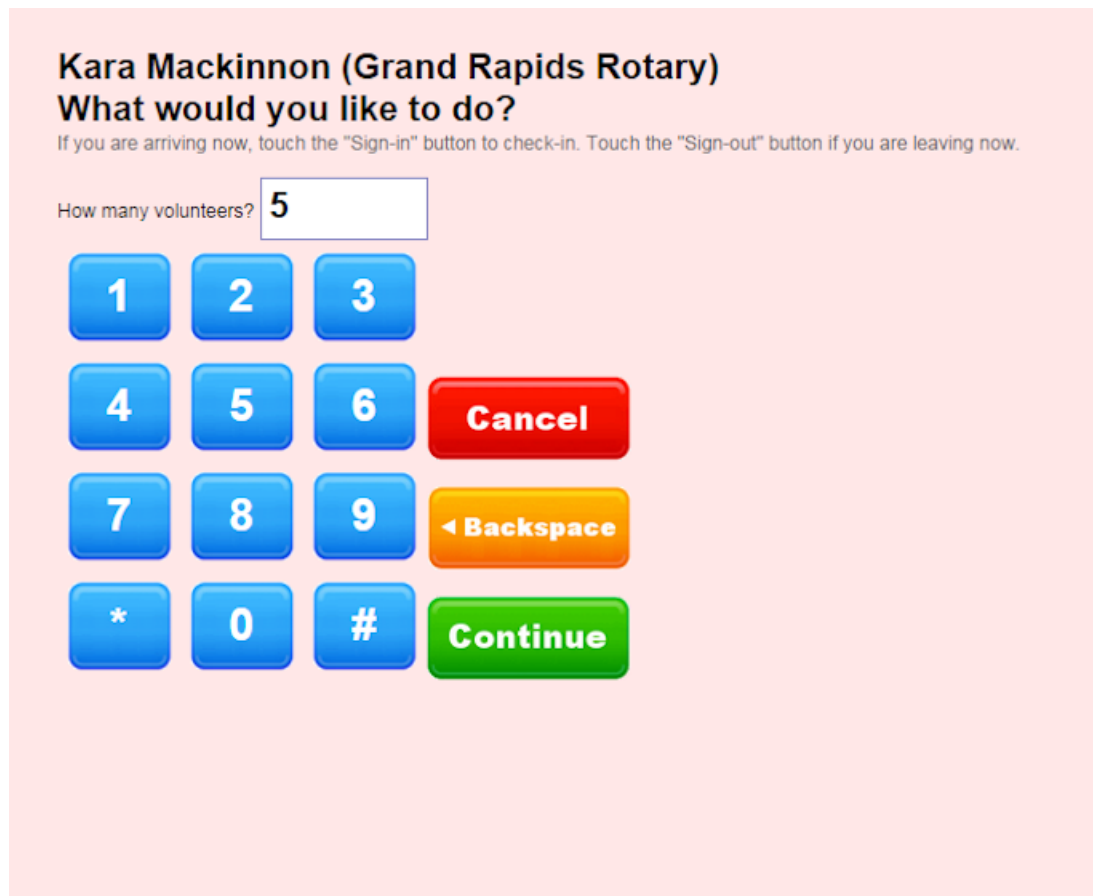

**Sign-in**

**View my schedule**

**View my service**

**Exit**

If the number listed is not correct, touch the *How many volunteers?* field and then use the keypad to enter the number of volunteers in your group today.

Press the **Continue** button when the correct number has been entered, and then continue the sign-in process outlined in the *Sign-in for Individuals* section above.

## Sign-Out

When you have completed your volunteer service, you will need to return to the VicTouch station to sign-out. The system needs both a sign-in and sign-out time to accurately record your hours so remembering to sign-out is very important.

The process for signing out of VicTouch is basically the same as signing in. Enter your PIN, touch the **Continue** button, and confirm your identity. Touch the **Sign-out** button on the menu screen so the system records when you finished serving.

If you are switching Assignments instead of signing-out completely, touch the **Switch assignments** button, and then choose the name of the Assignment you will be performing next.

**Jennifer Boston**  
**What would you like to do?**

If you are arriving now, touch the "Sign-in" button to check-in. Touch the "Sign-out" button if you are leaving now.

**Sign-out**

**Switch assignments**

**View my schedule**

**View my service**

**Exit**

The system will sign you out from the first Assignment and sign you in for the next. After you finish serving for the day, you will still need to sign-out for the Assignment you switched to. *Please note that organizations can choose whether or not the **Switch assignments** button shows so you may not see this option.*

### **Messages and Greeting Cards**

When you sign-in or sign-out, you may see a message from your organization. The message will only appear once and there is not a way to see it again after the first time you view it.

## Mail for Jennifer Boston

Message  
Date: Monday, September 29, 2014  
Subject: New Parking Pass

Hi Jennifer,

Please stop by the volunteer office (room 3029) before you leave today.  
Your new parking pass is ready for you to pick-up.

Thanks,  
Linda Sherman  
Volunteer Services Manager

Touch the Continue button when you have finished reading a mail message.

**Continue**

Your organization may also use VicTouch to send you a card on a special occasion such as your birthday, service anniversary date, or a holiday. You may see cards just once, or for a number of days, depending on your organization's settings for this.

Greetings!

The Volunteer Department wishes all our volunteers a prosperous and happy New Year!

We know your time with family and friends is valuable, so we wish you a special thank you for your volunteer service during this busy holiday season!

Thank you,  
Arnold Cabrera  
Volunteer Services

Touch the Continue button when you have finished reading a mail message.

**Continue**

When you are done viewing the message or card, touch the **Continue** button to go to the next screen. If for some reason you do not see the **Continue** button, don't panic. The system will advance to the next screen after about a minute of inactivity.

## Viewing Schedule and Self-Scheduling

Your organization may have setup their account to allow you to view your schedule and/or self-schedule for new dates. If they allow this, you will see a **View my schedule** button after you enter your PIN and confirm your identify. The current month's schedule will show by default. You can move to the next or the previous month by touching the appropriate button at the top of the screen.

You may also see an **Email me a copy** and/or **Text me a copy** button if your organization has set this up and you have opted to have schedule reminders sent to you. If you touch these buttons, the system will send you a message with the days you are scheduled for in the month you are viewing.

If your organization has setup self-scheduling, you will see a *Help wanted* icon on the calendar on any dates where there are open Assignments you can schedule yourself for.

**Schedule for Jennifer Boston**  
Touch any date to see the schedule for that day.

Calendar navigation: **Sep 2014** | **Nov 2014** | **Email me a copy** | **Finished**

We need volunteers on days that have the Help wanted symbol. Touch any of these days to learn more or to sign-up.

**HELP WANTED**

**October 2014**

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
			1	2	3 <b>HELP WANTED</b>	4 9:30 a to 11:30 a Pet Therapy Room
5 9:30 a to 11:30 a Pet Therapy Room	6 <b>HELP WANTED</b>	7 <b>HELP WANTED</b>	8	9	10 <b>HELP WANTED</b>	11 9:30 a to 11:30 a Pet Therapy Room
12 9:30 a to 11:30 a Pet Therapy Room	13	14	15 <b>HELP WANTED</b>	16	17 <b>HELP WANTED</b>	18 <b>HELP WANTED</b> 9:30 a to 11:30 a Pet Therapy Room
19 <b>HELP WANTED</b> 9:30 a to 11:30 a Pet Therapy Room	20 <b>HELP WANTED</b>	21	22	23	24 <b>HELP WANTED</b>	25 <b>HELP WANTED</b> 9:30 a to 11:30 a Pet Therapy Room
26 9:30 a to 11:30 a Pet Therapy Room	27	28 <b>HELP WANTED</b>	29 <b>HELP WANTED</b>	30 <b>HELP WANTED</b>	31	

Touch a date where the *Help wanted* icon appears to see open assignments and shifts for that date. If you'd like to schedule yourself for a shift, touch the **Schedule me** button beside an opening.

**Schedule for Monday, October 20, 2014**

**Return to calendar** **Finished**

**Openings & scheduled volunteers:**

---

**Pet Therapy Room**

---

2:00 p to 4:00 p      Would you like to serve on this date? Click the Schedule-Me button to schedule yourself here  
1 volunteer still needed

**Schedule me**

---

7:00 p to 9:00 p      Flores, Iva

---

Once you are scheduled, you can also remove yourself from a shift if you cannot make it. To do this, touch the date you're scheduled and then the **Remove me** button.

**Schedule for Monday, October 20, 2014**

**Return to calendar** **Finished**

**Your schedule for this date:**

---

2:00 p to 4:00 p  
Pet Therapy Room [Main Hospital/Rehabilitation]  
Can't serve on this date? Touch the Remove Me button to remove yourself from these times

**Remove me**

---

**Openings & scheduled volunteers:**

---

**Pet Therapy Room**

---

2:00 p to 4:00 p      Boston, Jennifer

---

7:00 p to 9:00 p      Flores, Iva

---

If you do not see a **Remove me** button, it means that your organization does not allow volunteers to remove themselves from shifts, or that it is too close to the date the shift is scheduled to remove yourself. In either case, you will need to contact the organization you volunteer with to let them know you cannot serve the shift you are scheduled for.

When you are done using the schedule page, click the **Finished** button to return to the main menu. *If you are already signed-in but have not served yet, be sure to touch the **Exit** button on the menu page to return the system to the keypad screen. If you have not served but are signed-in, touching the **Sign-out** button will make it so your hours are not accurately recorded!*

### Viewing Service History

Your organization may allow you to use VicTouch to view information about your volunteer service such as the hours you served in a certain year, your start date, your lifetime service hours, and totals for other service measures they record. If they have set this up, you will see a **View my service** button after you enter your PIN and confirm your identity. The first screen you see will show your service totals collapsed by year.

## Service history for Jennifer Boston

## Does VicTouch count as a system operator?

Help topic 1161

Added or revised 2-14-2008

---

No, using VicTouch will *not* impact the number of system operators available in an account. While you must enter an existing system operator's credentials to start VicTouch, this process does not log that system operator into Volgistics; it simply confirms that the user is authorized to start VicTouch. Therefore, that system operator is not prevented from using Volgistics at other computers while VicTouch is running. Note that organizations can run VicTouch at as many different computer stations as they would like.

---

## Getting Started with VicTouch

Help topic 1184

Added or revised 03-02-2017

---

[VicTouch \[pg:1778\]](#) is an optional module that can be used in conjunction with Volgistics to allow volunteers to interact with the system to track service, receive messages, and manage schedules at VicTouch workstations at your volunteer office or service site.

The Volgistics system itself provides powerful volunteer tracking capabilities with or without use of the optional VicTouch (and [VicNet \[pg:1724\]](#)) modules. It is up to an organization to determine whether VicTouch will be useful for their specific purposes. For example, organizations where volunteers serve in a central location would have reason to implement VicTouch, whereas VicTouch may not lend itself to organizations where volunteer service is performed off-site or at various locations because it would not be feasible for volunteers to check-in and out at centrally located Internet-connected workstations.

If an organization decides that VicTouch is something they would like to utilize, [Administrators \[pg:0052\]](#) have significant control over how - and by whom - the module is used.

### Setting up VicTouch

#### **Step 1. Choose which volunteers should be allowed to use VicTouch**

It often makes sense for only certain volunteers to be able to use VicTouch. For example, perhaps volunteers with the [Active Status \[pg:1832\]](#) should be able to use VicTouch, but volunteers with the *Inactive* Status should not. Administrators can customize the Status(es) volunteers must have in order to use VicTouch on the [VicTouch Ground Rules \[pg:1511\]](#) page.

#### **Step 2. Choose which Assignment buttons should appear when a volunteer checks in**

When a volunteer goes to check-in for service at the VicTouch station, they can optionally be required to choose the [Assignment \[pg:0096\]](#) they are there to perform. The VicTouch Check-in Sequence [Assignment Selection Screen setup page \[pg:1515\]](#) is where an Administrator decides whether or not volunteers should indicate their Assignment when they sign-in at VicTouch.

Once the checkbox stating that volunteers should indicate their Assignment at VicTouch is marked, Administrators can choose which Assignment buttons are displayed as possible choices for the volunteer. For example, all active Assignments, or the volunteer's Assignments when the volunteer has a particular [Role \[pg:0103\]](#), or one of several Roles, in the Assignment.

In addition to any Assignments selected on this page, buttons will also always appear for any Assignment with the "Sign-in option" [\[pg:1761\]](#) box checked on the Assignment record.

### Step 3. Enable message delivery at VicTouch

Organizations can send [Vic mail \[pg:0315\]](#) messages so volunteers see the message when they sign-in or sign-out at the VicTouch station. The Administrator should make sure this feature is enabled on the [VicTouch Mail Screen setup page \[pg:1510\]](#) in order to be able to do this.

### Step 4. Optionally setup Greeting Cards

You can setup the system to automatically display a message to the volunteer when they sign-in around their birthday or service anniversary. Messages can also be setup to offer holiday greetings. There are spots for two holidays, but you can update the messages throughout the year if you want to note more than two holidays. You can find directions on how to setup this feature in [help topic 2326 \[pg:1776\]](#).

### Step 5. Setup the VicTouch station

For the most safe and secure VicTouch experience, you must launch the module in kiosk mode. Kiosk mode basically causes the module's display to fill the entire monitor screen, and it eliminates the web browser controls and URL address.

The reason this is important is it prevents volunteers (or others) from shutting down the module, navigating to other web sites, or copying your account's VicTouch URL address. The last reason is particularly important because if people copy the URL address they could start VicTouch anywhere--and then sign-in and out as if they were at your facility.

Traditionally, VicTouch is designed to be used on a desktop computer running the Microsoft Windows operating system. The computer should be dedicated to just being used for VicTouch, and should have a [touchscreen monitor \[pg:1744\]](#) attached for user input (the keyboard and mouse controls are removed). If you go with the traditional route, the computer you use does not need to be the latest greatest model in terms of things such as processing speed, memory, graphics, etc. because the computer will only be performing one task. The main thing it needs are a reliable and secure Internet connection, and a supported operating system (Windows 7 or 10 at this point).

If you go with the traditional route, you can find information on how to setup the computer in [help topic 8271 \[pg:1527\]](#). If your IT department is setting up the computer for you, they will need to contact you for information from your account in some of the steps.

With the growing popularity of mobile devices such as tablets, we have seen a movement toward using these devices as sign-in stations instead of the traditional desktop computer with a touchscreen. This is perfectly acceptable, but there is not a built-in way to launch VicTouch in kiosk mode in most cases. This means you could have security risks to consider.

Apple tablets have a feature called Guided Access that can be used to emulate kiosk mode to give a safe and reliable experience. You can learn how to use this in [help topic 8269 \[pg:1792\]](#).

To our knowledge, Android tablets do not have a similar feature, but you can purchase apps to launch the web browser (and VicTouch) in kiosk mode. Be sure to get an app that allows you to hide the website address if you are concerned about this being exposed to users. You can learn how to start VicTouch from the tablet's web browser in [help topic 1203 \[pg:1933\]](#), but it will be up to you to follow the instructions from the app's producers to enable kiosk mode.

**Please note:**

Having multiple VicTouch stations is completely acceptable. The cost to use VicTouch that is part of your account's [service level \[pg:0719\]](#) is the same whether you have one station or one hundred. No additional licensing is required to add additional sign-in stations. If an organization wants to use more than one workstation for VicTouch, they should just follow the setup procedures for each VicTouch station.

**Special Circumstances**

The guidelines for setting up the VicTouch stations outlined above are the recommendations for giving the most secure and reliable experience for situations where the station is unattended. Organizations are free to modify their usage based on their circumstances. For example, using a computer with a mouse instead of a touchscreen monitor, or not launching in kiosk mode if someone will be monitoring the station. It is up to you to assess your organization's needs and decide if the risks of using VicTouch like this are acceptable.

**How Volunteers Use VicTouch**

Once you have your account configured and the VicTouch stations setup, volunteers can start using VicTouch as a time clock to record their hours. In order to use the time clock function, volunteers must sign in to VicTouch with their [volunteer PIN \[pg:1856\]](#). Each volunteer's PIN is unique and can be found in the Number field on the [Core tab \[pg:1868\]](#) of the volunteer's record. PINs are assigned by Volgistics each time a new volunteer record is added to the system. You can control how the system selects the number as shown in [help topic 2247 \[pg:1015\]](#).

If a volunteer has a hard time remembering his number, you can go to the Core tab of the volunteer's record and change the number to be something different. If the number you select is already in use, you will be prompted to select a different number.

**Bailey, George**

The screenshot shows a user interface for a volunteer record. At the top, there are tabs for Core, Profile, Service, Schedule, History, Contacts, Notes, Vic, and Docs. Below the tabs are buttons for Save, Cancel, Archive, Delete, Combine, New, Previous, and Next. There is also a 'Tagged' checkbox and a 'Copy' icon. The main form area is titled 'Name' and contains several fields: Last name: Bailey, First name: George, Middle name: (empty), Title: (dropdown), Number: 1946, Status: Active (dropdown), and Type: Adult (dropdown). A red arrow points to the Number field.

One option to let the volunteers know their PIN is to send them an email message that contains the PIN. For example, you can send a message letting volunteers know they will need to sign-in at the VicTouch station and place the code

**[[number]]**

in the body of the message where you want the PIN to appear. The system will replace the code with each recipient's PIN. You can find more information on using email codes in messages in [help topic 2103 \[pg:0386\]](#).

You may also want to include a link to [help topic 1147 \[pg:1745\]](#) in your email message because it shows volunteers how to use VicTouch. If you want to link to the written help topic, use this URL address:  
<https://www.volgistics.com/ex/Help.dll?ACT=21&HID=&TOPIC=1147>

If you want to link to the video tutorial for the help topic, use this URL address:  
<https://www.volgistics.com/Videos/HT1147.htm>

Another option to get volunteers started is to hold an orientation or training. If you do this, the video tutorial mentioned above is a great resource to show at the training.

Some organizations also like to print a [Volunteer List report \[pg:0692\]](#) containing volunteer names and PINs. This list would be a convenient reference to have on-hand when telling volunteers what their PIN is. Each organization may have different needs regarding whether or not PINs should be private. If there is not a need for privacy, the list could be left by the sign-in station. If more privacy is required, the list could be left with a person stationed by the sign-in station.

To create such a list:

1. Choose Print from the menu.
2. Click on Volunteer list.
3. Click on the *Create a new volunteer list report* link.
4. On the Options tab, select how you would like the report to be sorted.
5. On the Fields tab, select the name field(s) that should be displayed on the report and check the box next to *Number*.
6. You can give the report a title and set the formatting for PDF reports on the *Page Design* tab.
7. On the Include tab, choose the format you want for the report. You can optionally select to include just certain volunteers on the report such as those with the Active [Status \[pg:1832\]](#).
8. On the Save tab, give the report a new name so you can find it to run again when new volunteers are added. When you're ready, click the **Save and Print** button.
9. When the Include tab appears again, click the **Start printing** button.

## **How VicTouch is Helpful for Volgistics System Operators**

VicTouch's time clock feature automatically creates a service entry on the volunteer's [Service tab \[pg:1581\]](#) once a volunteer has checked out. As long as a volunteer was required to touch an Assignment button as part of the check-in process, their hours will be associated with that Assignment. Once the hours are recorded, the service information is available to include in reports such as the [Service Detail \[pg:0560\]](#) or [Service Summary \[pg:0580\]](#) reports.

VicTouch is also connected to the [Who's Here \[pg:1772\]](#) feature, which allows System Operators to see which volunteers are currently checked-in, were previously checked-in, and are scheduled to serve on the current date. It also optionally shows the current date's unfilled [schedule openings \[pg:0776\]](#). If a volunteer forgot to sign-in when they arrived, but signs-in before they leave, a System Operator can adjust the volunteer's arrival time from the Who's Here page so that the volunteer's time is recorded correctly when they sign-out.

Administrators can control what happens if volunteers forget to sign-out at the bottom of the [VicTouch Ground Rules \[pg:1511\]](#) page. They can select to have the entry [audited \[pg:1415\]](#), how many hours must pass before the automatic sign-out occurs, and how many hours are given for the entry when an automatic sign-out takes place.

System Operators can also see who was here on a certain date in the past by using the [Volunteer service details \(stock\) \[pg:0612\]](#) report located under the *Service Detail* reports. When you run the report, just select *These* days and select the specific date you want the report to cover from the dropdown lists.

## Using VicTouch for groups

Help topic 1212

Added or revised 05-13-2016

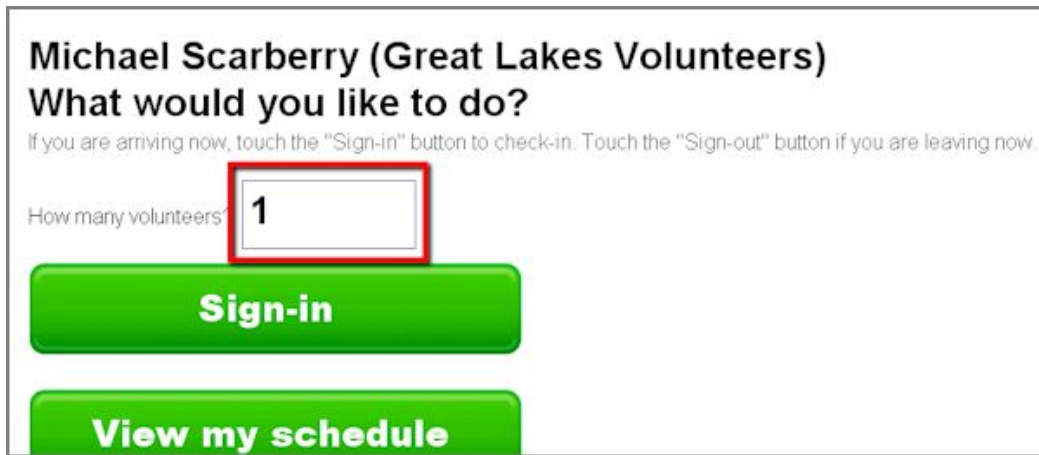

---

If you use [VicTouch \[pg:1778\]](#) and you track [volunteer groups \[pg:1909\]](#) in Volgistics, group contacts can sign-in to VicTouch when their group serves. If you would like to allow groups to sign-in to VicTouch, you should make sure this feature is enabled. [Help topic 1211 \[pg:1508\]](#) explains how to do this.

Group leaders will enter the PIN from the group record to sign in to VicTouch. The PIN can be found on the [Vic tab \[pg:1810\]](#) of the group's record. Because you do not track the individual group members when you use group records, we recommend only giving the PIN to the group's leader (or a few selected individuals). This is because only one person will be able to sign-in to VicTouch for the group.

When you allow groups to enter the number of volunteers who serve, the sign-in process will work similar to the process for individuals until they get to the menu screen where volunteers select what action they would like to perform. At this point, the groups will see a an extra field where they can enter the number of volunteers serving:

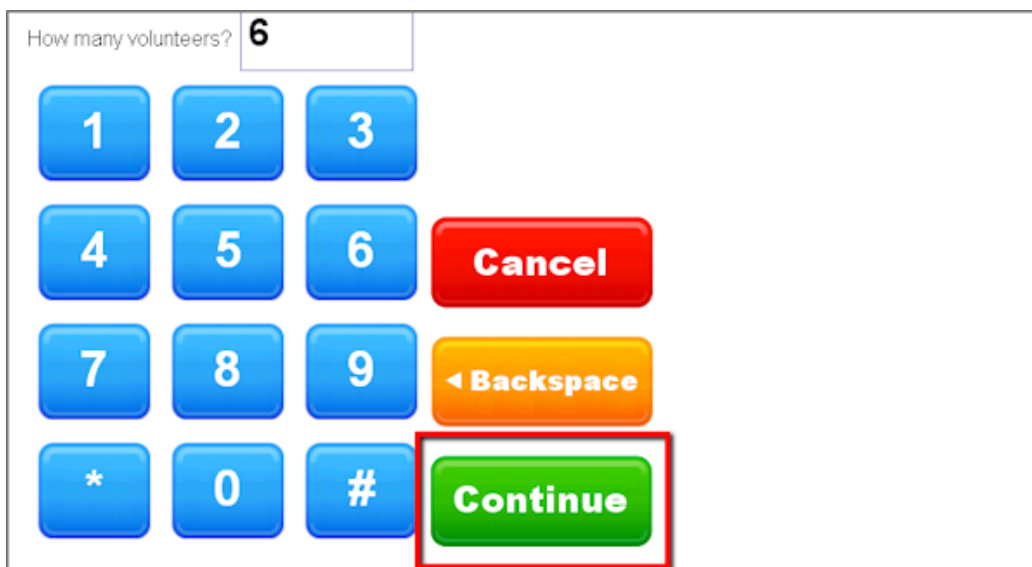

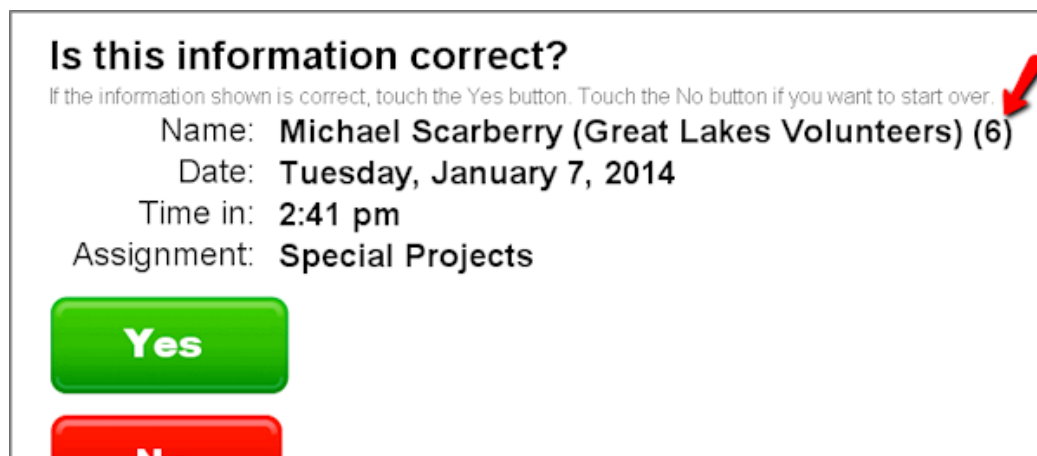

This field will default to whatever is recorded as the default value for the Volunteers field used for service entries on group records. If no default value is entered, it will default to one (1). To setup a default value for the Volunteers field:

1. Select [Setup \[pg:0887\]](#) from the [menu \[pg:0215\]](#).
2. Expand the *Field options* link.
3. Select *Service tab*.
4. Select *Volunteers*.
5. Enter a number in the *Default entry* field.
6. Click the **Save** button.

If the group leader needs to enter a different value for the number of volunteers serving, they should touch the field shown above and then use the keypad to enter the number of volunteers. After they are done, they will need to touch the **Continue** button.

They can then touch the **Sign-in** button to continue the sign-in process. When they get to the confirmation screen, the number of volunteers entered will appear in parentheses behind the leader and group names.

**Is this information correct?**  
If the information shown is correct, touch the Yes button. Touch the No button if you want to start over.

Name: **Michael Scarberry (Great Lakes Volunteers) (6)**  
Date: **Tuesday, January 7, 2014**  
Time in: **2:41 pm**  
Assignment: **Special Projects**

**Yes**  
**No**

If volunteers arrive (or depart) while the group is serving and the group is still signed-in to VicTouch, the number of volunteers can be updated in two different ways. A [System Operator \[pg:0065\]](#) can go to the [Who's Here \[pg:1772\]](#) page to edit the number of volunteers. Or, the group leader can enter their PIN at VicTouch, confirm their identity, and then touch the *Change number of volunteers?* field. After they use the keypad to enter the updated number of volunteers, they will need to click the **Continue** button to save the change.

When the group is done serving, they will enter their PIN and then touch the **Sign-out** button to complete the service entry.

[Help Topic 1147 \[pg:1745\]](#) - How to Sign-in and Sign-out at VicTouch: A Brief Guide for Volunteers

[Help Topic 1184 \[pg:1755\]](#) - Getting Started with VicTouch

---

## **Why do volunteers always see a button for a certain assignment at VicTouch?**

Help topic 2225

Added or revised 10-04-2016

---

You can optionally make assignment buttons appear for selected assignments that all volunteers will see when they sign-in at VicTouch, even if these assignments do not appear on their [Service tab \[pg:0138\]](#).

To make an assignment button appear at VicTouch for all volunteers:

1. Choose Assignments from the [menu \[pg:0215\]](#).
2. Select the Assignment you want to appear as an assignment option for all volunteers.
3. On the Assignment tab, check the *Sign-in option* checkbox.

Assignment   Coordinators   Profile   Description   Volunteers   Schedule   Rules

Save   Cancel   Combine, move or delete

**Name**

Site: Main Hospital  
Place: Info Desk

Assignment: North Lobby Desk

Cluster: i Information & Reception Desks ▾

Status: Active ▾ i  Advertise i  Sign-in option i  Schedule reminders i

4. Click the **Save** button.

To stop an assignment button from appearing at VicTouch for all volunteers:

1. Choose Assignments from the [menu \[pg:0215\]](#).
2. Select the Assignment for which you want to stop a button from appearing at VicTouch.
3. On the Assignment tab, un-check the "Sign-in option" checkbox.
4. Click the **Save** button.

Note that volunteers may continue to see a button for this assignment **if** they have a [Role \[pg:0103\]](#) in the assignment and you select to have assignments with that Role display on the [assignment selection screen \[pg:1515\]](#) setup page.

## Related help

# Shutting Down VicTouch

Help topic 2283

Added or revised 04-13-2015

By design there is not an obvious way to stop the [VicTouch module \[pg:1778\]](#), such as a **Close** or **Cancel** button. And if you operate VicTouch in [kiosk mode \[pg:1765\]](#) as recommended, you will not see the usual web browser controls for closing the browser. This is by design because it prevents people from exiting VicTouch without authorization (normally, you'll want to leave VicTouch running all the time). If you want to stop VicTouch from running on a VicTouch workstation, you enter a special exit code that will shut down the system.

To shut down VicTouch:

1. Use the same buttons volunteers use to enter their PIN to enter the VicTouch exit code. By default, the exit code is the pound or number sign (#) followed by 99.

# Enter your volunteer PIN number

Enter your volunteer ID number using the keypad buttons, and then touch the Continue button.

<input type="button" value="1"/>	<input type="button" value="2"/>	<input type="button" value="3"/>	
<input type="button" value="4"/>	<input type="button" value="5"/>	<input type="button" value="6"/>	<input type="button" value="Cancel"/>
<input type="button" value="7"/>	<input type="button" value="8"/>	<input type="button" value="9"/>	<input type="button" value="← Backspace"/>
<input type="button" value="*"/>	<input type="button" value="0"/>	<input type="button" value="#"/>	<input type="button" value="Continue"/>

Please note that this code can be updated for security purposes. To do this, select [Setup \[pg:0887\]](#) from the menu, expand the *VicTouch* link, select *Ground rules*, and go to the *Exit code* field.

2. Touch the **Continue** button after you enter your VicTouch exit code.

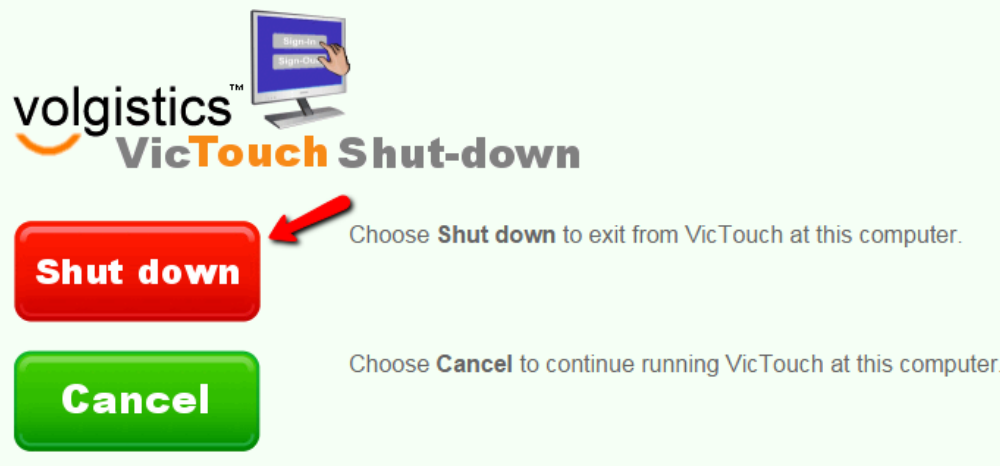

# Enter your volunteer PIN number

Enter your volunteer ID number using the keypad buttons, and then touch the Continue button.

#99

3. On the VicTouch Shut-down page, touch the **Shut down** button to stop VicTouch at this computer, or touch the **Cancel** button to continue running VicTouch.

---

## VicTouch desktop shortcuts

Help topic 2289

Added or revised 12-16-2016

---

You may want to setup your [VicTouch \[pg:1778\]](#) computer (or computers) so the VicTouch module can be started without anyone having to enter Volgistics login credentials. You can do this by creating desktop shortcut(s) that contain the full URL for your account's specific VicTouch portal.

This kind of desktop shortcut is useful if you want to add VicTouch to the computer's Windows *Startup* folder so VicTouch will start automatically anytime the computer is restarted, ready for volunteer interaction.

To provide a secure work station, VicTouch must be used in kiosk mode. Kiosk mode makes VicTouch fill the entire computer monitor and removes the usual browser controls – including the menu and tool bars – from view. Currently only Windows Internet Explorer 11 and Google Chrome web browsers come with the option to launch a web page in kiosk mode already available. For this reason VicTouch is only supported for Internet Explorer Version 11 and Google Chrome.

Internet Explorer is available free from Microsoft for Windows, and Chrome is available free from Google for Windows, Mac, or Linux. If you would like to use VicTouch with a mobile device, like Apple's iPad, please see [help topic 8269 "Using Apple's Guided Access for VicTouch" \[pg:1792\]](#).

In Section 2, choose the directions for the web browser you're using with your VicTouch work stations.

### Section 1 - Setup VicTouch so it does not require login credentials and copy the URL address

If you are setting up multiple VicTouch sign-in stations, you will only need to complete Section 1 once.

1. Login to Volgistics normally.
2. Choose Setup from the [menu \[pg:0215\]](#).
3. Select VicTouch.
4. Select Ground Rules.
5. Locate the "Startup" section pictured here:

**Startup**

Always require login credentials for VicTouch startup

Your public account identifier is: **101**

Your VicTouch access code is:

Use this URL in your desktop shortcut to VicTouch:

<https://www.volgistics.com/ex/touch.dll/?FROM=101&PW=502394297>

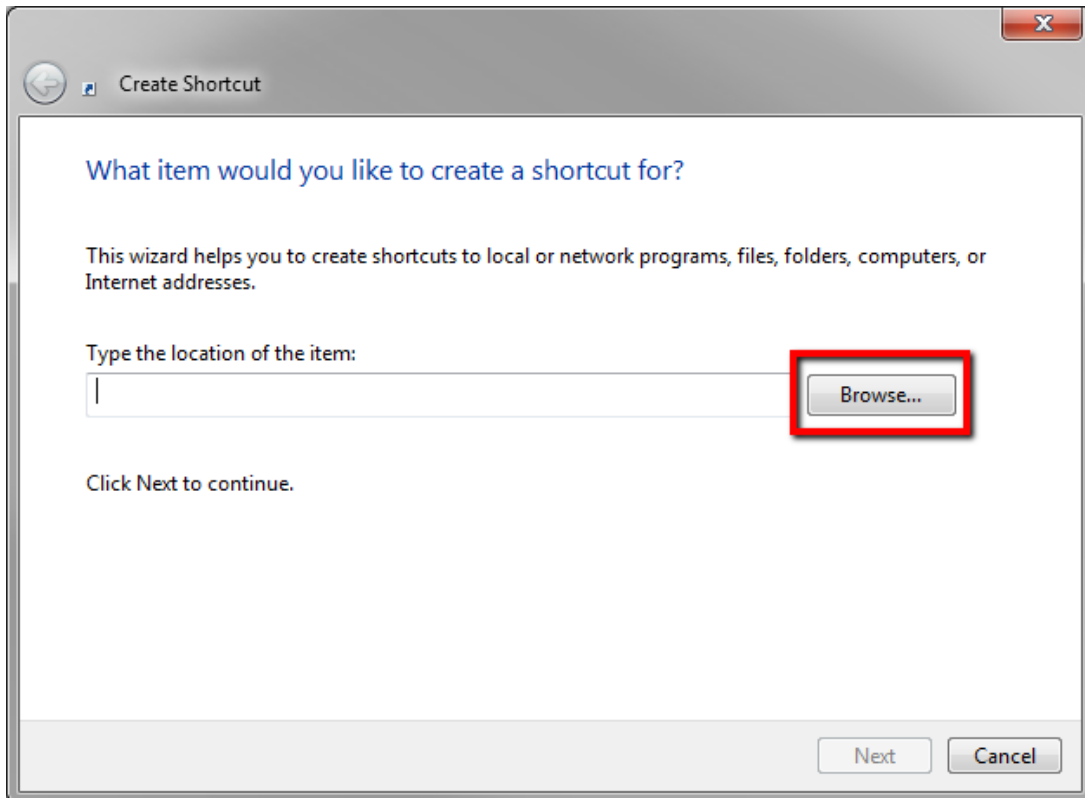

6. Be sure the *Always require login credentials for VicTouch startup* checkbox is not checked.
7. Copy the VicTouch URL (the long string of red text) to your Clipboard by highlighting the text and pressing the "Control" and "C" keys on your keyboard at the same time. You'll need this in Section 2.
8. If you've made any changes, click the **Save** button.
9. If you are working at the computer where you'll be setting up the shortcut, select Exit from the menu and close the web browser window.

Now you have the information you'll need to create a VicTouch shortcut that will launch VicTouch without anyone having to enter account credentials.

## Section 2A - Create a desktop shortcut for launching VicTouch in Internet Explorer

Follow these steps to create a desktop shortcut that will start VicTouch in Internet Explorer's kiosk mode. If you're using Google Chrome, follow the steps in Section 2B instead of these.

1. Right-click an open area on the desktop, point to New, and click Shortcut. This opens the 'Create Shortcut' window shown here:

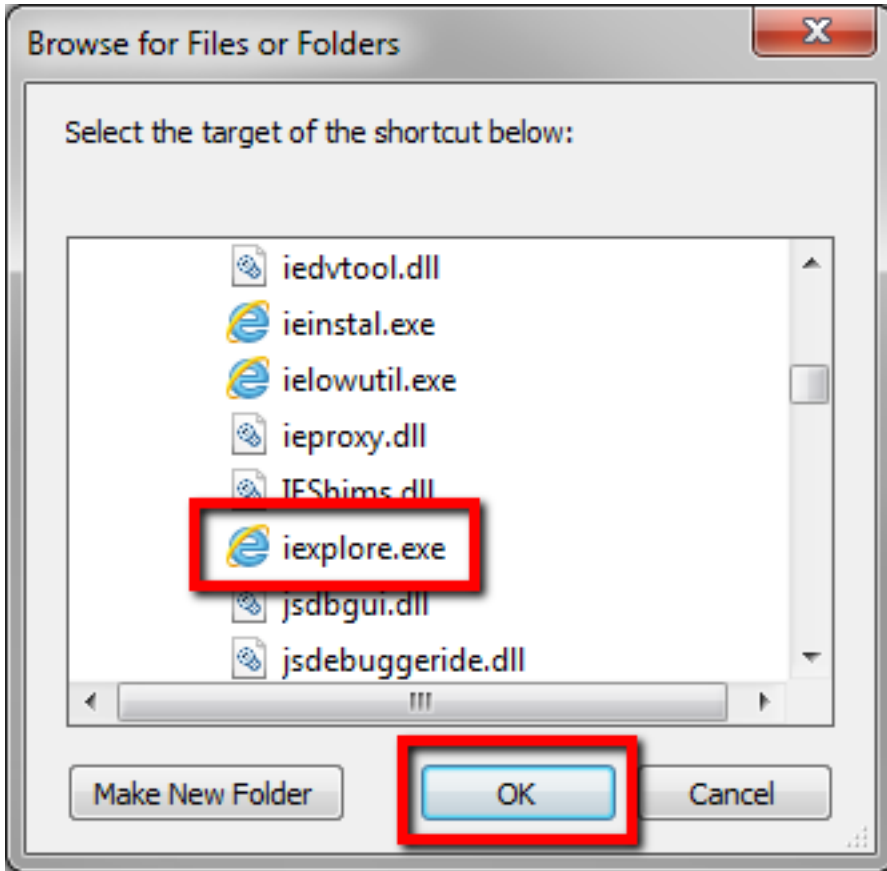

2. Click the Browse button and then navigate to the location of the Internet Explorer program file (iexplore.exe). The Internet Explorer program file is usually located at:

C:\Program Files\Internet Explorer\iexplore.exe

-OR-

C:\Program Files (x86)\Internet Explorer\iexplore.exe

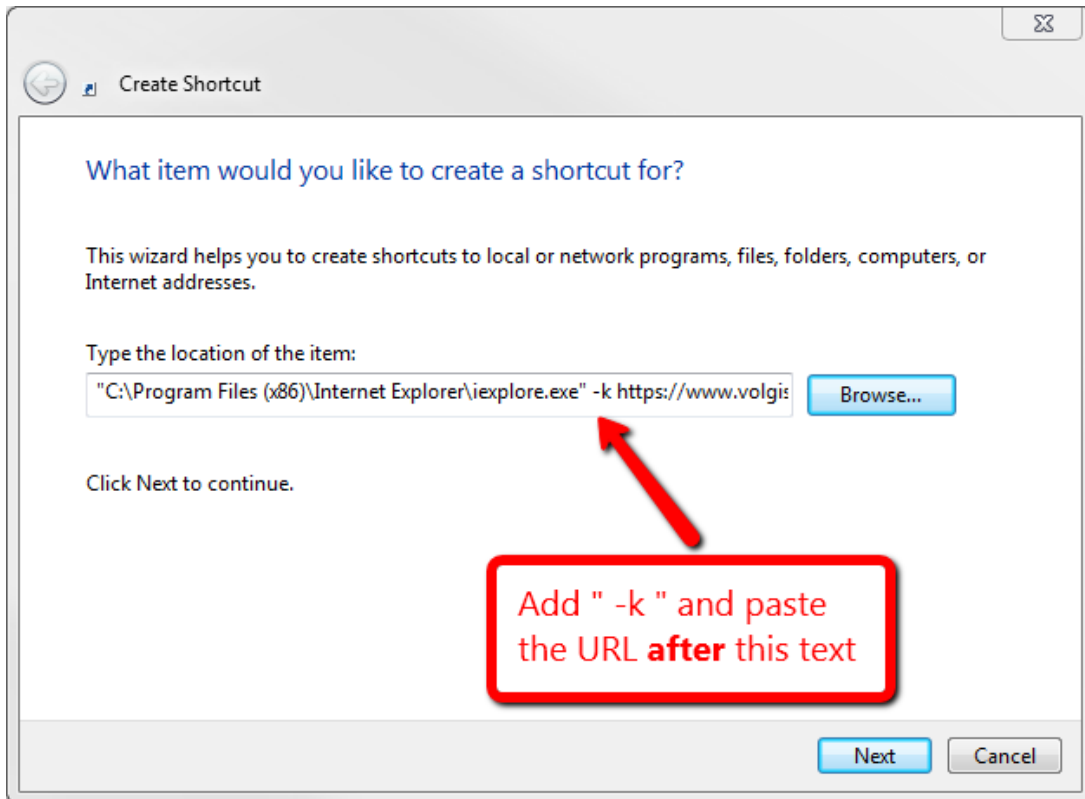

3. Once you've located the Internet Explorer program file (iexplore.exe), click on the name of the file and then the OK button.

4. Before clicking the **Next** button, add **-k** (with a space before and after) after the iexplore.exe file name, and then paste your VicTouch URL after this. You can do this by right-clicking after "k " and selecting **Paste** from the pop-up menu.

The VicTouch URL should be on your computer's Clipboard already from Section 1. If it is not, complete the steps from Section 1 and then begin Section 2A over again. If the path to the iexplore.exe file name appears inside quote characters, enter this text after the closing quote character.

5. Click the **Next** button.

6. Enter "VicTouch" in the Name field.

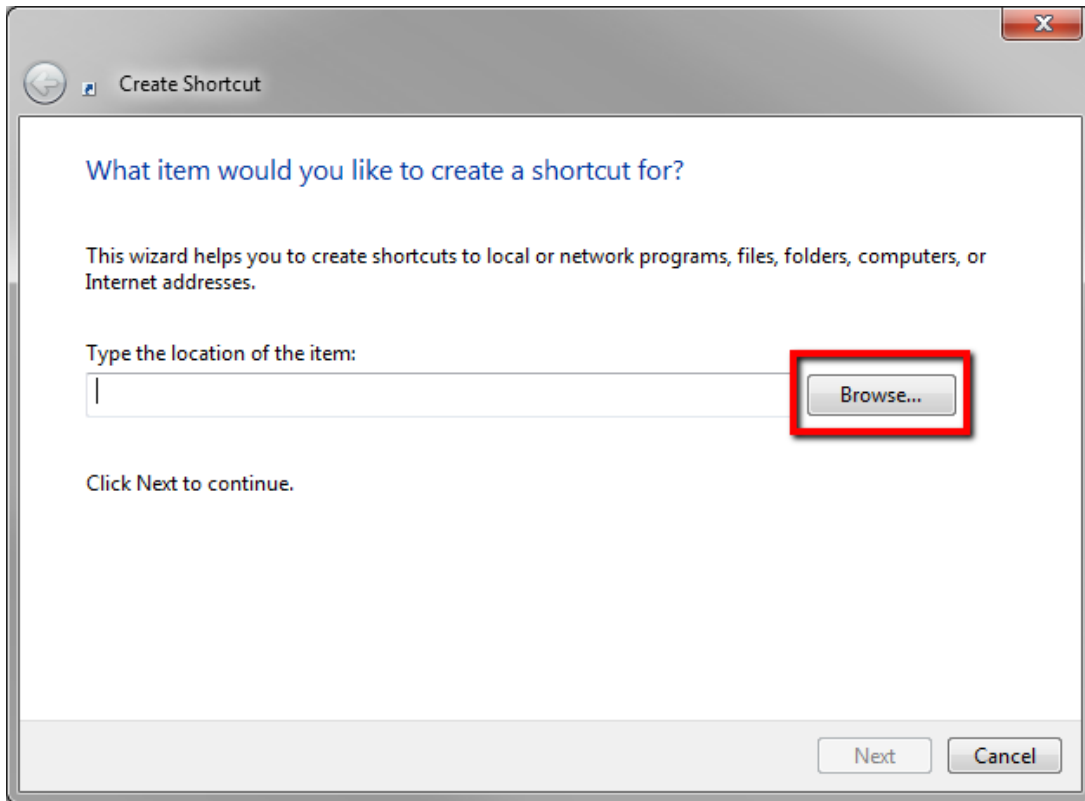

7. Click the **Finished** button.

To launch VicTouch in Kiosk mode, simply double click the VicTouch shortcut you just created. For directions on how to shut down the module, please see [help topic 2283 \[pg:1762\]](#).

## **Section 2B - Create a desktop shortcut for launching VicTouch in Chrome**

Follow these steps to create a desktop shortcut that will start VicTouch in Google Chrome's kiosk mode. If you're using Internet Explorer, follow the steps in Section 2A instead of these.

1. Right-click an open area on the desktop, point to New, and click Shortcut. This opens the 'Create Shortcut' window shown here:

2. Click the **Browse** button and then navigate to the location of the Chrome program file (chrome.exe). The Chrome program file is usually located at:

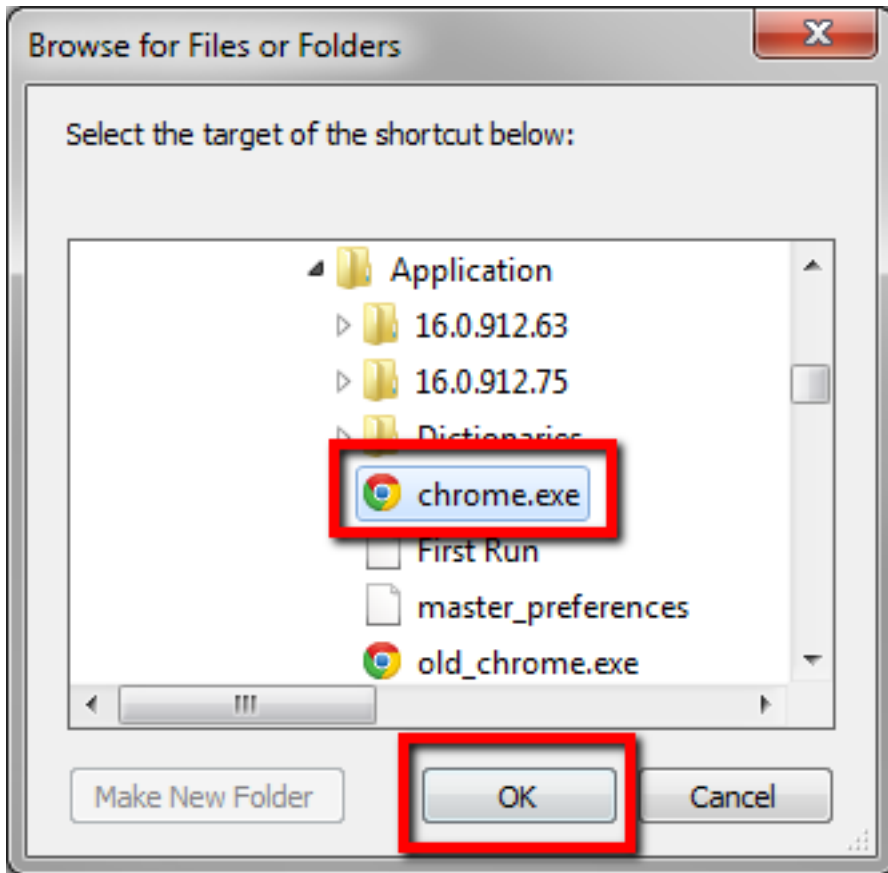

C:\Documents and Settings\{UserName}\Local Settings\Application Data\Google\Chrome\Application

-OR-

C:\Users\{UserName}\App Data\Local\Google\Chrome\Application

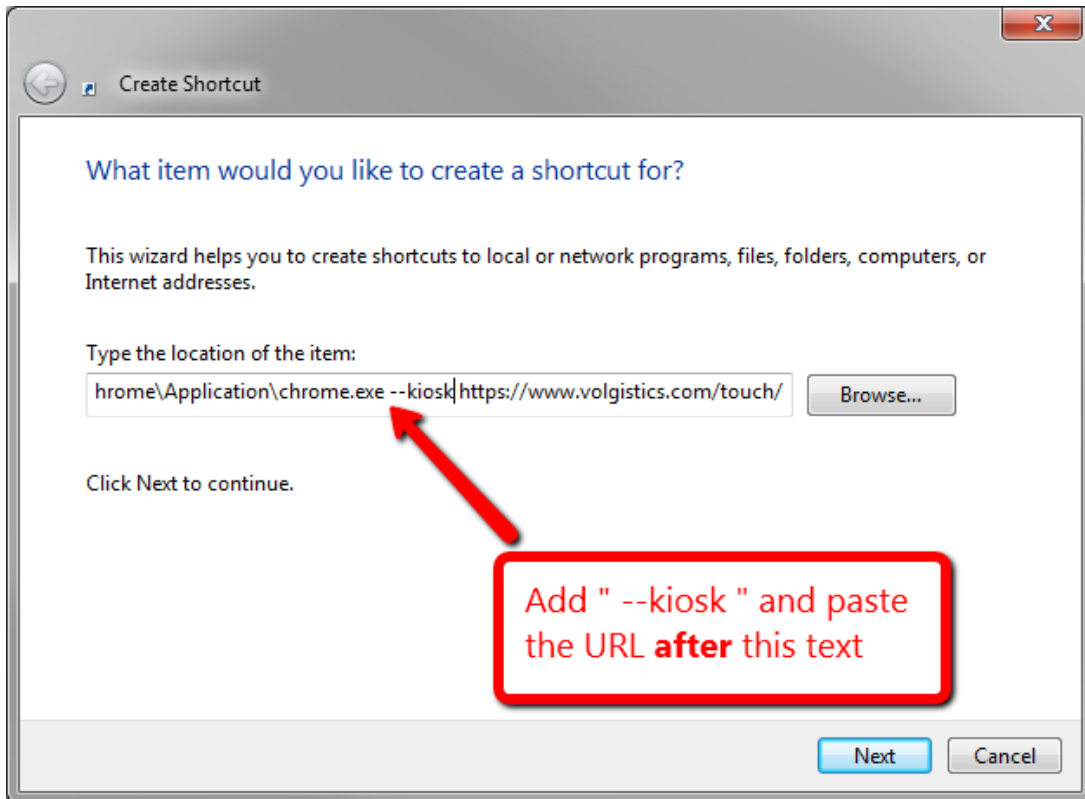

Replace {UserName} with the user name that was used to install Chrome.

3. Once you've located the Chrome program file (chrome.exe), click on the name of the file and then the **OK** button.

4. *Before* clicking the **Next** button, add `--kiosk` (with a space before and after) after the `chrome.exe` file name, and then paste your VicTouch URL after this. You can do this by right-clicking after "kiosk " and selecting **Paste** from the pop-up menu.

The VicTouch URL should be on your computer's Clipboard already from Section 1. If it is not, complete the steps from Section 1 and then begin Section 2B over again. If the path to the `chrome.exe` file name appears inside quote characters, enter this text after the closing quote character.

5. Click the **Next** button.
6. Enter "VicTouch" in the Name field.
7. Click the **Finished** button.

To launch VicTouch in Kiosk mode, simply double click the VicTouch shortcut you just created. For directions on how to shut down the module, please see [help topic 2283 \[pg:1762\]](#).

### Section 3 - Configuring VicTouch to launch during Windows Startup

After completing the sections above, the computer can optionally be configured to launch VicTouch automatically when the VicTouch computer is turned on or restarted.

Complete the following steps at the VicTouch computer for each VicTouch station you want to start automatically when the computer is turned on or restarted.

1. If VicTouch is running, shut-down VicTouch so you see the Windows desktop. Please see [help topic 2283 \[pg:1762\]](#) for help on this if you need it.
2. Right-click on the VicTouch shortcut icon you created and choose **Copy** from the pop-up menu.
3. Click the **Start** button and choose **Programs** or **All Programs**
4. Right-click on the **Startup** folder, and choose **Paste** from the pop-up menu

Now when the computer is restarted, VicTouch will be launched automatically.

## Section 4 - Troubleshooting

If you find that you still need to enter your account credentials when you start VicTouch from this shortcut, repeat the sections listed above. In Section 1, make sure the *Always require login credentials for VicTouch startup* checkbox is not checked and you click the **Save** button before exiting the page.

If you choose to enter your account's URL address by typing it in, make sure you enter the address exactly as it is shown on the VicTouch Ground Rules page. Check to be certain you have entered your public account identifier (not your Volgistics account number) and VicTouch access code exactly as they appear. Also be sure you've entered the question mark (?), and ampersand (&) characters. A simple mistake in the way you type the link will cause it to fail. To prevent errors in entering the information, we recommend that you copy and paste the URL address as shown in Section 1 of this help topic. This will help eliminate many minor typographical errors.

---

## Who's Here

Help topic 2307

Added or revised 07-13-2016

---

The "Who's Here" page works in combination with [VicTouch \[pg:1778\]](#). It shows you a real-time list of the volunteers who have signed-in so far today, and which assignment they have come to perform. Who's Here is an excellent tool for monitoring who is on-site in organizations where volunteers serve primarily at one or several fixed locations.

### Setup Access to Who's Here

You access Who's Here from within Volgistics. Any Volgistics system operator may be given access to the Who's Here page. The Who's Here page is not currently available to Coordinators or Volunteers through [VicNet \[pg:1724\]](#) or VicTouch.

To setup a Volgistics System Operator so they can – or cannot - access the Who's Here page:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "System Operators."
3. Click on the name of a System Operator.
4. On the [System Operator page \[pg:1433\]](#), under "This operator may have access to..." check "Who's Here" if you want the selected System Operator to have access to the Who's Here page. Uncheck "Who's Here" if you do not want the selected System Operator to have access to the Who's Here page.
5. Click the **Save** button.

### Using Who's Here

To open the Who's Here page, simply choose "Who's Here" from the Volgistics [menu \[pg:0215\]](#).

## Who's Here

1:24 pm

	Tag	Volunteer	Assignment	Time In	Time Out

	<input type="checkbox"/>			11:00 am		

You can leave the Who's Here page open (or open it in a full page mode as described in the *Full page* section below) to monitor volunteer arrivals and departures. The Who's Here page automatically updates once every minute so you'll see volunteer arrivals and departures in real time without having to refresh the page manually. If you want to force the page to refresh now, click the **Refresh** button in the lower right hand corner. Otherwise the page will refresh itself automatically every sixty seconds.

If you'd like to go directly to a volunteer's record from the Who's Here page, you can click on the name of the volunteer. You can also [tag \[pg:1529\]](#) volunteer records to use the tags feature to [work with a group \[pg:1530\]](#) of records. **Please note:** It is not possible to go to a volunteer's record or tag a volunteer record when the Who's Here page appears in full page view as described in the *Full page* section below.

### Options

The Who's Here page always lists the volunteers who are currently signed-in. The words "Here now:" appear next to each volunteer on the list currently signed-in. You can customize the page settings to show other options by clicking the **Settings** button in the lower right hand corner. This opens an *Options* window where you can customize your page view. When you're done making changes, click the **Save these Settings** button to keep your page setup. To hide the *Options* window, click the **Hide Settings** button.

3 Volunteers here now  
1 Volunteers signed out

[Help](#)

---

**Options:**

Include:

Who was here

Scheduled volunteers

Schedule openings

Include Site and Place names

Include nicknames

Sort by:

Volunteer

Assignment

Time

Exit to a full page display

### Include

Who was here. If you want the Who's Here page to include volunteers who signed-in earlier today and who since signed-out, check the "Who was here" checkbox. Uncheck the "Who was here" checkbox if you do not want the list to include volunteers who were signed-in earlier today. If you include them, these volunteers appear on the list with the words "Signed-out" next to their name.

Scheduled volunteers. If you want the Who's Here page to include volunteers who are scheduled for today, check the "Scheduled volunteers" checkbox. Uncheck the "Scheduled volunteers" checkbox if you do not want the list to include volunteers scheduled for today. If you include them, scheduled volunteers appear on the list with an icon by their name to show how they were scheduled. See the picture below for more information.

Schedule openings. If you want the Who's Here page to include unfilled [schedule openings \[pg:0776\]](#) for today, check the "Schedule openings" checkbox. Uncheck the "Schedule openings" checkbox if you don't want the list to include today's schedule openings. If you include them, schedule openings appear on the list with an icon by the entry. See the picture below for more information.

#### *Schedule Icons*

- Unfilled schedule opening
- Filled schedule opening
- Scheduled volunteer (who does not fill an opening)

### Include Site and Place names.

If you want the Who's Here page to list the Site and Place the Assignment falls under, check the "Include Site and Place names" checkbox. Uncheck the "Include Site and Place names" checkbox if you want the Assignment names to appear without the Site and Place information. If you include them, the Site and Place will appear in brackets behind the Assignment's name. See [Help topic 2099 \[pg:0096\]](#) if you need more information on how Sites, Places and Assignments are setup.

### Include nicknames.

If you want the Who's Here page to list the information in the volunteer's Nickname field (from the [Core tab \[pg:1868\]](#)), check the "Include nicknames" checkbox. Uncheck the "Include nicknames" checkbox if you do not want the volunteer's Nickname field to appear. If information is entered in the nickname field, it will appear behind the volunteer's name. For example, if a volunteer named *Theodore Smith* has *Teddy* entered in the Nickname field, his name will now appear as *Theodore Smith ("Teddy")*. If no information is entered in the Nickname field, only the volunteer's first and last names will appear.

### Sort by

Use the Sort by options to change the way the Who's Here list is sorted. Choosing "Volunteer" sorts the list alphabetically by the volunteer's last name; choosing "Assignment" sorts the list alphabetically by Assignment name; and choosing "Time" sorts the list according to time-in.

### **Editing service records through Who's Here**

You can use the Who's Here page to make changes to volunteer time-in, time-out, assignment and group size selections. This is useful in situations where volunteers signed-in later than when they actually arrived, chose the wrong assignment, forgot to sign-out, or had volunteers join or leave the group while they were serving.

To edit an entry for a volunteer who is currently signed-in; or for a volunteer who has already signed-out today; click the Edit link next to their name. This opens the entry in an edit box like the one shown here:

Here now:	Blackport, Henry	Coordinator and Chairperson	9:13 am	Edit	
Here Now:					
Volunteer: Binkman, Sara					
Time in:	9	:	14	am	Add Current Time
Time out:		:		am	Add Current Time
Assignment:	Room Visitor [Great Lakes Community Hospital\South Campus]				
				Save	Cancel
Here now:	Jeter, Susan	Parking Lot Clean-up	10:13 am	Edit	

Use the "Time-in," "Time-out," "Assignment," and "Group Size" fields to make any changes you'd like. The "Group Size" field will only appear if you have setup VicTouch to accept [group \[pg:1909\]](#) sign-in and the field being edited is a group record. [Help topic 1212 \[pg:1759\]](#) explains more.

You can click the

### **Add Current Time**

button to insert the present time into the "Time-in" or "Time-out" fields. This time is taken from the local computer that is being used to edit the service entry so it may appear different than the sign-in and sign-out times set by the default time settings for your account. [Help topic 2111 \[pg:1383\]](#) explains more about where to find and set the default time setting for your account. Click the **Save** button to save your changes. Click the **Cancel** button to close the edit box without saving any changes.

If a volunteer is currently signed-in, and they indicate that they actually arrived earlier than when they signed-in (for example, they may have forgotten to sign-in initially), you can optionally use the edit box to change their Time-in to the earlier time. In this case you would leave the Time-out field blank. The volunteer will still be signed-in, and their time-out will be recorded as usual when the volunteer later signs-out at VicTouch.

If a volunteer is currently shown to be "Here now," but you determine that they have actually left and forgotten to sign-out, you can optionally use the edit box to sign them out and record their time-out. Simply enter what you've determined to be their actual time-out in the "Time-out" field. This will cause their hours to be recorded for the times indicated, as if they had signed-out at VicTouch regularly. Note that if volunteers forget to sign-out, VicTouch will eventually sign them out automatically, according to the way you've configured your system. Help topic [2214 \[pg:1511\]](#) explains this automatic sign-out process further.

### **Full page**

While you're working in Volgistics, you can view the Who's Here page anytime you want to see who has signed-in or out simply by choosing Who's Here from the menu. If you want to leave the Who's Here page running on your desktop, or display it on a wall-mounted monitor, you can switch to a full page display by clicking the **Full page** button.

When you click the **Full page** button, you will exit from your current Volgistics session, however the Who's Here page will continue to run, and it will fill your entire browser window.

If you'd like to leave the Who's Here page running in a browser window on your computer desktop continuously, and use Volgistics at the same time, click the **Full page** button, open a new browser window (or frame), and then login to Volgistics again normally. You'll have Who's Here running in one window and Volgistics in another.

### **Current time**

The Who's Here page displays the current time for the time zone selected for your Volgistics System Operator profile. If the time that appears on the Who's Here page is not the correct time for your time zone, you (or your organization's [Volgistics Administrator \[pg:0052\]](#)) should update the time zone setting for your System Operator profile. [Help topic 2111 \[pg:1383\]](#) explains how to do this.

---

## **Greeting Cards**

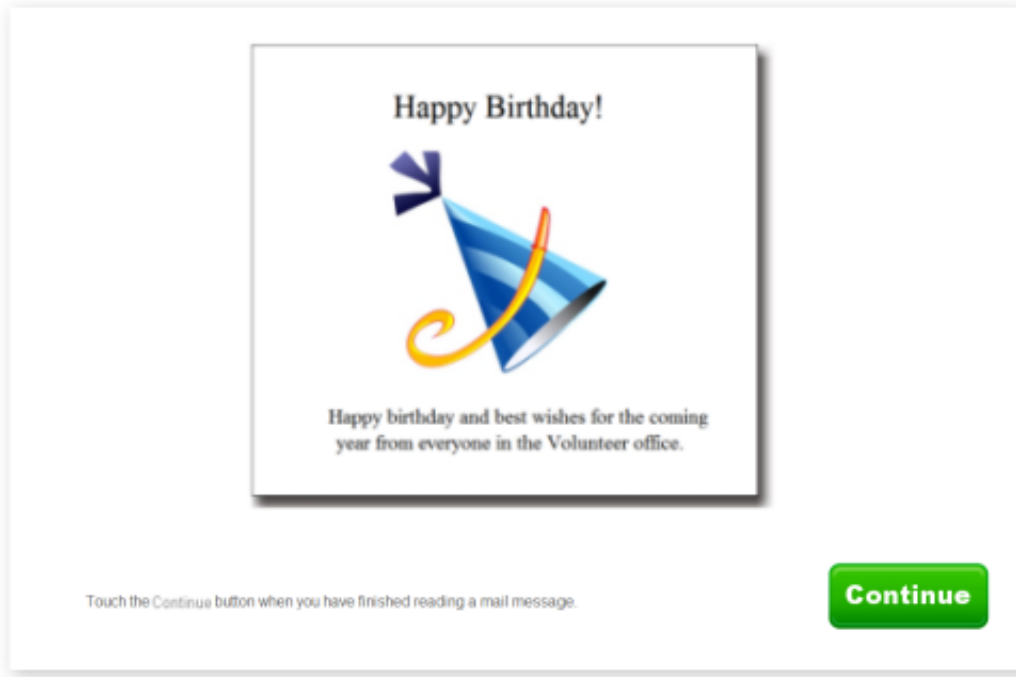

Help topic 2326

Added or revised 10-26-2007

---

If you use the [VicTouch \[pg:1778\]](#) module you can optionally deliver electronic greeting cards to volunteers as they check-in. This is a friendly way to wish volunteers a 'happy birthday' or to pass along a holiday greeting. Volunteers receive your greeting cards when they check-in on the days you've scheduled greeting cards to be delivered.

A sample 'Happy Birthday' card is shown here.

Greeting cards come with several stock images. You can either use these stock greeting card images, or upload your own greeting card graphics.

You can setup Volgistics to deliver the following types of greeting cards:

#### Birthday greetings

Electronic birthday cards may be delivered automatically on or around a volunteer's birthday. A volunteer must have (at least) a month and day of birth entered in the 'Date of birth' field on their Profile tab in order to receive a birthday card.

#### Start date anniversary cards

Electronic "Start date anniversary" cards may be delivered automatically on or around the anniversary of each volunteer's [start date \[pg:1890\]](#) to acknowledge another year of volunteer service.

#### Holiday cards

You can send holiday cards for specific date ranges that you specify. For example, you could post a 'Happy New Years' greeting the last week of December.

### **How to setup greeting card delivery**

If you have access to the Setup page you can setup VicTouch greeting card delivery like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'VicTouch.'
3. Select 'Greeting Cards.'

4. Follow the instructions in [help topic 2327 \[pg:1520\]](#) to setup greeting card delivery.

---

## VicTouch

Help topic 3021

Added or revised 05-16-2016

---

VicTouch is the optional Volgistics module used to provide interactive onsite touchscreen kiosks for volunteers. Among other features, VicTouch provides a time-clock function volunteers can use to check in and out when they arrive and depart.

VicTouch kiosks are ideal for organizations where volunteers serve primarily on-site at a specific facility or campus. If this describes your organization - and you track volunteer hours - VicTouch is a great solution. It can eliminate manual record keeping for service hours altogether, and give you a precise record of which volunteers were onsite, and when.

### Why Is It Called VicTouch?

*Vic* stands for *Volunteer Information Center* and *Touch* is how you access the module (through a touchscreen). Thus the name *VicTouch*.

There is also a module called *VicNet*. Don't confuse VicTouch with VicNet. [VicNet \[pg:1724\]](#) is used to give volunteers and [Coordinators \[pg:0163\]](#) a way to interact with Volgistics system via the Internet. While the main purpose of *VicTouch* is to serve as a time clock at your facility.

You don't need to use VicTouch to use Volgistics. If your volunteer program is less centralized – or you don't want to use interactive kiosks – simply use Volgistics without the optional VicTouch module (you can still collect and track volunteer hours in Volgistics without VicTouch).

A volunteer must be in your Volgistics database before they can use VicTouch.

This help topic explains more about what equipment you need for VicTouch, how VicTouch is set up, what volunteers see when they use VicTouch, and other information about the module. You can click on a link in the *Contents* box below to go directly to a section of the help topic.

## Shutting Down VicTouch

## Let's Review

### Try It Out

#### What You Need to Use VicTouch

VicTouch is designed for use at a computer that has a touchscreen monitor attached to it. [Touchscreen monitors \[pg:1744\]](#) enable volunteers to interact without having to use a keyboard or a mouse so they're great even for people who are not familiar with computers. It has a very simple, intuitive interface so just about anyone with very basic English skills can use the system.

While VicTouch is designed to work at a touchscreen equipped computer, you can run VicTouch at a computer with a regular monitor for testing or evaluation purposes. When you run VicTouch at a computer with a regular monitor, you interact using your mouse rather than touching the screen as you would if a touchscreen monitor were attached.

The computer(s) you use to run VicTouch must have an Internet connection. Like Volgistics, VicTouch is a hosted application that uses the Internet to connect to your Volgistics database. As long as your VicTouch computer has a connection to the Internet, it does not need to be connected to your organization's internal network (except if the route to the Internet is through your internal network).

You can run VicTouch at as many locations as you'd like, as long as each station has a PC with an Internet connection. If you have more than one VicTouch station, Volunteers can sign-in at one station, and sign-out at another. The monthly [service fee \[pg:0710\]](#) for VicTouch is the same no matter how many stations are set up.

Kiosks, or specially built cabinets or pedestals used to hold the touchscreen monitor and the PC it is attached to, are not required for the VicTouch station, but they do offer a good degree of security when the station is located in an unattended public area. When a kiosk is not used, VicTouch workstations are often located at information desks, on a counter in the volunteer office, or on tables or shelves near the location(s) where volunteers arrive and depart. In some installations where security is a concern, the VicTouch computer and monitor are secured to a counter or desktop with security cables, or placed inside small, vented PC cabinets instead of inside a kiosk.

#### **Can I Use a Tablet for VicTouch?**

With the growing popularity of touchscreen tablets, many organizations are opting to use these devices for VicTouch instead of computers with touchscreen monitors. VicTouch can be launched on any device with a reliable Internet connection so this is perfectly fine. The main concerns regarding tablets revolve around security. Because tablets are small and portable, you should consider the security of the actual device itself. Also, for secure and reliable operation, we recommend that VicTouch is launched in kiosk mode to restrict the user to just the VicTouch module. This may be more complicated on a tablet. Please see the Kiosk Mode for Tablets box

[below for more information.](#)  
**Set Up a VicTouch Computer**

For security and reliability, we recommend setting up the web browser you use for VicTouch to launch in *kiosk mode*. Kiosk mode displays VicTouch without any of the typical operating system controls, such as borders, title bars, menus, and tool bars. Removing these controls prevents users from going to other web sites, or easily closing the browser window.

Microsoft Internet Explorer and Google Chrome both have built-in kiosk mode options so these are the web browsers we recommend and support for VicTouch. [Help topic 2289 \[pg:1765\]](#) explains how to configure Internet Explorer or Chrome to launch VicTouch in kiosk mode. You may be able to use other web browsers instead of Internet Explorer or Chrome if you purchase software to enable the browser to display in kiosk mode.

Setting up the computer to use VicTouch may also require additional steps. Please follow the directions in [help topic 8271 \[pg:1527\]](#) to ensure your computer is correctly set up for VicTouch.

## Kiosk Mode for Tablets

Most tablets use different web browser software than desktop computers. So you may, or may not, be able to launch VicTouch in kiosk mode through the web browser. Apple devices come with a feature called *Guided Access* that can be used to emulate kiosk mode. [Help topic 8269 \[pg:1792\]](#) has instructions on how to use this feature with VicTouch. Other tablets may have features similar to this. You will need to ask the retailer or manufacturer of the tablet if something like this is offered with their product. If a built-in feature is not available, we recommend using a third party app on the tablet so VicTouch is displayed in kiosk mode.

**Please note that we do not endorse or support any specific tablet or related software (such as an app).** It is up to you to research, purchase, and set up any tablet used for VicTouch, along with any kiosk software that may be needed.

Even with kiosk mode turned on, it's a good idea for you, or your organization's IT department, to "lock down" your VicTouch computer or device, especially if it's located in a public area. Locking-down a computer prevents people from accessing your network or changing the way the computer or device is set up. The specific steps for "locking down" a computer or device vary with different operating systems, devices, and network configurations--so providing instructions on how to do this is beyond the scope of this help topic. However, your organization's IT department or computer support person should be able to do this.

### **How VicTouch Works**

You can customize many VicTouch features, such as adding your own logo graphic; customizing the instructions on each screen; and tailoring the way volunteers choose the assignment they have come to perform. Here's what a *typical* sign-in process might look to a volunteer.

## Sign-in for Individuals

First, volunteers enter their PIN (you can learn more about volunteer PIN's in [help topic 2152 \[pg:1856\]](#)).

# Volunteer Information Center

Welcome. The Volunteer Information Center is where volunteers check-in and out. If you are ready to check-in or out, enter your PIN to get started.

If you are interested in volunteering, or you have trouble checking-in or out, please contact Linda in Volunteer Services (ext. 302).

## Enter your volunteer PIN number

Enter your volunteer ID number using the keypad buttons, and then touch the Continue button.

1	2	3	
4	5	6	Cancel
7	8	9	← Backspace
*	0	#	Continue

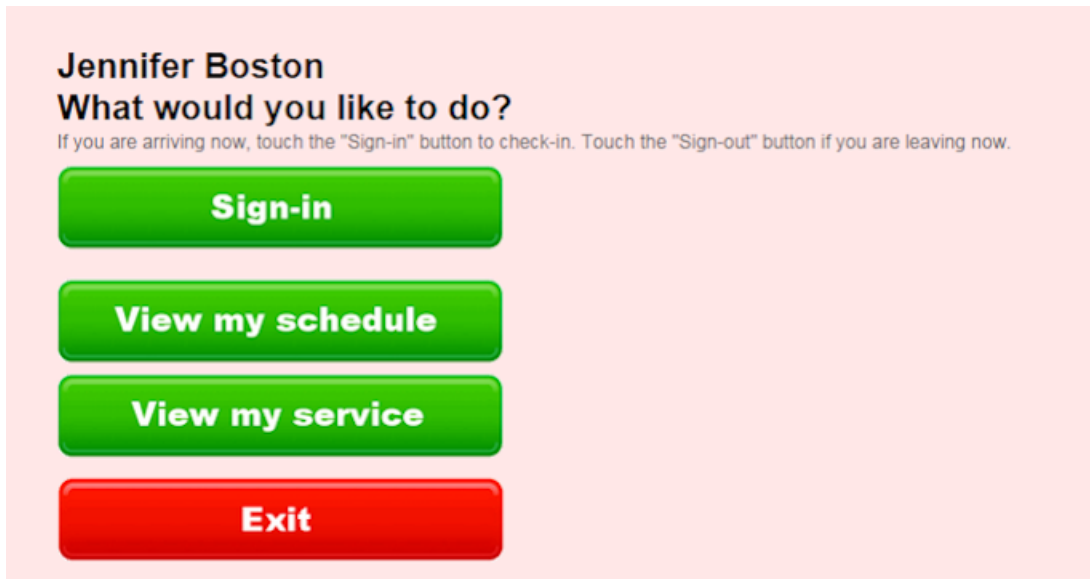

Next the volunteer will be prompted to verify if they have the correct record. If they made a mistake entering their PIN, they can press the **No** button to cancel the sign-in process.

## Is this Jennifer Boston ?

If you're not the volunteer whose name is shown, please press "No" and try to sign-in again. If you need additional help, please contact the Volunteer Services office.

Yes
No

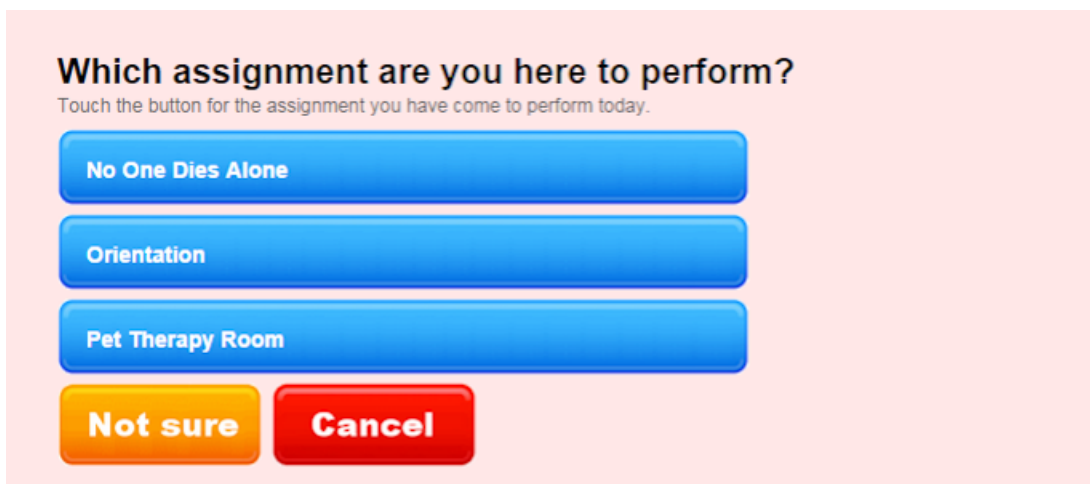

Once the volunteer confirms his or her identity, they press the **Sign-in** button to continue with the sign-in process.

If your account is set up to ask volunteers to choose the assignment they are serving in, they will see a screen asking them to choose their assignment. You can opt to include a

#### **Not sure**

button for volunteers who do not know their assignment. You can also customize which assignments appear for the volunteer to choose from. [Help topic 2224 \[pg:1515\]](#) explains how to select the options volunteers see on this page.

After the volunteer makes their selection, a confirmation screen appears in case they have made a mistake during sign-in.

## Is this information correct?

If the information shown is correct, touch the Yes button. Touch the No button if you want to start over.

Name: **Jennifer Boston**

Date: **Monday, September 29, 2014**

Time in: **1:29 pm**

Assignment: **Pet Therapy Room**

Yes

No

Once they confirm their selections, a volunteer is officially signed-in. Volunteers should sign-out at VicTouch using a similar procedure at the end of their duty.

You can quickly see the volunteers who have completed the sign-in process by going to the *Who's Here* page in your account. You can learn more about this page in [help topic 2307 \[pg:1772\]](#).

The screenshot shows the 'Who's Here' page in the Volgistics interface. The page title is 'Who's Here' and the current time is 3:25 pm. A sidebar on the left contains navigation links: Volunteers, Assignments, Coordinators, Schedule, Tickler, Post, Tags, Sets, Print, Mailbox, Who's Here (highlighted), Setup, Welcome, Help, and Exit. The main content area displays a table of active volunteers with columns for Tag, Volunteer, Assignment, Time In, Time Out, and Edit. Below the table are 'Tag these' and 'Un-tag these' buttons and a note that 20 volunteers are currently here.

Tag	Volunteer	Assignment	Time In	Time Out	Edit
Here now:	<input type="checkbox"/> <a href="#">Coronado, Amy</a>	Physical Therapy Assistant	10:55 am		Edit
Here now:	<input type="checkbox"/> <a href="#">Baccus, Lydia</a>	Laboratory Services Reception Desk	10:57 am		Edit

Here now:	<input type="checkbox"/> <a href="#">Gatto, Keith</a>	Gift Shop Helper	3:07 pm		Edit
Here now:	<input type="checkbox"/> <a href="#">Robinson, Sharon</a>	Emergency Department	3:10 pm		Edit

↑  
Tag these Un-tag these

20 Volunteers here now

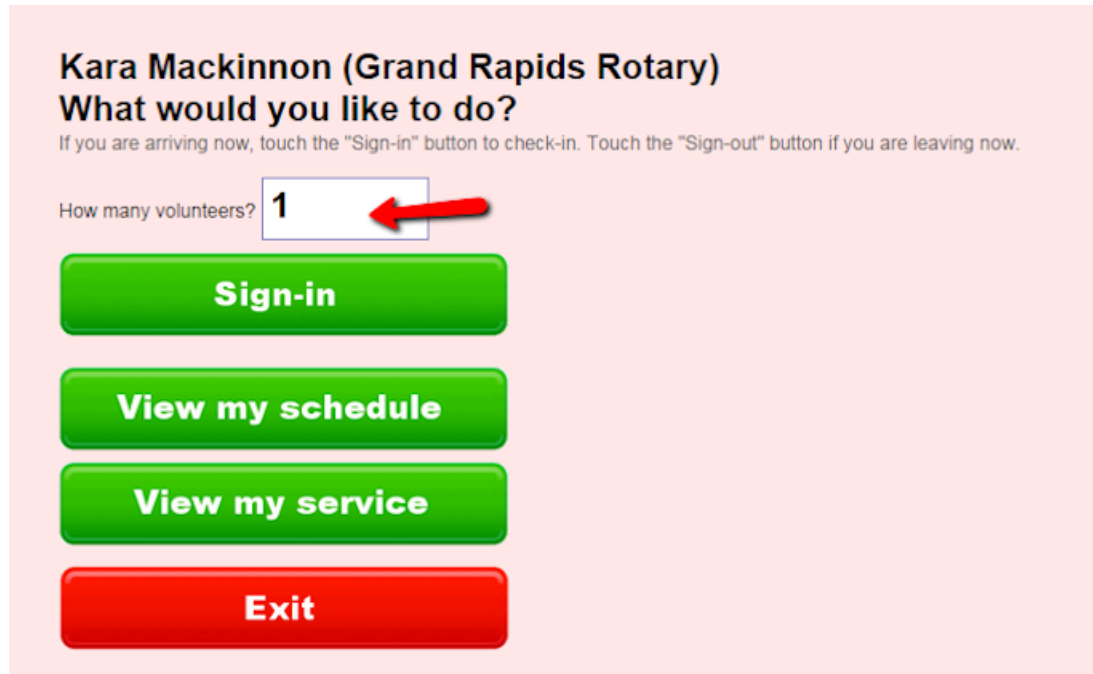

As soon as a volunteer signs-out, Volgistics automatically adds a service record for them showing their time-in, time-out, the Assignment they served in (if they selected one when they signed-in), and the number of hours they performed. You'll see these entries on the [Service tab \[pg:1581\]](#) in the volunteer's record.

VicTouch also includes features for detecting if a volunteer who signed-in has forgotten to sign-out. This feature will automatically sign-out these volunteers after a set interval. [Help topic 2214 \[pg:1511\]](#) explains how to set up this feature. You can optionally audit service entries posted for volunteers who forget to sign-out. See [help topic 1208 \[pg:1415\]](#) to learn more about auditing service entries.

### Sign-in for Groups

If your account uses [group records \[pg:1909\]](#), the sign-in process for groups is very similar to how individuals sign-in. The main difference is that the group leader will sign-in for the entire group of volunteers who are there to serve. After they confirm their identity, a field will appear that allows the leader to select how many volunteers are serving in the group.

The screenshot shows a mobile application interface for a group leader. At the top, it displays the name 'Kara Mackinnon (Grand Rapids Rotary)' and the question 'What would you like to do?'. Below this, there is a small instruction: 'If you are arriving now, touch the "Sign-in" button to check-in. Touch the "Sign-out" button if you are leaving now.' A text input field labeled 'How many volunteers?' contains the number '1', with a red arrow pointing to it. Below the input field are four large, rounded buttons: 'Sign-in' (green), 'View my schedule' (green), 'View my service' (green), and 'Exit' (red).

The leader can touch this field and then enter the number in the group using the keypad.

## Kara Mackinnon (Grand Rapids Rotary)

### What would you like to do?

If you are arriving now, touch the "Sign-in" button to check-in. Touch the "Sign-out" button if you are leaving now.

How many volunteers?

1	2	3	
4	5	6	Cancel
7	8	9	← Backspace
*	0	#	Continue

[Help topic 1212 \[pg:1759\]](#) has more information on how to set up and use VicTouch for groups.

### Switching Assignments

You may have volunteers who serve in more than one assignment, or position, at your organization during the same day. In this case, you can include a *Switch assignments* button to simplify the sign-out/sign-in process for them when they move from one assignment to another. The volunteer will sign-in to their first assignment as shown above. When they are ready to move from one assignment to the next, they just enter their PIN, confirm their identity, and press the **Switch assignments** button. This will sign them out of the first assignment and bring them to a screen where they can sign-in to the second assignment.

**Jennifer Boston**  
**What would you like to do?**

If you are arriving now, touch the "Sign-in" button to check-in. Touch the "Sign-out" button if you are leaving now.

To enable this feature, be sure the checkbox to include a **Switch assignments** button is checked on the [Menu Screen Setup \[pg:1508\]](#) page.

### **Vic Mail Messages**

Messaging features enable you to post messages for individual volunteers, all volunteers, or specific groups of volunteers. Volunteers receive your messages when they sign-in or out. To send messages through VicTouch, you must have [message delivery enabled \[pg:1510\]](#).

## Mail for Jennifer Boston

Message  
Date: Monday, September 29, 2014  
Subject: New Parking Pass

Hi Jennifer,

Please stop by the volunteer office (room 3029) before you leave today.  
Your new parking pass is ready for you to pick-up.

Thanks,  
Linda Sherman  
Volunteer Services Manager

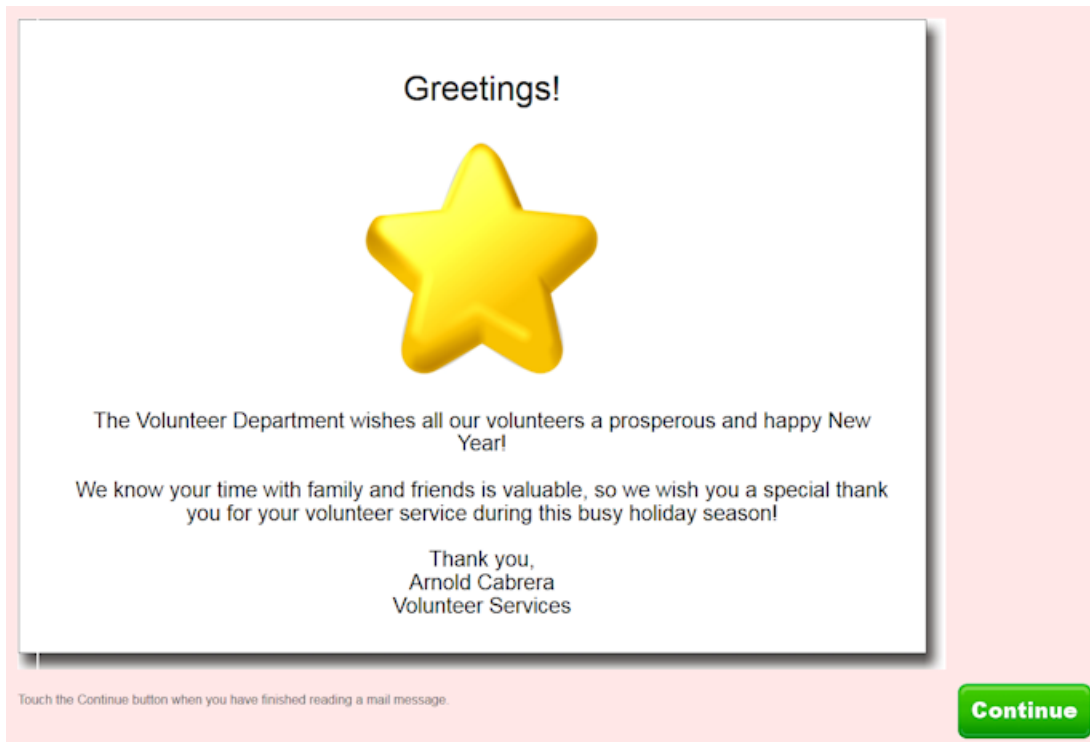

Touch the Continue button when you have finished reading a mail message.

**Continue**

You can learn more about how to send Vic Mail in [help topic 1127 \[pg:0315\]](#).

### **VicTouch Greeting Cards**

VicTouch also has a feature that will automatically display a birthday, or start date anniversary, card to the volunteer when he or she signs-in around their special day. This can also be used to send holiday cards when a volunteer signs-in during a date range you select. You can use the stock graphics for the Greeting Cards, or upload your own images.

For more information on the Greeting Card feature, please see help topics [2326 \[pg:1776\]](#) and [2327 \[pg:1520\]](#).

### Viewing Schedule and Self-Scheduling

You can also set up VicTouch to allow volunteers to look at the schedule to see when they are scheduled to serve next. You enable this on the [VIC My Schedule Setup Page \[pg:1453\]](#). If this is enabled, volunteers will see a **View my schedule** button after they enter their PIN and confirm their identity.

When volunteers view the schedule, they can select to have their schedule for the month sent to them by email or text as long as this is [enabled in your account \[pg:1595\]](#).

You can also set up [self-scheduling \[pg:1494\]](#) so that your volunteers can sign-up for shifts at the VicTouch kiosk.

## Schedule for Jennifer Boston

Touch any date to see the schedule for that day.

◀ Sep 2014

When the volunteer is done viewing the schedule, or scheduling him or herself, pressing the **Finished** button will return them to the menu screen.

### Viewing Service History

It's often motivating for volunteers to see their own time and service contributions. You can provide volunteers a way to do this through the VicTouch module. If you allow volunteers to view their service, they will see a **View my service** button after they enter their PIN and confirm their identity.

The volunteer's service information is collapsed by year initially:

### Service history for Jennifer Boston

Totals  
Start date: October 25, 2012  
Year-to-date hours: 146:09  
Life hours: 384:39

Year	Hours	Merit Hours	Absences
2014	146:09	273:54	0
2013	206:00	206:00	0
2012	32:30	32:30	0
Life total	384:39	512:24	0

Finished

If the volunteer presses the **View details for year** button, the screen will show all the service entries for the year that was selected:

2012 total				32:30	32:30	0

**Finished**

**View service  
for all years**

When the volunteer is done viewing their service, pressing the **Finished** button will return them back to the menu screen.

You can enable volunteers to see their service in VicTouch, and customize the instructions on the page, on the *VIC My Service Setup Page*. To get to this page:

1. Select [Setup \[pg:0887\]](#) from the menu.
2. Expand the VicTouch link.
3. Select *Service history screen*.

### **Shutting Down VicTouch**

If you run VicTouch in the web browser's kiosk mode as recommended, you'll notice that the usual operating system controls for minimizing or closing the VicTouch application are not visible on the screen. If the computer where VicTouch is used has not been locked-down, and a keyboard is attached, you can close the browser window where VicTouch is running by pressing ALT-F4 (the ALT key and the F4 key at the same time) on the keyboard.

Otherwise, you will need to enter a special code on the keypad screen in order to exit kiosk mode. [Help topic 2283 \[pg:1762\]](#) explains how to find out what the code is and where to enter the code to shutdown the VicTouch module.

### **Let's Review**

- VicTouch is the optional module you can use to set up interactive, onsite, touchscreen kiosks volunteers can use to sign-in and out when they arrive and depart.
- You are not required to use VicTouch. You can collect and track volunteer service in Volgistics even if you
- don't use the VicTouch module. [Help topic 1166 \[pg:1568\]](#) shows other ways service can be collected.

- While the VicTouch module is best when used at a touchscreen equipped computer, you can test VicTouch at any computer by using the mouse rather than a touchscreen monitor to make selections on the screen.
- When volunteers sign-in and out at VicTouch, their service is automatically recorded on the [Service tab \[pg:1581\]](#) in their record.
- VicTouch includes features for detecting when volunteers have forgotten to sign-out, and will sign them out automatically.
- You can optionally [audit service entries \[pg:1415\]](#) made for volunteers who forgot to sign-out.

## Try It Out

Volgistics trial accounts include VicTouch, and you can try VicTouch even without a touchscreen monitor. Here is how you can do this:

1. If you haven't already, enter at least one volunteer record in your database and make that volunteer have the Active [Status \[pg:1832\]](#). You can find directions on how to enter a record manually in [help topic 2298 \[pg:1877\]](#).
2. Note the volunteer's [number \[pg:1856\]](#) on the [Core tab \[pg:1868\]](#) of their record. This is their PIN.
3. Select [Setup \[pg:0887\]](#) from the menu.
4. Expand the VicTouch link.
5. Select *Launch at this computer*.
6. Use your computer's mouse to click the buttons to enter the volunteer's PIN and finish signing them in.
7. You can view the volunteer as being signed-in on the [Who's Here \[pg:1772\]](#) page for your account.
8. After you sign the volunteer out, you can [see a service entry \[pg:1579\]](#) for the service on the [Service tab \[pg:1581\]](#) of their record.

## Using Apple's Guided Access for VicTouch

Help topic 8269

Added or revised 10-02-2013

---

With the release of iOS 6, Apple introduced "Guided Access" to most iOS devices. This allows users to lock the device to a single app, disable areas of the screen, and prevent the orientation from changing when turning the device. We feel that these security features are robust enough to allow usage of [VicTouch \[pg:1778\]](#) on these iOS devices.

## 6 iOS 6 is compatible with:

### Configuring Guided Access

First, you will need to configure Guided Access for your device.

1. Open Settings and choose "General"
2. Select "Accessibility"
3. Under "Learning" select "Guided Access"
4. Move the slider to "ON"
5. Touch "Set Passcode" to setup a 4-digit passcode, used to exit Guided Access. This passcode is unique to Guided Access, and not connected with any other passcode you use on this device. You can also choose whether or not you would like to allow the screen to sleep. We recommend turning this setting "ON" to save battery life.

6. Close the Settings app

### Launching VicTouch

1. Open Safari
2. Navigate to [www.volgistics.com/touch](http://www.volgistics.com/touch)

3. Enter your login credentials and touch the Continue button.

## Login

VicTouch is the touch screen kiosk program you use with Volgistics to provide on-site time clock, scheduling, and communication features for volunteers. You need a Volgistics account in order to use VicTouch. To get a Volgistics account, or to learn more about Volgistics visit [www.volgistics.com](http://www.volgistics.com).

It's best to run VicTouch at a dedicated, touch screen equipped computer. For trial purposes, you can use VicTouch without a touch screen monitor at any computer. Simply use your mouse to simulate screen touches.

**To start VicTouch at this computer, enter your Volgistics account number, login name, and password; and then click the Continue button.**

Account number:

Email address:

Password:

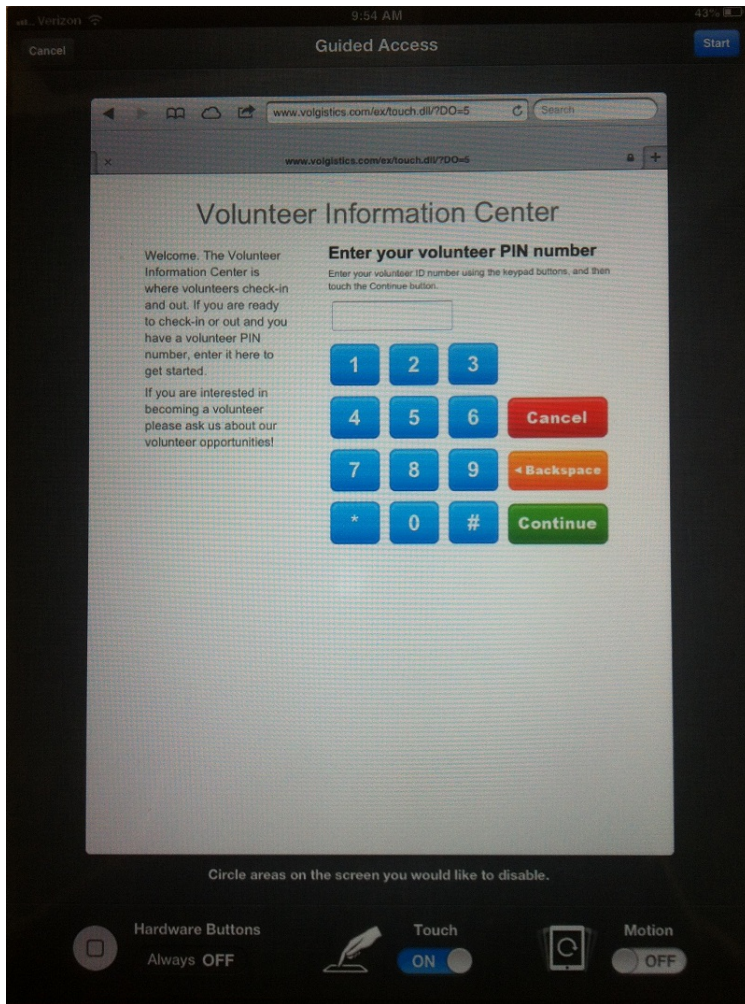

**Continue**

4. If the time zone displayed is correct, touch "Yes". If not, select "No" and choose the correct time zone
5. Touch the Continue button to finish launching VicTouch

Note that you are able to enter your full VicTouch URL in Safari, so that no login credentials are required. However, if you are using a device with a large screen, such as an iPad, the URL may be visible to users. Volunteers could potentially use the URL to launch VicTouch from other locations, such as their home computers. Therefore, this method is not recommended when launching VicTouch from a mobile device.

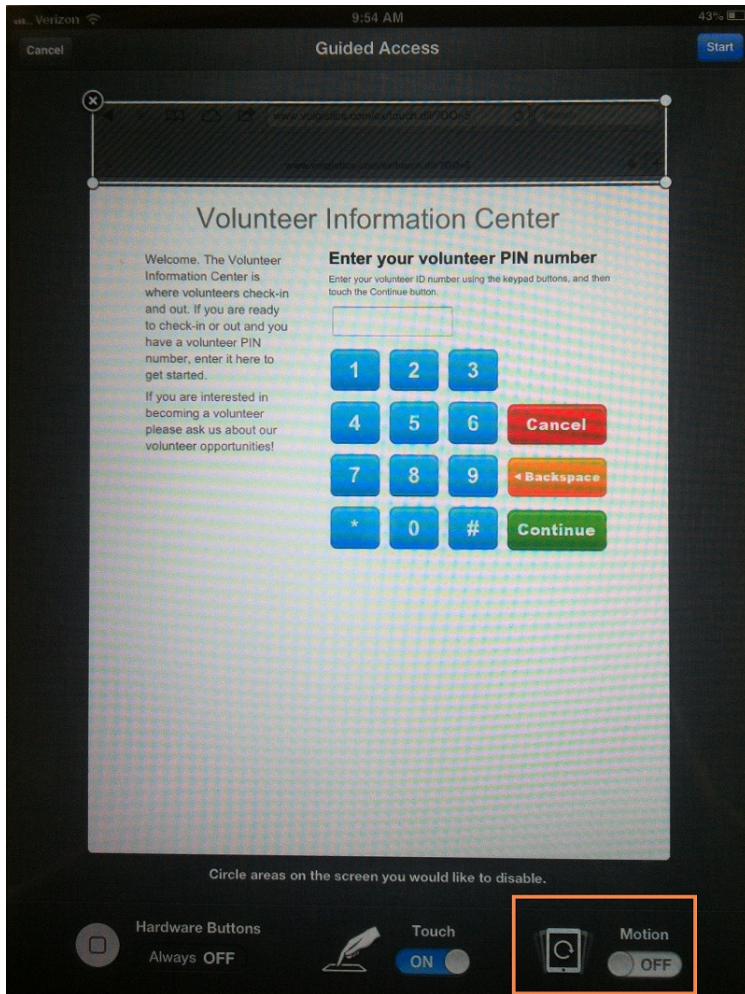

## Enabling Guided Access

1. With Safari open, and the VicTouch page displayed in the orientation you prefer (Portrait or Landscape), triple click the Home button (press it three times in rapid succession)

2. Now, circle areas of the screen you would like to "lock out". We recommend locking the areas containing the address and navigation options, as shown below.

3. Next to "Motion" move the slider to the "OFF" position. This will prevent users from changing the orientation, and getting around the locked out portions of the screen

4. Touch the "Start" button in the top right corner

Now, users will only be able to use Safari, and will not be able to navigate to another page. They will be locked into VicTouch.

#### Exiting VicTouch

To exit Guided Access and VicTouch:

1. Triple click the Home button
2. Enter your passcode for Guided Access
3. Touch "End"

Now, you can use your device normally. You can close the page with VicTouch, or exit Safari.

#### Problems Exiting VicTouch

Sometimes, Apple devices can become locked in Guided Access, preventing you from exiting VicTouch. You can correct this problem by performing a soft reset. Simply hold both the Home button and the Lock button until the Apple logo appears on the screen. The device will remain in Guided Access, but should allow you to enter your passcode and exit VicTouch.

---

## Volunteer photos

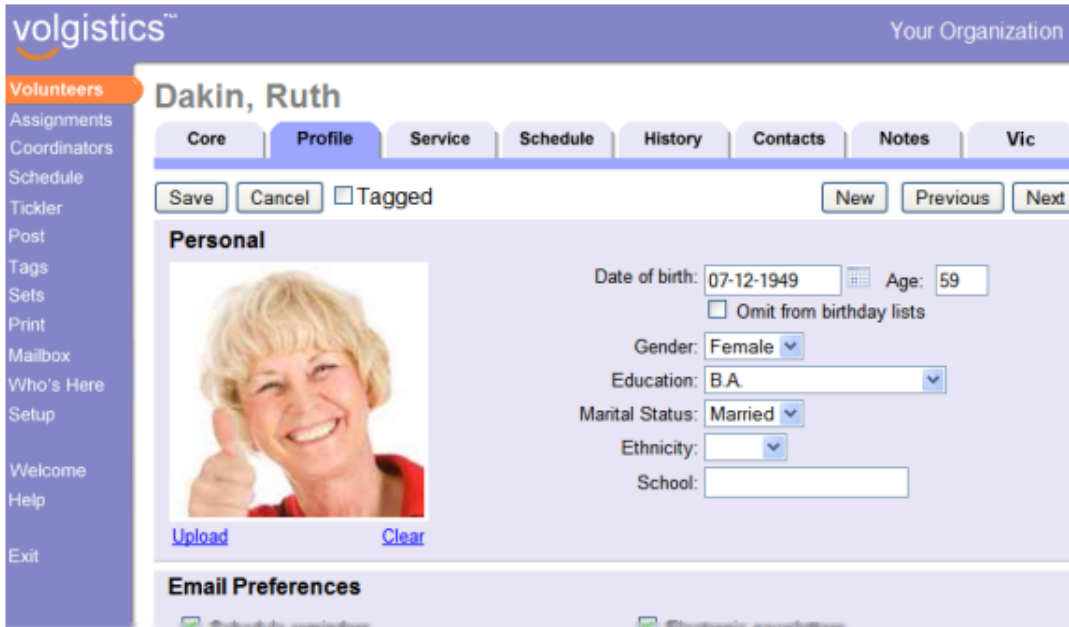

Help topic 1033

Added or revised 10-24-2011

---

You can optionally store a photo of each volunteer in their volunteer record. You can upload volunteer photos yourself, and you can optionally allow volunteers and/or coordinators to upload their own photos through [VicNet \[pg:1724\]](#).

Volunteer photos appear on the Profile tab in each volunteer record if the Photo field is not hidden.

The screenshot shows the Volgistics interface for a volunteer's profile. The top navigation bar includes the Volgistics logo and "Your Organization". A left sidebar lists various menu items like "Volunteers", "Assignments", "Coordinators", etc. The main content area is titled "Dakin, Ruth" and has tabs for "Core", "Profile", "Service", "Schedule", "History", "Contacts", "Notes", and "Vic". The "Profile" tab is active. Below the tabs are buttons for "Save", "Cancel", "Tagged", "New", "Previous", and "Next". The "Personal" section features a photo of a woman giving a thumbs up, with "Upload" and "Clear" links below it. To the right of the photo are fields for "Date of birth" (07-12-1949), "Age" (59), "Omit from birthday lists" (checkbox), "Gender" (Female), "Education" (B.A.), "Marital Status" (Married), "Ethnicity", and "School". Below this is the "Email Preferences" section.

If you do not see volunteer photos when you view the Profile tab, photos are hidden for your system operator level, or the Photo field is hidden in your account. If you have access to the Setup page you can un-hide the photo field like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select Field Options.
3. Select Profile tab (for volunteers).
4. Select Photo.
5. Change the Hidden drop-down to No.
6. Click the **Save** button.

### Uploading photos

You can upload volunteer photos from your computer or a memory card or digital camera you have attached to your computer. To upload a volunteer photo:

1. Choose Volunteers from the menu; locate the volunteer's record and then select the Profile tab.
2. Click the **Upload** link.

3. Click the Browse button and then select the photo file you want to upload. You can upload any image file in the ".gif," ".jpg," ".jpeg," or ".png" format, that is smaller than 10 megabytes (10,000K).
4. Once you've selected the photo file you want to upload click the **Upload** button. Depending on the size of the file you select, the upload may take a minute or more to complete. The 'Working...' message will go away once the file has been uploaded.
5. Crop the image. For consistency, Volgistics stores volunteer photos as square images. If the image you upload is rectangular, drag or resize the crop tool so it covers the portion of the image that includes the volunteer's face, as shown here:

Drag or stretch this crop tool so it covers the portion of the photo you want to upload

Point to any of these squares, and then hold down the mouse button to resize the crop tool

6. Click the **Submit** button. The uploaded image will now appear in the volunteer's record.

### **Remove a photo**

You can remove photos previously stored in a volunteer's record. When you remove a photo, the copy of the photo stored in the Volgistics system is deleted permanently. To remove a photo from a volunteer's record:

1. Choose **Volunteers** from the menu; locate the volunteer's record and then select the **Profile** tab.
2. Click the **Clear** link beneath the photo.
3. Click the **OK** button to confirm that it is okay to clear the photo.

### **Collecting volunteer photos through VicNet**

If you use the VicNet module you can give volunteers a way to view, and optionally upload or maintain their own photo. You can also allow coordinators to view and optionally upload photos of their volunteers.

To enable photos in VicNet for volunteers:

1. Choose Setup from the menu.
2. Select VicNet.
3. Select Profile tab (for volunteers).
4. Click the "Sections" link and then add a new "My Profile" tab section heading called *Photo* (or whatever you would like the section heading for the photo to be). You can optionally add any instructions you want volunteers to see in this section as well.
5. Click the **Save** button to save the new form section.
6. From the "VIC My Profile Tab" page click the "Photos" link.
7. Using the Form Section drop-down, select the form section you just created. Also choose if volunteers should be allowed to upload or clear their photos.
8. Click the **Save** button.

If you enable photos at VicNet, volunteers will see their photo on the "My Profile" tab. If you allow volunteers to upload their own photos, they upload photos using the same upload procedure explained above.

To enable photos in VicNet for Coordinators:

1. Choose Setup from the menu.
2. Select VicNet.
3. Select Volunteers tab (for coordinators).
4. Click the "Sections" link and then add a new "My Profile" tab section heading called *Photo* (or whatever you would like the section heading for the photo to be). You can optionally add any instructions you want Coordinators to see in this section as well.
5. Click the **Save** button to save the new form section.
6. From the "VIC Volunteers Tab" page click the "Photos" link.
7. Using the Form Section drop-down, select the form section you just created. Also choose if Coordinators should be allowed to upload or clear volunteer photos.
8. Click the **Save** button.

If you enable photos at VicNet for Coordinators, Coordinators will see volunteer photos on the "Volunteers" tab after they click on a volunteer's name. If you allow Coordinators to upload volunteer photos, they upload photos using the same upload procedure explained above.

[Using Group Records with Awards](#)

## Introduction to Group Records

Many volunteer programs include both individual volunteers, as well as groups such as businesses; service clubs; and fraternal organizations that provide volunteer service. Volgistics gives you tools for tracking both kinds of volunteers: individuals and groups. This help topic explains the difference between Individual and Group records in Volgistics, and the features that are unique to Group records.

Each time you add a new volunteer record to Volgistics you can mark which kind of record it is: an Individual record or a Group record. You do this using the Kind field which appears in the Name box on the Core tab in each volunteer record.

The screenshot shows a form titled "Name" with several input fields. On the left side, there are fields for "Last name:", "First name:", "Middle name:", "Title:", and "Nickname:". On the right side, there are fields for "Number:", "Status:" (set to "Active"), "Type:", and "Kind:". The "Kind:" field has two radio buttons: "Individual" (which is selected) and "Group". A red circle is drawn around the "Kind:" field and its radio buttons.

Use Individual volunteer records when you want to track personal information (like name and address); volunteer service; Checklist items; or Awards for a person individually, or if you would like to include the individual in Volgistics emails and text messages.

Use Group volunteer records to track groups of people who serve collectively as part of a business; service or social club; fraternal organization; or similar group when you cannot or do not want to track the group's members individually. When you create a Group record, that single Group record will represent all of the members of that particular group. You can record the name and contact information for a group contact on each Group record; however you do not record the names of the individual members of the group in a Group record.

When entering service for a person who is a member of a Group, you will need to decide if the service applies to the Individual or the Group. To avoid double posting the service, be careful to exclude the person from the Group count and Group hours served if you decide to track the individual's service separately. If the service credit should be applied to the Group, do not also post the service to the Individual record.

Here are examples of when to track volunteers using Individual volunteer records and when to track volunteers using a Group record instead.

Nancy Wilson visits your organization one day to express her interest in becoming a volunteer. Nancy's neighbor is a volunteer, and what she's heard about your organization interests her. She's available to serve one day week. Nancy is clearly an individual volunteer and you would track her information in Volgistics using an Individual record.

Once a year your organization conducts a food drive for which hundreds of volunteers are needed to collect food items from homes in various neighborhoods throughout your community. No special volunteer screening is required, and a brief volunteer orientation is given to all volunteers who can help on the morning of the event. Peter Evans, President of the local Rotary Club contacts you and offers to participate. He tells you that his club will send twenty members on the day of the event. In this example it's not necessary for you to track these 20 volunteers individually. Instead, you create a single Group record for the Rotary Club in Volgistics, entering Peter Evans as the contact person for the group.

If you want to track the members of a group individually you can, however you should not create Group records for each group member you want to track individually. Use Individual volunteer records instead.

If you want to track the names – or any specific information such as service, Checklist items, or Awards – for each member of a group, you should track those volunteers using an Individual volunteer record for each person instead of creating a Group record for their group or a separate Group record for each group member. You can still link all of their records together [using a Flag \[pg:0212\]](#) if you want to be able to produce reports just for the volunteers who have a specific group association.

For example, an organization has 12 people who volunteer as part of their community's Retired Senior Volunteer Program (RSVP). Even though these volunteers are part of a group, the volunteer leader wants to be able to track the volunteer service for these people individually and give them awards individually. In this case the volunteer leader would track each of these RSVP members using an Individual volunteer record for each person instead of creating a Group record for "RSVP." The volunteer leader can then record volunteer service for these 12 volunteers just like they do for all other individual volunteers ( [manually \[pg:1569\]](#), or through [VicTouch \[pg:1778\]](#) or [VicNet \[pg:1724\]](#) ).

Once a month, the volunteer leader must send the RSVP office a report that shows the number of volunteer hours served by these 12 RSVP volunteers. The volunteer leader can accomplish this simply by adding an "RSVP" flag to the Flag field in each of these 12 Individual volunteer records. Then at the end of each month they run a Service Details report that includes only the volunteers who have the "RSVP" flag (they can even setup this report so it [runs automatically \[pg:0473\]](#) at the end of each month!).

Group volunteer records differ from Individual volunteer records several ways. The differences between Group and Individual records are explained next.

### **Adding Group Records**

To add a new Group record manually:

1. Choose Volunteers from the menu.

2. Click the **New volunteer** button.
3. Enter the name of the group's contact person in the Name box.
4. Check "Group" in the Kind field.

**Contact Name**

Last name:  Number:

First name:  Status:

Middle name:  Title:

Nickname:  Kind:  Individual  Group

Once you select Group in the Kind field, a new box appears for entering the group's information.

**Group**

Group name:

Members:  (How many members in this group?)

Participation: If this group serves more than once, they usually send:

The same volunteers each time

Different volunteers each time

Enter the following information about the group.

#### Group name

Enter the group name.

#### Members

If you know how many members this group has, enter the number of people who belong to this group in the Members field. For example, if the Downtown Rotary Club has 50 members, enter 50 here (even if not all 50 members will volunteer). You can leave this field zero if you're not sure how many members the group has.

#### Participation

Choose the option that you think best describes how this group will participate if they will volunteer more than once for your organization. Volgistics uses this information when it calculates **unduplicated volunteer counts** [pg:0452] on service reports.

Choose **The same volunteers each time** if the group will typically send the same people each time the group volunteers. For example, if ten students from a college sorority serve once a month, and it tends to be same ten students each time, choose "The same volunteers each time. "

Choose **Different volunteers each time** if the group will typically send different people each time the group volunteers. For example, if ten employees from a large corporation located in your community serve once a month, and it tends to always be a different 10 people each time, choose "Different volunteers each time."

## Address

Enter the address and contact information for the group contact person in the Address box.

5. Click the **Save** button save the new group record.

## Icons

Groups and Individuals appear with different icons to help you distinguish Group records from Individual records.

 - Individual

 - Group

## Finding Group Records

Once you've added Group records to your database, you can later find and retrieve these records by the group contact's name or by the group name.

To find by the group contact's name:

1. Choose Volunteers from the menu.
2. Enter the contact person's last name in the Last Name field.
3. Click the Go button to see the volunteers with that last name.
4. Click the contact person's name.

To find by the group name:

1. Choose Volunteers from the menu.
2. Enter the group name in the Group Name field (or you can just enter the first few letters of the group name here).
3. Click the Go button to see the Group volunteers that match your entry.
4. Click on the appropriate group record.

## Scheduling Groups

You can schedule group volunteers along with individual volunteers in Volgistics.

When you add a group to a schedule from the Schedule tab of the Group's record, you'll see an additional Volunteers field you can use to record the number of group members who are to be scheduled. This makes it possible for you to schedule multiple group members in a single step.

[Help topic 1197 - Scheduling groups \[pg:0753\]](#) explains more about group scheduling.

## VicNet for Groups

If you use VicNet, group contacts can use VicNet to self-schedule their group members, as well as to post volunteer hours for their group online.

Since you do not track the individual group members when you use Group records, Volgistics does not provide a way for each separate member of group to access their group's records through VicNet.

There are not currently any VicTouch features designed specifically for group contacts or group members.

[Help topic 1198 - Using VicNet for groups \[pg:1673\]](#) explains more about the unique features of VicNet for Group records.

## Posting Service for Groups

You can post hours and other service for groups [manually from individual group records \[pg:1569\]](#), from the [Post page for multiple records \[pg:1559\]](#), or the group contact can [post hours for their group online \[pg:1673\]](#) using the [VicNet \[pg:1724\]](#) option.

When you or the group contact post hours for a group, a

### *Volunteers*

field appears on the service record. Use the Volunteers field to enter the number of group members who participated in the volunteer service you're posting. Volgistics uses this group volunteer count when it calculates [unduplicated volunteer counts \[pg:0452\]](#) in reports.

If you choose to post the starting and ending times that volunteers serve when you post volunteer hours, Volgistics will calculate the total hours served by the group automatically based on what you enter in the Volunteers field. For example, if 10 members of a group all worked from 9:00 am to 11:00 am, your service entry would look like this:

The screenshot shows a web form titled "Service" with an "Add" button. The form contains the following fields and values:

- Assignment: Phone Bank (dropdown menu)
- From date: 02-20-2011 (calendar icon)
- To date: 02-20-2011 (calendar icon)
- From time: 9:00 am (time and AM/PM dropdown)
- To time: 11:00 am (time and AM/PM dropdown)
- Hours: 20:00
- Volunteers: 10 (circled in red)

Below the "Volunteers" field is the text: "(Number of group members who served these times)". At the bottom right of the form are "Save" and "Cancel" buttons.

The Hours field will automatically show 20:00 hours served (2 hours each for 10 volunteers).

If you do not post the starting and ending times when you post volunteer hours, you will need to enter the total number of hours served collectively by the group, and then enter the number of group members who participated in that service in the Volunteers field. For example, if a group served 50 hours altogether, and there were 16 group members who each served a portion of those hours, your service entry would look like this:

**Service**

**Add**

Assignment: Phone Bank

Date: 02-21-2011

Hours: 50:00

Volunteers: 16 (Number of group members who participated in this service)

Save Cancel

You control if starting and ending times are available for posting service with your account's [settings for service tracking \[pg:1429\]](#).

If your organization uses the [VicTouch \[pg:1778\]](#) module, the group's leader can also sign-in and out when they arrive and depart from your facility. With this option, the total for the group's service will be calculated automatically. [Help topic 1212 \[pg:1759\]](#) explains more about this option.

### Including or Excluding Group Records on Reports

When you print [stock \[pg:0595\]](#) or [custom \[pg:0467\]](#) reports in Volgistics there may be times when you want a particular report to exclude Group records, include only Group records, or include both individual and Group records. You can do this by checking the appropriate option on the Include tab for the report.

For example, if you wanted to modify a custom Volunteer List report so it includes both individual and Group records, you would do this by:

1. Choose Print from the menu.
2. Click Volunteer list to expand your Volunteer list reports.
3. Click on the name of the report you want to modify.
4. Click the **Modify it** button.
5. Select the Include tab.
6. Under "Which volunteers do you want to include in this report?" find the Kind heading and be sure the "Both individuals and groups" option is checked as shown here.

Which **volunteers** do you want to include in this report?

Tagged volunteers ( 0)

These volunteers:

**Status**

Any

Any of these

Active  Applicant  Inactive

LOA  Prospect

**Type**

Any

Any of these

Adult  College  Group

High School

**Kind**

Both individuals and groups

Individuals only

Groups only

**Flags**

Any

Any of these

7. Save or print the report.

### Using Group Records with Checklist Items

If you use the volunteer [Checklist \[pg:0142\]](#) features, you may have some Checklist items that should apply to both Group and individual records, or apply only to Group or individual records. Here is an example of how to setup a Checklist item to only apply to individual volunteers:

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Click Checklists.
3. Click on the name of a Checklist item you want to change, or click the "Add a new Checklist item" link to create a new Checklist item.
4. Under "Which volunteers should this item apply to?" select "Individuals only" in the "If their Kind is" section.

Which volunteers should this item apply to?

If their Status is:

- Active
- Applicant
- Inactive
- LOA
- Prospect

If their Kind is:

- Either individual or group
- Individuals only
- Groups only

If their Type  is  is not:

5. Finish configuring the Checklist item and then click the **Save** button.

Remember that Group records represent groups of volunteers who you do not track individually. For this reason there is not a way to use Checklist items to track whether or not specific members of a group have completed a Checklist item. If you setup a Checklist item that applies to Groups, you can use the Checklist in each Group record to show whether or not the group contact completed that item.

### Using Group Records with Awards

If you use Volgistics to track and queue volunteer [awards \[pg:1551\]](#), you may have some Awards that should not apply to Group records, should apply only to Group records, or should apply to both individual and Group records. Here is an example of how to setup an Award to only apply to Group records.

1. Choose [Setup \[pg:0887\]](#) from the menu.
2. Click Awards.
3. Click on the name of an Award item you want to change, or click the "Add a new award" link to create a new award.
4. Under "Volunteers receive this award only if, select "Groups only" in the "Their Kind is" section.

Volunteers receive this award only if...

Their Type  is  is not:

Their Flag  is  is not:

Their Kind is:

- Either individual or group
- Individuals only
- Groups only

Sequence:

Some awards are sequential, such as those based on 100, 500 and 1,000 hours of service. If this award

5. Finish configuring the award and then click the **Save** button.

Keep in mind that Group records represent groups of volunteers who you do not track individually. For this reason there is not a way to queue or track awards for specific members of a group who serve under a Group record. If you want to track awards for group members individually you can track those volunteers as Individuals instead of tracking them collectively as a Group.

If you setup an Award that applies to Groups, a Group will be queued for the award when the group members collectively meet the award requirements. For example, if you create an award which is given after 100 hours of service, the Group will be queued for the award if 50 members of the group each serve 2 hours.

Remember that when you have an Individual record for someone that is also a member of a Group, you will need to decide if the service applies to the Individual, the Group or both. If you want to avoid double posting the service, be careful to exclude the person from the Group count and Group hours served if you decide to track the individual's service separately. If the service credit should be applied to the Group, do not also post the service to the Individual record. You can link the individuals to the Group later by using a Flag as discussed in the sidebar on this page.

## VIC Tab

Help topic 1076

Added or revised 01-24-2017

---

The Vic tab has access information for the optional [VicNet \[pg:1724\]](#) or [VicTouch \[pg:1778\]](#) components. This tab appears on volunteer and [Coordinator \[pg:0163\]](#) records even if these modules are not included in your organization's service level. This allows you to try the modules on a [trial basis \[pg:0082\]](#).

You use the Vic tab to:

- Check or change a volunteer or Coordinator's ability to access the optional modules
- Preview VicNet from the perspective of a volunteer or Coordinator
- Set a temporary VicNet password for a volunteer or Coordinator
- Send a volunteer or Coordinator a link to set her password
- See dates volunteers viewed VicTouch [Greeting Cards \[pg:1776\]](#)
- Change a volunteer's privacy options

### VicNet Access

The VicNet box at the top has a variety of purposes. The first is showing the volunteer or Coordinator's ability to access VicNet.

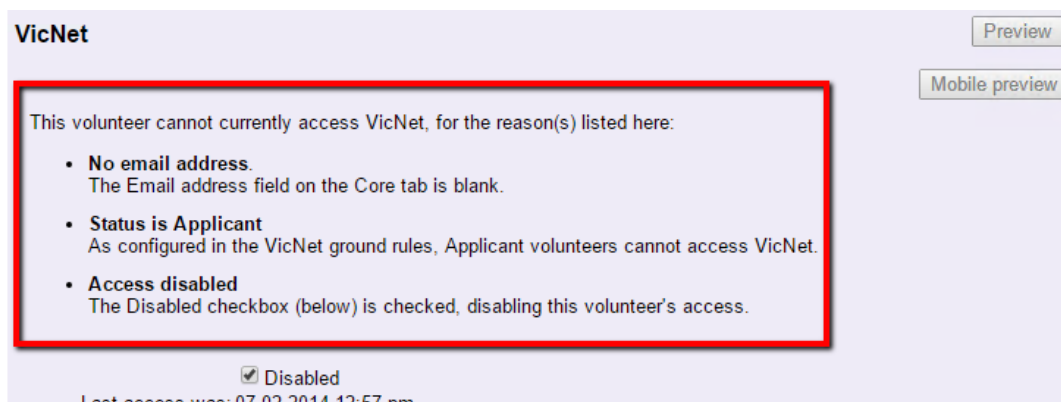

#### Access is OK

*Access is OK* means that this volunteer or Coordinator has an email address and their access to VicNet has not been disabled by you. Also in the case of volunteers, their volunteer Status is one that is allowed to access VicNet.

This volunteer (Coordinator) cannot currently access VicNet, for the reason(s) listed here

If access is not OK, you'll see this message and the reason(s) this volunteer or Coordinator cannot currently login to VicNet. If you would like this volunteer or Coordinator to be able to use VicNet, simply correct the conditions listed in this area.

### Access disabled

Check the *Disabled* checkbox and then click the **Save** button if you want to prevent this volunteer or Coordinator from being able to login to VicNet.

Un-check this box and click the **Save** button to permit this volunteer or Coordinator to access VicNet.

### Last access was

This field shows the date and time this volunteer or Coordinator last accessed VicNet:

If the volunteer or Coordinator has never accessed VicNet, this field will show *(never)*:

### Hint:

If you want to see the last date all your volunteers accessed VicNet, you can add the *Last access was* date to the list you see when you select Volunteers from the [menu \[pg:0215\]](#). You can find information on how to do this in [help topic 1202 \[pg:1381\]](#).

### Preview VicNet

Another thing you can do in the VicNet box is preview VicNet as the volunteer or Coordinator. To do this, simply click the **Preview** or **Mobile preview** button.

This will open the person's VicNet account in a new browser window. You can learn more about previewing records in [help topic 2159 \[pg:1705\]](#).

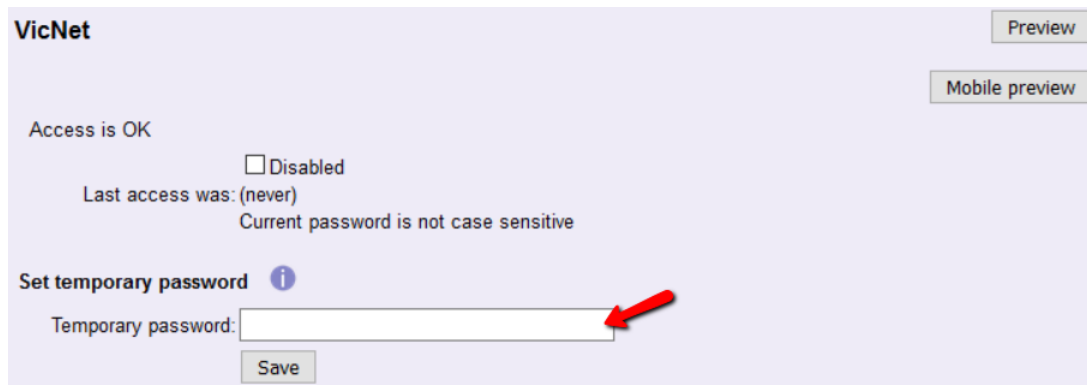

### VicNet Passwords

Finally, the VicNet box also allows you to set a temporary password for the volunteer or Coordinator, or send the volunteer or Coordinator a link she can use to set a password. For security purposes, Volgistics never displays the password currently established for a volunteer or Coordinator

### Set temporary password

There is not a way to send the volunteers their temporary password by email or text. So this option should only be used when you have some other way to communicate the temporary password to the volunteer or Coordinator.

To assign a temporary password, enter a password in the *Temporary password* field and then click the **Save** button. Because the volunteer or Coordinator will need to select a permanent password, the temporary password does not need to meet any password strength requirements setup for your account.

The screenshot shows the VicNet user interface. At the top left is the 'VicNet' logo. On the top right are 'Preview' and 'Mobile preview' buttons. Below the logo, it says 'Access is OK' and 'Last access was: (never)'. There is a checkbox for 'Disabled' which is unchecked, and a note that 'Current password is not case sensitive'. The 'Set temporary password' section has an information icon (i) and a text input field labeled 'Temporary password:'. A red arrow points to this input field. Below the input field is a 'Save' button.

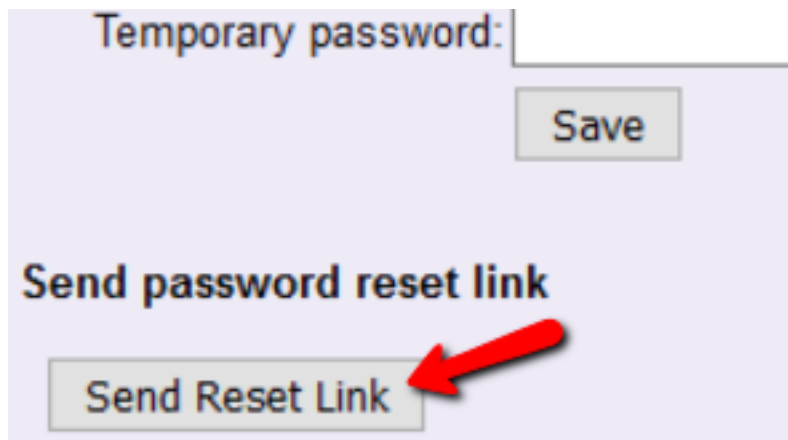

### **Please note:**

Setting a temporary password does not replace the person's current password if they have one. If the person remembers their current password, it will still work. If the person logs in with the temporary password, they will need to change the temporary password to a permanent password before they can work in VicNet.

### Send password reset link

You can send a link by email to the volunteer or Coordinator that can be used by her to set a VicNet password. If the Coordinator or volunteer has [opted-in to text messaging \[pg:0323\]](#), the password will also be sent by text message. The link will only stay active for 24 hours after you send it. If volunteers or Coordinators report that they click the link and it has expired, simply have them click the *Forget your password?* or *Need a password?* link on the VicNet login page. This will send out a new link to the person.

To send the message with the link, click the **Send Reset Link** button:

The screenshot shows a close-up of the 'Send password reset link' section. At the top, there is a text input field labeled 'Temporary password:' and a 'Save' button. Below this, the text 'Send password reset link' is displayed in a larger font. At the bottom, there is a button labeled 'Send Reset Link'. A red arrow points to this button.

## **VicTouch**

*There is not a way for Coordinators [pg:0163] to access VicTouch [pg:1778] so this section will not appear on the Vic tab for Coordinator records.*

### Access is OK

*Access is OK* means that the volunteer's access has not been disabled by you and their volunteer **Status [pg:1832]** is one that is allowed to access VicTouch. You control which Status(es) volunteers must have to access VicTouch on the **VicTouch Ground Rules [pg:1511]** page.

This volunteer cannot currently access VicTouch, for the reason(s) listed here:

You'll see the reason(s) this volunteer cannot currently login to VicTouch listed here. If you would like this volunteer to be able to use VicTouch, simply correct the conditions listed in this area.

### PIN number is

The VicTouch box also contains the PIN associated with that volunteer. This number, also found in the Number field on the Core tab, is what a volunteer should enter to login at VicTouch. Help topics **2152 [pg:1856]** and **2247 [pg:1015]** have information on how this number is assigned and how to change the settings.

### Greeting Card Status

If you have used the **Greeting Cards [pg:1776]** at VicTouch, this section of the VicTouch box will tell you whether cards have been used and/or delivered to the volunteer.

## **Privacy**

This box allows you to customize a volunteer's privacy settings on the VicNet and VicTouch schedules. *There is not a way for Coordinators [pg:0163] to appear on the schedule so this section will not appear on the Vic tab for Coordinator records.*

### Allow other volunteers to see when I am scheduled.

If this box is checked, the volunteer's name will be included on the schedule at VicNet and VicTouch when the schedule is setup to allow volunteers to see who else is scheduled. If the schedule is not configured to allow volunteers to view the other volunteers scheduled, marking this box will not have an effect. The settings for this are found on the **VIC My Schedule Setup Page [pg:1453]**.

If this box is unmarked, other volunteers will not be able to see this volunteer's name when looking at the schedule in VicNet or VicTouch--even if the schedule is setup to allow volunteers to see who else is scheduled. In place of this volunteer's name, it will say "Filled" next to the opening for which they are scheduled.

---

## How can I get a volunteer count?

Help topic 1173

Added or revised 02-14-2012

---

Volunteer managers sometimes need to see the total number of volunteers in their organization or the total number of volunteers with certain characteristics. This help topic provides several options for obtaining volunteer counts in Volgistics.

### To see the number of volunteers

There is a count at the bottom of the Volunteers page. You can use this in combination with the Include options on the Volunteers page to get counts for different kinds of volunteers. Note that by clicking the "Advanced options" button, the user can select which volunteers are displayed by even more criteria.

In the example below, only Active Adult volunteers with the RSVP Flag will be displayed when the user clicks the "All" link at the top of the page.

### Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

#### Include

Status:

[New volunteer](#)

[Tag these](#)

[Un-tag these](#)

[Top](#)

### To obtain a printed list with a count

Sometimes there is a need to not only view a volunteer count, but to include it in a printed report. Here are three ways to do so:

1. The Volunteer List report contains an option to "Include a volunteer count." Selecting this item on the report's Options page will add a count of all listed volunteers to the bottom of the report. By choosing which volunteers you want to include in the list report on its Include page, you can generate lists and counts of specific groups of volunteers on the report.
2. If you want a count of the number of volunteers who performed service, both Service Details and Service Summary reports can include an [unduplicated count \[pg:0452\]](#) of the volunteers who had service during the time period included in the report. You choose to include the unduplicated volunteer count on a service report's Fields page.

---

## Tracking Multiple Contacts for a Group

Help topic 1990

Added or revised 10-25-2012

---

Use the [Core tab \[pg:1868\]](#) in the group record to store each group's main contact person's information. When you print address labels or address lists, Volgistics uses the address on the Core tab as the group's mailing address. Also, email messages are sent to the address stored on the Core tab. If a group has secondary contacts, you can store their information on the Contacts tab of the group's record for reference purposes.

The first step to do this is to add a Contact Kind field entry for tracking an additional group contact. If you have not done this already, here is how to add the entry:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Field Options.'
3. Select 'Contacts tab.'
4. Click the Kind link.

5. On the Field Properties page, enter the new kind (e.g. "Secondary Group Contact") in the 'Add a new item' field.

6. Click the **Save** button.

After you have made the new Contact Kind, you can add additional contacts for your group record by:

1. Choose Volunteers from the [menu \[pg:0215\]](#).

2. Open the record for the group you want to add additional contacts information on.

3. Click the Contacts tab.

4. Click the **Add a new contact** button.

5. Select the Contact Kind you created from the Kind field dropdown list.

## Bailey, George (Savings and Loan Volunteers)

Add a new contact  Tagged New Previous Next

**Secondary Group Contact**

Last name:  Kind: **Secondary Group Contact** ▼

First name:  Relationship:

Middle name:  Title:  Contacted:

Nickname:  Verified:

6. Enter the information for the secondary contact.

7. Click the **Save** button.

---

## Finding Archived Volunteer Records

Help topic 1998

Added or revised 10-22-2012

---

In Volgistics, your account is divided into two sections--the non-archived records and the archived records. Archived records have more limited functionality compared with non-archived records and each section is used for different purposes. [Help topic 1999 \[pg:0709\]](#) explains more.

There are times when you may need to locate a record that has been archived. To do this:

1. Choose Volunteers from the menu.

2. Click the "Advanced options" button under the "Include" section.

3. Check the box next to "Archived Volunteers".

4. Click the "All" link near the top of the Volunteers page to see all of your archived records. If you're looking for a specific record and know the volunteer's name, you can also click on the link for whatever letter starts the volunteer's last name or use the "Find" options to locate the record.

## Archiving Volunteer Records

Help topic 2000

Added or revised 10-05-2016

---

Volgistics includes an archive for storing old volunteer records that you don't currently need in the database, but you don't want to delete altogether. For instance, you might choose to archive the record for a volunteer who has moved away. If the volunteer returns, you can easily restore their record. If you do not mind accumulating records for inactive volunteers, then you do not need to archive volunteer records. However, most people like to maintain only the records they really need.

When you archive a volunteer record, Volgistics moves all information tied to the record into the archive. You may restore archived volunteer records at any time. When you restore a volunteer from the archive, all information except for the volunteer's schedule comes back. The schedule is not restored along with the record because, in many cases, the volunteer's former schedule has been taken over by another volunteer since the volunteer record was archived.

*When you archive a volunteer record it is, in effect, removed from the database and moved into a storage area. While the record is archived you cannot access or use the record the same way that you can use volunteer records you have not archived.*

- When you archive a volunteer's record, their volunteer information will no longer appear in any Volgistics reports, with the following exceptions: [volunteer service \[pg:1581\]](#) will always appear on [Service Detail \[pg:0560\]](#) and [Service Summary \[pg:0580\]](#) reports even for volunteer records that have been archived. This means that you can always count on

*Service Detail*

and

*Service Summary*

reports to include volunteer service even if the volunteer's record has been archived. Information from archived volunteer records can optionally be included in [Statistics \[pg:0593\]](#) reports. Archived volunteer records can also be exported using the [Excel spreadsheet \[pg:0513\]](#) reports. You can find more information on including information for archived records in these reports [here \[pg:0442\]](#). There is not a way to include archived volunteer records on other reports.

- When you archive a volunteer record, the volunteer is removed from any schedules they may have been on.
- Archived volunteers cannot use [VicNet \[pg:1724\]](#) or [VicTouch \[pg:1778\]](#).
- Archived volunteers cannot receive [email \[pg:0404\]](#), [text \[pg:0343\]](#) or [Vic Mail \[pg:0315\]](#) messages sent through Volgistics.
- Birthdays for archived volunteers do not appear on the [birthday list \[pg:1385\]](#).

You should not archive a volunteer record if you want to include that volunteer in any of the functions listed above.

[When to archive volunteer records](#)

There is not a hard and fast rule for when you should archive volunteer records for inactive volunteers. Since the [Service Detail \[pg:0560\]](#), [Service Summary \[pg:0580\]](#) and [Statistics \[pg:0593\]](#) reports can include [service data \[pg:1581\]](#) from archived records, you do not have to wait until year end service reports are complete to archive volunteer records. Keep in mind, however, that if there is still a possibility that past hour entries will need to be made for a newly inactive volunteer, you should not archive their record until those entries have been made. A good rule-of-thumb might be to archive inactive volunteer records quarterly or semi-annually. [Help topic 2222 \[pg:0878\]](#) "Find the Volunteers with No Recent Activity" shows how you can find the volunteers who have not had any service entries recorded on their record recently.

How to archive an individual volunteer record:

1. Select *Volunteers* from the [menu \[pg:0215\]](#), and then click on the letter of the alphabet that corresponds to the volunteer's last name. The corresponding list of volunteer names appears.
2. Click on the volunteer's name. The [Core tab \[pg:1868\]](#) opens.
3. In Volgistics, the [Status \[pg:1832\]](#) shows the volunteer's relationship with your organization. Volgistics does not automatically change a volunteer's Status when the record is archived so an archived record can have any Status. If you rely on Statuses to track volunteers, it is a good practice to change the Status on the record before archiving it.
4. Click the **Archive** button. A system prompt appears to confirm that it is okay to archive this volunteer record. ([What if I don't have an Archive button? \[pg:1605\]](#))
5. If you are certain that this is a record you would like to archive, click the **OK** button.

Volgistics moves the entire volunteer record into the archives--except for the volunteer's schedule, which is deleted. When the process is finished, Volgistics displays the initial Volunteers screen.

How to archive multiple volunteer records:

1. Before you begin, select *Tags* from the menu and click the **Clear all tags** button to make sure your session does not have any records that are currently tagged. Doing this will prevent records from being archived by accident. If the **Clear all tags** button is disabled, there are not any tagged records to clear.
2. Tag the volunteer records that you want to archive. If you need help with this, see [help topic 2139 \[pg:1538\]](#).
3. Select *Tags* from the menu.
4. In Volgistics, the volunteer [Status \[pg:1832\]](#) shows the volunteer's relationship with your organization. Volgistics does not automatically change volunteer Statuses when records are archived so an archived record can have any Status. If you rely on Statuses to track volunteers, it is a good practice to change the Status on the records before archiving them. You can do this for all of the tagged records by selected the desired Status from the dropdown in the *Change the **Status** of all tagged records to* section and then clicking the **Go** button.
5. Click the

**Go**

button located next to

**Archive**

*the tagged volunteer records*

. A system prompt appears to confirm that it is okay to archive the tagged volunteers. ([What if I can't complete this step? \[pg:1605\]](#))

6. If you are certain you would like to archive the tagged records, click the **OK** button.

How to view the archived volunteer records:

1. Select *Volunteers* from the **menu** [pg:0215].
2. Click the **Advanced options** button if the Advanced page is not already displayed.
3. Check the *Archived volunteers* checkbox. This changes your view of the volunteer records so you see just the archived volunteers. The page title changes to Archived Volunteers to let you know you're viewing the archives.
4. Use the letters of the alphabet or the *All* link to locate a specific archived volunteer record.

When you're finished working with the archived volunteer records, un-check the *Archived volunteers* checkbox on the Volunteers page to return to the non-archived records. You can also click the **Basic options** button to return to the basic page.

How to un-archive a volunteer record:

1. View the archived volunteer records as explained above.
2. Locate the archived volunteer record you want to restore.
3. Select the record and the **Core tab** [pg:1868] appears.
4. Click the **Restore** button to restore the record.
5. If you changed the volunteer's **Status** [pg:1832] to one that represents an archived volunteer, return it to a different Status if appropriate.

*If you wish to restore all of your archived volunteers at once, see **help topic 2038** [pg:0889].*

## Delete Archived Volunteer Records

Help topic 2001

Added or revised 01-07-2016

---

You can delete archived volunteer records individually or in groups. You will normally only delete archived records if you discover duplicates, or if you decide that there is no need to maintain the record(s) in the archives any longer.

**Deleted archived records can only be restored for 5 calendar days after they are deleted.** If 5 days pass and the record has not been restored, it will be permanently deleted from the system. There is not a way to "un-do" the deletion at this point.

You can find information on how to restore a deleted record during the 5 day hold period in [help topic 2311 \[pg:1888\]](#). Please note, that there is not a way to restore the schedule for a volunteer that has been deleted. All schedule information for the record will be lost.

There may be instances where you need to permanently delete a record before the 5 calendar day hold period ends. If you need to do this, see the [Remove a deleted archived record before the 5 day hold period ends](#) section at the bottom of this help topic.

When you delete an archived volunteer record, all of the data related to that volunteer – including their service records – are completely deleted from your database. You should not delete archived volunteer records for volunteers who have service records for the current calendar or [fiscal year \[pg:0062\]](#) if you want to include their service on year end service reports.

**Tip:** If you want to save the data from archived volunteer records before you delete them, you can use an [Excel spread sheet \[pg:0513\]](#) report to save the archived volunteer records to your own computer before you delete them. [Help topic 1997 \[pg:0442\]](#) has more information on this.

Click a link in the *Contents* box below to go to a specific section of the help topic.

### Contents

Delete a single archived volunteer record

Delete groups of archived volunteer records

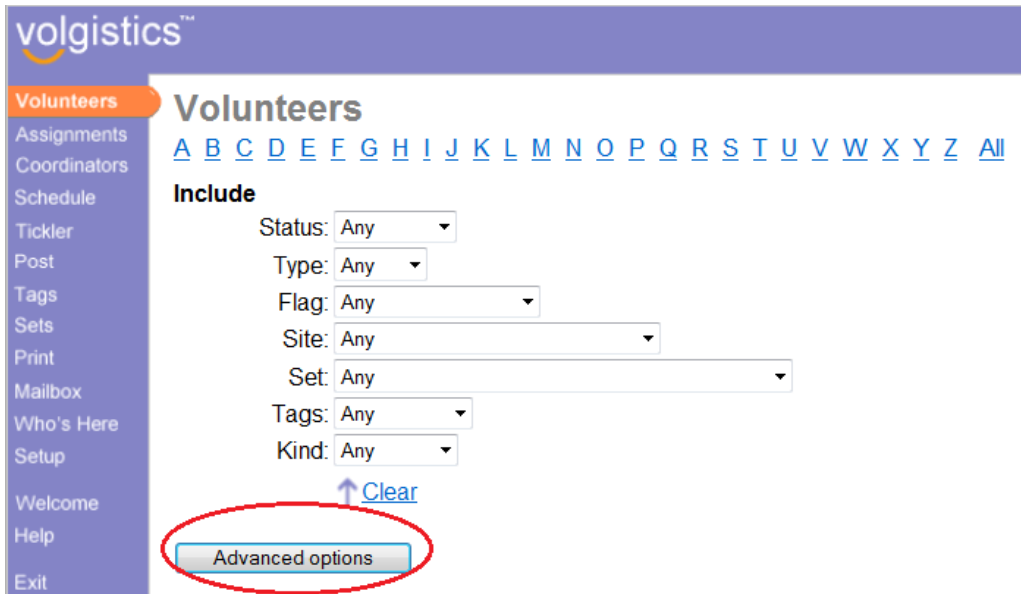

Choosing which archived records to delete

Remove a deleted archived record before the 5 day hold period ends

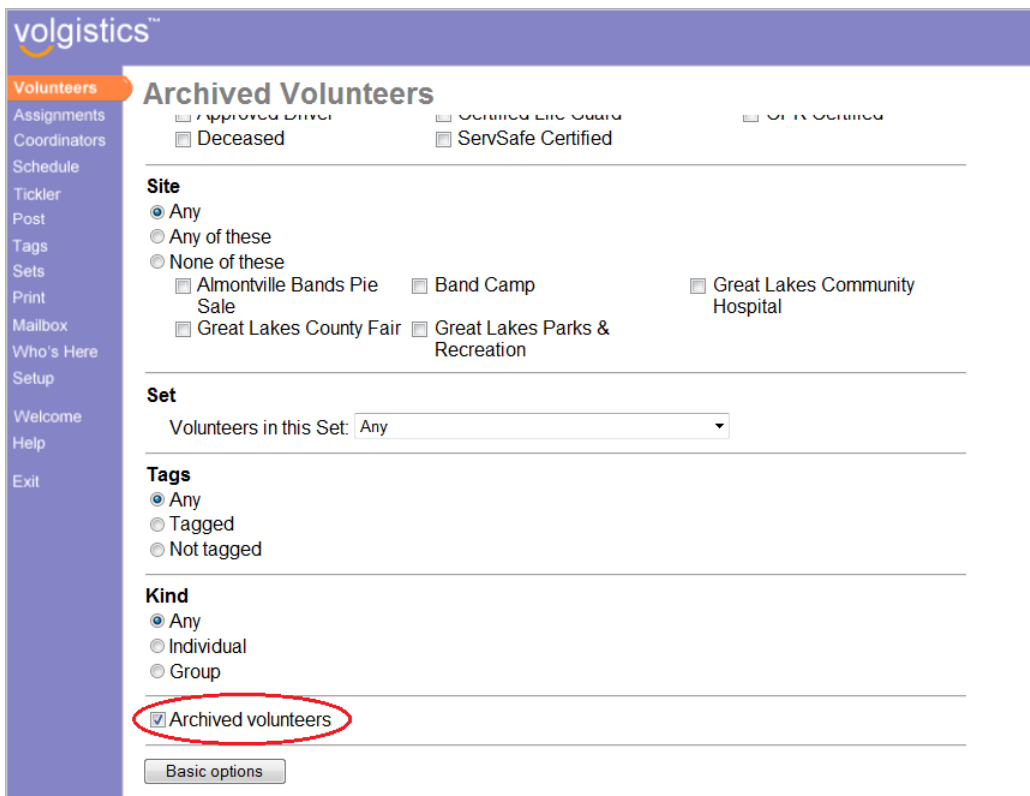

### Delete a single archived volunteer record

To delete a single archived volunteer record:

1. Choose Volunteers from the [menu \[pg:0215\]](#). The initial Volunteers screen appears.
2. If the Advanced Include options are not already displayed, click the **Advanced options** button.

3. Check the *Archived volunteers* checkbox in the Include options. The list of volunteers will include only the archived volunteers.

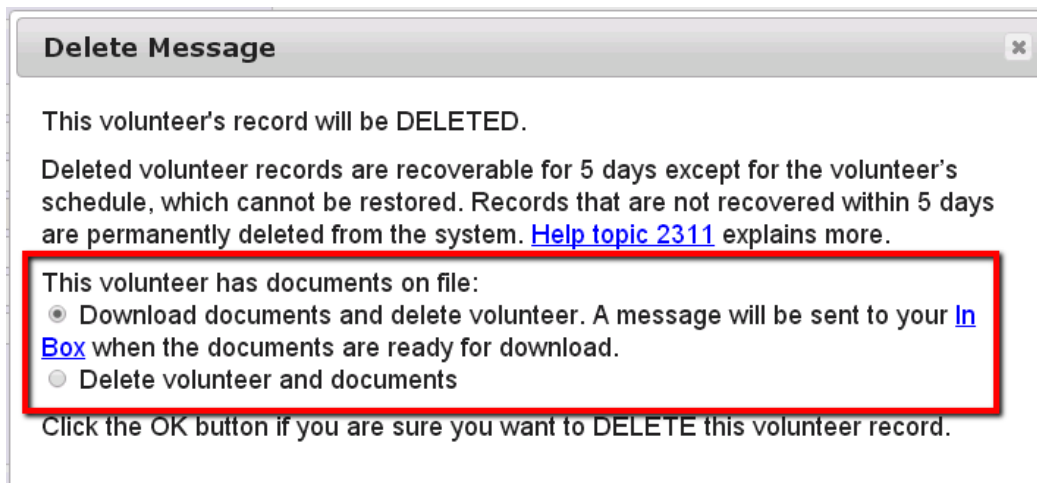

4. Use the letters at the top of the Volunteers screen, or the All link, and select the volunteer record you would like to delete.

5. Click the **Delete** button on the **Core tab** [pg:1868] of the record. A prompt will appear to confirm that you'd like to delete the record.

6. If your account has the [VicDocs \[pg:1648\]](#) feature enabled, and the record you're deleting has documents stored, the prompt will include an option to save or delete the documents. If you select to save the documents, they will be available on the [In Box \[pg:0303\]](#) in your mailbox for 5 days. If you do not save the documents locally during these 5 days, there will not be a way to recover them.

7. If you are certain that this is the volunteer record you would like to delete, click the **OK** button.

When the process finishes, Volgistics displays the initial Volunteers screen.

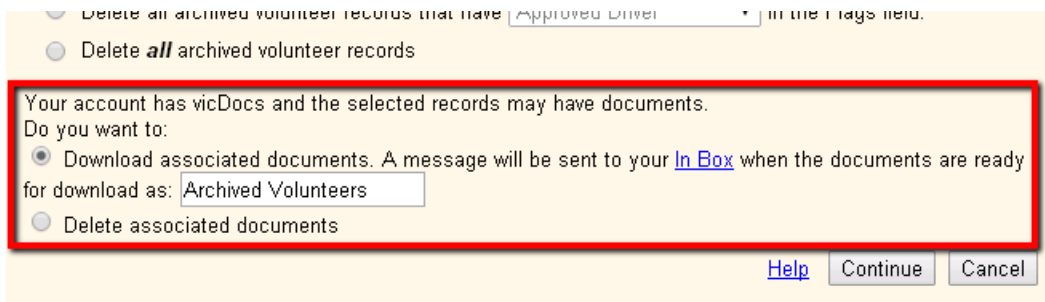

The volunteer file will still be set to include archived volunteers only. You can continue working with archived volunteers, or you can uncheck *Archived volunteers* to work with records in the non-archived section of your database.

### Delete groups of archived volunteer records

If you have access to the [Setup \[pg:0887\]](#) page, you can delete multiple archived volunteer records in a single step. This is a useful capability if you want to purge multiple archived volunteer records from your database without having to delete them individually.

To delete multiple archived volunteer records:

1. Choose Setup from the menu.
2. Select *Account management*.
3. Click *Delete archived volunteer records*.
4. Specify which archived records you want to delete (see the Choosing which archived records to delete section below for details).
5. If your account has the [VicDocs \[pg:1648\]](#) feature enabled, you will see an option to save or delete any documents associated with the records being deleted. If you select to save the documents, they will be available on the [In Box \[pg:0303\]](#) in your mailbox for 5 days. If you do not save the documents locally during these 5 days, there will not be a way to recover them.

6. Click the **Continue** button. A confirmation screen will appear.

7. If you are certain that you want to continue (remember that if records are not restored they are permanently deleted after 5 days), enter your Volgistics password and then click the **Continue** button.

### Choosing which archived records to delete

If you choose to delete groups of archived volunteer records, there are four options for choosing which archived records to delete.

#### Delete all archived volunteer records archived on or before...

Choose this option to delete all of the volunteer records archived on or before the date you specify. Any record that was archived on or before the date you choose will be deleted no matter when (or if) that volunteer last performed service. For example, if you choose this option and select the date 12-31-2015, any volunteer record that was archived on or before December 31, 2015 will be deleted.

You can view the date that individual volunteer records were archived in the *Date archived* field that appears on the History tab of volunteer records.

If you use [Site Level Access \[pg:0092\]](#), volunteer records archived on or before the date you specify will be deleted no matter which Site(s) a volunteer was associated with.

#### Delete all archived volunteer records that have a date of last activity earlier than...

A volunteer's *date of last activity* is the last date for which [service \[pg:1568\]](#) was recorded for the volunteer (if you track volunteer service). [Help topic 2259 \[pg:0076\]](#) explains more about this. You can view the *date of last activity* for individual archived volunteer records in the Statistics box on the [Core tab \[pg:1868\]](#).

Choose this option to delete all of the archived volunteer records that have a *date of last activity* that is earlier than the date you specify; or that do not have any *date of last activity* (volunteers for whom no service was ever recorded). This choice ensures that you do not inadvertently delete archived volunteer records for volunteers who performed service within a recent time frame.

For example, if you choose to delete archived volunteer records for volunteers whose *date of last activity* was earlier than 01-01-2016, then the system will delete archived volunteer records with no *date of last activity*, or no service records for dates later than 12-31-2015.

If you use [Site Level Access \[pg:0092\]](#), archived volunteer records with a *date of last activity* earlier than the date you specify will be deleted no matter which Site(s) a volunteer was associated with.

#### Delete all archived records that have XXXXX in the Flags field

You can choose to delete just the volunteer records that have a specific Flag. This can be an existing Flag that volunteer records already have on them such as if you have archived records with a *Summer Interns 2015* Flag and you want to delete just these records. Or you can create a custom Flag such as *Delete this record* and add it to records in the archive that are no longer needed. To create a new Flag:

1. Select [Setup \[pg:0887\]](#) from the Menu.
2. Expand the *Field options* link.
3. Select *Core tab*.
4. Select **Flags**.
5. Add the new Flag in the *Add a new item* field.
6. Click the **Save** button behind the field name.
7. If no other Flags are needed, click the **Save** button at the bottom of the page.

Once the new Flag is created, you can add it to the Core tab of individual archived records. However, if you want to use the [Tags \[pg:1529\]](#) feature to add the Flag to multiple records at once, you would need to un-archive the records first because archived records cannot be tagged.

If you use [Site Level Access \[pg:0092\]](#), all volunteer records with the Flag you specify will be deleted no matter which Site(s) a volunteer was associated with.

#### Delete all archived volunteer records

Choose this option if you want to completely delete all of the archived volunteer records from your database. Your account will not contain any archived volunteer records if you choose this option.

If you use [Site Level Access \[pg:0092\]](#), archived volunteer records for all Sites will be deleted.

#### **Remove a deleted archived record before the 5 day hold period ends**

You can permanently remove a volunteer record from the database before the end of the 5 calendar day hold period if needed. Please remember that there will *not* be a way to recover the record from the system if you do this. All information associated with the record will be removed from the system and it will not be recoverable. To remove a record before the end of the 5 day hold period:

1. Choose **Volunteers** from the [menu \[pg:0215\]](#). The initial **Volunteers** screen appears.
2. If the **Advanced Include** options are not already displayed, click the **Advanced options** button.

## Tracking References

Help topic 2011

Added or revised 10-08-2012

---

You can track references for volunteers on the Contacts tab in the volunteer record. To add a new reference for a volunteer:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and then locate the volunteer's record.
2. Open the volunteer's record and click on the Contacts tab.
3. Click the **Add a new contact** button. This opens a new, blank Contact record.
4. Enter the reference information - such as name and address. You can optionally record the reference's relationship to the volunteer using the "Relationship" field.
5. In the "Kind" field, select "Reference."
6. Click the **Save** button.

### Reference

Last name:	<input type="text" value="Mathews"/>	Kind:	<input type="text" value="Reference"/>
First name:	<input type="text" value="Kevin"/>	Relationship:	<input type="text" value="Neighbor"/>
Middle name:	<input type="text"/>	Title:	<input type="text" value="Mr."/>
Nickname:	<input type="text"/>	Contacted:	<input type="text" value="Yes"/>
Job Title:	<input type="text"/>	Verified:	<input type="text" value="05-22-2007"/>
Employer name:	<input type="text"/>		
Street 1:	<input type="text" value="2300 Smithville Road"/>	Home:	<input type="text"/>
Street 2:	<input type="text"/>		<input type="checkbox"/> Ok to call
Street 3:	<input type="text"/>	Work:	<input type="text" value="(812) 555-2144"/>
City:	<input type="text" value="Bedford Falls"/>		<input checked="" type="checkbox"/> Ok to call
State:	<input type="text" value="OR"/>	Cell:	<input type="text"/>
Zip:	<input type="text" value="12345"/>		<input type="checkbox"/> Ok to call
		Fax:	<input type="text"/>
			<input type="checkbox"/> Ok to call
		Pager:	<input type="text"/>
			<input type="checkbox"/> Ok to call
		Other:	<input type="text"/>
			<input type="checkbox"/> Ok to call
		Email:	<input type="text"/>

If you want to track more than one reference, repeat these steps to add additional references.

If you check volunteer references, and you want to keep a record of when a particular reference was checked, use the "Contacted" field to show that the reference was contacted. You can also enter a date in the "Verified" field to show when the reference was checked.

If you use [online volunteer application forms \[pg:0413\]](#), you can ask volunteers to enter up to four references on their application. The applicant's references will appear on the Contacts tab once you receive their application. You can find more information on how to set this up in [Help topic 1059 \[pg:1346\]](#).

### **Need additional dropdown list entries?**

If they are needed, [Volgistics Administrators \[pg:0052\]](#) can add more items to the "Kind," "Relationship," and "State" dropdown list fields on the Contacts record. [Help topic 2018 \[pg:0963\]](#) explains more about how to do this.

---

## **Tracking Emergency Contacts**

Help topic 2012

Added or revised 01-09-2015

---

You can track emergency contact records for volunteers on the Contacts tab in the volunteer record. To add a new emergency contact for a volunteer:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and then locate the volunteer's record.
2. Open the volunteer's record and click on the Contacts tab.
3. Click the **Add a new contact** button. This opens a new, blank Contact record.
4. Enter the emergency contact information you want to track. For example, you can enter just a name and phone number, or you can also record a complete address for the emergency contact. You can optionally record the emergency contact's relationship to the volunteer using the "Relationship" field.
5. In the "Kind" field, select "Emergency contact."
6. Click the **Save** button.

Last name: Bailey  
 First name: Mary  
 Middle name: Title:  
 Nickname:  
 Employer name: Drewer Associates, Inc.  
 Street 1:  
 Street 2:  
 Street 3:  
 City:  
 State: Zip:

Kind: **Emergency contact**  
 Relationship: Spouse  
 Contacted:  
 Verified:

 Fax:  Ok to call  
 Pager:  Ok to call  
 Other:  Ok to call  
 Email:

Pull from Core Swap with Core Save Delete Cancel

If you want to track more than one emergency contact, repeat these steps to add additional contacts.

If you use [online volunteer application forms \[pg:0413\]](#), you can ask volunteers to enter up to four emergency contacts on their application. The applicant's emergency contact information will appear on the Contacts tab once you receive their application. You can find more information on how to set this up in [Help topic 1059 \[pg:1346\]](#).

### Need additional dropdown list entries?

If they are needed, [Volgistics Administrators \[pg:0052\]](#) can add more items to the "Kind," "Relationship," and "State" dropdown list fields on the Contacts record. [Help topic 2018 \[pg:0963\]](#) explains more about how to do this.

---

## Tracking Employers

Help topic 2013

Added or revised 10-09-2012

---

You can track information about a volunteer's employer, or their profession, on the Contacts tab in the volunteer record. To add employer information for a volunteer:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and then locate the volunteer's record.
2. Open the volunteer's record and click on the Contacts tab.
3. Click the **Add a new contact** button. This opens a new, blank Contact record.

4. Enter the employer information you want to track. For example, you can enter just the name of the employer, or you can also record a complete address.
5. In the "Kind" field, select "Employer."
6. Click the **Save** button.

### Employer

Last name: <input type="text"/>	Kind: <input type="text" value="Employer"/>
First name: <input type="text"/>	Relationship: <input type="text"/>
Middle name: <input type="text"/> Title: <input type="text"/>	Contacted: <input type="text"/>
Nickname: <input type="text"/>	Verified: <input type="text"/>
Job Title: <input type="text" value="President"/>	
Employer name: <input type="text" value="Bedford Falls Savings &amp; Loan"/>	
Street 1: <input type="text"/>	Home: <input type="text"/> <input type="checkbox"/> Ok to call
Street 2: <input type="text"/>	Work: <input type="text"/> <input type="checkbox"/> Ok to call
Street 3: <input type="text"/>	Cell: <input type="text"/> <input type="checkbox"/> Ok to call
City: <input type="text"/>	Fax: <input type="text"/> <input type="checkbox"/> Ok to call
State: <input type="text"/> Zip: <input type="text"/>	Pager: <input type="text"/> <input type="checkbox"/> Ok to call
	Other: <input type="text"/> <input type="checkbox"/> Ok to call
	Email: <input type="text"/>

If you want to track more than one employer, repeat these steps to add additional employer records.

If you check volunteer employment records, and you want to keep a record of when a particular employer was checked, use the "Contacted" field to show that the employer was contacted. You can also enter a date in the "Verified" field to show when the employer was checked.

If you use [online volunteer application forms \[pg:0413\]](#), you can ask volunteers to enter up to four employers on their application. These could be past or current employers if you use these for background checks. The applicant's employer information will appear on the Contacts tab once you receive their application. You can find information on how to set this up in [Help topic 1059 \[pg:1346\]](#).

#### Need additional dropdown list entries?

If they are needed, [Volgistics Administrators \[pg:0052\]](#) can add more items to the "Kind," "Relationship," and "State" dropdown list fields on the Contacts tab. [Help topic 2018 \[pg:0963\]](#) explains more about how to do this.

Volgistics Administrators may also customize fields that appear on the Contact record. In the example pictured above, the "Job Title" field was customized using the "Spare text" field on the Contacts tab. [Help topic 2017 \[pg:0957\]](#) explains how to customize fields.

---

# Tracking Volunteer Status

Help topic 2014

Added or revised 10-09-2012

---

An important piece of information in every volunteer record is the volunteer's status. The term "status" describes the volunteer's overall relationship with your organization. Every volunteer record in Volgistics must have a status selected in the Status field on the [Core tab \[pg:1868\]](#) of the record.

You can find information on how organizations usually use the default statuses provided in Volgistics in the *Default Status Names* section of this help topic. You can also customize new statuses to suit your needs. The *Customizing the Status Field* section shows how to do this.

## To view or change a volunteer's current Status

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Use the letters at the top of the Volunteers screen to browse for the appropriate volunteer record.
3. Select the volunteer's record. The Core tab for this volunteer appears. You'll see the volunteer's status listed in the first section of the Core tab.
4. To change the volunteer's status, select the new status from the dropdown list.
5. Click the **Save** button. The volunteer record will refresh and the new status will be permanently saved.

### Bailey, George

Core Profile Service Schedule History Contacts Notes

Save Cancel Archive Delete Combine  Tagged Previous Next

**Name**

Last name:  Status:

First name:  Type:

The status field is located here

## To view or change a volunteer's Status dates

Whenever you change a volunteer's status, Volgistics automatically makes a Date entry on the History tab showing the date the volunteer's status changed, and what status it changed to. To see the history of a volunteer's statuses, select their History tab and view the Status entries in the Dates box.

# Bailey, George

Core Profile Service Schedule **History** Contacts Notes

Save Cancel  Tagged Previous Next

Dates				
	Event	Date	Expires	Notation
Status	Active	01-13-2004		<a href="#">Edit</a>

Each time a volunteer's status changes, Volgistics automatically records the date on the volunteer's History tab, like this.

In this example, George Bailey became an Active volunteer on January 13, 2004.

These automatic Date entries default to the current date (the date you changed their status). If necessary, you can always edit these Date entries to show an earlier or later date.

It's a good idea not to delete these automatic Date entries (unless you made one by changing a volunteer's status inadvertently) because they enable Volgistics to provide you with important information about volunteer participation over time.

Every volunteer you track must have a volunteer status.

## Default Status Names

Volgistics provides four volunteer status categories by default:

- Prospect
- Applicant
- Active
- Inactive

These categories apply well to most volunteer programs. Here's what each status category means:

### Prospect

Prospective volunteers are people who have expressed an interest in volunteering, or you want to recruit. Typically these are people who call or stop by to ask about volunteer opportunities.

Information about prospective volunteers is like gold: these individuals may be the future volunteer strength of your agency! While not all prospective volunteers will eventually become active, many may become contributing volunteers.

### Applicant

Applicants are people who have started the process toward becoming a volunteer. Normally this means they have submitted an application form. (Applicants differ from Prospects in that Prospects have only expressed an interest in volunteering; Applicants have taken action toward becoming a volunteer.)

### Active

Active volunteers are those who have completed your induction process and are currently contributing members of your volunteer force.

### Inactive

Inactive volunteers are formerly active volunteers who are no longer contributing members of your force. This category usually includes volunteers who are inactive for any reason: they moved, went back to work, resigned, were terminated, and so forth.

It may be that if volunteers have the Inactive Status for a certain length of time, you will want to move their record to the archived section of your database. Because archived records have more limited functionality compared to non-archived records (they cannot receive email messages, be scheduled for assignments, login to VicNet or VicTouch, etc.), archived records cost less on a record-by-record basis. [Help topic 2000 \[pg:1819\]](#) explains more about how to archive volunteer records.

Often, volunteers start as a Prospect, then progress to Applicant, Active, and eventually Inactive status. What prompts you to add a volunteer to the database and/or change their status is up to you. The main point is that you should use the Status field to track a volunteer's progress toward becoming a contributing volunteer.

Tracking status in this way is important for many reasons:

- It enables you to generate mailings and lists that include only the active volunteers.
- It allows you to measure the current strength of your volunteer program. ("How many active volunteers do we have?")
- It allows you to identify potential volunteers and encourage them to apply for a volunteer position at your agency.
- It allows you to identify individuals who have started the application process, but may need some encouragement to move things along.

### **Configuring a Default Status**

The Status field always has a default value. Each time you add a new volunteer record, it starts out with this default status. You can change the default status if you have access to Volgistics [Setup \[pg:0887\]](#).

To change the default status:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select Field Options. A list of all the tabs in Volgistics appears.
3. Select the Core tab. A list of all the fields located on the Core tab appears.
4. Click on Status. The Field Properties window appears.

Field location: **Core tab**

Type of field: **Dropdown**

Field name:

Require an entry: Always

Default entry:

5. Next to "Default entry," choose the volunteer status you want to appear on new volunteer records.

- If you normally track prospective volunteers in Volgistics, then set this to "Prospect" since most of the new records you create will be for prospects.
- If you do not create volunteer records in Volgistics until after you receive an application, set this to "Applicant" since most of the new records you create will be for applicants.
- If you only enter volunteers into Volgistics after they become active, set this to "Active" since most of the new records you create will be for active volunteers.

6. Click the **Save** button.

### Customizing the Status Field

If you have access to Volgistics [Setup \[pg:0887\]](#), you can change the status names, add additional statuses (up to eight), and merge statuses.

When re-naming or adding a status, remember that you should use the Status field only to describe the overall relationship that volunteers have with your organization. Since there are more appropriate places for tracking the following things, you should not use the Status field to track these:

- Assignments. See [Help topic 1185 \[pg:0193\]](#) for instructions on tracking a volunteer's assignments.
- Volunteer Types (e.g. Adult vs. Junior). See [Help topic 2263 \[pg:0212\]](#) for information on tracking volunteer Types.
- Volunteer Affiliations (e.g. RSVP, Auxiliary etc.). See [Help topic 2263 \[pg:0212\]](#) for information on creating Flags.
- Whether or not a record is archived. Please see the note below for more information on this.

#### Please note:

In some cases organizations may choose to create a status called "Archived." Giving a volunteer record a status of "Archived" is not the same as actually placing the volunteer's record in the archived section of your database. Records in the archived section of the database can have any of the statuses that are setup in your account. While it might be helpful to create a status of "Archived," a volunteer record could have this status in either the non-archived, or the archived, section of your account. See [Help topic 2000 \[pg:1819\]](#) for information on archiving records.

To customize the Status field:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select Field Options. A list of all the tabs in Volgistics appears.
3. Select the Core tab. A list of all the fields located on the Core tab appears.
4. Click on Status. The Field Properties window appears.

**Drop down table items**

Add a new item:

Active

#### Add a new status

Type the new status next to "Add a new item" and click the **Save** button. You can create up to eight different statuses.

Result: The new item is an option in the Status field.

#### Rename a status

Edit the entry you would like to change and click the **Save** button.

Result: Volgistics renames the entry in the dropdown list and in any record that has the corresponding entry. For instance, if you rename "Inactive" to "Resigned," any volunteer that had "Inactive" in the Status field now has "Resigned."

#### Combine one status with another

1. Determine which dropdown list item you would like to merge. Click the corresponding **Merge** button. The "Merge drop-down items" window appears.
2. The screen will verify the item you chose to merge and will ask you which entry you would like to merge into. Select the appropriate entry.
3. Click the **Go** button.

**Please note:** If the status is setup as the default status, the **Merge** button will not appear beside the status. If you want to combine this status with another status, you would need to choose a different default status first.

Result: After you merge two dropdown items together, any records that had the first entry will have the second entry you choose instead. The merged item will no longer appear as a choice in the Status field.

For instance, if you merge "Prospect" into "Applicant," any record that had "Prospect" as their status now has "Applicant." Prospect is no longer an option in the Status field.

Note: Several minutes may pass before the merged values appear in your database.

### Delete a status

Every volunteer record must have a volunteer status. For this reason, it is not possible to delete a status (deleting a status could potentially leave some volunteers without a status). If you have a status you no longer need, instead of deleting it combine it with another status. This ensures that no volunteer records are left without any status on their record. For example, if you have a status called "Moved" that you want to remove from your system, combine it with a status such as "Inactive." Any volunteers who had the "Moved" status will be changed to the "Inactive" status, and "Moved" will be removed from the Status dropdown list.

---

## **Adding a New Volunteer Record**

Help topic 2015

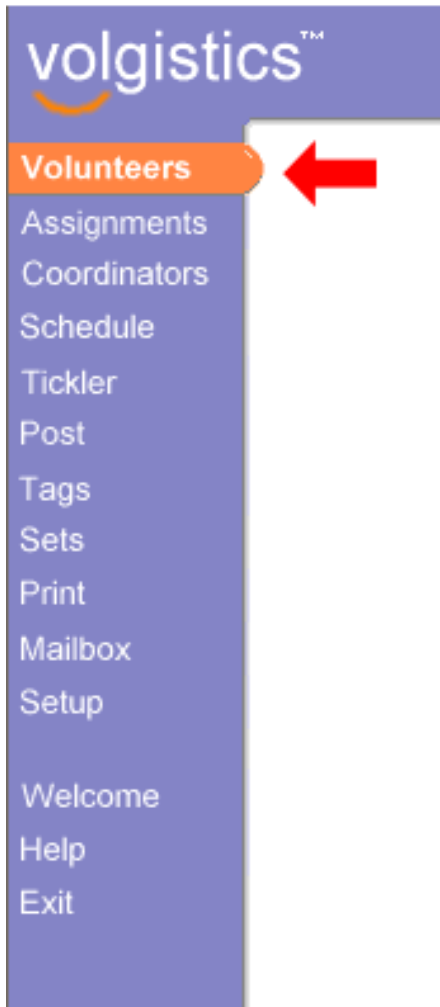

Added or revised 03-04-2008

---

If you use on-line volunteer application forms, chances are many or all of your new volunteers will submit an application form on-line, in which case Volgistics establishes the volunteer records for you automatically when you retrieve new applications.

Still, there may be times when you want to add a new volunteer record to Volgistics yourself, manually. Here's how to do this:

1. Choose Volunteers from the [menu \[pg:0215\]](#).

2. Click the "New Volunteer" button.

3. Enter (at least) the new volunteer's first and last name on the Core tab, then click the "Save" button.

You have now established a new volunteer record. Note that you cannot select any of the other tabs in the new volunteer's record until you save the record for the first time.

The amount of information you initially enter for a new volunteer record is entirely up to you. Often, just the basic information is entered on the Core tab, and then additional information is entered over time as it becomes available.

# How do I change a volunteer's Start Date?

Help topic 2022

Added or revised 03-10-2011

A volunteer's *Start date* is shown on the History tab in their volunteer record. By Default, the *Start date* is the date a volunteer first became active (their earliest 'active' status date).

Dates		Start date: 02-02-2004	Date entered: 10-27-2006			
		Stop date: 07-23-2005				
	Event	Date	Expires	Notation		
Status	Inactive	07-23-2005			Edit	Delete
Status	Active	02-02-2004			Edit	Delete
Status	Applicant	01-09-2004			Edit	Delete
Checklist	Attends orientation	03-04-2004		See file	Edit	Delete
Checklist	Initial interview	01-12-2004		Complete	Edit	Delete
Class	Customer Service Training	08-02-2004		Completed	Edit	Delete

[Add](#)

In the example shown above, the volunteer's status was made 'active' on February 2, 2004. Therefore February 2, 2004 became their 'start date' automatically.

If you want this volunteer's 'start date' to be a date other than February 2, 2004, change their 'active' status date. For example, suppose this volunteer actually started volunteering years earlier, on December 1, 1995. You can change their 'active' status date to 12-01-1995 by editing their active status date entry:

1. Click the Edit button on the date you want to change.

Status	Inactive	07-23-2005			Edit	Delete
Status	Active	02-02-2004			Edit	Delete
Status	Applicant	01-09-2004			Edit	Delete

2. In the Edit box, enter the new date.

**Edit**

Add a:  date

Event:

Date:

Notation:

3. Click the Save button.

The volunteer's start date will change automatically to reflect their new 'active' status date.

Dates		Date entered: 10-27-2006				
Start date:	12-01-1995	Stop date:	07-23-2005			
Status	Event	Date	Expires	Notation	Edit	Delete
		07-23-2005				

Using the [Start and stop date rules \[pg:1017\]](#), it's possible to customize your system so that other status dates - such as a volunteer's 'applicant' date - will become their *Start date*. If you've customized your system this way, a volunteer's *Start date* may be based on a status date other than the 'active' status date.

Find by Email Address

Find by Group Name

Using Wildcard Search Features

Sort & Search Records

### Controlling Records Shown

When you use one of the methods shown in this help topic to bring up your volunteer records, the Volunteers page may not load all of your records initially if you have a large number of records. If the search results contain more records than the dropdown is set to, the entry count will indicate that not all of the records are shown.

### Using the Alphabetical Index

One way to locate a volunteer record is to use the alphabetical name index located at the very top of the Volunteers screen.

1. Choose Volunteers from the menu [pg:0215].

2. Across the top of the Volunteers screen you'll see the letters of the alphabet. Click on the first letter of the volunteer's last name. For example, if you're looking for *George Bailey*, click the "B" link to see the volunteers whose last names begin with the letter B.

3. Volgistics displays an alphabetized list of the volunteers whose last names start with the letter you selected. If necessary, scroll down this list until you find the volunteer you're looking for. When you see the volunteer you're looking for, click on his or her name to open the record.

### Viewing All Volunteers

To view a list of all volunteer records:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Click the "All" link next to the letter "Z" in the alphabetical index.

### Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

You'll see a list of all volunteers.

### Using Include Options

You might want to limit your search to just certain volunteers, such those with an Active Status or just a certain Flag or Type. You can use the fields under the *Include* heading to do this. Available fields include [Status](#), [Type](#), [Flag](#), [Site](#), [Set](#), [Tags](#) and [Kind](#). The fields you see on the Volunteer page may not include all of these options depending on your account's setup.

Here is how to use the *Include* options:

1. Choose Volunteers from the [menu](#).
2. Locate the *Include* section.
3. Use the fields to limit your search to just records with the desired *Status*, *Type*, *Flag*, *Site*, *Set*, *Tags* and/or *Kind*. For example, to search for just records with the Active *Status*, select "Active" from the Status dropdown list and leave the other fields set to "Any."

### Include

Status:    

Type:   

Flag:   

Site:   

Set:   

Tags:   

Kind:   

 [Clear](#)

4. Click on a letter of the alphabet or the All link to see records that have the selection you made in the *Include* field.

You can also use more than one *Include* field at a time for more advanced searches. For example, if you wanted to find only volunteers with the Active Status who also have the "Approved Driver" Flag on their record, select "Active" from the Status dropdown and "Approved Driver" from the Flag dropdown and then complete your search.

## Include

Status:  Active  

Type:  Any 

Flag:  Approved Driver  

Site:  Any 

Set:  Any 

Tags:  Any 

Kind:  Any 

 [Clear](#)

Selections in the *Include* fields will stay in place during your [session \[\\_\\_\\_\\_\\_\]](#) unless they are changed. You can either reset the field's dropdown to "Any," or click the "Clear" link underneath the fields to reset them. The fields will reset to "Any" automatically when your session ends.

You can also fine tune your searches even more by clicking the **Advanced options** button that appears under the fields. This page allows you to do things such as selecting multiple options for a field, or excluding certain options for a field. For example, to find all records with the Active and Applicant Statuses you would set the Status field as shown below and then click the "All" link.

---

### Status

- Any  
 Only these  
 Not these
- |  |   |                                   |
|--|---|-----------------------------------|
| <input checked="" type="checkbox"/> Active | <input checked="" type="checkbox"/> Applicant | <input type="checkbox"/> Inactive |
| <input type="checkbox"/> Leave of Absence  | <input type="checkbox"/> Prospect             |                                   |
- 

Or if you wanted to find all records with either the "CPR Certified" or the "Certified Life Guard" Flags, you'd set the Flag field as shown below and then click the "All" link.

---

### Flag

- Any  
 Any of these  
 All of these  
 None of these
- |   |   |  |
|---|---|--|
| <input type="checkbox"/> Approved Driver          | <input type="checkbox"/> Auxiliary              | <input checked="" type="checkbox"/> Certified Life Guard |
| <input checked="" type="checkbox"/> CPR Certified | <input type="checkbox"/> Emergency Availability | <input type="checkbox"/> RSVP                            |
| <input type="checkbox"/> ServSafe Certified       |   |  |
-

The "Any of these" setting functions like an *or*. It would bring up volunteers if they have either of the Flags. The "All of these" setting functions like an *and*. Volunteers would need both Flags on their records in order to be included in the results if this were selected.

Click the **Basic options** button to return to first page when you're done using the advanced search features.

Selections you make on the *Advanced options* page will not remain selected when you leave the page.

### Find by Last Name

You can also find volunteer records by last name. To find the record for an individual volunteer by the volunteer's last name:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Enter the volunteer's last name in the *Last Name* field and then click the **Go** button located just to the right. If you're unsure of the spelling of the volunteer's name, see the Using Wildcard Search Features section of this help topic.

### Find

Find from within all volunteer records

Last Name:	<input type="text" value="Bailey"/>	<input type="button" value="Go"/>
First Name:	<input type="text"/>	<input type="button" value="Go"/>
Number:	<input type="text"/>	<input type="button" value="Go"/>
Email:	<input type="text"/>	<input type="button" value="Go"/>
Group Name:	<input type="text"/>	<input type="button" value="Go"/>

3. Volgistics displays an alphabetized list of volunteers whose last names match the name you entered. Locate the exact volunteer you're looking for and click on his or her name to open the record. If the record does not appear on the list, you might find [Help topic 2291 \[pg:1621\]](#) useful.

### Find by First Name

There may be times when you remember a volunteer's first name, but not their last. You can look-up volunteer records using the volunteer's first name, too. To find the records for volunteers with a certain first name:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Enter the volunteer's first name in the *First Name* field and then click the **Go** button located just to the right. If you're unsure of the spelling of the volunteer's name, see the Using Wildcard Search Features section of this help topic.
3. Volgistics displays an alphabetized list of the volunteers whose first names match the name you entered. Locate the exact volunteer you're looking for, and then click on his or her name to open the record. If the record does not appear on the list, you might find [Help topic 2291 \[pg:1621\]](#) useful.

### Find by Number

Some volunteer leaders use numbers to identify volunteers. If you assign numbers to your volunteers, you can locate a volunteer by their number by:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Enter the volunteer's number in the *Number* field and then click the **Go** button located just to the right. If you only know part of the volunteer's number, see the Using Wildcard Search Features section of this help topic.
3. If there is one, Volgistics displays the name of volunteer that has the number you entered. Click on the volunteer's name to open their record. If the record does not appear on the list, you might find [Help topic 2291 \[pg:1621\]](#) useful.

### Find by Email Address

To find the record for a volunteer using their email address:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Enter the volunteer's email address in the *Email* field and then click the **Go** button located just to the right. If you only know part of the address, see the Using Wildcard Search Features section of this help topic.
3. Volgistics displays an alphabetized list of the volunteers whose email addresses match the email address you entered. Locate the volunteer you're looking for and then click on his or her name to open the record. If the record does not appear on the list, you might find [Help topic 2291 \[pg:1621\]](#) useful.

Of course the volunteer's email address must have been recorded in their record in order for Volgistics to be able to locate the record by email address. You enter volunteer email addresses on the [Core tab \[pg:1868\]](#).

### Find by Group Name

You can also find a [group record \[pg:1802\]](#) by searching for the name of the group by:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Enter the group's name in the *Group Name* field and then click the **Go** button located just to the right. If you only know part of the name, see the Using Wildcard Search Features section of this help topic.
3. Volgistics displays an alphabetized list of the records that match the name you entered. Locate the record you're looking for and then click on the link to open it. If the record does not appear on the list, you might find [Help topic 2291 \[pg:1621\]](#) useful.

### Using Wildcard Search Features

If you only know part of the information for the record you're trying to locate, or are unsure of the spelling for a search field, you can also use wildcard searches in the fields under the *Find* heading. Here is the way these work:

- You can enter just the first part of the information in the field. For example, if you're looking for a volunteer named "George Bailey" you can enter "Ba" in the *Last Name* field. This will bring up all records where the last name starts with "Ba" such as Bailey, Baker, Barber, Barclay, etc. This option will work for the *Last Name*, *First Name*, *Email*, and *Group Name* fields. However, it will not work for the *Number* field.
- You can use the asterisk character (\*) in place of the information you do not know. This can be used at the start, end or in the middle of the information you do know. For example, to look for a volunteer with the last name of "Bailey," you could use "Bai\*" or "\*ley" or "Ba\*ey". This feature will work in any of the fields including the *Number* field. For example, to search for a volunteer with the number of "1234567" you could enter "123\*" or "\*567" or "12\*67" in the *Number* field. Here is an example of how this could be used to find all volunteers with a Yahoo email domain:

## Find

Find from within all volunteer records

Last Name:	<input type="text"/>	<input type="button" value="Go"/>
First Name:	<input type="text"/>	<input type="button" value="Go"/>
Number:	<input type="text"/>	<input type="button" value="Go"/>
Email:	<input type="text" value="*@yahoo.com"/>	<input type="button" value="Go"/>
Group Name:	<input type="text"/>	<input type="button" value="Go"/>

Only one asterisk character (\*) will work as a replacement for information in the wildcard searches. For example, "\*\*ile\*" in the *Last Name* would not work to find a record with the last name of "Bailey." Also, only the asterisk is a valid wildcard character for the *Find* fields. Other characters such as a question mark (?) are not valid in this location. However, the column headings shown in the Sort & Search Records section below do support other wildcard characters.

## Sort & Search Records

### Sorting Records

When the Volunteers page shows more than one record, the page is initially sorted alphabetically according to the volunteer's last name. To help you find certain records, you can click on a column heading to re-sort the page according to that column's information.

Showing 1 to 166 of 166 entries

Name	Tag	Number	Status	Type	Last Activity	S
<input type="text" value="Search"/>		<input type="text" value="Search"/>	<input type="text"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>	S
Armstrong, Mary	<input type="checkbox"/>	816	Applicant	Adult	06-11-2013	
Baccus, Lydia	<input type="checkbox"/>	774	Active	Adult	12-18-2014	08-
Bailey, Victor	<input type="checkbox"/>	1155	Applicant	Adult	06-11-2013	
Bargas, Jessica	<input type="checkbox"/>	830	Applicant	Adult	06-11-2013	
Barker, Geraldine	<input type="checkbox"/>	910	Active	Adult	12-17-2014	03-

For example, if the volunteer's [Date of Last Activity \[pg:0076\]](#) is included on this page [\[pg:1381\]](#), you can sort the page from the earliest to the most recent date by clicking the *Last Activity* heading. Click the heading again to sort the page to display the most recent dates at the top and the earliest dates at the bottom.

You can even sort the page based on the information in multiple columns. For example, you can sort the page according to the volunteer's [Status \[pg:1832\]](#) first by clicking on the heading of the *Status* column. You can then sort the records again according to the volunteer's [Type \[pg:0212\]](#) by holding down the *SHIFT* key on your keyboard while clicking on the heading of the *Type* column. The original sorting by *Status* will be maintained and then the records will be sorted by *Type*.

**Please note:** It is not possible to sort columns with icons or checkboxes such as the *Tag* column, or the [email validity \[pg:0377\]](#) or [text number validity \[pg:0333\]](#) indicator columns.

### Searching for Records

There are various ways you can search for just certain records in Volgistics.

One way is to [create a Set \[pg:0859\]](#) to query the database based on certain conditions such as [how much service \[pg:1581\]](#) a volunteer has recorded. Sets can be created based on any of the rules shown in [help topic 2177 \[pg:0853\]](#). After you create the Set, you can see the volunteers the Set contains by selecting the Set from the dropdown as shown in the Using Include Options section above.

Another way you can find certain records without creating a Set is to use the *search* options on the Volunteers page. Once you have a group of records showing on the page, you can search for certain records in two different ways. One is to use the *Search* box that appears in the top right corner to search the entire page.

 Search:

Previous 1 Next

Status	Type	Email	Last Activity	Start
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Applicant	Adult	maryearmstrong@pookmail.com	06-11-2013	
Active	Adult	lydiarbaccus@mailinator.com	12-18-2014	08-08-2012
Applicant	Adult	victorbailey@dodgit.com	06-11-2013	
Applicant	Adult	jessicarhargas@dodgit.com	06-11-2013	

The other is to use the search fields that appear at the top of each column. The search function looks for your input from left to right in the field. So, for example, if you need to find a volunteer with a certain last name and you can only remember that it starts with "Fr," enter "Fr" in the search field in the *Name* column to bring up all volunteers whose last names begin with "Fr."

Showing 1 to 3 of 3 entries (filtered from 166 total entries)

Name	Tag	Number	Status	Type	Email
<input type="text" value="Fr"/>	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Freitas, Elaine	<input type="checkbox"/>	1108	Active	College	elainejfreitas@pookm
French, Robert	<input type="checkbox"/>	1205	Active	Adult	robertjrench@spamb
Fryer, Bobbie	<input type="checkbox"/>	1227	Active	Adult	bobbiewfryer@dodgit

The more characters you type in, the more refined your search will be. To return to the un-filtered view. Just remove the characters you entered into the search field using the delete or backspace keys on your keyboard.

You can narrow your search still further by searching for information in multiple columns. Using the example we started above, you could narrow your search for volunteers with last names beginning with "Fr" to just those who have the *College Type [pg:0212]*. To do this you would enter "Co" (or more characters if you wish) in the search field at the top of the Type column.

Showing 1 to 1 of 1 entries (filtered from 166 total entries)

Name	Tag	Number	Status	Type	Email
<input type="text" value="Fr"/>	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text" value="Co"/>	<input type="text"/>
Freitas, Elaine	<input type="checkbox"/>	1108	Active	College	elainejfreitas@pookm

If you need to skip information, or look for just certain information anywhere in the field, the search will allow you to use some [regular expressions \[\\_\\_\\_\\_\\_\]](#). If you are unfamiliar with these, you may need to use a web search or find another source of information on how to perform more advanced searches.

Here's an example of a simple way regular expressions could be used on the page. Let's say you have a cleanup event at neighborhood park on a street called Cherry Ridge Drive. You want to find the volunteers on Cherry Ridge regardless of their house number. In this case, you could use the escape (\) or wildcard (\*) characters in front of "Che" in the Street column to bring up records for your volunteers on Cherry Ridge Drive.

Showing 1 to 3 of 3 entries (filtered from 168 total entries)

Name	Tag	Street	City	State
<input type="text" value="Search"/>		<input type="text" value="*Che"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>
Baccus, Lydia	<input type="checkbox"/>	4632 Cherry Ridge Drive	Wyoming	MI
Ford, Louise	<input type="checkbox"/>	1548 Cherry Ridge Drive	Wyoming	MI
Swindale, William	<input type="checkbox"/>	3022 Cherry Ridge Drive	Wyoming	MI

Here is another example of using regular expressions to filter the page. Let's say you've included the volunteers' [Date of Last Activity \[pg:0076\]](#) on the Volunteers page. ([Help topic 1202 \[pg:1381\]](#) shows how you can control which fields appear on the Volunteers page.) You may want to filter the page to show just the volunteers who have a blank in the field (in other words, they do not have any [service information \[pg:1581\]](#) recorded). To do this, enter the regular expression `^$` into the Search field. The page will filter to show just the volunteers who do not have a date recorded in the Date of Last Activity field. Or, if you want to do the opposite and filter the page to just show volunteers *with* a date entered, enter the regular expression `\d` into the Search field. Now the page will be filtered so that volunteers with a blank in the field are not shown.

## Status Field Search

Because each volunteer record can only have one [Status \[pg:1832\]](#), the Status search field is a dropdown list that contains all the options for Statuses in your account instead of a text field.

# Volunteer Record Organization

Help topic 2024

Added or revised 03-27-2017

---

Each volunteer you track in Volgistics has their own

### *volunteer record*

. Volgistics stores these records in a database, and gives you a variety of ways to retrieve them--individually, in [Sets \[pg:0858\]](#), in printed [reports \[pg:0595\]](#), and in [spreadsheet files \[pg:0513\]](#).

A volunteer record contains information that pertains only to that volunteer and their participation with your organization. If a couple – such as a husband and wife – volunteers, you should create an individual volunteer record for each of them if you want to track personal information (like name and address); volunteer service; Checklist items; or Awards for each person individually, or if you would like to include the individual in Volgistics emails.

Volgistics also has [group records \[pg:1802\]](#) that function similarly to individual records. These are designed to be used if you need to track groups of people who serve collectively as part of a business; service or social club; fraternal organization; or similar group. When you create a group record, that single group record will represent all of the members of that particular group. You can record the name and contact information for a group contact on each group record; however you do not record the names of the individual members of the group.

If you need to track personal information for each individual, but still identify service for a group, you should create individual records and show that they belong to the group with a [Flag \[pg:0212\]](#) on their record.

After you've added a volunteer record to Volgistics, you can always go back to that volunteer's record to add more information, view information, or change something. See [help topic 2023 \[pg:1840\]](#) for a list of the different ways you can find volunteer records. If the record is [archived \[pg:0709\]](#), you may find [help topic 1998 \[pg:1817\]](#) useful.

Volgistics stores the information you track for individual volunteers in a tab format. When you open a volunteer's record (by clicking on their name in a volunteer list), you'll see one or more of these tabs:

- Core
- Profile
- Service
- Schedule
- History
- Contacts
- Notes
- Vic
- Docs

Volgistics always displays the name of the volunteer whose record you've opened at the top of the Volunteer screen, as shown here:

## Bailey, George

To move between the tabs for the selected volunteer simply click the tab you want to view.

If you don't see all of these tabs when you view volunteer records, it means that your organization's [Volgistics Administrator \[pg:0052\]](#) limits your Volgistics access just to the tabs you see. Don't be alarmed if this is the case! Volunteer administrators often simplify things by limiting user access to just the areas of Volgistics used by your organization.

Here is a summary of the kinds of information normally tracked on each tab:

### Core

You'll keep basic personal information about the volunteer and their role in your organization on the [Core tab \[pg:1868\]](#). The Core tab includes: volunteer name, address, telephone numbers, email address, and web site; the volunteer's [Status \[pg:1832\]](#) and [Type \[pg:0212\]](#); any [Flags \[pg:0212\]](#) appropriate to the volunteer; their [Site \[pg:0092\]](#) (if you track volunteers at more than one site); and a [statistical \[pg:1387\]](#) summary of their service such as [Years of service \[pg:0077\]](#) and [Date of last activity \[pg:0076\]](#).

### Profile

Use the Profile tab for managing each volunteer's personal demographic information: their [Date of Birth and age \[pg:1861\]](#); their [photo \[pg:1798\]](#); their availability; their [assignment preferences \[pg:1011\]](#); [characteristics \[pg:0033\]](#) such as skills or interests; and their [email preferences \[pg:0381\]](#). There are also [customizable fields \[pg:0957\]](#) for tracking additional information.

### Service

The Service tab shows the volunteer's (past or current) [assignments \[pg:0138\]](#) in your organization, their actual [service statistics \[pg:1581\]](#) (such as volunteer hours), and any [mandated service \[pg:1419\]](#) requirements they may have.

### Schedule

Use the Schedule tab to manage or view the volunteer's [schedule \[pg:0746\]](#).

### History

This is where you can view or update a volunteer's [Status dates \[pg:1832\]](#), [Checklist \[pg:0142\]](#) (the things they do to become a volunteer or sustain their volunteer standing), past or upcoming [volunteer recognition \[pg:1551\]](#), and key dates such as their [start and stop dates \[pg:1890\]](#). There is also a [message history \[pg:0370\]](#) of messages sent to the volunteer.

### Contacts

Use the Contacts tab to record information about: [volunteer references \[pg:1828\]](#); [emergency contacts \[pg:1829\]](#); the [volunteer's employer \[pg:1830\]](#); [multiple addresses \[pg:1875\]](#) for the volunteer; and other significant people or organizations important to your volunteer record keeping.

### Notes

The Notes tab provides a simple, open ended text field for entering narrative information related to this volunteer. Volunteer leaders often use this space to include information gathered from volunteer interviews, and to record notable events that may occur in the course of this volunteer's participation. Information from [Comment Fields \[pg:1345\]](#) on your organization's application forms also appears here when the application is received.

### Vic

The [Vic tab \[pg:1810\]](#) has access information for the optional [VicNet \[pg:1724\]](#) and [VicTouch \[pg:1778\]](#) components. This tab appears even if these modules are not included in your organization's service level so you can try these modules on a [trial basis \[pg:0082\]](#).

### Docs

The [Docs tab \[pg:1630\]](#) of the volunteer record is used for electronic document storage. If an account has [VicDocs \[pg:1648\]](#) included in their [service level \[pg:0719\]](#), documents in a variety of formats (such as PDF, XLSX, DOCX, PNG, JPEG, etc.) can be uploaded to this tab. The tab is also used to store a PDF file of completed [online application forms \[pg:0413\]](#) for new volunteers. This is available even if VicDocs is not included in the account's service level. [Help topic 2553 \[pg:1319\]](#) has more information on how [System Operator \[pg:0065\]](#) rights are set for the Docs tab.

## How do I restore a volunteer record from the archive?

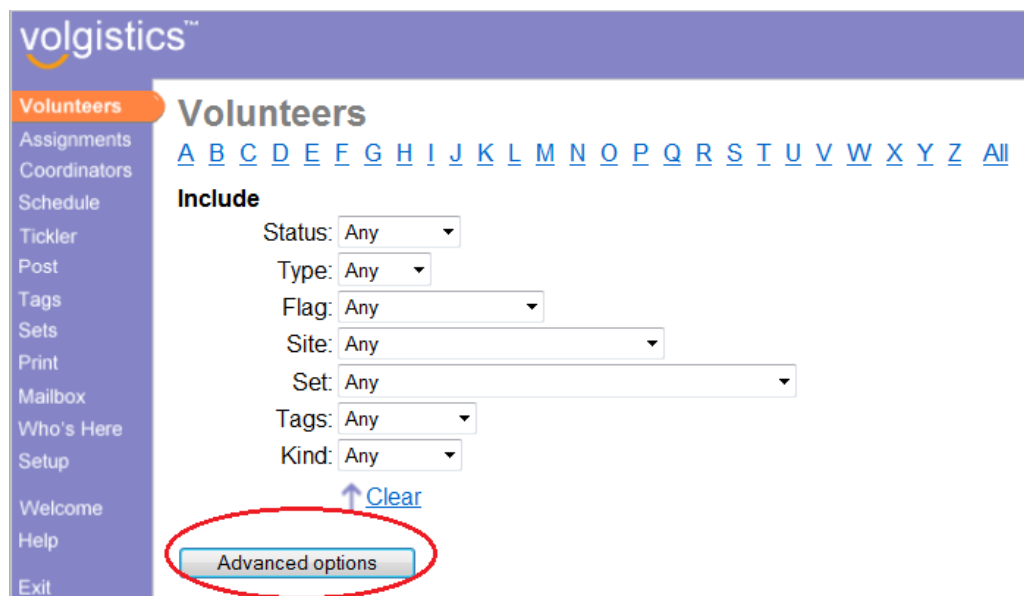

Help topic 2034

Added or revised 03-03-2017

---

To un-archive a volunteer record you archived previously:

1. Select 'Volunteers' from the [menu \[pg:0215\]](#).
2. If the 'Advanced' include options are not already displayed, click the **Advanced options** button.

3. Check the "Archived volunteers" checkbox. This changes your view of the volunteer records so you see just the archived volunteers. The page title changes to "Archived Volunteers" to let you know you're viewing the archives.

The screenshot shows the 'Archived Volunteers' filter page in Volgistics. The left sidebar contains navigation links: Volunteers, Assignments, Coordinators, Schedule, Tickler, Post, Tags, Sets, Print, Mailbox, Who's Here, Setup, Welcome, Help, and Exit. The main content area has the following filters:

- Site:** Radio buttons for 'Any' (selected), 'Any of these', and 'None of these'. Under 'None of these', there are checkboxes for 'Almontville Bands Pie Sale', 'Band Camp', 'Great Lakes County Fair', 'Great Lakes Parks & Recreation', and 'Great Lakes Community Hospital'.
- Set:** A dropdown menu labeled 'Volunteers in this Set:' with 'Any' selected.
- Tags:** Radio buttons for 'Any' (selected), 'Tagged', and 'Not tagged'.
- Kind:** Radio buttons for 'Any' (selected), 'Individual', and 'Group'. Below this is a checkbox for 'Archived volunteers' which is circled in red.

At the bottom of the filter section is a 'Basic options' button.

4. Use the letters of the alphabet or the 'All' link to locate the archived volunteer record you want to restore.

5. Click the **Restore** button to restore the record.

If you would like to restore *all* of your archived volunteer records at once, you can. [Help topic 2038 \[pg:0889\]](#) explains how.

---

## How do I track volunteer training?

Help topic 2149

Added or revised 04-04-2005

---

**Question:** How do I track volunteer training?

Some of our volunteers participate in volunteer training programs. How can I track which training programs or classes volunteers have attended?

**Answer:** There are two ways you can track volunteer training using the Volgistics History tab.

For training activities that are required for certain (or all) volunteers, or that must be repeated periodically, it's usually best to create a Checklist item for the training course and then use the Checklist to manage who has completed the course and who currently needs to complete it. Examples of training activities you might track as Checklist items include 'Orientation' and 'Life safety training' (because they are often a requirement for all volunteers); and 'CPR' (because the training must be renewed periodically).

If you track training activities using the Checklist, you can record the name of the training event, the date it was last completed (if it was), and the date it next expires (if it expires). You can also use the Tickler to get lists of volunteers for whom a specific training activity is due, or will soon expire.

If you choose to track your training activity using the Checklist features, you create the training events as you would any other Checklist item.

The second way to track training is in the Dates box on the History tab. This is usually best for training events that are not required for all volunteers and that do not need to be repeated periodically. Examples of training activities you might track in the Dates box would be 'public speaking,' 'instructor training,' and 'crisis intervention.'

When you track training classes in the Dates box on the History tab, you can pre-register volunteers for training events, and track whether or not they attended, and the date they attended.

These are some of the differences between using the Checklist and the Dates box for tracking volunteer training:

1. The system supports a limited number of Checklist items, but you can track as many different training events as you would like if you track them in the Dates box.

2. Use can use the Tickler feature to manage who needs to complete a particular course when you track training events on the Checklist, but not when you track them in the Dates box.

Here's how you track volunteer training activities in the Dates box on the History tab:

Start by adding the training activities you want to track to the 'Class Event' drop-down list on the History tab:

1. Choose Setup from the [menu \[pg:0215\]](#) and then select 'Field options.'

2. Select 'History tab.'

3. Select the 'Class event' field.

4. On the Field Properties page for the 'Class event' field, enter the name of a training activity in the 'Add a new item' field and then click the **Save** button. Repeat this step for each different training activity you want to track.

5. Click the **Save** button at the bottom of the Field Properties window when you're finished adding the training events you want to track (you can always return here and add more later).

Now you're ready to start recording training for volunteers. Here's how you would enter a training record for an individual volunteer:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and then locate the volunteer's record.

2. Click on the History tab for the selected volunteer.

3. If necessary, scroll down until you see the 'Dates' box. Use the 'Add' section of the 'Dates' box to add a new training record:

- a. In the "Add a" drop-down field, select 'Class'

- b. In the "Event" drop-down field, select the class the volunteer attended. (If the class you want to add does not appear in the "Event" drop down list, follow the instructions above for adding training activities to the Class Event drop down).

- c. Enter the date the volunteer attended the class, and – if there is one – an expiration date for the training.
- d. In the "Notation" drop down list select "Attended" to show that the volunteer attended the selected class.
- e. Click the **Save** button. The new training entry now appears in the Dates box on this volunteer's History tab.

---

## How do I pre-register volunteers for training events?

Help topic 2150

Added or revised 04-04-2005

---

**Question:** How do I pre-register volunteers for training events?

We have training events for which volunteers must pre-register by phone. How can we track these pre-registrations, and then produce rosters to show which volunteers have registered for a given course.

**Answer:** You can pre-register volunteers for training events using the Volgistics History tab.

Here's how to do this using the History tab:

If you haven't done so already, start by adding the training activity you want to pre-register for to the 'Class event' field on the History tab. For step-by-step instructions on how do this visit [How do I track volunteer training? \[pg:1853\]](#).

When a volunteer calls to pre-register:

1. Choose Volunteers from the [menu \[pg:0215\]](#) and then locate that volunteer's record.
2. Click on the volunteer's History tab
3. If necessary, scroll down until you see the 'Dates' box. Use the 'Add' section of the 'Dates' box to add the registration:
  - a. In the "Add a" drop-down field, select 'Class'
  - b. In the "Event" drop-down field, select the class the volunteer is pre-registering for.
  - c. Enter the date of the class.
  - d. In the "Notation" drop down list select "Registered" to show that the volunteer is registered for the class.

---

## Using Volunteer Numbers

Help topic 2152

Added or revised 02-14-2012

---

Each volunteer record has a unique number, stored in the Number field on the Core tab in the volunteer record. This number is commonly referred to as the 'volunteer number' or the 'PIN number.'

### Bailey, Harry

The screenshot shows the 'Core' tab of a volunteer record for Harry Bailey. The record includes fields for Last name (Bailey), First name (Harry), Middle name, Nickname (Harry), Title (Mr.), and Type (Community Volunteer). The Number field is set to 4321 and is circled in red. The Status is Active. Navigation buttons include Save, Cancel, Archive, Delete, Combine, Tagged, New, Previous, and Next.

Whether or not you use this number field is up to you. Unless you use the optional VicTouch module, there is no reason that you **must** assign volunteer numbers (if you use VicTouch, there is more information about assigning PIN numbers later in this help topic).

Some organizations assign volunteer numbers to coincide with numbered id- cards or badges, or to make it easier for volunteers to log their hours on manual time sheets.

You do not need to use numbers for the purpose of looking-up volunteer records in Volgistics. If you choose not to use volunteer numbers (and even if you do), you can look-up and identify volunteers by their name as easily as you can by number.

### Hiding or un-hiding the number field

If you want to use volunteer numbers, but you don't see the Number field on the Core tab, it may currently be hidden. On the other hand, if you see the number field on the Core tab but you don't need to use it, you can hide it.

To do this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Field options'
3. Select the 'Core tab link. This lists all of the fields on the Core tab.
4. Select the 'Number' field. This opens the Field Properties page.
5. On the Field Properties page, change the 'Hidden' field to "Yes" or "No" to suit your needs.

If you're un-hiding the number field: while you're on the Field Properties page examine the "System Operator rights." Be sure that the Volgistics System Operators you expect to enter volunteer numbers have "View and change" rights to the Number field.

6. If you made changes to the Field Properties page click the **Save** button.

### **Entering volunteer numbers**

If you choose to use volunteer numbers, you can either enter your own volunteer numbers or let Volgistics assign them for you.

Volgistics will automatically assign a unique volunteer number to every new record you add if you simply leave the volunteer number field blank on the new record. Volgistics assigns non-sequential 4 to 6 digit volunteer numbers by default (If you use VicTouch, random numbering provides better security than sequential numbering). You can also [customize the way Volgistics assigns numbers automatically \[pg:1015\]](#).

If you want to enter your own volunteer numbers, simply enter the number of your choice in the Number field when you add new volunteer records. Volunteer numbers may be up to 9 digits long, and they must contain numbers only (no letter characters, spaces or punctuation). Volunteer numbers cannot have "leading zeros" (for example, "000123" would be changed to "123").

If you enter your own volunteer numbers you must assign a unique number to each volunteer. No two volunteer records can have the same volunteer number. If you try to save a volunteer record with a number that is already in use, Volgistics will ask you to choose a different number before saving the record.

If you archive a volunteer record, it keeps its' volunteer number in the archive. Therefore you cannot re-use a volunteer number that is assigned to a volunteer whose record has been archived. You can re-use numbers from volunteer records you have deleted.

You can change the number on any volunteer record simply by entering a new number in the Number field and then saving the record.

If you receive on-line volunteer application forms, Volgistics automatically assigns a volunteer number to each new volunteer record. If you want to use your own numbering system, enter new numbers for these volunteer records after you receive them.

### **Let Volgistics do the counting**

Some organizations try to use volunteer numbering as way of determining how many records they have in their database; or as an indicator of which Site or volunteer group a volunteer belongs to.

These schemes are not recommended because they are usually difficult to implement and maintain; and they are almost always un-necessary because Volgistics can perform these tasks for you. Rather than trying to make volunteer numbers do these things, you should use the built-in Volgistics features designed to do them. For example, it's easy to get a [count of the number of volunteer records \[pg:1867\]](#) or [Manage Site Level Access \[pg:0092\]](#) without any special volunteer numbering scheme.

### **VicTouch PIN numbers**

If you use the optional VicTouch module, volunteers sign-in and out at VicTouch using their volunteer number (this is often called their PIN number).

With VicTouch, there are two main ways to assign PIN numbers:

- You can let Volgistics assign volunteer numbers as you add new volunteer records, and then give these numbers to your volunteers. This may be the easiest approach for you, however it means that volunteers will have to learn and remember a new number (or carry it with them).

- You can assign each new volunteer a number that you choose (either by entering a number when you first enter their record, or by changing the number that Volgistics assigns to another number you choose).

However you choose to assign PIN numbers for VicTouch, you'll need to give each volunteer their number at some point during their registration process (e.g. during their orientation) so they'll be able to start signing-in and out.

---

## Update Youth Volunteers upon Adulthood

Help topic 2160

Added or revised 04-18-2017

---

In many organizations, tracking whether the volunteer has reached adulthood is important. For example, a festival may have jobs that only volunteers who are 21 years old can perform. Or, a hospital may have requirements that apply to volunteers who are over 18 that do not apply to younger volunteers. Each organization will have its own standards for the age that a volunteer is considered an adult.

There are various ways to track if the volunteer is a youth or adult, but the two most common ways are to use a [Type or a Flag \[pg:0212\]](#). The Type option allows you to create mutually exclusive categories such as Adult or Youth. The Flag option allows you to place a Flag (such as Minor or Underage) on records to identify youth volunteers.

Whichever method is used, Volgistics will not automatically update a volunteer's Type or Flag when the volunteer reaches adulthood. However, this help topic shows how you can easily identify which volunteers have reached the age threshold and need to have their record updated.

*This process will only work if you include the year of birth in the [Date of Birth \[pg:1861\]](#) field so the system automatically updates the volunteer's age when their birthday arrives.*

### Create a Set to Identify the Volunteers Who Need to Be Updated

The first step is to make a [Set \[pg:0858\]](#) to identify volunteers who are now at the adult age, but still have the youth identifier. Here is how you can make this Set.

1. Select Sets from the [menu \[pg:0215\]](#).
2. Click the **Create a new set** button.
3. Enter a name (such as *Update Type to Adult*) in the *What would you like to call this set?* field.
4. Select *Their age* from the dropdown list under *Include volunteers in this set based on*, and then click the **Go** button.
5. Configure your Set rule to be *Their age is 18 and older*. (Use 21, or whatever age your organization considers a volunteer to be an adult, if it is different than 18.)
6. Select *Their type* or *Their flags* (whichever method you use to identify underage volunteers) from the dropdown list under *Add another rule based on*, and then click the **Go** button.
7. Configure your Set rule to find the youth volunteers. For example, if you have a Type called Youth, your rule will be *Their Type is Youth*. Or, if you have a Flag called Minor, your rule will be *Their Flags include any of these* and the box in front of Minor will be checked.

8. Under *This set has 2 rules*, be sure *Include volunteers in this Set only if they pass every one of these rules* is selected.

9. Click the **Finished** button.

### Setup an Automatic Report to Show the Volunteers in the Set

Now that you have your Set, you can make a report that will run automatically every week or every month. This will remind you to update the records, and it will show you which volunteers have had birthdays and need to be updated. Here is how you can create this report:

1. Select Print from the [menu \[pg:0215\]](#).
2. Expand the *Volunteer list* link.
3. Select *Create a new volunteer list report*.
4. On the Options tab, select how you want the report to be sorted.
5. On the Fields tab, select which fields you would like on the report such as one of the name choices, and the Type, Flag, or Date of birth fields.
6. On the Include tab, select if you'd like the report in PDF or Excel format. Then, scroll to the bottom and check the box by *This set*. Select the name of the Set you created from the dropdown list.

The screenshot shows a section titled "Set" with a checked checkbox labeled "This set:". Below the checkbox is a dropdown menu currently displaying "Update Type to Adult". To the right of the dropdown are four buttons: "Help" (a blue link), "Back", "Next", and "Cancel".

7. On the Save tab, give the report a new name such as *Volunteers to Update*. Under *Would you like this report to run on an automatic schedule?* select to run the report on a certain day of each month, or on a certain weekday if you'd like the report once per week.

The screenshot shows a section titled "Would you like this report to run on an automatic schedule?". There are three radio button options: "No, do not print this automatically", "Yes, print it on the 1st of each month", and "Yes, print it every Monday". The "Yes, print it every Monday" option is selected. Below these options is a "Send it to:" field with a dropdown menu showing "Sample Account, Operator". At the bottom right are five buttons: "Help" (a blue link), "Back", "Save", "Save and Print", and "Cancel".

8. Click the **Save** button.

### Use the Report to Update Your Volunteer Records

The report will be on the [In Box \[pg:0303\]](#) tab of your Volgistics mailbox on the day it is scheduled to be run. You can now open it and use it as a resource to [locate the volunteer records \[pg:1840\]](#) that need to be updated. After you change the Type on the record to be an adult, or you remove the Flag that identified the volunteer as underage, the volunteer will not be on the report the next time it is run because they will no longer be included in the Set.

If you use the Type option to identify adult volunteers, you can quickly change the Type for all the volunteers that need to be updated at once by using the **Tags** [pg:1529] feature. If you use the Flag option, you will need to remove the Flag from each record individually. Here are the steps to change the Type for all volunteers at once by using Tags:

1. Select Tags from the **menu** [pg:0215].
2. Click the **Clear all tags** button. This will ensure that Types are not accidentally changed for volunteers who may already be tagged in your session. If the button is grayed out, there are not any tagged records to clear.
3. Select Volunteers from the menu.
4. Select the name of the Set you created from the Set dropdown list. Be sure the other dropdown lists are set to Any. Then, click the All link to the right of the row of letters.

## Volunteers

8. Click the **Clear all tags** button.

---

## Tracking Date of Birth and Age

Help topic 2212

Added or revised 04-19-2017

---

If you choose to track volunteer dates of birth, or ages, Volgistics provides fields for these on the Profile tab. There are several ways to track dates of birth, depending upon your organization's need for this information.

### If "date of birth" is required

Some organizations ask volunteers to provide their date of birth. This is often a required piece of information needed to perform background checks or confirm that a volunteer meets the age requirements for certain volunteer assignments.

If your organization collects complete dates of birth (month, day, and year) from volunteers, enter this date value in the Date of birth field on the Profile tab.

### If "date of birth" is not required

Some organizations prefer to track a volunteer's month and day of birth, but not their year of birth. This makes it possible for an organization to wish volunteers a happy birthday when their birthday occurs, without asking volunteers to reveal their year of birth (age). To enter a date of birth without the year, simply enter the month and day in the "Date of birth" field on the Profile tab without the year. For example:

3/12 (March 12th)

5/1 (May 1st)

You can use the [Birthday list \[pg:1385\]](#) feature, and [Birthday Sets \[pg:0855\]](#) to find volunteers with a birthday in a given week or month.

### Age field

When you enter a complete date of birth (with the year) in the "Date of birth" field and then save the Profile tab, Volgistics automatically calculates the volunteer's age. This calculated age appears in the Age field next to the date of birth, and it is automatically updated by the system as time goes by. This means that the age displayed in the Age field increments automatically each time the volunteer has a birthday (as long as a complete date of birth is recorded in their record).

If you do not track dates of birth, or you choose to enter dates of birth without a year, Volgistics cannot automatically calculate a volunteer's age in the Age field. In this case you may manually enter an age in the "Age" field, however Volgistics cannot automatically update the age as time passes since the date of birth is not known.

### Tracking Age Categories

If your organization prefers not to collect or track volunteer dates of birth, however you need to categorize volunteers by age group (e.g. under 18, 18 to 65, over 65), you should customize a field on the Profile tab for these categories rather than using the "Date of birth" and "Age" fields.

To customize a field for this purpose:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "Field options."
3. Select "Profile tab (for volunteers)."
4. Select the next unused "Spare dropdown" field. For example, if a custom name does not already appear next to the "Spare dropdown 1" field, select that field.
5. Setup the "Field properties" page as shown in the following illustration. Use the "Add a new item" field to add the actual age groups you want to track (in other words, you need not setup the same age categories used in the example).

**Field Properties** Save Cancel

**Spare dropdown**

Field location: **Profile tab**

Type of field: **Dropdown**

Field name:

Hidden:  ▼

Require an entry:  ▼

Default entry:  ▼

**Drop down table items**

Add a new item:  Save

<input type="text" value="18 to 65"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="Over 65"/>	<span>Delete</span>	<span>Merge</span>
<input type="text" value="Under 18"/>	<span>Delete</span>	<span>Merge</span>

**System operator rights**

Volgistics Administrators:  ▼

Power users:  ▼

Basic users:  ▼

Save Cancel

6. Click the Save button on the Field properties page.

Your profile tab now includes a field for tracking age category.

Note that if you choose to track volunteer age categories in this fashion (without entering dates of birth), the system does not automatically advance a volunteer from one category to the next when their age changes (it can't because the date of birth is unknown). It's up to you to maintain this information as time passes and volunteers move from one category to the next. If you would like Volgistics to automatically track volunteer ages, you should record volunteer dates of birth as described under *If date of birth is required* above, instead.

### Finding records that are missing a date of birth

If you're interested in seeing which volunteers in your database do not have a complete date of birth, you can easily do so using a Set.

To create a Set that includes all of the volunteers without a complete date of birth (including the month, day, and year of birth) [create a new Set \[pg:0859\]](#) with a rule based on "Their age" like the one shown here:

The screenshot shows a configuration window titled "Rule" with a sub-header "Their Age". It contains five radio button options for defining a rule based on age or date of birth. The first option, "Their age is 0 and older", is selected. The other options are: "Their age is at least 0 and not more than 0", "Their date of birth is before [calendar icon]", "Their date of birth is between [calendar icon] and [calendar icon]", and "The Date of birth is incomplete in their record". A "Help" link is located in the bottom right corner.

---

## International Addresses

Help topic 2276

Added or revised 07-17-2006

---

If your organization has volunteers who reside in more than one country, you can configure Volgistics for tracking international mailing addresses.

By default Volgistics will track U.S. and Canadian addresses. If you would like to track addresses outside the U.S. and Canada, some Setup changes are needed. These are described in this help topic.

### Using the Country field

#### Using the Country field in volunteer addresses

Volgistics includes a field for tracking 'country' as part of mailing addresses. The Country field is hidden by default. To un-hide the Country field:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Field Options.'
3. Click on the 'Core tab' link.
4. Click on the 'Country' link.
5. On the Field Properties page, set 'Hidden' to "No."

**Field Properties** Save Cancel

**Country**

Field location: **Core tab**

Type of field: **Dropdown**

Field name: Country

Hidden: No

Require an entry: No

Default entry: None

**Drop down table items**

Add a new item:  Save

Canada	Delete	Merge
France	Delete	Merge
Germany	Delete	Merge
United Kingdom	Delete	Merge
United States	Delete	Merge

**System operator rights**

Volgistics Administrators: View and change

Power users: View and change

Basic users: View and change

Save Cancel

6. The Country field uses a drop-down list, which is empty by default. You can add the country names you want to appear in the Country drop down by entering them in the 'Add a new item' field and then clicking the **Save** button.

When it is not hidden, the Country field appears in the Address box on the Core tab for each volunteer.

**Address**

Street 1: 2454 Elm Street

Street 2:

Street 3:

City: Bedford Falls

State: IN Zip: 42345

Country: United States

Mail:  No postal mail  No email

Home: (414) 555-1286  Ok to call

Work: (414) 555-7122  Ok to call

Cell:   Ok to call

Fax:   Ok to call

Pager:   Ok to call

Other:   Ok to call

Email: hbaily@savingsandloan.com

If you use the Country field, it is not necessary for you to enter a country for every volunteer. If most volunteers live in your home country, you can omit the country entry for these volunteers. If you enter a country as part of a volunteer's address, it appears as part of the address on labels and lists. If you do not enter a country as part of the address, the Country field will not be used when the address is printed.

#### Using the Country field in other addresses

You can also include the Country field as part of the addresses tracked on these tabs:

Contacts  
Site  
Place  
Assignment  
Coordinator

To use the Country field in the addresses on these tabs, use the Field Options settings under Setup to un-hide the Country field on the selected tab.

#### Using the Country field in online volunteer application forms

If you have un-hidden the Country field for volunteer addresses using the instructions under *Using the Country field in volunteer addresses* (above), then you can also add the Country field to any of your [online volunteer application forms \[pg:0413\]](#).

To add the Country field to an application form:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Online forms.'
3. Select 'Volunteer application forms.'
4. Click on the name of application form you want to add the Country field to.
5. On the form setup page, click the 'Fields' link.
6. On the 'Fields' setup page for the selected application form, use the drop-down list next to the 'Country field' to choose the [form section \[pg:1340\]](#) where you want the Country field to appear (typically this will be same form section where the other address fields appear).
7. If you want to require an entry in the Country field, check the "Required" checkbox.
8. Click the **Save** button.

#### **Expanding the State/Province field**

If you track international addresses, the field typically used for the state or province in the U.S. and Canada may need to include entries for more than (or instead of) states and provinces, depending on the addressing standards for the nations for which you track addresses. To add additional (or different) values to the State field:

1. Choose Setup from the [menu \[pg:0215\]](#).

2. Select 'Field Options.'
3. Click the 'Core tab' link.
4. Click the 'State' field.
5. Use the "Add a new item" field to add each of the additional entries you want to appear in the State drop down list.
6. Click the **Save** button.

### Expanding the Zip/Post code field

By default, the Zip/Post code field accepts only postal codes that are properly formatted for U.S. or Canadian addresses. If you need to track postal codes with formatting other than these, you should remove the default U.S. and Canadian post code formatting requirement for this field.

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Field Options.'
3. Click the 'Core tab' link.
4. Click the 'Zip' field.
5. In the "Post or zip code format" field, select "No formatting"

**Field Properties** Save Cancel

**Zip**

Field location: **Core tab**

Post or zip code format: **No formatting** ▼

Field name: Zip

Hidden: **No** ▼

Require an entry: **No** ▼

Default entry:

**System operator rights**

Volgistics Administrators: **View and change** ▼

Power users: **View and change** ▼

Basic users: **View and change** ▼

Save Cancel

---

## How can I see how many volunteer records I have?

Help topic 2282

Added or revised 12-13-2012

---

To see a count of the number of records in your database:

1. Choose Volunteers from the menu.
2. Click the "Clear" link to clear any Include options that might be set, and then click "All" link near the top of the page to display the list of all records.

### Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

#### Include

Status:    
Type:    
Flag:    
Site:    
Set:    
Tags:    
[Clear](#)

3. The number of volunteers appears at the bottom of the list.

Note: This count does not include Archived volunteer records.

If you are a [Volgistics administrator \[pg:0052\]](#), you can get a count of the number of volunteer records, and the number of archived volunteer records like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select 'Account management.'
3. Select 'Account status.' Among other things, the Account status page shows the number of un-archived and archived records in the database.

---

## Core Tab

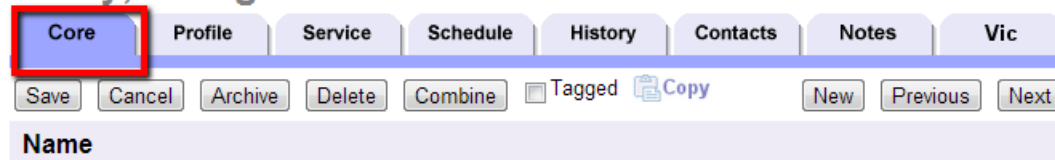

Help topic 2294

Added or revised 08-13-2014

---

Every volunteer's record includes a Core tab where you record their basic information such as name, address, and other contact information. The tab also includes fields used for identifying or categorizing your volunteer records. For example, the Status, Type and Flag fields. This help topic explains how to use the fields on the Core tab.

### Bailey, George

Core Profile Service Schedule History Contacts Notes Vic

Save Cancel Archive Delete Combine Tagged Copy New Previous Next

Name

#### Please note:

The field options on the Core tab in

*your*

system may differ from those shown below. Some fields appear only when you enable certain system features. Other fields can be hidden or renamed. If your organization has custom Core tab fields not shown below, please contact your [Volgistics Administrator \[pg:0052\]](#) to find out how they are used for your organization. The Core tab is organized into 5 or 6 "boxes" depending on the kind of record it is used for. Each box contains a related group of fields. You can click a link in the *Contents* box below to be taken directly to the section of the help topic that relates to a box.

#### Contents

- Name (or Contact Name) Box
- Group Box
- Address Box
- Flags Box
- Sites Box
- Statistics Box

#### Name (or Contact Name) Box

The fields in the Name box are for recording the volunteer's most vital information: their name, Status, Type, Kind, and optionally a record number. If the record is for a group, the "Name" box is re-named "Contact Name." In this case, you record the information for the primary group contact in this box. If you also need to track contact information for secondary contacts for the group, see [help topic 1990 \[pg:1816\]](#).

## Name

Last name:

Number:  

First name:

Status:  

Middle name:  Title:  

Type:  

Nickname:

Kind:  Individual  Group 

Field	Purpose
Last name	<p>Enter the volunteer's (or group contact's) last name.</p> <p>It's best to use upper and lower case letters when you enter names. There's no benefit to entering names in all uppercase letters. Entering names with proper capitalization produces printed reports with a more professional appearance.</p>
First name	<p>Enter the volunteer's (or group contact's) first name.</p>
Middle name	<p>If it's known, enter the volunteer's (or group contact's) middle name or middle initial.</p>
Title	<p>Use the dropdown list to choose the appropriate title, such as Mr., Ms., Mrs., Dr., etc.</p> <p>If the Title you want to select does not currently appear in the dropdown list, you can add it in Setup. Help topic 2018 explains how to add new dropdown list items.</p>
Nickname	<p>If they have one, enter the volunteer's (or group contact's) preferred name or nickname. For example, a person with the legal name of "Margaret" may prefer to go by "Peggy." In this case you should enter "Margaret" in the First name field, and enter "Peggy" in the Nickname field.</p>
Number	<p>Each record has a identification number. If you use VicTouch, this is the number the volunteer uses to sign-in and out at the VicTouch station. Numbers are not required for any other purpose except to identify records internally.</p> <p>If you leave the Number field blank, Volgistics will assign a record number for you. Help topic 2152 has more information about the Number field.</p>
Status	<p>Use the Status field dropdown list to select the volunteer's (or group's) current Status. Help topic 2014 has more information about tracking statuses.</p>
Type	<p>If your organization has different types of volunteers, use the Type field dropdown list to select the type for this record. Help topic 2263 has more information about using the Type field.</p>

Kind	<p>Volgistics can be used for both Individual and Group records.</p> <p>Group records allow you to make one record in situations where you do not need to keep track of individual volunteer data. For example if a business is sending 20 volunteers to help with a park clean-up.</p> <p>If you will need to know how many service hours a specific group member contributed, or send an email message to a specific group member, they will need an Individual record.</p> <p>Help topic 1045 has more information about when and how to use Group records.</p>
------	--

**Group Box**

This box will only appear if you select "Group" in the Kind field of the Name box. The Group box is used for recording information for the group's record.

**Group**

Group name:

Members:  (How many members in Savings and Loan Volunteers?)

Participation: If this group serves more than once, they usually send: 

The same volunteers each time

Different volunteers each time

Field	Purpose
Group name	Enter the group's name.
Members	<p>If you know how many members this group has, enter the number of people who belong to this group in the Members field. For example, if the Savings and Loan Volunteers group has 20 members, enter 20 here (even if not all 20 members will volunteer). You can leave this field zero if you're not sure how many members the group has.</p> <p>Volgistics uses the Members field along with other fields to determine unduplicated volunteer counts on service reports. You can find more information about how this works in Help topic 2115.</p>

Participation	<p>Choose the option that best describes how this group will participate if they will volunteer more than once for your organization. Volgistics uses this information when it calculates unduplicated volunteer counts on service reports. You can find more information about how this works in Help topic 2115.</p> <p>Choose "The same volunteers each time" if the group will typically send the same people each time the group volunteers. For example, if 20 group members will serve once a month, and it will most likely be the same 20 people each time.</p> <p>Choose "Different volunteers each time" if the group will typically send different people each time the group volunteers. For example, if a large company commits to send 20 volunteers each month, but the majority of the people will likely be different each time.</p>
---------------	--

### Address Box

Use the fields in the address box to enter the volunteer's (or group contact's) mailing address, phone numbers, email address, and web site. If a volunteer has more than one address, use the Core tab for the address where they currently prefer to receive mail. [Help topic 2296 \[pg:1875\]](#) explains how to enter additional addresses for the same volunteer. If the record is a group record and the group has secondary contacts, use the Core tab to record the primary contact's information and the Contacts tab for the secondary contact's information. [Help topic 1990 \[pg:1816\]](#) explains how to do this.

Field	Purpose
Street 1 Street 2 Street 3	<p>Enter the volunteer's (or group contact's) street address in these fields. Street addresses can have up to three lines. Some street addresses use just one line, such as:</p> <p><i>123 Elm Street</i></p> <p>Others may require additional lines. For example:</p> <p><i>Bradford Arms Apartments 3416 North Broadway</i></p>

City	Enter the city for the volunteer's (or group contact's) address.
State/Province	<p>Use the dropdown list to choose the volunteer's (or group contact's) state or province.</p> <p>If the state or province you want to select does not currently appear in the dropdown list, you can add it in Setup. Help topic 2279 explains how to add new entries to the State or Province fields.</p>
Zip/Post code	Enter the volunteer's (or group contact's) zip or postal code.
Country	<p>Use the Country field to choose a country if needed.</p> <p>If the country you want to select does not appear in the dropdown list, you can add it in Setup. Help topic 2018 explains how to add new dropdown list items. If you don't need to use the Country field, you can hide it. Help topic 2017 explains how to hide fields.</p>
Messaging	<p>It's possible to prevent postal mail, email and/or text messages from being sent for a record. This feature is useful in situations where you do not want a person who has been separated from your organization to receive mail, while still maintaining their record in your database.</p> <p>Check "No postal mail" if you want to prevent postal mail from being sent for this record. When you check "No postal mail," this record will not be included in any address labels you print from Volgistics.</p> <p>Check "No email" if you want to prevent email messages from being sent for this record. When you check "No email," this record will not be included in any email you send from Volgistics.</p> <p>Check "No text message" if you want to prevent text messages from being sent for this record. When you check "No text message," this record will not be included in any text (SMS) messages you send from Volgistics. The "No text message" field will not appear unless your account has enabled text messaging <i>and</i> the volunteer has access to VicNet.</p> <p>Note that changing a record's Status field to <i>Inactive</i> is generally all you need to do to remove a person from routine mailings, email and text messages. As long as you typically select to send mailings and emails to only records with the <i>Active</i> Status. In this case, it's normally not necessary for you to also check the "No postal mail," "No email" or "Not text message" checkboxes on a record. Instead, these checkboxes are intended for situations where you want to explicitly prevent mail, email or text messages from being sent. For</p>

Email	<p>Enter the volunteer's (or group contact's) email address here. This is the email address at which this record will receive email you send through Volgistics. If you use VicNet, the person will use the email address entered here to login with.</p> <p>The icon that appears as a square beside the email address lets you know if the address is known to be a good or bad email address. If no information is available on this because messages have not been sent to the address yet, the square appears blank or unfilled. The color of the square indicates the address's validity. You can get additional information by placing your cursor over the icon. Help topic 2065 explains more about email address validity.</p>
Web site	<p>or volunteers who have a personal web page, or profiles on web sites such as Facebook or Twitter, you can enter their URL address here. You can enter the URL address for an organization's web site here for group records.</p> <p>When a valid web page address has been saved in this field, a "Visit" link to that web page will appear next to the field if the link has been enabled on the Web site field's properties page. To get to this page, choose Setup from the menu, select "Field options," "Core tab," and then "Web site." When this link is enabled, clicking on it will take you to the URL address recorded in the Web site field.</p>
Home Work Cell Text Fax Pager Other	<p>Enter the appropriate phone numbers for the volunteer (or group contact) in these fields. Volgistics provides fields for all common types of phone numbers. You can change the format for phone number fields if your geographic area uses a different format, or you need to add phone number extensions.</p> <p>The Text field will not appear unless your account has enabled text messaging <i>and</i> the volunteer has access to VicNet. Because text messaging can cost a volunteer money depending on his or her plan, there is not a way for System Operators to edit this field. If the phone number for this field needs to be updated, the volunteer must opt-out of messaging and then opt-in with the new number.</p> <p>The icon that appears as a square beside the Text field lets you know if the number is known to be valid or not. If no information is available on this because messages have not been sent to the number yet, the square appears blank or unfilled. The color of the square indicates the number's validity. You can get additional information by placing your cursor over the icon. Help topic 1292 explains more about Text number validity.</p>
Ok to call	<p>Use the Ok to call checkboxes to show which of a volunteer's (or group contact's) phone numbers are okay to call for routine business.</p>

## Flags Box

Use the Flags field to mark or "flag" this record for the specific category (or categories) it belongs to. To choose a Flag, select it from the dropdown list and then click the **Save** button. A record can have multiple flags if it belongs to multiple categories. The flags for a record are all listed in the Flags box, as shown here:

Flags

Auxiliary	Delete	Green Team	Delete
RSVP	Delete		

Flag:  Save 

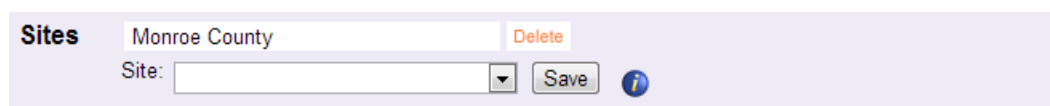

To remove a Flag from a record, click the orange "Delete" link next to the Flag name.

You can skip the Flag field if this record does not currently need any flags.

[Help topic 2263 \[pg:0212\]](#) has more information about using Flags in your account. Please note that Flags are a permanent way to mark a record while [Tags \[pg:1529\]](#) are a temporary way to mark a record. [Help topic 2140 \[pg:1541\]](#) explains more.

## Sites Box

If you use [Site Level Access \[pg:0092\]](#), the Site box appears on the Core tab. The Site box does not appear on the Core tab otherwise. You use the Site field to choose the Site (or Sites) this volunteer serves at. [Site-Level Operators \[pg:1442\]](#) will only see volunteer or group records when the same Site is on the record as they have on their System Operator record. [Help topic 2037 \[pg:0094\]](#) explains more about how to use the Site field on the Core tab.

Sites

Monroe County	Delete
---------------	--------

Site:  Save 

## Statistics Box

The Statistics box on the Core tab displays key statistical information about the selected volunteer or group. You don't actually enter anything in the Statistics box. Instead the Statistics box summarizes important statistics (such as service hours and years of service) based on other information entered elsewhere in the volunteer's record. The Statistics box gives you a snap-shot of this volunteer's or group's participation.

Statistics	Life:	YTD:	MTD:
Hours:	1,711:00	119:30	0:00
Years of service:	12 years		
Date of last activity:	04-01-2012		

You can find information on how these fields are determined in the following help topics:

[Help topic 2259 \[pg:0076\]](#) - Date of Last Activity

[Help topic 2261 \[pg:0077\]](#) - Years of Service

You can also find information on how to customize the Statistics box in [help topic 2260 \[pg:1387\]](#).

## Save button

Always click the **Save** button to save additions or changes you've made on the Core tab. A **Save** button appears at both the top and the bottom of the Core tab for convenience. You may click either to save your entries.

---

## Tracking Multiple Addresses (and Other Information) for the Same Volunteer

Help topic 2296

Added or revised 12-13-2012

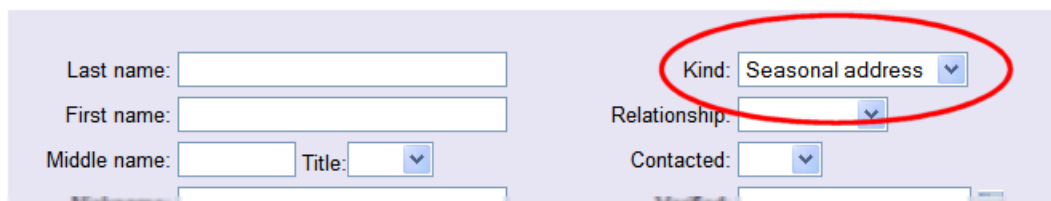

---

Use the **Core tab** [pg:1868] in the volunteer record to store each volunteer's mailing address. This may be a home or a business address. When you print address labels or address lists, Volgistics uses the address on the Core tab as the volunteer's mailing address.

If a volunteer has more than one address, such as a home address and a business address, you can store their additional addresses on the Contacts tab in their record. You can also use this tab to store other information for the volunteer.

To add an additional address (or other information) for a volunteer:

1. Choose Volunteers from the **menu** [pg:0215].
2. Open the record for the volunteer for whom you want to add additional information.
3. Click the Contacts tab.
4. Click the **Add a new contact** button.
5. Skip the name fields, and then select the kind of address you're entering from the Kind field dropdown. For example "Seasonal address," "Business address," or "Home address." If your Kind field does not include these options, see the sidebar below for instructions on how to add them.

The image shows a portion of a web form for adding a new contact. On the left, there are input fields for 'Last name:', 'First name:', 'Middle name:', and 'Title:'. On the right, there are dropdown menus for 'Kind:', 'Relationship:', and 'Contacted:'. The 'Kind:' dropdown is highlighted with a red oval and is currently set to 'Seasonal address'.

6. Use the address fields to enter the address. Enter any other information you want to save in the appropriate fields.

7. Click the **Save** button.

## Managing seasonal addresses

If you have volunteers who live in your community on a seasonal basis (e.g. "snowbirds"), enter their local address on the Core tab and their "Seasonal address" on the Contacts tab, as described above. Then when the volunteer departs for the season, click the **Swap with Core** button next to their "seasonal address" on the Contacts tab. When you click the **Swap with Core** button, the address, phone numbers, and "Ok to call" fields

on the Core tab are swapped with these fields on the Contacts tab. Repeating this process when the volunteer returns restores the local address, phone numbers, and "Ok to call" fields to the Core tab.

This technique is optional, however if you do this you can easily keep in touch with seasonal volunteers during the periods they are away.

### How to add contact kinds for additional addresses

When you use the Contacts tab to record additional addresses for a volunteer, you can use the Contact "Kind" field to indicate what kind of additional address you're entering. For example, it might be a Seasonal address, Business address, or a Home address. If the "Kind" dropdown list does not include these selections, you can add them like this:

1. Choose Setup from the [menu \[pg:0215\]](#).
2. Select "Field Options."
3. Select "Contacts tab."
4. Click the "Kind" link.
5. On the Field Properties page, enter the address kind (e.g. "Seasonal address") in the "Add a new item" field.
6. Click the **Save** button.

## Adding Volunteer Records

Help topic 2298

Added or revised 06-20-2013

---

There are several different ways you can add volunteer records to your database. You can convert volunteer records from other computer files, you can collect new volunteer records through online volunteer application forms, or you can enter them manually. [Help Topic 2299 \[pg:1878\]](#) explains more about this.

This help topic shows you how to add new volunteer records manually.

To add a new volunteer record manually:

1. Choose Volunteers from the [menu \[pg:0215\]](#).
2. Click the **New volunteer** button.

### Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

#### Include

Status:

Type:

Flag:

Site:

Set:

Tags:

[↑ Clear](#)

#### Find

Find from within all volunteer records

Last Name:

First Name:

Number:

Email:

3. Enter the name and address of a new volunteer on the Core tab. [Help Topic 2294 \[pg:1868\]](#) explains how to use the Core tab in detail.

When you enter a new volunteer record, pay attention to the *Status* you choose on the Core tab. If you're entering a record for a volunteer who is already active, select the "Active" Status. If you have an application procedure for new volunteers, and the person you're entering a record for has not yet completed that procedure, you would probably make their Status "Applicant" instead (you can change their Status to "Active" once they've completed your application procedure).

If the record you're adding is for a group instead of an individual, refer to the *Entering and Finding Group Records* section of [Help Topic 1045 \[pg:1802\]](#) for additional help.

4. Click the **Save** button to save the new record.

You've now added a new volunteer record. From here you can continue entering information on the other tabs, and start tracking the new volunteer using features such as the Checklist. You'll learn more about how to do these things later. You may find [help Topic 2024 \[pg:1849\]](#) helpful to do this.

## How Volunteer Records Get Into Volgistics

Help topic 2299

Added or revised 03-12-2014

---

Your Volgistics database will include a record for each volunteer you want to track. These are known simply as *volunteer records*. You can add volunteer records to your database through any combination of...

- Data conversion from another database
- Online volunteer application forms submitted by prospective volunteers
- Manual data entry

Let's take a closer look at these three options

### Data conversion

If you already have volunteer information in a computer database, there's a good chance that you can transfer some, or all, of it directly into Volgistics using one of the three data conversion tools described here. These tools can transfer the most common kinds of volunteer data; however, there may be some specialized data you won't be able to transfer automatically. In some cases, you might use one of these data conversion tools to transfer the bulk of your data, and then add the remaining pieces manually yourself.

**If you're just getting started with Volgistics, and you have information you want to convert from another database, it's best to do this before you begin collecting online volunteer application forms or entering volunteer records manually.**

Completing a data conversion before you start adding records from other sources will make it possible for you to clear your Volgistics database and re-run a conversion again if you find you don't care for your first conversion attempt. If you've already started adding other volunteer records, you would lose them if you cleared your account and ran the conversion again. Note that you can clear your account of all volunteer data without losing setup options, [System Operators \[pg:0065\]](#), and other customizations you have already made. [Help Topic 2112 \[pg:0890\]](#) explains more about this.

The three conversion tools available are the *Import Utility* program, the *Jump-Start* service, and the *VolunteerWorks Conversion Utility* program.

#### Free Import Utility

Volgistics offers a free Import Utility program you (or someone in your organization) can use to convert data yourself. The program can read data from any tab or comma delimited text file. These are often called CSV files. If your records are currently in a program that stores data in a format other than CSV, you may be able to export it or save it as a CSV file, or a spread sheet file. Spread sheet files can usually be saved as CSV files.

There's more information about the free Import Utility (plus the link to download it), at <https://www.volgistics.com/Import-Utility.htm>.

You run the free Import Utility program at a computer that has Microsoft Windows.

#### Jump-Start Service

If you would rather not run your own data conversion, Volgistics can perform your data conversion for you through the Jump-Start service. There is a service fee (usually \$500 but this depends on several factors such as the number of different databases you want to convert). While conversions are often completed in a matter of days, you should allow up to three weeks for a conversion under this service.

To use the service, you send your current volunteer database files to Volgistics through a secure data upload page. Volgistics checks to make sure they can convert your data and lets you know what the conversion service fee will be. Once you've paid the service fee, Volgistics performs the conversion and places your converted information right into your Volgistics account.

There are some limitations to the kinds of information Volgistics can convert through this service, but it usually allows more detailed records to be transferred than the Import Utility program. You can learn more about the Jump-Start service at <https://www.volgistics.com/jump-start-service.htm>.

#### VolunteerWorks

If you use the VolunteerWorks program, an integrated data conversion utility for moving your volunteer data into Volgistics is available in VolunteerWorks version 3. You can run this yourself from within VolunteerWorks and it transfers nearly every kind of information from VolunteerWorks directly into your Volgistics account. You must run the conversion from a computer that has an Internet connection. There is more information about how to do this at <https://www.volgistics.com/VolunteerWorks-Conversion.htm>.

If you'd prefer not to perform the conversion yourself, Volgistics can complete the process for you. You can find information on how to do this in [Help topic 1196 \[pg:0035\]](#). There is no charge for Volgistics to do this for you.

[Help topic 2006 \[pg:0047\]](#) may also be helpful no matter which conversion option you choose.

#### **Online volunteer application forms**

Another way to get new volunteer records into Volgistics is through online volunteer application forms. Creating an online volunteer application form with Volgistics is as easy as configuring a few setup options and then adding a simple HTML link on your web site.

[Help topic 2121 \[pg:0413\]](#) explains more about how to setup and use application forms. For now, know that you can customize online application forms to suit specific information requirements, offer web visitors links to your application form at your own web site, and audit new application submissions before receiving them into your Volgistics database. You can even create different application forms for different purposes (for example, one for adult volunteers and one for youth volunteers).

Once you've elected to receive a new application, the information the applicant entered online goes directly into your database as a new volunteer record. Volunteer records you receive this way can have a [Status \[pg:1832\]](#) of *Applicant* so they're easily distinguished from your other volunteer records.

While you don't have to use online application forms in your account, they are a great way of gathering information from prospective volunteers without having to enter it manually.

## Manual data entry

The last way to get new volunteer records into Volgistics is simply to add them manually. Volgistics makes data entry quite easy. You can start by entering just basic information—such as name and address—and then [add more information \[pg:1849\]](#) to the record as you collect it. [Help Topic 2298 \[pg:1877\]](#) explains how to enter volunteer records manually.

## Use any combination of these methods

You can use all three of these methods (or any combination of them) for getting volunteer records into your database. For example, you might start by converting your existing volunteer records from another database. Then you could collect new volunteer records through a combination of the online volunteer application forms (for people who choose to apply online), and manual data entry (for people who apply in person or by way of a paper form). No matter how a volunteer record gets into your database—through a data conversion, an online application form, or manual data entry—you can always add more information to the record (or edit the record) any time, through a variety of methods.

---

## Delete Volunteer Records

Help topic 2309

Added or revised 12-11-2015

---

If your Volgistics [System Operator \[pg:0065\]](#) rights permit, you can delete volunteer records from Volgistics whenever necessary. You can click on a link in the *Contents* box below to go directly to a particular section of this help topic.

### Contents

[Important Considerations Before Deleting Records](#)

[To Delete a Single Volunteer Record](#)

[To Delete Multiple Volunteer Records](#)

[Site-Level Operators and Deleting Records](#)

[Remove a Deleted Record Before the 5 Day Hold Period Ends](#)

**[Important Considerations Before Deleting Records](#)**

- **Deleted volunteer records can only be restored for 5 calendar days after they are deleted.**
- If 5 days pass and the record has not been restored, it will be permanently deleted from the system. There is not a way to "un-do" the deletion at this point. You can find information on how to restore a deleted record during the 5 day hold period in [help topic 2311 \[pg:1888\]](#). *Please note that there is not a way to restore the schedule for a deleted record that has been restored.*
- There may be instances where you need to permanently delete a record before the 5 calendar day hold period ends. If you need to do this, see the [Remove a Deleted Record Before the 5 Day Hold Period Ends](#) section at the bottom of this help topic.
- Any service records associated with the record you delete are also deleted. This means that any volunteer service performed by the volunteer whose record you delete will no longer appear on any service reports, or in the cumulative hour total for your account. The service information not appearing on reports may not matter to you if the volunteer service associated with the record you delete has already been reported on prior year service reports, and you no longer need a record of their service detail. For example, if the record you're deleting only has service records through 2013, and you have already printed 2013 year end reports, deleting service entries from 2013 or earlier may not affect future reporting. However if the record you want to delete includes service records for the current fiscal or calendar year, you should not delete the record until after you print any year end service reports you need (consider archiving the record until then).

- If you want to remove a record from your database but you don't want to delete it, you can [archive \[pg:1819\]](#) it instead. Volunteer service associated with archived volunteer records

will

always appear on service reports, and in the cumulative hour total for your account, even while the volunteer's record is in the archives. [Help topic 1997 \[pg:0442\]](#) has more information on this.

- If you discover that you have two (or more) volunteer records for the same volunteer, you can use the **Combine** button on the Core tab to [combine \[pg:1884\]](#) the records rather than deleting one of them. Records deleted through combining cannot be restored.

### To Delete a Single Volunteer Record

1. Choose *Volunteers* from the [menu \[pg:0215\]](#).
2. [Locate the volunteer record \[pg:1840\]](#) you want to delete, and then open it to the [Core tab \[pg:1868\]](#).
3. Click the **Delete** button near the top of the Core tab.

## Thomas, Jill

### Operator Rights and Deleting Records

If you do not see a **Delete** button on the Core tab, your [Volgistics System Operator rights \[\\_\\_\\_\\_\\_\]](#) do not permit you to delete volunteer records. Your System Operator rights are set by your organization's [Volgistics Administrator \[pg:0052\]](#).

4. A dialog box will appear to confirm that you would like to delete the record. If the volunteer has [VicDocs \[pg:1648\]](#) documents stored, the box will have an option to download the documents when you delete the record. When you choose this option, the volunteer's VicDocs will be placed in a zip file and sent to the [In Box \[pg:0303\]](#) of your Volgistics mailbox. *You must save the zip file to your local computer within 5 days.* The document download is deleted automatically when the volunteer's record is permanently deleted.
5. If you'd like to proceed with deleting the record, click the **OK** button in the dialog box. Otherwise, click the **Cancel** button to close the dialog box without deleting the volunteer.

### To Delete Multiple Volunteer Records

You will use the [Tags \[pg:1529\]](#) feature to delete multiple volunteer records. Because tags are cumulative during your [session \[pg:1589\]](#), we recommend **always** clearing your tags before deleting multiple records. This will reduce the chance that records are unintentionally deleted. To clear all records currently tagged for your session, select *Tags* from the [menu \[pg:0215\]](#) and click the **Clear all tags** button. If the button appears grayed out, there are not any tagged records to clear.

To delete multiple volunteer records:

1. Tag the volunteer records [pg:1538] you need to delete.
2. Select *Tags* from the menu [pg:0215].
3. Click the **Go** button beside *Delete the tagged volunteer records*.

Change the **Status** of all tagged volunteer records to:

Change the **Type** of all of the tagged volunteer records to:

Add this **Flag** to all of the tagged volunteer records:

**Delete** the tagged volunteer records:

**Archive** the tagged volunteer records:

Reset and send the temporary **VicNet password message** to the tagged volunteer records:  Auto generate  Set as PIN  Set to:

### Operator Rights and Deleting Records

If you do not see the *Delete the tagged volunteer records* option on the Tags menu, your Volgistics **System Operator rights** [ ] do not permit you to delete volunteer records. Your System Operator rights are set by your organization's **Volgistics Administrator** [pg:0052].

4. A dialog box will appear to confirm that you would like to delete the tagged records. If any of the tagged volunteers have **VicDocs** [pg:1648] documents stored, the box will have an option to download the documents when you delete the record. When you choose this option, the volunteers' VicDocs will be placed in a zip file and sent to the **In Box** [pg:0303] of your Volgistics mailbox. *You must save the zip file to your local computer within 5 days.* The document download is deleted automatically when the volunteer records are permanently deleted.

5. If you'd like to proceed with deleting the tagged records, click the **OK** button in the dialog box. Otherwise, click the **Cancel** button to close the dialog box without deleting the volunteers.

### Site-Level Operators and Deleting Records

*If you use the Site Level Access* [pg:0092] feature in your account, you should note how this affects volunteer record deletions.

If a **Site-Level Operator** [pg:1442] is allowed to delete volunteer records, and they choose to delete a volunteer record for a volunteer that serves *only* at their own Site, the volunteer record is deleted.

If a **Site-Level Operator** [pg:1442] is allowed to delete volunteer records and they choose to delete a volunteer record for a volunteer that **serves at multiple Sites** [pg:0094], the volunteer record will no longer be associated with the Site where they have been deleted (and therefore appear to have been deleted from that Site's database). However, the record remains in the database and it is still accessible to Site-Level Operators from the other Site(s), as well as to headquarters level operators.

Headquarters level operators (operators with access to "All Sites") are not subject to these restrictions even if their account uses [Site Level Access \[pg:0092\]](#). When a headquarters level operator deletes a record, it is removed from the database regardless of what Site(s) the record is associated with.

### Remove a Deleted Record Before the 5 Day Hold Period Ends

You can permanently remove a volunteer record from the database before the end of the 5 calendar day hold period if needed. Please remember that there will

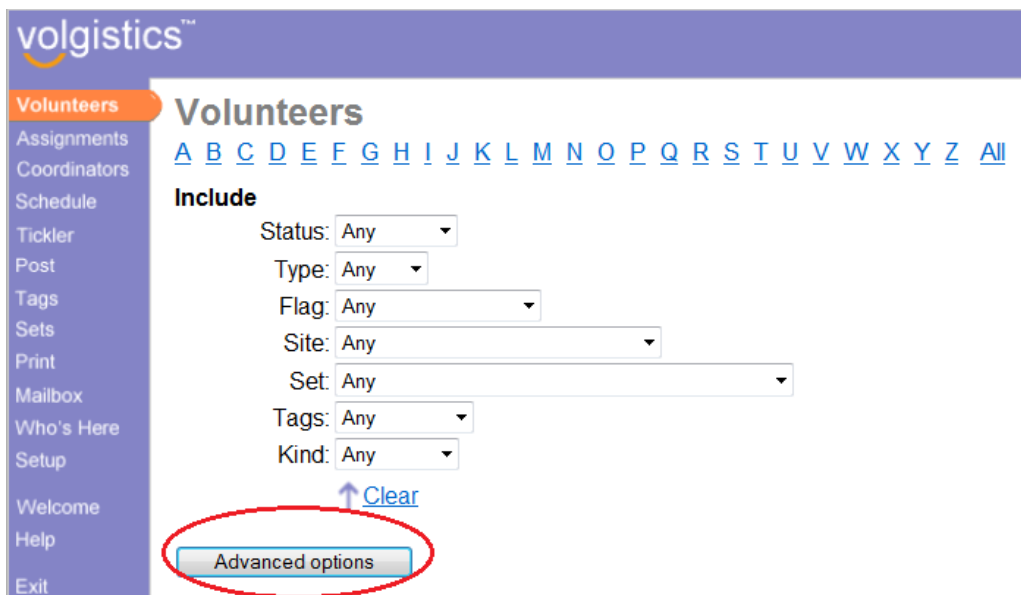

*not*

be a way to recover the record from the system if you do this. All information associated with the record (with the exception of the zip file of downloaded [VicDocs \[pg:1648\]](#) documents) will be removed from the system.

The downloaded zip file of VicDocs will still be available for 5 days from the date the record was deleted even if you permanently delete the record before this time. If you wish to permanently delete the zip file before 5 days, follow the directions in the [Deleting In Box Items \[ \]](#) section of help topic 1110.

To remove a record before the end of the 5 day hold period:

1. Choose Volunteers from the [menu \[pg:0215\]](#). The initial Volunteers screen appears.
2. If the Advanced Include options are not already displayed, click the **Advanced options** button.

3. Click the **Show deleted volunteers** button at the bottom of the page.

- [Help Topic 2001 \[pg:1822\]](#) - Delete Archived Volunteer Records
- [Help Topic 2311 \[pg:1888\]](#) - How do I restore a deleted volunteer record?

## Combine Duplicate Volunteer Records

Help topic 2310  
 Added or revised 01-26-2016

While Volgistics has features to help you [avoid the creation of duplicate volunteer records \[pg:1389\]](#), from time to time you may find that two or more separate volunteer records have been created for the same volunteer. If this happens, you can combine the two records into one automatically using the

**Combine**

button. Please note that this will delete the older of the two records and save the combined records to the most recent record. The older record is permanently deleted from the system. *There is not a way to restore this record as you can when records are [deleted \[pg:1880\]](#).* (See the [How the most recent record is determined](#) box below for information on how the system decides which record is the most recent.)

When you combine duplicate volunteer records, the information from both records is merged into a single record. This includes all assignment, schedule, service (including hours), contact, and history records. However, not all information is merged because it could potentially cause conflicting information. For example, the [Status history \[pg:1832\]](#) is only kept for the record that will remain after the merge. Likewise, the [history of messages received \[pg:0370\]](#) is only kept for the record that remains after the two records are combined.

*If the two records happen to include any assignment, schedule, service, contact, or history records that are **exactly** the same, these records will not be duplicated in the combined record.*

If the two records have different information in the same field (for example, if each record has a different email address), the entry from whichever record is more recent will be saved. *You should note that a blank is considered to be an entry because fields can be intentionally left blank.* So, for example, if the most recent record has a blank for the City field, and the older record has "Boston" for the City field, the combined record may have a blank for the City field.

Also, you should note that if *either* of the two volunteer records you combine are [Group \[pg:1802\]](#) volunteer records, the resulting combined record will always be a Group volunteer record (which you can change on the [Core tab \[pg:1868\]](#) in the combined record if you would like to).

## **How the most recent record is determined**

It is important to understand how the system determines the most recent record *before* you combine records. To determine which record is most recent, Volgistics looks for the most recent [Date of last activity \[pg:0076\]](#).

This statistic is taken from the volunteer's last service hours recorded. So even if one volunteer record was created more recently, if that record

*does not*

have any service hours recorded--its information will be replaced by the older record's information as long as the older record

*does*

have service hours recorded.

In this case, if you want the newer record's information to be used, you can enter a token service entry on the record. This will make the record show the most recent Date of last activity. [Help topic 2021 \[pg:1569\]](#) shows how to enter service on a record. This service entry can be deleted after the records are combined if necessary.

## **To combine duplicate volunteer records**

1. Choose Volunteers from the menu.
2. Locate one of the duplicate volunteer records and then open it to the [Core tab \[pg:1868\]](#).

3. Click the **Combine** button near the top of the **Core tab** [pg:1868]. This opens the Combine box. If the **Combine** button does not appear, see the Operator Rights section below.

4. Use the

*Search by*

dropdown list to select how you'd like to search for the record you'd like to combine. You can search records according to Last Name, First Name, or **Group Name** [pg:1802].

5. Start typing the last name, first name or group name of the record you want to combine with the first record into the field to the right of the *Search by* dropdown list. After the second character is entered, the list of records with matching criteria will grow smaller with each additional character entered. You can select the record you need from the list at any point.

## Smith, Kay

**Combine**

Use this page if you want to merge two duplicate volunteer records for Kay Smith into one record.

Choose the volunteer record you want to merge with the volunteer record for Kay Smith, and then click the **Combine** button.

Search by **Last Name** :

[Which record is saved?](#)

- Smit, Jeffrey, A
- Smith, Alicia, S
- Smith, George, William
- Smith, Helen, Lynn
- Smith, Kaylyn, J
- Smithfield, Patricia, Lynn
- Smythe, Madison
- (Louis Brothers Manufacturing)

[Help](#)

6. Click the **Combine** button once you have selected the second record to combine. A confirmation dialog box will pop-up asking if you are sure you want to continue. If you want to combine the two records, click the **OK** button. If you changed your mind and do not want to combine the records, click the **Cancel** button.

7. If the two records being combined will have more than 50 documents on file when they are combined, the records will not be combined yet and a *Combine Documents* page will appear. See the Combine Documents section below for information on how to proceed.

## Operator Rights

If you don't see a **Combine** button on the Core tab, your Volgistics **System Operator rights** [pg:1433] do not include the ability to combine duplicate volunteer records. Your System Operator rights are set by your organization's **Volgistics Administrator** [pg:0052].

## Combine Documents

When the two records being combined will have more than 50 documents, a page appears that allows you to select the documents that should be kept and the documents that should be deleted.

## Combine Documents Combine Cancel

The two volunteers you are merging have a total number of documents that is more than the allowed document maximum (50). You need to select which documents you want to keep and which ones to be deleted.

The documents listed below are color coded for each volunteer as follows: Kay Smith Kaylyn Smith

Drag and drop the documents to the corresponding column.

Keep these documents (34)	Delete these documents
Parental Consent Form	<a href="#">K. Smith Resume</a>
Interest Survey	<a href="#">Interest Survey</a>
Application-Individual Form	<a href="#">Photographic Release</a>

The most recent record's documents will be shown in the *Keep these documents* column on the left. Drag and drop documents from one column to the other until you have the documents you wish to save in the *Keep these documents* column. When you are finished, click the **Combine** button to finish combining the records.

If the number of documents in the *Keep these documents* column is more than 50, the **Combine** button will be disabled until the column's total is 50 or less. You can easily tell when the column's total exceeds the limit because the document count after the column heading will turn red.

Drag and drop the documents to the corresponding column.

Keep these documents (57)	Delete these documents
Parking Permit Form	<a href="#">K. Smith Resume</a>

### Helpful Hints

1. You can often click on a document's name to open it in a new browser tab or window. This will allow you to view the document, which can be helpful when you are deciding which column to place the document in.
2. You can save the documents in the *Delete these documents* column to your local computer before you combine the records. To do this, open the document as described in hint one and then use the save feature of the program used to view the document. Or, you can also right-click on a document's name and select *Save as* or *Save target as* from the menu.

## How do I restore a deleted volunteer record?

Help topic 2311

Added or revised 12-08-2015

---

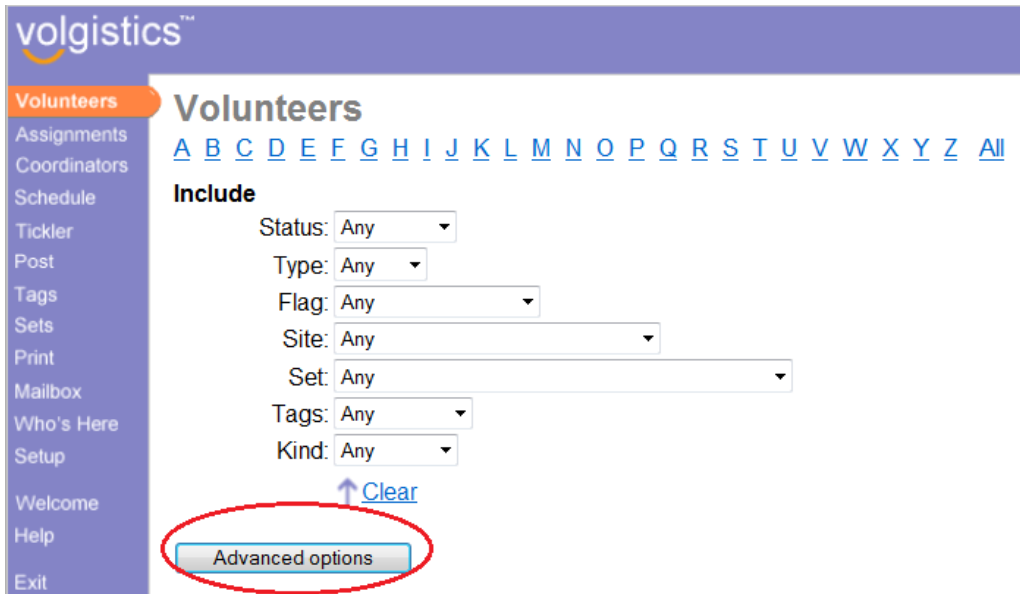

When a volunteer record is deleted, it is held for five (5) calendar days before it is permanently removed from the system. This five day window allows a [System Operator \[pg:0065\]](#) to recover records that were accidentally deleted. **After the five day hold period passes, there is not a way to recover a deleted volunteer record.**

Please note the following regarding restoring deleted records:

- In order to restore deleted records, the System Operator's rights must allow them to delete volunteer records.
- System Operator rights are controlled by the [Administrator\(s\) \[pg:0052\]](#) of the account on the [System Operator Page \[pg:1433\]](#) of the record.
- Only records deleted as shown in help topics [2309 \[pg:1880\]](#) and [2001 \[pg:1822\]](#) can be restored. Records deleted by using the [combine records \[pg:1884\]](#) feature *cannot* be restored.
- Records are restored to their most recent location in your database. For example, records deleted from the non-archived section of your database are returned to the non-archived section. Records deleted from the archived section of your database are returned to the archived section. [Help topic 1999 \[pg:0709\]](#) explains more about each section.
- If [Site Level Access \[pg:0092\]](#) is enabled, records are returned to the Site(s) they were associated with. This is recorded on the Core tab of the record as shown in [help topic 2037 \[pg:0094\]](#). In this case, to see a restored record the System Operator must be assigned to "All Sites" or to one of the Sites recorded on the Core tab of the restored record.
- Deleted records can only be restored if your account is below the capacity set by your [service level \[pg:0719\]](#). For example, if your service level allows for 500 archived records, and you currently have 500 archived records in your database, you will not be able to restore an archived record that was deleted.
- There is not a way to restore the schedule for a volunteer who has been deleted. The volunteer is removed from all schedule entries when the record is marked for deletion.

To restore a volunteer record that was deleted:

1. Select *Volunteers* from the [menu \[pg:0215\]](#).
2. If the Advanced include options are not already displayed, click the **Advanced options** button.

3. Click the **Show deleted volunteers** button. If the record you need to restore was deleted from the archived section of your database, check the *Archived volunteers* box that appears directly above the **Basic options** button before clicking the **Show deleted volunteers** button.

- Tagged
- Not tagged

**Kind**

- Any
- Individual
- Group

Archived volunteers

**Find**

Find from within all volunteer records.  
 Valid searches: exact phrase (such as **Volgistics**) or an \* (asterisk) at the beginning, middle, or end: **\*gistics** or **Vo\*stics** or **Volg\***.  
 Last Name:

4. Click the

**Restore**

button that appears by the record you would like to restore. If this button does not appear, your account's **service level** [pg:0719] is at capacity and there is not room to restore the deleted record, or your System Operator rights do not allow you to restore deleted records. The date the record was deleted from your database appears in parenthesis in the same column as the **Restore** button.

## Start and Stop Dates

Help topic 2315

Added or revised 12-12-2006

Volgistics makes it easy to track volunteer 'start' and 'stop' dates.

By default, a volunteer's start date is the date they first become an 'active' volunteer, and their stop date is the date they become an inactive volunteer (you can customize this using the [start and stop date rules \[pg:1017\]](#)). Volgistics records these dates for you automatically each time you mark a volunteer active or inactive: you don't need to enter these dates manually.

To mark a volunteer's status 'active,' open their record, choose 'Active' from the status field on their Core tab, and then click the Save button.

The screenshot shows a portion of the Volgistics interface. At the top, there are three buttons: 'New', 'Previous', and 'Next'. Below these, there is a form with the following fields:

- Number: 15
- Status: Active (dropdown menu)
- Type: Adult (dropdown menu)

A red oval highlights the 'Status' dropdown menu, which is currently set to 'Active'.

To mark a volunteer's status 'inactive,' open their record, choose 'Inactive' from the status field on their Core tab, and then click the Save button.

[New](#)   [Previous](#)   [Next](#)

Number:

Status:

Type:

When you mark a volunteer 'active,' Volgistics automatically records their 'start date' as the date they became active. When you mark a volunteer 'inactive' Volgistics automatically records their 'stop date' as the date they became inactive.

You can see a volunteer's Start and Stop date on their History tab.

Dates		Start date: 02-02-2004	Stop date: 07-23-2005	Date entered: 10-27-2006
	Event	Date	Expires	Notation
Status	Inactive	07-23-2005		<a href="#">Edit</a> <a href="#">Delete</a>
Status	Active	02-02-2004		<a href="#">Edit</a> <a href="#">Delete</a>
Status	Applicant	01-09-2004		<a href="#">Edit</a> <a href="#">Delete</a>

If a volunteer hasn't yet been marked active they will not have a start date, and until they're marked inactive they will not have a stop date. Volunteers who were active at one time, but are now inactive will have both a start date and stop date.

Each time you change a volunteer's status, Volgistics automatically records the date their status changes on their History tab along with their other key dates. These appear just below their start and stop dates, as shown here:

Dates		Start date: 02-02-2004	Stop date: 07-23-2005	Date entered: 10-27-2006
	Event	Date	Expires	Notation
Status	Inactive	07-23-2005		<a href="#">Edit</a> <a href="#">Delete</a>
Status	Active	02-02-2004		<a href="#">Edit</a> <a href="#">Delete</a>
Status	Applicant	01-09-2004		<a href="#">Edit</a> <a href="#">Delete</a>
Checklist	Attends orientation	03-04-2004		See file <a href="#">Edit</a> <a href="#">Delete</a>
Checklist	Initial interview	01-12-2004		Complete <a href="#">Edit</a> <a href="#">Delete</a>
Class	Customer Service Training	08-02-2004		Completed <a href="#">Edit</a> <a href="#">Delete</a>

[Add](#)

In the example shown above, the volunteer's status was initially set to 'Applicant' on January 9, 2004 when they first submitted an application. They were made 'active' on February 2, 2004. February 2, 2004 became their 'start date' automatically. On July 23, 2005 they left, and the volunteer leader changed their status to 'Inactive' which made their 'Stop date' July 23, 2005 automatically.

If you want this volunteer's 'start date' to be a date other than February 2, 2004, change their 'active' status date. For example, suppose this volunteer actually started volunteering years earlier, on December 1, 1995. You can change their 'active' status date to 12-01-1995 by editing their active status date entry:

1. Click the Edit button on the date you want to change.

Status	Inactive	07-23-2005			Edit	Delete
Status	Active	02-02-2004			Edit	Delete
Status	Applicant	01-09-2004			Edit	Delete

2. In the Edit box, enter the new date.

**Edit**

Add a:

Event:

Date:

Notation:

3. Click the Save button.

The volunteer's start date will change automatically to reflect their new 'active' status date.

<b>Dates</b>		Start date: 12-01-1995	Date entered: 10-27-2006			
		Stop date: 07-23-2005				
	Event	Date	Expires	Notation		
Status	Inactive	07-23-2005			Edit	Delete

Sometimes volunteers become inactive, but then return later. When this happens, you'll see each of their status change dates on the History tab.

Dates		Start date: 02-02-2004	Date entered: 10-27-2006			
		Stop date:				
	Event	Date	Expires	Notation		
Status	Active	03-09-2007			Edit	Delete
Status	Inactive	07-23-2005			Edit	Delete
Status	Active	02-02-2004			Edit	Delete
Status	Applicant	01-09-2004			Edit	Delete
Checklist	Attends orientation	03-04-2004		See file	Edit	Delete
Checklist	Initial interview	01-12-2004		Complete	Edit	Delete
Class	Customer Service Training	08-02-2004		Completed	Edit	Delete

[Add](#)

In the example shown above, the volunteer's status was initially set to 'Applicant' on January 9, 2004. They first became 'active' on February 2, 2004. On July 23, 2005 they became inactive, and on March 9, 2007 they became active again. The volunteer's start date is still February 2, 2004 since that was the date they *first* became active, and they do not have a stop date because they are currently active.

## How to Handle Volunteer Records for Deceased Volunteers

Help topic 2330

Added or revised 06-10-2014

---

The best practice for handling volunteer records for deceased volunteers is this:

- If you don't already have one, create a *Deceased Flag* [\[pg:0212\]](#) and Flag the volunteer as *Deceased*. You can also note the date the volunteer passed on the Notes tab of their record.
- If the volunteer was previously *Active* change their *Status* [\[pg:1832\]](#) to *Inactive*.

[Archive](#) [\[pg:1819\]](#) the volunteer's record.

Changing a decedent's status to *Inactive* will remove them from any schedules they may have been on (unless you've changed this default setting in your account).

If the deceased volunteer performed any volunteer service during the current year, and your organization tracks volunteer hours, archiving the record for the deceased volunteer instead of deleting it ensures that their hours will still be included on any year-end service reports you run. Archiving the record rather than deleting it also gives you a way to restore or examine the record in the future if there are any questions about the volunteer's participation with your organization.

Moving the deceased volunteer's record to the archive prevents you from inadvertently sending any email, text message or postal mail to the decedent through Volgistics.

If you track and report volunteer service, keep the deceased volunteer's record in your archive at least until you've completed any year-end service reports you choose to run. You may [delete \[pg:1822\]](#) the deceased volunteer's record from the archive any time you deem appropriate after that.

## Additional Help Documents

### System Operator Page

Help topic 1011

Added or revised 03-31-2017

---

In Volgistics, System Operators are the users who login to the system with the Login link located at [www.volgistics.com](http://www.volgistics.com). The System Operator page is used to add a new System Operator, change the settings for an existing System Operator, or delete a System Operator.

If you're not already on the System Operator page, you can get there by choosing Setup from the menu, selecting *System Operators* and then clicking the *Create a new operator* link or the link to an existing System Operator.

This help topic gives details on each field on the page. You can navigate directly to a specific item in the help topic by clicking the link in the Contents box.

Basic Operator Information

Last name

Enter this operator's last name

First name

Enter this operator's first name

### Email address

Enter this operator's email address. This is the email address this System Operator will enter when they login to Volgistics.

### Phone number

Optionally enter a telephone number for this System Operator.

### Password & Confirm password

Enter the password this operator will use when they login to Volgistics. Passwords are case sensitive, can be up to 30 characters long, contain lower and upper case letters, numbers, and special characters such as \$ & or ?.

For security purposes, you do not see the password as you enter it. To be sure you've entered the password correctly, enter the same password in the *Password* and the *Confirm password* fields. Volgistics will check to be sure you entered it the same way in both of these fields.

If the *Caps Lock* key on your keyboard is on, you will receive a warning message like the one below when you start to type in the password. In this case, press the *Caps Lock* key on your keyboard to turn this off before continuing.

The screenshot shows a form titled "New System Operator" with the following fields and elements:

- Last name: Lawson
- First name: Brenda
- Email address: b.lawson@volunteers.org
- Phone number: (555) 123-4567
- Password: [Redacted]
- Confirm password: [Redacted]
- Operator must change their password when they login next:
- Time zone: (GMT-05:00) Eastern Time (US & Canada)

A warning message is displayed on the right side of the form: "Caps Lock is on" with a yellow exclamation mark icon.

If you enter a password that does not meet the password strength rules setup on the System Operator Ground Rules page, you will see a message like the one below when you attempt to save the record. The message lists the password strength rules currently in place. You will need to re-enter a password that meets each rule in order to be able to save it.

## Password does not meet the password strength rules for your account.

The password you entered does not meet one of the following password rules. Passwords must:

- Be between 8 and 30 characters long.
- Include both letter and number characters.
- Include some upper and some lower case letters.
- Include some characters that are not letters or numbers, such as !#\$% or ?.
- Must not contain any space characters.
- Be different from the current password.

Enter a new password that conforms to these rules, and then click the Save button again.

### Operator must change their password when they login next

Check this box if you want to require this System Operator to choose a new Volgistics password the next time they login. Checking this box when you create a new System Operator, or update the password strength rules, forces the System Operator to select a password other than the password assigned to them when they login the next time.

### Time zone

Select the time zone for the location where this System Operator is based. In many organizations, everyone who uses Volgistics works from the same time zone. However, in some national and international organizations, some operators may be located in distant locations and time zones. This setting allows Volgistics to localize date and time values for individual System Operators.

If your organization uses the VicTouch module, this setting also controls the times that will appear when the operator views the Who's Here page.

### Date of Last Activity

This field tracks when the operator logged into the account last. It can be useful to note this to see if the operator's record is necessary in your account. If the operator is not logging in regularly, you can delete the System Operator and then reduce your account's service level. Or, you can delete the record and then create a new record for someone who will use it.

### Rights

#### Block this operator's access to the system

Check this checkbox to temporarily prevent this System Operator from being able to login to Volgistics. As long as this checkbox is checked, no one can access Volgistics using this operator's credentials. Once this checkbox is un-checked, this System Operator can access the system with the Rights you select for them.

### **More Help**

This help topic explains how to setup or change an operator's record to limit access to the system or the actions

the operator can perform. You may also find help topic 2028 useful because it gives examples of how the changes will appear for the operator, as well as more information on how to configure your account to limit operator access.

### Site

If your organization has volunteer offices at multiple Sites, and you want to limit this operator's access to just the volunteers assigned to one individual Site, select that Site here. Otherwise, select *All sites* here. Volgistics refers to an operator with access to just one Site as a Site-Level Operator.

See Site Level Access for more information about this Volgistics feature.

### User level

User levels determine the degree of access a System Operator has in the Volgistics system. Every System Operator has one of the three following *user levels* in Volgistics:

- Basic User
- Power User
- Volgistics Administrator

By default, *Basic users* and *Power users* have the same level of access to the system; however, you can tailor what *Power users* and *Basic users* are allowed to do in Volgistics by granting or restricting specific tab rights and/or field rights to these user levels.

*Basic User.* Choose *Basic User* for operators who will have basic access to Volgistics. These are typically people who assist with data entry, but who do not perform many reporting or management functions. You can customize which tabs *Basic Users* can see on the Tab Rights page and which fields they can see or change in the Field Properties window. Please note that only *Volgistics Administrators* have access to the Volgistics Store with their login credentials. However, you can give a *Basic User* access by giving them the accounting access code for your account.

*Power User.* Choose *Power User* for operators who will be extensive users of the Volgistics system. These are typically people who not only assist with data entry, but who also perform reporting or management functions. You can customize which tabs *Power Users* can see on the Tab Rights page and which fields they can see or change in the Field Properties window. Please note that only *Volgistics Administrators* have access to the Volgistics Store with their login credentials. However, you can give a *Power User* access by giving them the accounting access code for your account.

*Volgistics Administrator.* *Volgistics Administrators* have access to all of your account's administrative controls so this user level should only be selected for the operator (or operators) your organization has designated as the *Volgistics Administrator*. If you do not want to give an individual complete access to your database, you should make them a *Power user* or *Basic user*. You can customize which tabs *Volgistics Administrators* can see on the Tab Rights page and which fields they can see or change in the Field Properties window.

### Computers

If your organization's internal network has a shared Internet connection that uses a fixed IP address (so all of the computers on the internal network use the same public IP address on the Internet) you can create a System Operator who is permitted to access Volgistics only when they use a computer on your internal network. These operators would not be able to access the system from any computers outside of your internal network.

*Login allowed from any computer on the Internet.* Choose this option if this System Operator is allowed to access Volgistics from any computer on the Internet or if there is not a fixed IP address to which this operator's access can be restricted.

When this option is selected this System Operator may access Volgistics from any computer on the Internet. This is the default setting.

*Login allowed only from computers that use one of these Internet addresses.* Choose this option if your organization has Internet access through a shared network or broadband connection that has a static (or fixed) public IP address, and you want this System Operator to use Volgistics only from computers on your internal network. An example of when this might be used is if you have a System Operator who only enters data while they are in your office--and you do not want them to be able to login to the system from a computer at their home or other site.

If you are not sure if your organization has Internet access that uses a fixed IP address, contact your organization's computer support department or ISP. If your organization does have a fixed public IP address for Internet access, your computer support department or ISP can tell you what that IP address is.

*Permitted IP address.* Enter up to two public IP addresses here. This System Operator will be permitted to login only when they access the system from a computer using either of these two addresses. If you have just one fixed IP address enter zeros for the second permitted IP address.

You can permit access from an entire Class A, B, or C network by entering a zero for the appropriate IP address octets. For example, to permit access from any IP address in the range 192.168.1.1 to 192.168.1.255 you would enter "192.168.1.0."

### **Caution**

For security purposes, the Volgistics Team cannot remove this restriction from a System Operator under any conditions. If you choose to impose this restriction on a System Operator, only a *Volgistics Administrator* from your organization can remove this restriction or change the permitted IP addresses.

To prevent potential *lock-out* conditions, this restriction cannot be placed on System Operators who are Volgistics Administrators. Volgistics Administrators can always login to the system from any Internet connected computer.

### This operator may have access to...

Each of these checkboxes corresponds to a Volgistics menu item, and they allow you to control which menu options *this* System Operator can see and use. Check the menu items you want this operator to be able to use, and un-check any you do not want this operator to be able to use. For example, if this System Operator is someone who would not normally use the Tickler menu option, you can remove the check from the Tickler menu item.

In most cases, it's best to check the Setup menu option only for operators whose access level you've set to *Volgistics Administrators*. However, this is not required so if you may check this option for *Power Users* and *Basic Users* if it fits your needs.

### This operator is allowed to...

Choose the privileges appropriate for this operator by placing a check mark next to the privileges you want this operator to have, and removing the checkmark from any you do not want this operator to have.

*Change their password (if it has not expired).* You should normally give all operators this right, since allowing operators to change their passwords on a regular basis can improve security. If you do not want this operator to be able to change their password for any reason, un-check this item.

*Add new volunteer records.* When checked, this operator is allowed to create new volunteer records. If you do not want this operator to be able to do this, un-check this item.

*Delete and restore volunteer records.* When checked, this operator is allowed to delete complete volunteer records, combine volunteer records, and restore deleted records. If you do not want this operator to be able to do these things, un-check this item.

*Archive and restore volunteer records.* When checked, this operator is allowed to archive volunteer records as well as restore archived records. If you do not want this operator to be able to do this, un-check this item.

*Change or delete existing service records.* If checked, this operator can modify or delete service records (hour entries) that were entered previously. If not checked, this operator cannot make changes to, or delete, service (hour) records entered previously. However, they can still make new service entries.

*Add new assignments.* If checked, this operator can create new Assignments on the Assignments page. If this box is not checked, this operator cannot add a new Assignment to the system.

*Combine, move or delete assignments.* When checked, this operator is able to combine, move, and delete assignment records. If this operator should not be permitted to do any of these things, un-check this box.

*Add or change schedule openings and schedule setup.* When checked, this operator can add or change schedule openings on your volunteer schedules, as well as add or change volunteer entries on schedules.

When un-checked, this operator can still add or change volunteer entries on schedules, but they cannot add new schedule openings or make changes to existing schedule openings. It's a good idea to un-check this option for people who will help manage volunteer schedules, but who are not responsible for initially establishing the schedules.

*Send email and text messages.* Un-check this option if you do not want this operator to be able to use Volgistics to send email and text messages to volunteers or Coordinators. When checked, this operator can send email and text messages to volunteers and Coordinators.

*Create or modify reports.* When checked, this operator can create new Volgistics reports and modify existing reports. When this privilege is not checked, this operator can still print existing reports, but they cannot create new reports or change existing reports.

*See Account Statistics on Welcome page.* When checked, this operator will see the Account Statistics box on the Welcome page. The Account Statistics box displays summary information such as the number of volunteers and amount of service performed overall in your organization. The Welcome page is what first appears when you login to Volgistics and when you choose *Welcome* from the menu.

*See Birthday Lists on the Welcome page.* If you use the birthday list feature, checking this box causes this System Operator to see the current birthday list on the Welcome page. If this box is not selected, or you do not use the birthday list feature, this System Operator will not see the birthday list on the Welcome page. The Welcome page is what first appears when you login to Volgistics and when you choose 'Welcome' from the menu

*See information popup icons (blue circles with 'i' inside).* When this box is checked, this operator will see the information icons that appear throughout the Volgistics account. An example of what the operator would see if they place their cursor over the information icon by the Status field on the Core tab of the volunteer's record appears below:

The information icons are useful to new operators because they give information on how the fields and features are used, and often have links to help topics about the item. If the operator is familiar with the system and does not want to see the information icons, un-check this box.

See *session expiration warnings*. Volgistics includes a security feature that closes sessions automatically when approximately 60 minutes of inactivity occur. You can optionally disable the alert messages warning that the session will be expiring soon. *This will not prevent the session from expiring. It will only prevent the alert messages from appearing for the operator.* You can learn more about the feature that closes inactive sessions [here](#).

## Email

### Reply-to address

Use this optional text field if email messages sent by this System Operator should contain a reply-to address other than their login name email address (provided in the *Email address* field above). When this System Operator sends email, the address entered here will be used as the reply-to address. If this field is left blank the reply-to address will be the System Operator's email address.

### Email signature block

Each System Operator can customize his or her own email signature block, which automatically appears at the bottom of all email messages he or she sends through Volgistics. The text entered here will be used as this user's default email signature block. When this System Operator composes a new email message in Volgistics, this default signature will appear, but there will be an option to edit the signature for that specific message.

Click **Save** to save changes you've made to a System Operator record, **Cancel** to exit without saving your changes, or **Delete this operator** to delete the selected System Operator record.

---

## Sending and Receiving Help Inquiries

Help topic 1027

Added or revised 06-10-2016

---

If you have a trial or a paid Volgistics account, we recommend that all help inquiries be sent from the *Help E-mail* tab of your Volgistics Mailbox instead of by selecting Support from the menu at the top of the page at [www.volgistics.com](http://www.volgistics.com).

There are four reasons we recommend this.

- The questions and responses will all be stored in one place so you have a quick, handy reference if you have the same question again or you are training a new System Operator.
- The Volgistics Support Team can respond to your inquiries quicker and more accurately because the inquiries you submit will be linked to your Volgistics account.
- You can include additional resources such as a report you have a question about or a screenshot of what you are seeing.
- You can create follow-ups so that all the inquiries in a chain are connected. This can be helpful to the Support Team because we will be able to see the previous inquiry so information will not need to be repeated.

Other people from your organization who have access to your Volgistics account can see your inquiries and the responses to them in case they have a similar question. However, no one from outside of your organization, such as volunteers and people in other organizations, can see them.

The Volgistics Support Team is available to answer your questions weekdays from 8 am to 9 pm Eastern. On Saturday, we are available from 11 am to 4 pm. Additionally, a support team member will log in at least once Saturday evening and three times throughout the day on Sunday. The typical response time during support hours is between 10 and 15 minutes. When you submit your question after support hours, the team will answer it the next time support resumes.

You can go directly to a section of this help topic by clicking a link in the *Contents* box below.

[Send a New Help Inquiry](#)

[Send a New Help Inquiry with a Report Attached](#)

[Send a New Help Inquiry with a Screenshot or Other File Attached](#)

[Send a Follow-up Help Inquiry](#)

[Receive Responses to Help Inquiries](#)

[How to Make a Screenshot](#)

**[Send a New Help Inquiry](#)**

Take the following steps to get to the New Help Inquiry window:

1. Choose Mailbox from the menu.
2. Click on the *Help E-mail* tab.

3. Click the **Send an inquiry** button.

Use the New Help Inquiry window fields to prepare your help inquiry.

Posted By

The name associated with the login name you used to access the Volgistics system appears here.

This is about

Choose the entry that best describes the kind of inquiry you are making.

Subject

Enter a few words to summarize your inquiry (for example "Printing mailing labels," or "Renewing my account"). Please note that this field is limited to 40 characters so any information beyond this limit will not appear on your inquiry.

Message

Enter your question(s) here.

If you are writing about an error message you received, be sure to include the exact wording of the message and the error number (if one was provided).

Send or Cancel

Click **Send** to send your inquiry, or **Cancel** to continue without saving or posting an inquiry.

**Send a New Help Inquiry with a Report Attached**

If your inquiry is about a stock or custom report you have created, it is often useful to send a copy of the report to the team so they can refer to it when answering your question. *In order for us to see the report you must keep it on the In Box* of your Volgistics mailbox. If you delete the report, we will not be able to see it.

Here are the steps to send a report along with your help inquiry:

1. Choose Mailbox from the menu.
2. Click on the *Help E-mail* tab.
3. Click the **Send a report inquiry** button at the bottom of the page.

**Mailbox**

[In Box](#) [Out Box](#) [Applications](#) [Service](#) [Help E-mail](#) [Documents](#)

[Refresh](#) [Send an inquiry](#)

**Help email**  Include archived inquiries

<a href="#">Reply</a>	<a href="#">Posted by</a>	<a href="#">Subject</a>	<a href="#">Posted</a>	<a href="#">Answered</a>
	Brenda Samuelson	<a href="#">Help Inquiry Responses</a>	10-19-2011	10-19-2011
	Annie Smith	<a href="#">Cloning</a>	04-22-2010	04-22-2010

**Have a question about a report?**

If you have a question about a report you printed in Volgistics you can show the report to the volunteer information specialists at Volgistics using the **Send a report inquiry** button here:

[Send a report inquiry](#)

4. Select the report your question is about from the list. If the report does not appear on the list, click the link behind "If your inquiry is not about a specific report."

Use the window fields to prepare your help inquiry. If you need assistance for what a field is used for, you can find details in the Send a New Help Inquiry section above.

### Send a New Help Inquiry with a Screenshot or Other File Attached

If your inquiry is about a problem you're seeing, and you feel it will be helpful for us to see your screen, you can send a screenshot showing what you see. If you need help making a screenshot, see the How to Make a Screenshot section below.

You are not limited to just sending screenshots, any file you feel will be helpful for us to see can be included as long as it is in one of the accepted formats: .doc, .docx, .gif, .jpg, .pdf, .png, .xls, or .xlsx. The file that you send needs to be stored locally on your computer or network, or on a storage device such as a flash drive.

To send us a file to view, follow the steps in the Send a New Help Inquiry section above. Before you click the **Send** button, click the **Choose file** or **Browse** button at the bottom:

Posted by: Alexandra Call

This is about:

Subject:

Message:

Upload optional attachment:  No file chosen  
Acceptable file types: XLS, XLSX, DOC, DOCX, PDF, PNG, GIF, JPG

[Help](#)

Locate the file you'd like to send, click on it, and then click the **Open** button.

Click the **Send** button to finish sending us the inquiry.

### Send a Follow-up Help Inquiry

When you have an additional question, or more information, about a help inquiry that was sent previously you should link the inquiries together. This will help the Volgistics Support Team know your inquiry is related to a previous question and save you from needing to re-enter information. You can find more information on viewing responses to your inquiries in the Receive Responses to Help Inquires section below.

Take the following steps to link a follow-up inquiry to a previous inquiry:

1. Choose Mailbox from the menu.
2. Click on the *Help E-mail* tab.
3. Click the link to the help inquiry in the Subject column.
4. Click the **Post a follow-up** button.

The screenshot shows the Volgistics Mailbox interface. On the left is a vertical navigation menu with items: Volunteers, Assignments, Coordinators, Schedule, Tickler, Post, Tags, Sets, Print, Mailbox (highlighted in orange), Who's Here, Setup, Welcome, Help, and Exit. The main content area is titled "Mailbox" and has tabs for "In Box", "Out Box", "Applications", "Service", "Help E-mail", and "Documents". The "Help E-mail" tab is selected. Below the tabs is a "Close" button. The main content displays a "Help Inquiry" message. The message text is: "Posted by: Brenda Samuelson, 10-19-2011 at 2:04 pm. Subject: Help Inquiry Responses. Message: Where will answered help responses appear? Will I get a message on my Welcome page? Reply: Hi Brenda, Our responses to your help inquiries should appear on the Help E-mail tab of your Mailbox. We can also send a copy of the message to the email address you use to access Volgistics, as we did with this one. Please let us know if you have any other questions. Thank you, The Volgistics Team. 10-19-2011 at 2:06 pm". At the bottom left of the message content is a "Printable View" link. At the bottom right are two buttons: "Post a follow-up" (highlighted with a red box) and "Archive". A "Close" button is also present at the bottom left of the main content area.

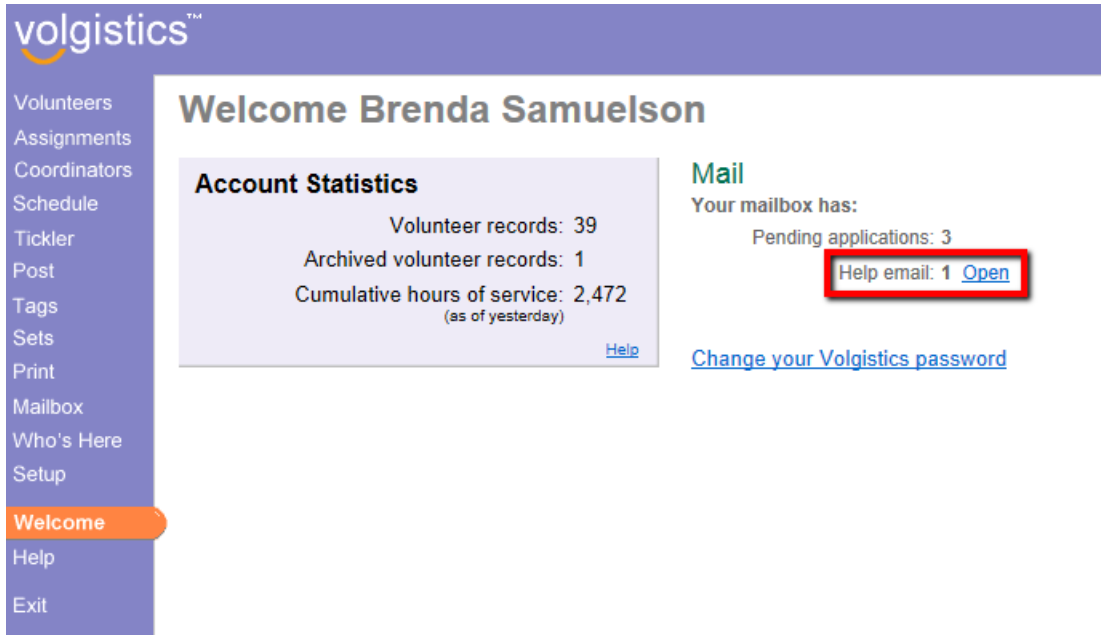

Use the window fields to prepare your help inquiry. If you need assistance for what a field is used for, you can find details in the Send a New Help Inquiry section above.

### Receive Responses to Help Inquiries

If you are working in your Volgistics account when a response is sent, and you are the operator who sent the inquiry, the answer will appear in a separate browser window when you select a new item from the menu.

If you are not working in your Volgistics account when a response is sent, we post a notice and link on your Volgistics Welcome page to let you know. Click the Open link to be taken to the *Help E-mail* tab of your Volgistics Mailbox.

All help responses are collected on the *Help E-mail* of your Volgistics mailbox also. You can go there to read new responses, or review old responses. To do this:

1. Choose Mailbox from the menu.

2. Click on the *Help E-mail* tab.

3. Click the link to the help inquiry in the Subject column.

Unread help responses will appear in bold print and show as **New** in the Reply column.

The screenshot shows the Volgistics Mailbox interface. The top navigation bar includes tabs for In Box, Out Box, Applications, Service, Help E-mail, and Documents. The Help E-mail tab is selected. Below the tabs are buttons for Refresh and Send an inquiry. The main content area is titled 'Help email' and includes a checkbox for 'Include archived inquiries'. A table lists help emails with columns for Reply, Posted by, Subject, Posted, and Answered. The first row is highlighted with a red box, showing a 'New' status, 'Brenda Samuelson' as the sender, 'Inactive Volunteers' as the subject, and '10-21-2011' for both posted and answered dates. Below the table is a section titled 'Have a question about a report?' with a 'Send a report inquiry' button.

Reply	Posted by	Subject	Posted	Answered
<b>New</b>	Brenda Samuelson	<a href="#">Inactive Volunteers</a>	10-21-2011	10-21-2011
	Brenda Samuelson	<a href="#">Assignments</a>	10-21-2011	10-21-2011
	Brenda Samuelson	<a href="#">Help Inquiry Responses</a>	10-21-2011	10-21-2011
	Brenda Samuelson	<a href="#">Help Inquiry Responses</a>	10-19-2011	10-19-2011
	Annie Smith	<a href="#">Cloning</a>	04-22-2010	04-22-2010

If you need to clean-up the list of inquiries and responses, you can archive items that are no longer needed. Help topic 2231 explains how to do this.

### How to Make a Screenshot

Taking a screenshot is something that is done outside of the Volgistics system so how to do it will vary depending on what resources you have available. Below are some outside resources that may help you, but if you need additional assistance you will need to find this on your own. For instance, by doing an Internet search or asking a colleague.

If you have Microsoft Windows, the fastest way to capture a screenshot is with the Snipping Tool. You can find information on this feature on Microsoft's website here.

If you do not have Windows, or cannot use the Snipping Tool, there is an additional resource here. Just click on the tab at the top to go to the instructions for your operating system.

[Scheduling Groups](#)

[VicNet for Groups](#)

[Posting Service for Groups](#)

[Including or Excluding Group Records on Reports](#)

[Using Group Records with Checklist Items](#)

[Using Group Records with Awards](#)

### Introduction to Group Records

Many volunteer programs include both individual volunteers, as well as groups such as businesses; service clubs; and fraternal organizations that provide volunteer service. Volgistics gives you tools for tracking both kinds of volunteers: individuals and groups. This help topic explains the difference between Individual and Group records in Volgistics, and the features that are unique to Group records.

Each time you add a new volunteer record to Volgistics you can mark which kind of record it is: an Individual record or a Group record. You do this using the Kind field which appears in the Name box on the Core tab in each volunteer record.

The screenshot shows a form titled "Name" with several input fields. On the left side, there are fields for "Last name:", "First name:", "Middle name:", and "Nickname:". The "Middle name:" field is followed by a "Title:" dropdown menu. On the right side, there are fields for "Number:" (with the value 0), "Status:" (with a dropdown menu set to "Active"), and "Type:" (with a dropdown menu). Below these is the "Kind:" field, which contains two radio buttons: "Individual" (which is selected) and "Group". This "Kind:" field is circled in red.

Use Individual volunteer records when you want to track personal information (like name and address); volunteer service; Checklist items; or Awards for a person individually, or if you would like to include the individual in Volgistics emails and text messages.

Use Group volunteer records to track groups of people who serve collectively as part of a business; service or social club; fraternal organization; or similar group when you cannot or do not want to track the group's members individually. When you create a Group record, that single Group record will represent all of the members of that particular group. You can record the name and contact information for a group contact on each Group record; however you do not record the names of the individual members of the group in a Group record.

When entering service for a person who is a member of a Group, you will need to decide if the service applies to the Individual or the Group. To avoid double posting the service, be careful to exclude the person from the Group count and Group hours served if you decide to track the individual's service separately. If the service credit should be applied to the Group, do not also post the service to the Individual record.

Here are examples of when to track volunteers using Individual volunteer records and when to track volunteers using a Group record instead.

Nancy Wilson visits your organization one day to express her interest in becoming a volunteer. Nancy's neighbor is a volunteer, and what she's heard about your organization interests her. She's available to serve one day week. Nancy is clearly an individual volunteer and you would track her information in Volgistics using an Individual record.

Once a year your organization conducts a food drive for which hundreds of volunteers are needed to collect food items from homes in various neighborhoods throughout your community. No special volunteer screening is required, and a brief volunteer orientation is given to all volunteers who can help on the morning of the event. Peter Evans, President of the local Rotary Club contacts you and offers to participate. He tells you that his club will send twenty members on the day of the event. In this example it's not necessary for you to track these 20 volunteers individually. Instead, you create a single Group record for the Rotary Club in Volgistics, entering Peter Evans as the contact person for the group.

If you want to track the members of a group individually you can, however you should not create Group records for each group member you want to track individually. Use Individual volunteer records instead.

If you want to track the names – or any specific information such as service, Checklist items, or Awards – for each member of a group, you should track those volunteers using an Individual volunteer record for each person instead of creating a Group record for their group or a separate Group record for each group member. You can still link all of their records together using a Flag if you want to be able to produce reports just for the volunteers who have a specific group association.

For example, an organization has 12 people who volunteer as part of their community's Retired Senior Volunteer Program (RSVP). Even though these volunteers are part of a group, the volunteer leader wants to be able to track the volunteer service for these people individually and give them awards individually. In this case the volunteer leader would track each of these RSVP members using an Individual volunteer record for each person instead of creating a Group record for "RSVP." The volunteer leader can then record volunteer service for these 12 volunteers just like they do for all other individual volunteers (manually, or through VicTouch or VicNet).

Once a month, the volunteer leader must send the RSVP office a report that shows the number of volunteer hours served by these 12 RSVP volunteers. The volunteer leader can accomplish this simply by adding an "RSVP" flag to the Flag field in each of these 12 Individual volunteer records. Then at the end of each month they run a Service Details report that includes only the volunteers who have the "RSVP" flag (they can even setup this report so it runs automatically at the end of each month!).

Group volunteer records differ from Individual volunteer records several ways. The differences between Group and Individual records are explained next.

### **Adding Group Records**

To add a new Group record manually:

1. Choose Volunteers from the menu.
2. Click the **New volunteer** button.
3. Enter the name of the group's contact person in the Name box.

4. Check "Group" in the Kind field.

**Contact Name**

Last name:  Number:

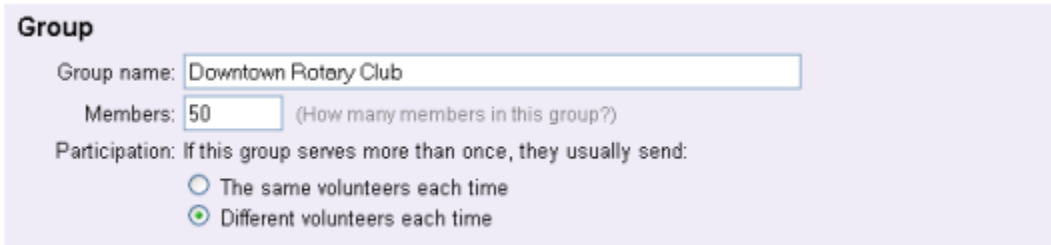

First name:  Status:

Middle name:  Title:

Nickname:  Type:

Kind:  Individual  Group

Once you select Group in the Kind field, a new box appears for entering the group's information.

**Group**

Group name:

Members:  (How many members in this group?)

Participation: If this group serves more than once, they usually send:

The same volunteers each time

Different volunteers each time

Enter the following information about the group.

#### Group name

Enter the group name.

#### Members

If you know how many members this group has, enter the number of people who belong to this group in the Members field. For example, if the Downtown Rotary Club has 50 members, enter 50 here (even if not all 50 members will volunteer). You can leave this field zero if you're not sure how many members the group has.

#### Participation

Choose the option that you think best describes how this group will participate if they will volunteer more than once for your organization. Volgistics uses this information when it calculates unduplicated volunteer counts on service reports.

Choose **The same volunteers each time** if the group will typically send the same people each time the group volunteers. For example, if ten students from a college sorority serve once a month, and it tends to be same ten students each time, choose "The same volunteers each time. "

Choose **Different volunteers each time** if the group will typically send different people each time the group volunteers. For example, if ten employees from a large corporation located in your community serve once a month, and it tends to always be a different 10 people each time, choose "Different volunteers each time."

#### Address

Enter the address and contact information for the group contact person in the Address box.

5. Click the **Save** button save the new group record.

## Icons

Groups and Individuals appear with different icons to help you distinguish Group records from Individual records.

 - Individual

 - Group

## Finding Group Records

Once you've added Group records to your database, you can later find and retrieve these records by the group contact's name or by the group name.

To find by the group contact's name:

1. Choose Volunteers from the menu.
2. Enter the contact person's last name in the Last Name field.
3. Click the Go button to see the volunteers with that last name.
4. Click the contact person's name.

To find by the group name:

1. Choose Volunteers from the menu.
2. Enter the group name in the Group Name field (or you can just enter the first few letters of the group name here).
3. Click the Go button to see the Group volunteers that match your entry.
4. Click on the appropriate group record.

## Scheduling Groups

You can schedule group volunteers along with individual volunteers in Volgistics.

When you add a group to a schedule from the Schedule tab of the Group's record, you'll see an additional Volunteers field you can use to record the number of group members who are to be scheduled. This makes it possible for you to schedule multiple group members in a single step.

Help topic 1197 - Scheduling groups explains more about group scheduling.

## VicNet for Groups

If you use VicNet, group contacts can use VicNet to self-schedule their group members, as well as to post volunteer hours for their group online.

Since you do not track the individual group members when you use Group records, Volgistics does not provide a way for each separate member of group to access their group's records through VicNet.

There are not currently any VicTouch features designed specifically for group contacts or group members.

Help topic 1198 - Using VicNet for groups explains more about the unique features of VicNet for Group records.

### Posting Service for Groups

You can post hours and other service for groups manually from individual group records, from the Post page for multiple records, or the group contact can post hours for their group online using the VicNet option.

When you or the group contact post hours for a group, a *Volunteers* field appears on the service record. Use the Volunteers field to enter the number of group members who participated in the volunteer service you're posting. Volgistics uses this group volunteer count when it calculates unduplicated volunteer counts in reports.

If you choose to post the starting and ending times that volunteers serve when you post volunteer hours, Volgistics will calculate the total hours served by the group automatically based on what you enter in the Volunteers field. For example, if 10 members of a group all worked from 9:00 am to 11:00 am, your service entry would look like this:

The screenshot shows a web form titled "Service" with an "Add" button. The form includes the following fields and values:

- Assignment: Phone Bank (dropdown menu)
- From date: 02-20-2011
- To date: 02-20-2011
- From time: 9:00 am
- To time: 11:00 am
- Hours: 20:00
- Volunteers: 10 (circled in red)

Below the "Volunteers" field is the text "(Number of group members who served these times)". At the bottom right of the form are "Save" and "Cancel" buttons.

The Hours field will automatically show 20:00 hours served (2 hours each for 10 volunteers).

If you do not post the starting and ending times when you post volunteer hours, you will need to enter the total number of hours served collectively by the group, and then enter the number of group members who participated in that service in the Volunteers field. For example, if a group served 50 hours altogether, and there were 16 group members who each served a portion of those hours, your service entry would look like this:

**Service**

**Add**

Assignment: Phone Bank

Date: 02-21-2011

Hours: 50:00

Volunteers: 16 (Number of group members who participated in this service)

Save Cancel

You control if starting and ending times are available for posting service with your account's settings for service tracking.

If your organization uses the VicTouch module, the group's leader can also sign-in and out when they arrive and depart from your facility. With this option, the total for the group's service will be calculated automatically. Help topic 1212 explains more about this option.

### Including or Excluding Group Records on Reports

When you print stock or custom reports in Volgistics there may be times when you want a particular report to exclude Group records, include only Group records, or include both individual and Group records. You can do this by checking the appropriate option on the Include tab for the report.

For example, if you wanted to modify a custom Volunteer List report so it includes both individual and Group records, you would do this by:

1. Choose Print from the menu.
2. Click Volunteer list to expand your Volunteer list reports.
3. Click on the name of the report you want to modify.
4. Click the **Modify it** button.
5. Select the Include tab.
6. Under "Which volunteers do you want to include in this report?" find the Kind heading and be sure the "Both individuals and groups" option is checked as shown here.

Which **volunteers** do you want to include in this report?

Tagged volunteers ( 0)

These volunteers:

**Status**

Any

Any of these

Active       Applicant       Inactive

LOA       Prospect

**Type**

Any

Any of these

Adult       College       Group

High School

**Kind**

Both individuals and groups

Individuals only

Groups only

**Flags**

Any

Any of these

7. Save or print the report.

### Using Group Records with Checklist Items

If you use the volunteer Checklist features, you may have some Checklist items that should apply to both Group and individual records, or apply only to Group or individual records. Here is an example of how to setup a Checklist item to only apply to individual volunteers:

1. Choose Setup from the menu.
2. Click Checklists.
3. Click on the name of a Checklist item you want to change, or click the "Add a new Checklist item" link to create a new Checklist item.
4. Under "Which volunteers should this item apply to?" select "Individuals only" in the "If their Kind is" section.

Which volunteers should this item apply to?

If their Status is:

- Active
- Applicant
- Inactive
- LOA
- Prospect

If their Kind is:

- Either individual or group
- Individuals only
- Groups only

If their Type  is  is not:

5. Finish configuring the Checklist item and then click the **Save** button.

Remember that Group records represent groups of volunteers who you do not track individually. For this reason there is not a way to use Checklist items to track whether or not specific members of a group have completed a Checklist item. If you setup a Checklist item that applies to Groups, you can use the Checklist in each Group record to show whether or not the group contact completed that item.

### Using Group Records with Awards

If you use Volgistics to track and queue volunteer awards, you may have some Awards that should not apply to Group records, should apply only to Group records, or should apply to both individual and Group records. Here is an example of how to setup an Award to only apply to Group records.

1. Choose Setup from the menu.
2. Click Awards.
3. Click on the name of an Award item you want to change, or click the "Add a new award" link to create a new award.
4. Under "Volunteers receive this award only if, select "Groups only" in the "Their Kind is" section.

Volunteers receive this award only if...

Their Type  is  is not:

Their Flag  is  is not:

Their Kind is:

- Either individual or group
- Individuals only
- Groups only

Sequence:

Some awards are sequential, such as those based on 100, 500 and 1,000 hours of service. If this award

5. Finish configuring the award and then click the **Save** button.

Keep in mind that Group records represent groups of volunteers who you do not track individually. For this reason there is not a way to queue or track awards for specific members of a group who serve under a Group record. If you want to track awards for group members individually you can track those volunteers as Individuals instead of tracking them collectively as a Group.

If you setup an Award that applies to Groups, a Group will be queued for the award when the group members collectively meet the award requirements. For example, if you create an award which is given after 100 hours of service, the Group will be queued for the award if 50 members of the group each serve 2 hours.

Remember that when you have an Individual record for someone that is also a member of a Group, you will need to decide if the service applies to the Individual, the Group or both. If you want to avoid double posting the service, be careful to exclude the person from the Group count and Group hours served if you decide to track the individual's service separately. If the service credit should be applied to the Group, do not also post the service to the Individual record. You can link the individuals to the Group later by using a Flag as discussed in the sidebar on this page.

## **Mailbox In Box Tab**

Help topic 1110

Added or revised 07-21-2016

---

The Mailbox's In Box tab is the tab initially displayed after you select Mailbox from the menu. The In Box tab is used for managing incoming messages such as reports, alerts, and document zip files. Messages are identified by kind, format, date received, subject, and the System Operator to whom they were directed.

# Mailbox

In Box   Out Box   Applications   Service   Help E-mail   Documents

Refresh

**In Box**   All sites 

<a href="#">Kind</a>	<a href="#">Date</a>	<a href="#">Subject</a>	<a href="#">To</a>
<input type="checkbox"/> Alert 	10-03-2013 12:22 p	<a href="#">Declined email</a>	Jim Howard
<input type="checkbox"/> Report 	10-03-2013 12:18 p	<a href="#">Name, address and phone list (stock)</a>	Operator Volgistics

Click Delete to delete the **checked** messages:

This help topic reviews some of the basic features of the In Box tab. You can click on a link in the *Contents* box below to go directly to a section of the help topic.

## Contents

- Capacity
- Alerts
- Downloads
- Reports
- Upload Alerts
- Saving Reports Locally
- Refreshing the In Box Tab
- Sorting the In Box Tab
- Deleting In Box Items
- Site Level Access and the In Box Tab

## Capacity

The In Box tab is not intended for long term storage. These rules apply to how long items remain on the In Box tab:

- Alerts are deleted from the In Box tab 180 days after they are received.
- Downloads of documents are deleted from the In Box tab 5 days after they are received.
- Reports are deleted from the In Box tab 25 months after they are generated.
- Upload Alerts are deleted from the In Box tab 5 days after they are received.
- System Operators are limited to 12 reports each. Once the 12 report limit is reached, when the operator generates a new report the oldest report run by the operator is automatically deleted.

If you need to save an item such as a report or download, you will need to save it to your local computer, network, or storage device before it is deleted. To save reports on your local system, see the Saving Reports Locally section of this help topic. To save a download of documents, see the Downloads section of this help topic.

## Alerts

Alerts received on the In Box tab are identified with the following icon:

Depending on your account setup, you could receive five different types of alert messages. These are generated for the following events:

- Subject: New application. Alerts generated when an applicant submits an online application form. Help topic 1053 shows how to add these alerts.
- Subject: Schedule change (added). Alerts generated when a volunteer adds him or herself to the schedule through Vic self-scheduling. For information on adding these alerts, see Help topic 2172.
- Subject: Schedule change (removed). Alerts generated when a volunteer removes him or herself from the schedule through Vic self-scheduling. For information on adding these alerts, see Help topic 2172
- Subject: Declined messages. Alerts generated when a Coordinator or volunteer opts-out of all email communication and text messages from your organization through the link at the bottom of an email message. For information on adding these alerts for volunteers, see help topic 1068. For information on adding these alerts for Coordinators, see help topic 1025.
- Subject: Opt-out of text messaging. Alerts generated when a Coordinator or volunteer opts-out of text messaging by texting STOP or changing their selection in VicNet.

## Downloads

Zip files of downloaded VicDocs documents may be received on the In Box when a System Operator performs an action such as deleting a volunteer record or deleting a Site, Place or Assignment record. The zip files allow you to save the documents associated with records that are deleted from your Volgistics account.

Downloads are identified with the following icon:

The first part of the Subject of the download message shows the type of record that was deleted, and the second part of the subject has the name of the record that was deleted. The chart below shows the abbreviations used for the types of records:

Abbreviation	Record Type
Asgmnt	Assignment
Coord	Coordinator
Place	Place
Site	Site
Vol	Volunteer

The zip files for downloads are only kept in Volgistics for 5 days so if you wish to keep the download of documents you will need to save the file locally before it is deleted. In most cases, you can do this by simply clicking on the Subject of the notification. Another option to download the file is to right-click on the Subject of the notification and then select "Save link as . . .", "Save target as . . ." or "Save as . . ." from the menu.

## Reports

Reports received on the In Box tab can be in Microsoft Excel format, or PDF format. Excel files appear with the following icon:

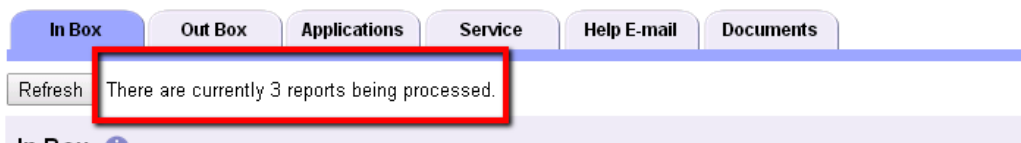

PDF files are identified with the icon shown below:

You can find information on how to print reports, plus a listing of pre-made reports, in help topic 2104 "Stock Reports." You can also customize your reports in Volgistics. You can find information on this in help topic 2223 "Creating Custom Reports."

If you have requested a report and the system is still working to compile the information, you will see a message by the **Refresh** button indicating there is a report pending. This message will indicate how many reports are currently pending for your entire account.

These could be reports initiated by a Site Level Operator other than yourself so you may not actually see the reports on the In Box tab when they are completed. The Site Level Access and the In Box Tab section below explains more about this. If you remain on the In Box tab, you will need to Refresh the tab to see pending reports that have completed since you visited the tab.

## Upload Alerts

When you upload VicDocs files, the system scans the document to check for viruses. If the scan shows a file may have a virus, the document is deleted to protect the system. When this occurs, you will receive an Upload Alert on the In Box tab. Upload Alerts are identified with the icon shown below:

The Subject of the alert shows the name of the file that was infected. Click on the Subject to learn more about the Docs tab where the upload attempt was made. The following help topics have more information about the Docs tabs where documents can be uploaded:

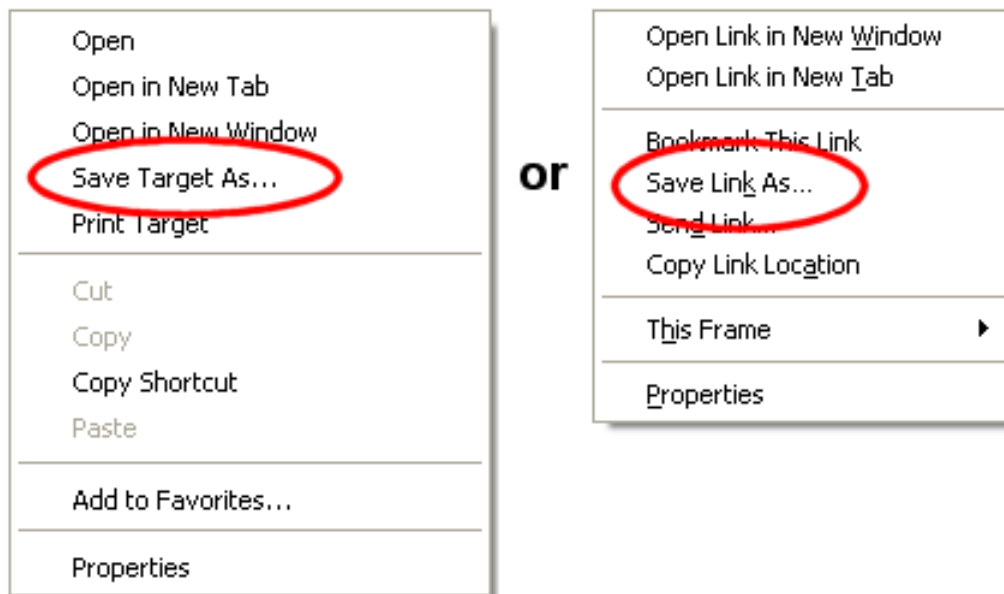

Help Topic 2548 - Docs Tab (Volunteer Records)

Help Topic 2549 - Docs Tab (Coordinator Records)

Help Topic 2550 - Docs Tab (Site, Place & Assignment Records)

### Saving Reports Locally

As noted in the Capacity section of this help topic, the In Box tab is not intended for the long term storage. To save a report to your local computer (or flash drive or other storage medium), right-click on the Subject of the report on the In Box tab and then select "Save target as...", "Save link as..." or "Save as..." from the prompt.

Then follow the steps to save the file to a local storage location. You can also save reports by opening them in Excel or Adobe Reader and then using the program to save the report. Help topic 2106 explains more about how to do this.

There is not a way to save Alerts locally without copying and pasting them into a spreadsheet or word processing document.

### Refreshing the In Box Tab

The In Box tab will show an up-to-date view each time you select Mailbox on the Volgistics menu. If you're on the In Box tab and you want to update the view without leaving the tab, click the **Refresh** button in the top left corner of the In Box tab.

### Sorting the In Box Tab

By default, the In Box tab is sorted by the Date column with the most recent items at the top.

As your In Box tab receives more items such as alerts, reports, and downloads, it may become difficult to find an item you're looking for. To help you with this, Volgistics allows you to sort the In Box by the Kind, Date, Subject and To columns. Just click on the column heading to sort the In Box by that column's information.

In Box 					<input checked="" type="checkbox"/> All sites 
Kind	Date	Subject	To		
<input type="checkbox"/> Alert 	10-03-2013 12:22 p	Declined email	Jim Howard		
<input type="checkbox"/> Report 	10-03-2013 12:18 p	Name, address and phone list (stock)	Operator Volgistics		
<input type="checkbox"/> Alert 	10-03-2013 12:11 p	Schedule change (removed)	Northside Lear		

## Deleting In Box Items

To delete an item from the In Box tab, check the box next to the item you'd like to delete and then click the **Delete** button. You can clear out your entire In Box at once by clicking the **Check all** button and then the **Delete** button.

### Please note. . .

- 1.The **Delete** buttons are located at the bottom of the tab so if your account has many items, you will need to scroll to the bottom of the tab to locate the buttons.
- 2.The In Box tab is shared by the System Operators in your account so if you don't recognize an item, you may want to check with the operator listed in the *To* column before you delete the entry.

## Site Level Access and the In Box Tab

If an organization uses Site Level Access and a System Operator is logged in as a Headquarters-level operator, the In Box tab will have a checkbox for *All Sites* in the upper right corner. If this box is checked, the operator will view reports generated by Headquarters as well as reports generated by Site-level Operators. If the *All Sites* box is un-checked, only reports generated by Headquarters will be displayed on a Headquarters-level operator's In Box tab.

Users logged in as Site-level Operators will not see the *All Sites* checkbox on the In Box tab. With Site Level Access, the In Box tab will only display reports generated at their Site.

---

## Coordinators

Help topic 1111

Added or revised 03-23-2017

---

In addition to tracking volunteers and Assignments, Volgistics also includes features for tracking the people who supervise or manage each Assignment, and tools these people can use to perform certain tasks without having to be Volgistics System Operators themselves. Volgistics calls the people who supervise or manage volunteers at the Assignment level *Coordinators*.

Coordinators are typically paid or volunteer staff with responsibility for coordinating or supervising volunteers in a specific Assignment. Here are some examples:

- At an animal shelter, volunteer *team leaders* coordinate the schedules for all of the volunteers in each of the shelter's Assignments. If a volunteer cannot serve as scheduled, they contact their *team leader* who handles the scheduling of a substitute. In this example, these team leaders could be Volgistics Coordinators.

- In a hospital, a hospital employee in each department is given responsibility for supervising the volunteers who serve in their department. In this example, these hospital staff could be Volgistics Coordinators.
- A *Retired Senior Volunteer Program* identifies a person at each different organization where their volunteers serve as their contact at that organization. In this example, these contact people could be Volgistics Coordinators.
- A human service agency appoints a *chairperson* for each volunteer Assignment. These chairpersons train and coordinate the activities of the volunteers in their designated Assignment. In this example, these chairpersons could be Volgistics Coordinators.

This help topic covers more about how to create and use Coordinator records in Volgistics. You can click on a link in the *Contents* box to go directly to a section of the help topic.

## Contents

The Coordinator Record  
 Connecting Coordinators and Assignments  
 What Coordinators Can Do  
 Communication for Coordinators

### The Coordinator Record

As with volunteers, each Coordinator's information is stored in their own record. You get to your Coordinator records by choosing *Coordinators* from the menu. To see Coordinators currently in your account, click on letter to see Coordinators whose last names start with that letter. Or click the *All* link to see all Coordinators in your account.

To start a new Coordinator record, click the **New coordinator** button. Enter at least a last and first name and then click the **Save** button. You can return to the record later to add more information.

The following tabs make up the Coordinator record: Coordinator tab, Assignments tab, Volunteers tab, Schedule tab and Vic tab. Each is explained below.

#### Coordinator tab

The Coordinator tab contains Name, Address, and Email (or Email and Text) Preferences boxes. It is used to store Coordinator contact information and track which types of messages they will receive.

#### Assignments tab

The Assignments tab lists the names of Assignments the Coordinator is responsible for managing or coordinating. It includes an "Add" box to add new Assignments to the Coordinator's record.

#### Volunteers tab

The Volunteers tab in the Coordinator record lists all volunteers who have one or more of the Coordinator's Assignments. A System Operator can view the list of only volunteers with the Role of "Assigned" in the Coordinator's Assignments, or volunteers with any Roles and Statuses they specify. From this tab, a System Operator can tag a Coordinator's volunteers, send a mass message to all of them, or change their Roles in the Coordinator's Assignments. The Volunteers tab on the Coordinator record works similarly to the Volunteers tab on an Assignment record. Help topic 2221 has more information about the settings on this tab.

#### Schedule tab

The Schedule tab displays the schedule for volunteers assigned to the Coordinator's Assignments. A System Operator can schedule a Coordinator's volunteers from this tab.

### Vic tab

A Coordinator's Vic tab is where System Operators manage the Coordinator's access to VicNet. If a Coordinator cannot currently access VicNet (for example, if their record lacks an email address or an organization has prevented Coordinators from accessing VicNet on the VicNet Ground rules page), this tab will display the reason. In addition, the Coordinator's VicNet password can be changed, or a password link can be sent to the Coordinator from this tab. You can learn more about this tab in help topic 1076.

**Note:** Service, including hours or any other service measures used by the organization, cannot be tracked for Coordinators. If an organization wants to track a Coordinator's hours, they must create a separate volunteer record for them (in addition to the Coordinator record). Help topic 1093 explains how VicNet works for individuals who are both a Coordinator and a volunteer.

## **Connecting Coordinators and Assignments**

In Volgistics, Coordinators and volunteers are not assigned to one another directly--they are connected only when they share the same Assignment(s).

Coordinators may have a single Assignment, multiple Assignments, or all of the Assignments at a given Site or Place.

Take the following steps to add an Assignment, Site or Place to a Coordinator's Assignments tab:

1. Choose Coordinators from the menu.
2. Click the letter of the Coordinator's last name, or the *All* link at the top of the page.
3. Click on the name of the Coordinator for whom you would like to add an Assignment.
4. Go to their Assignments tab.
5. Locate the Add box. In the Assignment dropdown field, select an individual Assignment name, or the name of a Place or Site. If a Place or Site name is selected, the Coordinator will be associated with each Assignment (or Place and Assignment) that falls under the chosen Place or Site, respectively.
6. In addition to the Assignment field, the Add box on the Assignments tab contains any Coordinator relationship fields used by the organization. Enter any appropriate information into the fields present on the Add box.
7. Click the **Save** button.

Once an Assignment (or Site or Place) has been added to a Coordinator's Assignments tab, all volunteers who have this Assignment (or any Assignment under this Site or Place) on their Service tab become this Coordinator's volunteers. See help topic 2173 to learn how to add volunteer Assignments and Roles.

## **What Coordinators Can Do**

Since a Coordinator's role is typically more limited than the role of an organization's overall volunteer leader, it usually is not necessary or desirable for an organization to make each of their Coordinators a System Operator in Volgistics. It would often not be practical to train each Coordinator in the whole Volgistics system, and it's often not desirable for these people to have as much access to Volgistics as a System Operator might.

Instead, Volgistics provides a way for Coordinators to access the system through the VicNet module. The VicNet module provides Coordinators with a simplified interface; access only to the volunteers who have the Coordinator's Assignment (or Assignments); and features for performing the most common supervisory tasks only (such as scheduling or updating contact information). Coordinators can access VicNet from any Internet connected computer--in their office, home, or even on the road. All that is required is an Internet connection.

Help topic 1093 has information on how VicNet will work if the person has a Coordinator and a volunteer record in the system.

Unlike *System Operators*, the number of *Coordinators* you add does not affect your account's Service Level. (Each *Volgistics System Operator* you add to your account after the first two increases your Service Level; however, you can add as many *Coordinators* as you need without increasing your account's Service Level). For this reason, *Coordinators* do not have access to all the same tools as *System Operators*.

One way to get an idea of what *Coordinators* can, and cannot, do is to watch the training videos designed to show *Coordinators* how to use VicNet. You can find these videos here.

There are two different videos because accounts can setup *Coordinator* access differently depending on their needs. The options for setting up VicNet for *Coordinators* are on the pages you access by selecting Setup from the menu, and then expanding the VicNet link.

### **Communication for Coordinators**

There is not a way for *Coordinators* to send messages to their volunteers, or to other *Coordinators* and *System Operators* through the system. However, a *System Operator* can send email, Vic mail, and/or text messages to a *Coordinator's* volunteers on behalf of the *Coordinator*. Help topic 2193 shows how to do this.

*System Operators* can also send custom messages to a single *Coordinator* or to all *Coordinators*. Messages can be sent by email, Vic mail or text message. In order to send text messages, your account must enable text messaging and the *Coordinator* must opt-in to receive text messages.

*Coordinators* can also receive schedule reminder messages to show them the coverage for upcoming assignments. These can be sent by email or text depending on if the *Coordinator* has opted-in for texting and his or her message preferences. You can find information on setting up daily schedule reminder messages for *Coordinators* in help topic 2494. For monthly reminders, please see help topic 2492.

*Coordinators* can also receive self-scheduling alerts to let them know when a volunteer has added and/or removed themselves from the schedule for an assignment. To set this up, go to the Rules tab of the *Coordinator's* assignment(s). You can find more information on this here.

---

## **How do volunteers get started with VicNet?**

Help topic 1158

Added or revised 04-12-2017

---

Many organizations wonder how they create volunteer "accounts" to allow volunteers to sign-in to the VicNet module. The good news is if the volunteer has a record in your database, the volunteer already has an "account." You can learn how volunteer records can be added to your database in help topic 2299.

Once a volunteer has a record, they will need to meet three requirements in order to use VicNet:

- They will need a Status (and optionally a Type or Flag) that is allowed to access VicNet. You control access requirements on the VicNet Ground Rules page.
- An email address on the Core tab of their volunteer record.

- The *Disable access* box on the Vic tab of the volunteer's record cannot be checked.

As long as a record meets all three items that are listed above, the volunteer will be able to use VicNet. The trick is often educating the volunteers on what they need to do. This help topic reviews some of the common strategies for using the VicNet portal, collecting volunteer information, and letting volunteers know about VicNet.

You should choose the strategy (or strategies) that works best for your organization's structure and requirements. For example, a festival may want applicants to be able to access VicNet right away without any onboarding requirements. So an option where the applicants choose their password on the application form will work best for them. However, an organization such as a hospital will likely have onboarding requirements so a method where the System Operators send login information after the volunteers are approved will work best for them.

You can click on a link in the *Content* box below to go directly to a section of the help topic.

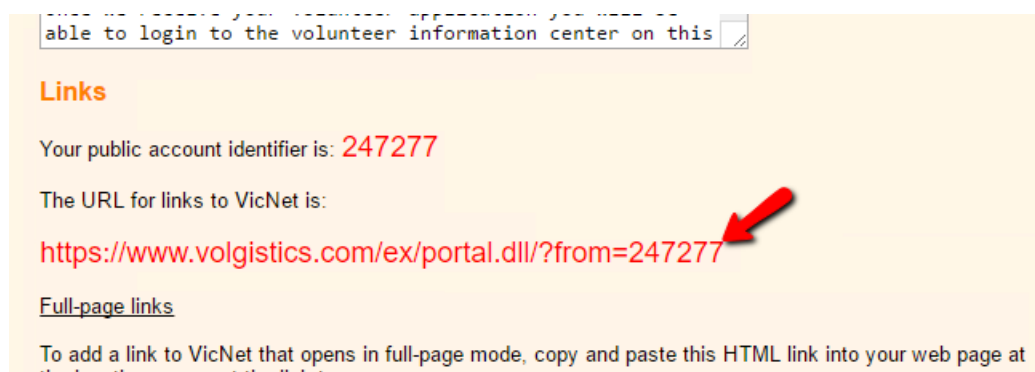

## Contents

Where is the VicNet Portal?  
Collect Login Information on Application Forms  
Send a Message with Login Information  
Use the "Need a Password?" Link  
Set a Temporary Password

## Where is the VicNet Portal?

Each Volgistics account has a unique URL address for their VicNet portal. You can find this by:

1. Select Setup from the menu.
2. Expand the VicNet link.
3. Select *Ground Rules*.
4. Scroll down to the Links heading. The URL will appear in red like the one pictured below. Please note that your account's URL will have different numbers than the one pictured.

For testing, you can simply copy and paste the URL into a web browser window. In the majority of cases, when your volunteers are ready to use VicNet you will want to place a link to the URL somewhere on your website. Or some organizations choose to embed VicNet into their web pages so it appears to be part of their website.

With this option, volunteers do not need to know the URL address for VicNet. You simply give them directions to the web page on your site where the link appears. You can find more information on how to place a link to VicNet on your organization's website in help topic 2153.

There may be some cases where an organization cannot place a link to VicNet on their website. In these cases, it is perfectly alright to give the volunteers the URL address for your VicNet portal. If you do this, you may want to encourage the volunteers to bookmark the address so you do not get repeated questions about how to get to the portal.

## Collect Login Information on Application Forms

If your applicants will be accessing VicNet soon after they apply, you may want to collect the email address and password from your volunteers right on your application form(s). This option works well for accounts that use Volgistics for events such as conferences or festivals where there may not be a long approval or onboarding process.

You can create a section on the application form just for the VicNet access information, and link the email and password fields to the form section. You link fields to a form section by selecting the *Fields* link on the application form's setup page.

With this method, you can place directions about the location of your organization's VicNet portal right in the instructions field of the form section. Or you could give directions with the receipt confirmation feature. This could be a page applicants view after they submit the form, or an automatic email sent to the applicant after they submit the form. If you send it as an email message, volunteers could find the directions again by referring back to the email message.

Here is an example of how this option may look on your application form:

Work phone:   OK to call me here

**Volunteer Information Center (VicNet)**  
You will schedule yourself for shifts through the Volunteer Information Center (VicNet). Please enter the email address and password you'd like to use to access VicNet. Once you've been approved, you can sign-in to VicNet by:

1. Go to our website ([www.organization.org](http://www.organization.org))
2. Select the Volunteer page.
3. Click the 'Volunteer portal' link.

Email address:  \*

Please enter a password that:

- Is between 6 and 30 characters long
- Contains both letters and numbers.
- Contains a combination of both uppercase and lower case letters.
- Contains at least one character that is not a letter or number, such as !#\$% or ?.

Password:  \*

Confirm password:  \*

**Emergency Contact**  
In the event of an emergency, whom should we notify?

**Please note:** If your application forms are setup to be audited, you will need to receive the application into your database, and the volunteer must meet the three requirements at the top of this help topic, in order to sign-in.

## Send a Message with Login Information

If your volunteers need to go through some sort of an approval, or onboarding, process before they can serve, you may want to send them an email message they can use to get their login information. Volgistics has a template you can use to customize a message to use for this email. The same template is used for three

purposes: 1) when the message is sent by a System Operator to volunteers, 2) when the message is sent by a System Operator to Coordinators, and 3) when the message is sent because volunteers or Coordinators request a password on the VicNet login page.

Because of this, you may want to keep the content of the message generic so that it works for all three purposes. However, it is still useful to give directions on how users login in the message. You customize this message by:

1. Select Setup from the menu.
2. Expand the VicNet link.
3. Select *Ground Rules*.
4. Scroll to the *Password email* section and customize the message.
5. Click the **Save** button to keep your changes.

You can see a sample of what you could enter as the message's content below:

Expire every  days

### Password email

Volunteers and Coordinators can receive a link to set their password by email. You can customize the content of this message below. Volgistics inserts the person's login name (email address), and the password link, between the Top and Bottom parts

Top part:

```
Thank you for serving at "My organization." You can find login information for the Volunteer Information Center (VicNet) below. Click on the link to set your password. After you have successfully set a password, you will be directed to the login page.
```

Bottom part:

```
To login to VicNet in the future:  
1. Go to our website (www.organization.org)  
2. Select the Volunteer page.  
3. Click on the "Volunteer portal" link.  
4. Enter your email address and password.  
  
We appreciate your service! Please contact Jessica in Volunteer Services (555-444-3333) if you have trouble logging-in.
```

What should the subject line be for VicNet password emails?

### Heading

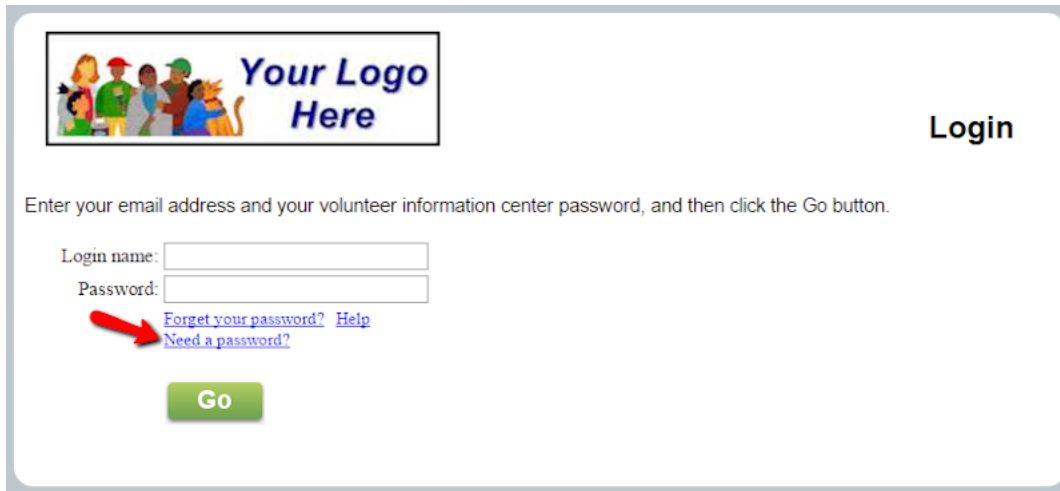

You can send the email with the link to individual volunteers and Coordinators on the Vic tab of their records. There is more information on how to do this in help topic 2234.

You can also send the email with the link to multiple volunteers at once by tagging the volunteers you want to send the email to. You can find information on how to do this in help topic 2233.

## Use the "Need a Password?" Link

You may have a situation where you want your volunteers or Coordinators to get their own passwords so they do not need to rely on a System Operator. For example, if once the volunteers are approved to serve, you provide them with a packet of instructions on what to do next.

In this case, your volunteers can get their own passwords as long as your instructions include the location of your VicNet Portal, and they meet the three requirements to use VicNet. To do this, they will go to the login page for VicNet, and click the *Need a password?* link.

This will take them to a page where they can enter their email address to have the password link sent to them.

## Set a Temporary Password

There may be times when you want to set a temporary password that volunteers use to login to VicNet for the first time. For example, if you have volunteer orientations where you will train groups of volunteers all at once, you can set the same temporary password for the entire group and tell them the temporary password. Or, you may give out new volunteer packets where you have instructions on how to login and you give the temporary password in the instructions. When volunteers login with the temporary password the first time, they will be prompted to select a permanent password.

You can set a temporary password for volunteers (or Coordinators) on the Vic tab of their record.

You can also set temporary passwords for multiple volunteers at once by tagging the volunteers. You can find information on how to assign a temporary password to tagged volunteers in help topic 2137.

## Did you know?

Volgistics has resources you can use if you conduct trainings or orientations for new volunteers. There are video tutorials you can download here. There are also help topics you can direct volunteers to online, or you can print the help topic out for a handout. The help topic for the desk top view is help topic 1148. The help topic for the mobile view is help topic 1215.

If you are bringing in new volunteer records to your account using the free Import Utility program, you can also bring in a temporary password for the volunteers. This works well if you are just getting started with Volgistics and previously used another program that the volunteers accessed with a password. You can learn more about the free Import Utility program here.

---

## Message Ground Rules Setup Page

Help topic 1200

Added or revised 06-14-2016

---

You use the Message Ground Rules setup page to configure default email properties for email you send through Volgistics, as well as enable or disable text messaging for your account. To get to the Message Ground Rules setup page, choose Setup from the menu, click on Messages, and then choose Ground Rules.

### Automatic email

#### Volunteer reply-to address

Enter the email address you want to appear as the "reply-to" address on email messages you choose to have sent automatically. This will be the email address that email will go to if a volunteer recipient clicks the "Reply" button in his or her email program to reply to an automatic email message he or she has received.

If you have a general email address for your volunteer program (such as "volunteer@youragency.org") this is typically a good email address to use for this purpose, however you can enter any valid email address you want replies from volunteers to go to--with the exceptions noted below. You must enter a valid email address in this field. This field cannot be left blank.

**Please note** that some Internet Service Providers (ISP's) and Email Service Providers (ESP's) have started to block email messages when certain email domains are used as the reply-to address. At this point, only "@yahoo.com" and "@aol.com" email addresses are affected so these should not be used as your reply-to address if possible. Other general domains (such as "@gmail.com," "@hotmail.com," etc.) may follow so if possible we recommend using an email address with a domain specific to your organization as your reply-to address.

If you must use an AOL or Yahoo email address, you will need to change your *From address* setting to use **VolunteerMail@volgistics.com**. There is more information on this in the *From address* section below.

Automatic email to volunteers can include:

- Monthly schedule reminders
- Daily schedule reminders
- Checklist item expiration reminders
- Requests for forgotten VicNet passwords

You choose which kinds of automatic email volunteers receive on other Setup pages.

#### Coordinator reply-to address

Enter the email address you want to appear as the "reply-to" address on email messages you choose to have sent to Coordinators automatically. This will be the email address that email will go to if a Coordinator recipient clicks the "Reply" button in his or her email program to reply to an automatic email message he or she has received.

You can enter any valid email address you want replies from Coordinators to go to--with the exceptions noted in the *Please note* box above. This can be same email address you use for your *Volunteer reply-to address*, or it can be a different email address if you want email from Coordinators to be sent to a different email address than email from volunteers.

You must enter a valid email address in this field. This field cannot be left blank.

Automatic email to Coordinators can include:

- Monthly schedule reminders
- Daily schedule reminders
- Requests for forgotten VicNet passwords

You choose which kinds of automatic email Coordinators receive on other Setup pages.

#### Email signature block

Optionally enter the signature block you want to appear at the bottom of email messages sent automatically by Volgistics. A signature block typically includes the sender's name, title, and contact information.

#### **HTML email default style**

Choose the font, font size, and font color you would like the text in your email messages to normally use.

#### Font

Choose the default font for your HTML formatted messages. You can choose Arial, Comic sans ms, Courier new, Georgia, Lucida sans, Tahoma, Times new roman, Trebuchet ms, and Verdana. The Default is the Arial font.

#### Font size

Choose the default font size for you HTML formatted messages. You can choose a font size of 8, 9, 10, 11, 12, 13, 16, 18, 20, 22, 24, 26, 28, 36, 48, or 72. The default is font size of 12.

#### Font color

You can choose a default font size for your HTML formatted messages. You an choose one of 40 preset colors. The default is Black.

#### Sample

The sample section will show you the results of any changes you make to the Font, Font size, and Font color settings above. For example if you choose the Georgia font, a font size of 18, and a font color of red then the Words "Sample message text" will reflect those choices under the Sample section.

#### **Closing message**

Many organizations include a standard message at the bottom of all of the email messages they send. Such a message might include a statement of the organization's mission; or a confidentiality or privacy policy.

If you would like email you send through Volgistics to include such a message, enter (or paste) it here. This message will automatically appear near the bottom of all email you send through Volgistics, including messages sent to volunteers and Coordinators by System Operators as well as automatic email sent by the system.

#### **Email Authentication**

In order to help insure email delivery, Volgistics uses the Sender ID method of email authentication. With Sender ID, the mail your organization sends to volunteers through Volgistics can be verified more accurately by recipient mail systems, often bypassing spam filters and giving your email a better chance of reaching all volunteer recipients.

You can choose to let Volgistics handle Sender ID for you, in which case there's nothing more you need to do for email authentication to happen; or – if your organization has its own Internet domain – you can add volgistics.com to your domain's authorized email senders to provide Sender ID authentication yourself.

With either option, you still send email through Volgistics the exact same way, and email is still delivered by Volgistics mail servers.

Your selection here controls Sender ID email authentication for all of the email you send through Volgistics, including automatic email such as checklist and schedule reminders.

Help topic 1116 - Sender ID explains more about these options.

### **From address**

An email domain is the portion of the email address after the at (@) sign. For example, if your organization's name is *Volunteer Agency* your email address may end with a domain like *@VolunteerAgency.org*.

In some cases, using a *from* email address with your organization's domain when you send email messages can cause the messages to fail. This is because the messages are blocked by your organization's network to prevent spamming. Also, as noted in the warning box above, using a reply-to address with a domain of AOL.com or Yahoo.com can cause messages to fail due to policies put in place by internet and email service providers.

To help get messages through in these cases, the Volgistics system can be configured to use a *from* email address that is the same as the reply-to address for the type of message being sent, or it can be configured to use a *from* address of **VolunteerMail@volgistics.com**.

If your messages are not being delivered, we recommend using the *Use VolunteerMail@volgistics.com* setting. This will help the messages get through any blocks your organization may have, and it will bypass the AOL and Yahoo restrictions put in place by internet and email service providers.

You should also make sure volunteers and Coordinators have their email accounts setup so that messages from VolunteerMail@volgistics.com are on the safe sender list. Some refer to this as "white-listing." You can find more information on how volunteers and Coordinators can white-list the Volgistics email addresses in help topic 2046.

### **Opt-out message**

All email sent through Volgistics includes an opt-out message for proper email etiquette. Use this section to choose the opt-out message terminology you prefer. There is not a way to omit the opt-out message, for the reasons provided in help Topic 2101 – "Why It Is Important to Provide Message Opt Out Features."

### **Text Messaging**

This section of the page is used to enable or disable text messaging for your account. If you are not a Volgistics Administrator for your account, or if your account does not include the VicNet module, the options in this section will be disabled.

### **Text Message Opt-in Email**

If your account does not have text messaging enabled, you will not see this section. This section is designed to assist organizations in letting volunteers and Coordinators know that text messaging is available. You can edit the content of the email message that is sent, as well as send the message to all Coordinator records in your account. To send the message to all of your Coordinators, click the **Send to all coordinators** button at the bottom of the page.

To send the message to volunteers, you will tag the records you want to send the message to. Then select Tags from the menu and press the **Go** button beside the option to send the opt-in message. You can learn more about this in the Send the text messaging opt-in email to the tagged records section of help topic 2137.

## Starting VicTouch

Help topic 1203

Added or revised 05-13-2016

---

These are the steps for starting VicTouch on a short-term basis. The VicTouch module will be fully functional with this start-up method, but it will not fill the entire screen. This allows volunteers access to the browser controls—including the menu and tool bars—*which compromises the workstation's security*.

**For long-term installations, we recommend launching the VicTouch module in kiosk mode.** This will cause the module to fill the entire monitor screen and give the most secure access. Help topic 2289 "VicTouch desktop shortcuts" shows how to do this.

To launch VicTouch at a temporary location:

1. Start your web browser and navigate to <https://www.volgistics.com/touch>

**To start VicTouch at this computer, enter your Volgistics account number, login name, and password; and then click the Continue button.**

Account number:

Email address:

Password:

2. Enter your Volgistics login credentials and click **Continue**. Note that launching VicTouch does not count as a regular Volgistics session. So you'll still be able to use Volgistics on a separate computer without ending the VicTouch session.

3. Verify your time zone.
4. Be sure your browser is maximized. VicTouch determines how much space it can use when it is first launched, and retains that number throughout the session. So if you launch VicTouch and then increase the size of the browser, VicTouch won't be able to use the full screen.
5. You'll see some information about creating a desktop shortcut for VicTouch for long-term use. Read this and then click **Continue**.

## **Customizing VIC Mobile Graphics & Styles**

Help topic 1214

Added or revised 08-04-2015

---

Organizations may customize the graphic images and styles volunteers and Coordinators see when they use VicNet on a mobile device such as a smart phone or tablet. You may wish to do this if you want a truly "branded" and integrated look. Or you might want to do this to tailor the user's experience on their mobile device.

**Please note:** To make the user's VicNet experience mobile friendly, certain options available with the *full-site* setup for VicNet are not available. For example, the options to layout the Home tab in three vertical columns and to have the schedule display in a calendar format are not available. If your full-site setup uses these display options, the mobile view of VicNet will automatically convert them into a mobile friendly format. We recommend previewing the user's VicNet experience as shown in help topic 2159 to make sure VicNet displays how you want it to for mobile users.

To get to the setup page where you can customize VicNet for mobile devices:

1. Select Setup from the menu.
2. Expand the VicNet link.
3. Select *Mobile Graphics & Styles*.

The settings for the mobile view of VicNet are different than the settings for the *full-site* view of VicNet. The full-site view is what users see if they login to VicNet on a desktop or laptop computer. If you want to change the full-site view's graphics and styles:

- See help topic 1187 to update the logo.
- See help topic 1052 to update the fonts and background colors.
- See help topic 1075 to update the button and tab graphic images.

You can click on a link in the *Contents* box to go directly to a section of the help topic.

#### **Contents**

Volunteers and coordinators can...

Organization Logo (specifically for mobile VicNet)

Colors

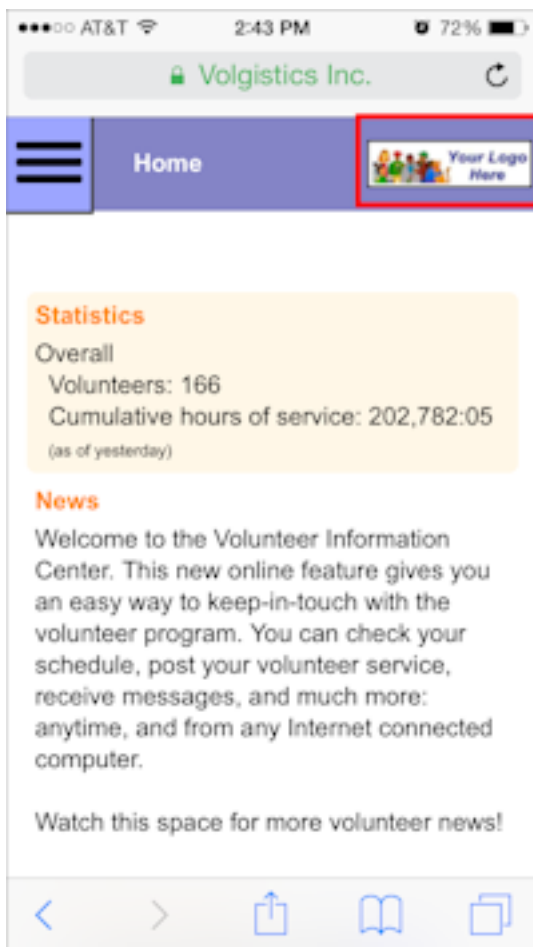

Expanding Menu Items  
Buttons  
Instructions

### Volunteers and coordinators can...

By default this box is checked so that your volunteers and Coordinators will see the option to sign-in to the mobile friendly view of VicNet at the volunteer portal when they are using a device such as a mobile phone or tablet. If you do not want your volunteers and Coordinators to be able to access the mobile view, uncheck the box in front of *Access the mobile version of VicNet* and then click the **Save** button.

### Organization Logo (specifically for mobile VicNet)

You will need to upload a separate image file if you want your organization's logo to appear on the mobile view of VicNet. When a file has been uploaded, it will appear in the top right corner of the VicNet page.

You may want to reduce the dimensions and optimize your organization's logo file that was used for the *full-site* version. This is because larger image files increase loading times, plus your volunteers and Coordinators may pay for their data plans with their wireless carrier. Most graphic or photo editing software programs or services have options to change a file's dimensions and to optimize the file when it is saved. Optimizing the file reduces the amount of resources required to store the file, as well as the bandwidth required to transmit the file.

There are not any height or width restrictions for the images, but the file size itself cannot exceed 48 KB. Acceptable file formats for the logo are GIF, JPG, or PNG.

To upload an image file:

1. Click the **Choose File** or **Browse** button.
2. Select the image file you want to upload and click the **Open** button.
3. Click the **Upload** button.

## Colors

This section allows you to customize the colors used for the VicNet display when it is viewed from a mobile device. The default values use the colors from the Volgistics system. You can optionally choose a different color for the different elements of the VicNet mobile display. If your organization has a web master who maintains your website, you may be able to contact him or her to find the values to enter to customize the display with your organization's color schemes.

Enter font colors in RGB color notation (see "*A note about RGB color notation*" below for a description of RGB color notation). You can also click in the field to bring up a color picker that you can use to select the color.

### A note about RGB color notation

There are several fields on this page for setting background and font colors. Enter color information in these fields using standard hexadecimal RGB color notation. This is the color notation used in HTML (Hypertext markup language) to specify color attributes for web page elements. Hexadecimal RGB color notation includes the '#' character followed by a six character RGB color value in hexadecimal notation (hex).

These are some examples of this notation:

#FFFFFF (white)

#000000 (black)

#FF0000 (red)

#00FF00 (green)

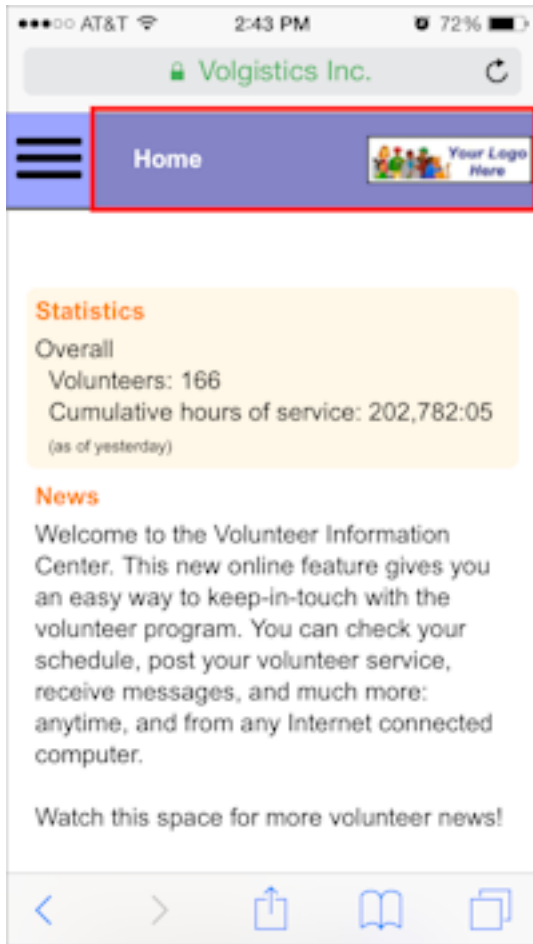

If you click on the field itself, a color picker will appear that makes it easy to select the color you need. You can also learn more about hexadecimal RGB colors for websites at [w3schools.com](http://w3schools.com)

Your color choices will be shown in the mock-up section to the right as you make the changes. You can also preview the mobile display for volunteers or Coordinators. Help topic 2159 shows how to do this. *Remember to click the **Save** button when you are done selecting your color choices!*

Here is more information about what each color selector field will change for the VicNet mobile display:

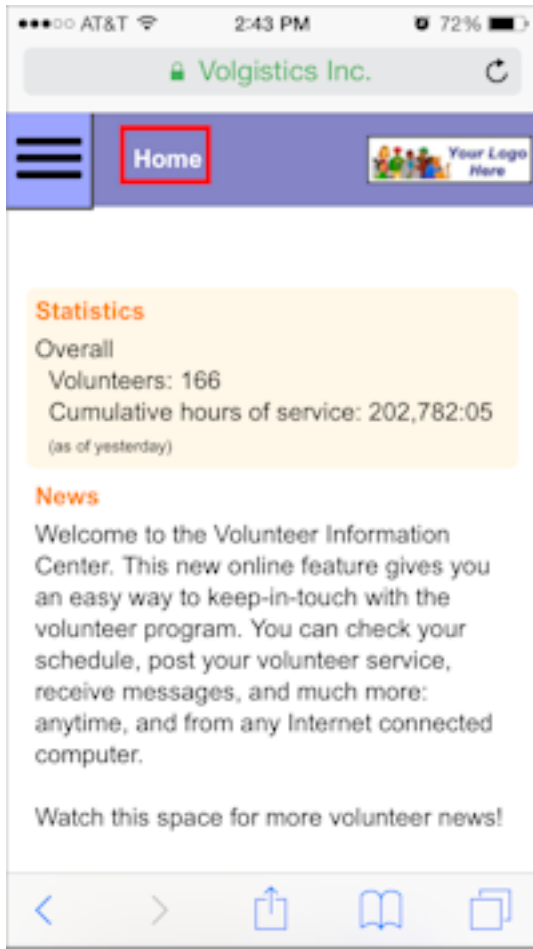

### Header section: Background color

This controls the color used in the header at the top of the screen.

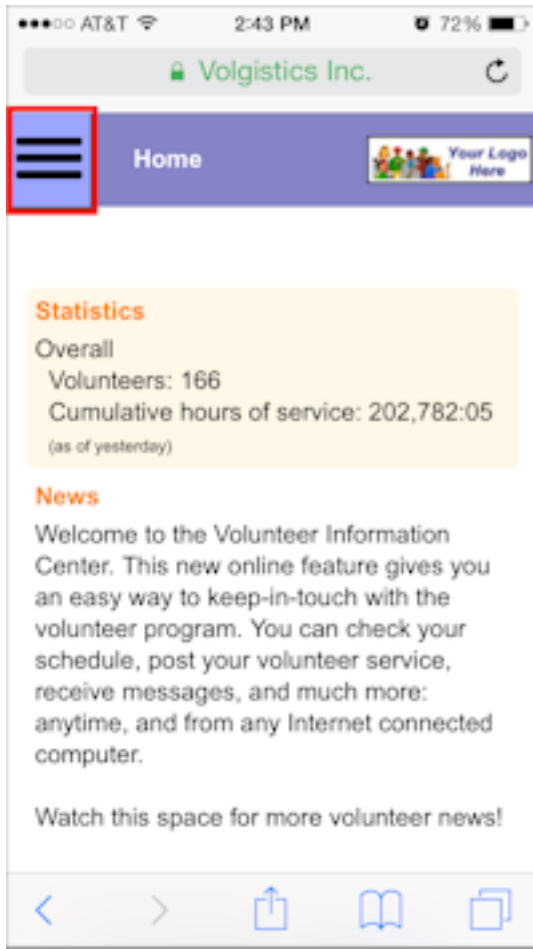

**Header section: Font color**

This controls the color of the text that appears in the header at the top of the screen.

**Expanding menu: Background color**

This controls the color of the menu users tap to see their choices to navigate. When the menu is collapsed, this is the small box in the top left corner of the header section.

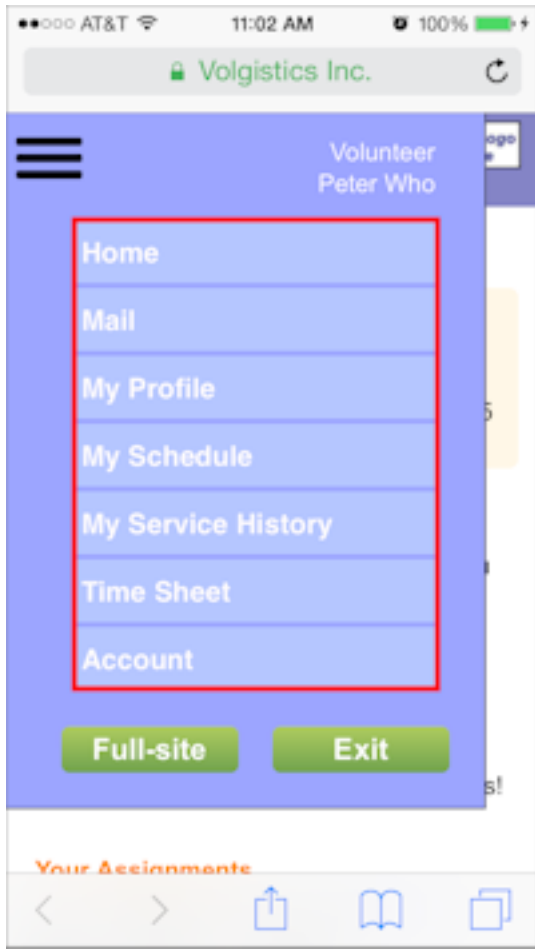

When the user taps the menu, it expands to fill more of the screen so users can tap the area they want to navigate to.

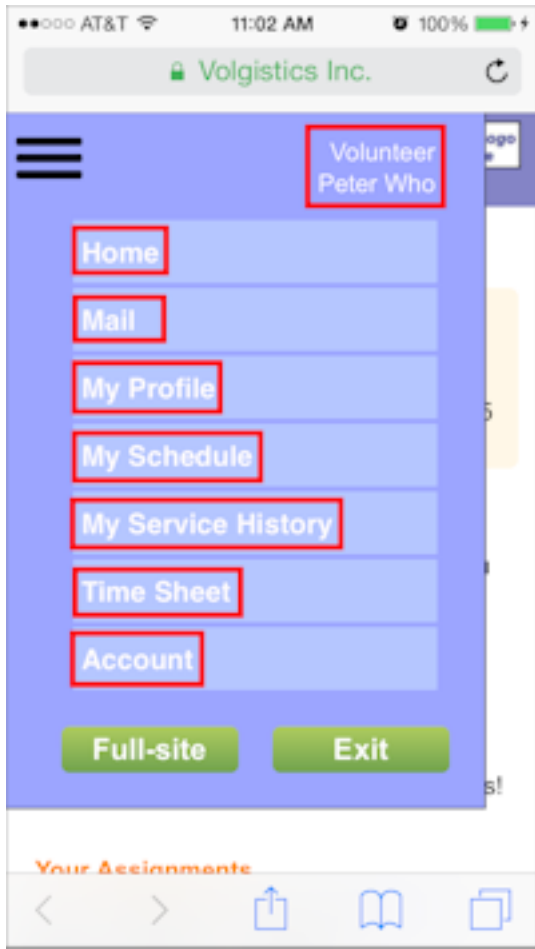

**Expanding menu:** Background color of buttons

This controls the color of the buttons on the expanding menu.

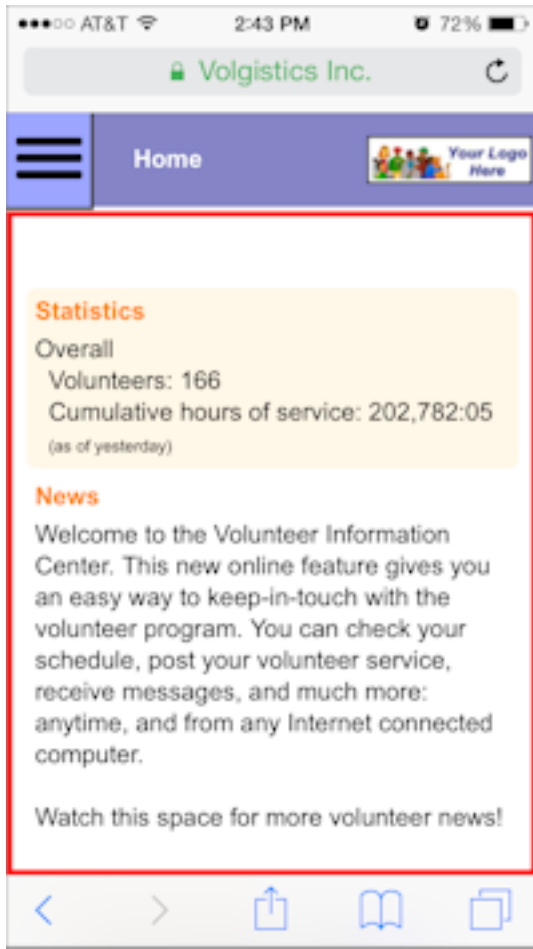

**Expanding menu:** Button font color

This controls the color of the text labels on the buttons that users tap to navigate to a certain area. It also controls the color of the text used for the user identification label.

**Main section:** Background color

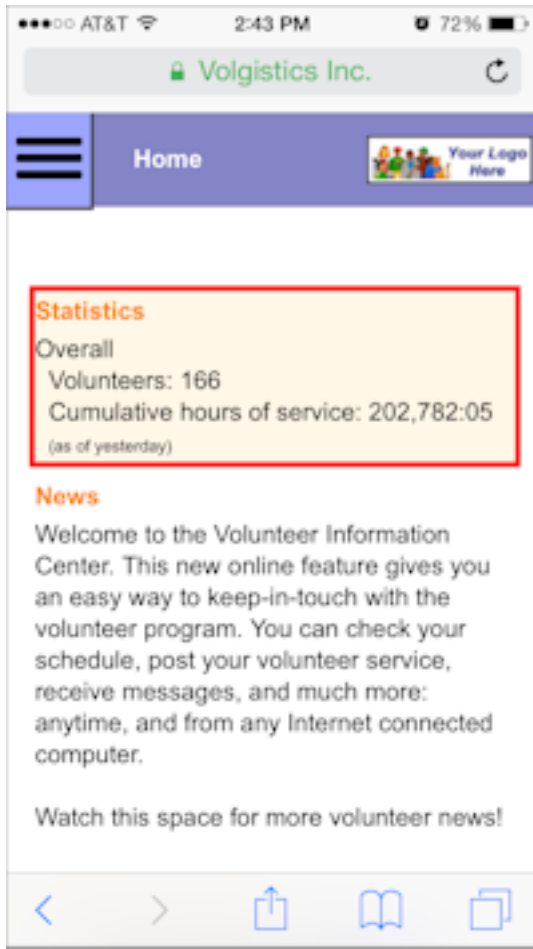

This controls the color of the section that appears under the top header.

**Main section:** Background color of boxes

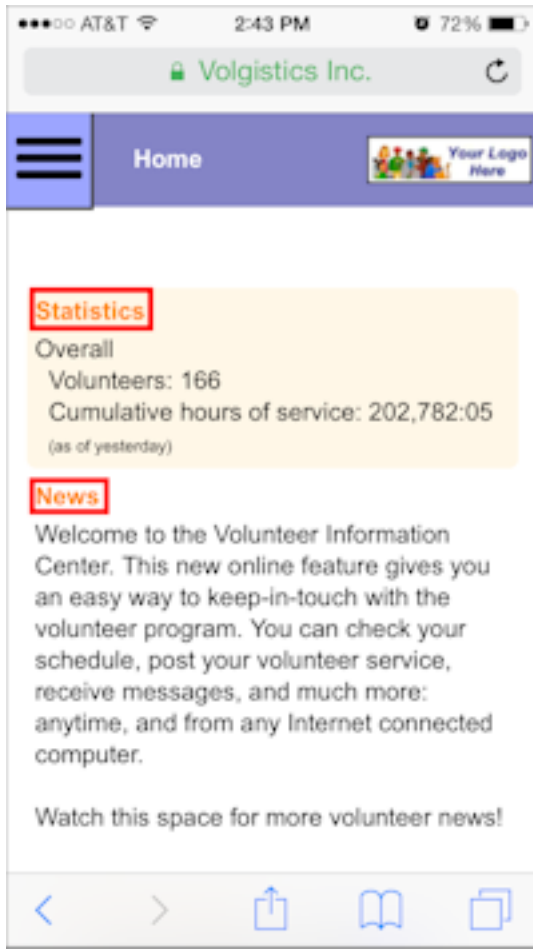

This controls the color used in the background on any boxes that appear in the main section.

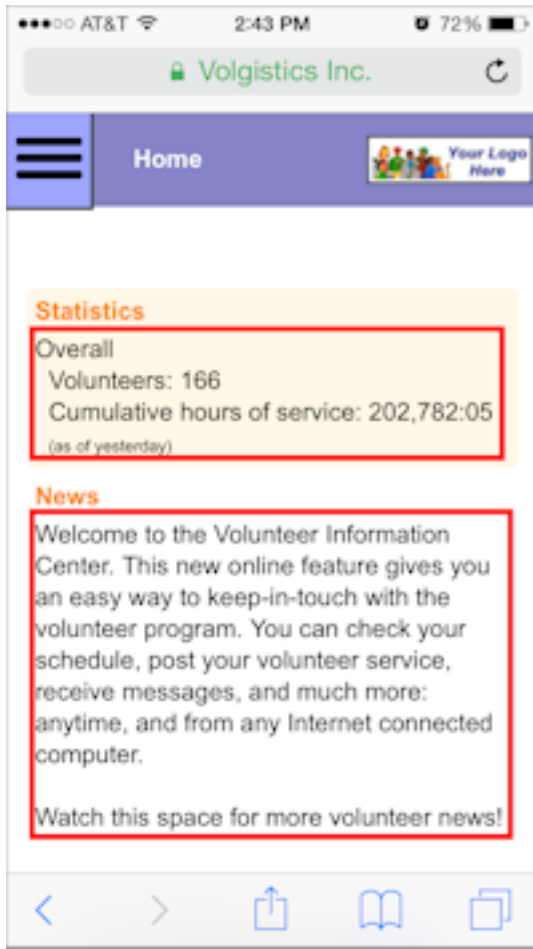

**Main section:** Color of heading fonts

This controls the color of the text used for each section's heading.

**Main section:** Color of body fonts

This controls the color of the text used for the body paragraphs in the sections.

## Expanding Menu Items

The names for the items in the expanding menu are originally taken from the *Mobile text for tab* field on each tab's setup page. The seven default tabs for volunteers are:

- Home
- Mail
- My Profile
- My Schedule
- My Service History
- Time Sheet
- Account

Coordinators may have access to the Home, Mail, My Schedule, and Account tabs, as well as a Volunteers tab.

**Please note:** The list will contain text for each item even though you may have a tab setup so that the users do not have access to the tab in the full-site view of VicNet. If this is the case, the item will not appear in the Expandable Menu in the user's mobile view for VicNet.

If you already have a different name recorded in the *Mobile text for tab* field on the tab's setup page, this will appear instead of the default text.

You can change an item in the expandable menu by placing your cursor in the field, deleting the current text, and then entering in the new text. Be sure to click the **Save** button to keep your changes.

**Please Note:** The text entered in the *Expanding Menu Item* fields will not change the name of the tabs that appear when volunteers and Coordinators view the *full-site* view of VicNet. Entering a label here will change the text displayed in the Expandable Menu when users view the mobile version of VicNet, as well as the name used for screen-readers and alternate (alt) text in the full-site view.

For the *full-site* view of VicNet, the tab names are actually part of the image files used for each tab. If you'd like to change the tab name for the full-site view, you will need to upload new image files for the tab that have the new tab name you'd like. You can find more information on this in help topic 1075.

*To help prevent confusion for your users, we recommend that the expanding menu items in the VicNet mobile view match the names on the tab graphics used for the full-site view of VicNet.*

## **Buttons**

Organizations may customize any of the graphic images for the buttons that appear in the mobile view of VicNet. Volgistics does not include any graphic or image editing software, but there are a variety of sources you can use to create graphic images. These include programs that come with your operating system, software you purchase or download from software vendors, and online image editing or button generator programs.

Some general things to keep in mind if you want to customize the graphic images are:

### File Formats

Custom images must be in one of these graphic file formats: GIF, JPG, or PNG. You will get the best results with files saved in PNG format.

### Maximum Dimensions

Each graphic image has a maximum height and width in pixels. Your files can be a maximum of 350 pixels wide and 100 pixels high. You may need to preview the mobile view of VicNet to make sure the button images look like you want them to. If they do not, you will need to re-size the image using whatever outside program you have for image files. After you do this, upload the re-sized image to Volgistics.

### Maximum Size

To ensure fast load times for the VicNet mobile pages, each graphic image has a maximum image file size in bytes. The button images must be 6,144 bytes (6 KB) or smaller. When you save your files, most image editing programs have an option to optimize the file to reduce the file size.

### Background Color

Your custom images should either have a transparent background, or use the same background color as your forms. You can learn how to customize the color for the VicNet mobile view in the Colors section above.

### Graphic Image Rights

You can copy and modify the default graphic images that are part of Volgistics, as long as you use these images in Volgistics only. Volgistics does not grant rights to use its images for any other purpose, or for use outside of Volgistics.

If you're using graphic images you've obtained from other sources, you must be certain that you have the legal right to use those images. Unless an image is offered for use without restriction, most of the graphic images that appear on the web are protected by copyrights. Be certain you have the proper rights before installing custom graphics you have obtained from others.

## Installing New Button Graphics

Once you have your new image file for the button you want, you can install it by:

1. Click on the button that you would like to replace.
2. Be sure the radio button is on *Install a new graphic*, and click the **Choose File** or **Browse** button.
3. Find the file you want to upload and select it. Then click the **Open** button.
4. Click the **Install** button.

## **Instructions**

The instruction fields that appear on the tabs in the *full-site* view of VicNet will be used for the instruction fields on the mobile view also. You may want to modify the instructions that are used so that they apply to both instances.

The Expanding Menu Items section above lists the possible tabs for volunteers and Coordinators. To review the instruction fields and edit them if necessary, you will need to go to the setup page for the tab that you want to review and/or modify. Here is an example of how to do this for the *Home tab*:

1. Select Setup from the menu.
2. Expand the VicNet link.
3. Select the *Home tab* (or whichever tab you want to review and/or modify).
4. Review the content in the instruction fields and make sure it makes sense for users in both the full-site and mobile views. If it does not, make any changes necessary. It may help to preview the mobile and regular views volunteers and Coordinators see. Help topic 2159 shows how to do this.
5. Click the **Save** button to keep the new content in the instructions fields if you made changes.

---

## **How Volunteers & Coordinators Opt-in & Opt-out of Text Messaging**

Help topic 1291

Added or revised 01-15-2015

---

*This help topic is designed to show volunteers and Coordinators how to opt-in and opt-out of text messaging so they can receive text messages from the organization where they serve.*

You can click on a section of the help topic in the *Content* box below to go directly to that section.

### **Contents**

- Opt-in Process
- Opt-out Process & Changing Message Preferences
- Resume Opt-in
- If Your Phone Number Changes

## Opt-in Process

Follow the steps below to start receiving text messaging from the organization you serve with.

### 1. Sign-in to VicNet

You use your VicNet account at the organization you volunteer at to opt-in to text messaging and control your text preferences. The VicNet account is necessary so the opt-in process complies with Federal communication regulations that specify that you can select what types of text messages you want to receive.

Most organizations place a link to VicNet somewhere on their web site. The login screen for the portal will look something like this:

Enter the email address the organization has on file for you along with your VicNet password. If you forgot your password, you can find assistance here.

If you are unable to sign-in, please contact the volunteer office at the organization where you serve.

### 2. Go to the Account tab

Once you have signed-in, select the Account tab.

Some organizations may customize VicNet and/or the tabs so your account may look different and the tab may not be called *Account*. However, the tab you need will always be on the far right side. Some organizations may also place a **Text message opt-in** button on the Home tab. If you click this button you will be taken directly to the Account tab.

### 3. Enter your mobile device number and select your country

Type your mobile (cell) phone number into the *Enter a mobile phone number* field. There is not a need to enter a "1" or a country code in front of the number.

## Volunteer information for Jennifer Tutone

[Home](#)[Mail](#)[My Profile](#)[My Schedule](#)[My Service History](#)[Time Sheet](#)[Account](#)

### Message Preferences (Email / Text Messaging)

Use this section to opt-in and opt-out of text messaging (also known as "SMS"). You can change preferences for how you would like to receive messages, whether as emails, text messages, or none.

#### 1. Please Enter Your Mobile Device Number:

Volgistics Volunteer Alerts sends reminders, alerts, and custom messages from System Operators and Coordinators using text messaging (SMS). Please tell us where we can send messages:

Enter a mobile phone number

*This is a required field.*

Your country

*If outside U.S., this will help us determine which Country Code & format to use.*

**Supported Carriers:** AT&T, Sprint, Nextel, Boost, Verizon Wireless, U.S. Cellular®, T-Mobile®, Cellular One Dobson, Cincinnati Bell, Alltel, Virgin Mobile USA, Cellular South, Unicel, Centennial and Ntelos.

Use the *Your country* dropdown list to select the country your phone plan (or phone number) originates from.

The *Supported Carriers* list may not include the specific provider you use if you are outside of the United States. However, you should still be able to receive text messages.

#### 4. Select your preferences for how you would like to receive messages

Use the radio buttons by a message type to select how you would like to receive that type of message.

2. How do you prefer to receive these types of messages?

Automated Messages		
Text		
Email	Message	None
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

Schedule reminders  
Schedule alerts! Handy reminders to help you remember when you're scheduled to serve. Please remember to let your team leader know if you cannot make it!

Checklist reminders  
Reminder messages to help you remember if you're due for things such as training, TB tests, flu shots, etc.

Custom Messages		
Email with Text Notification		
Email	Message	None
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

Continuing education  
Be all that you can be! Updates on education programs including new course offerings, and times and locations for classes.

Electronic newsletters  
Stay informed! News about what's happening in the Volunteer Services Department.

Important information  
Only used to communicate important news that affects you. Please DO NOT opt-out of this type of message. We will only use it when we absolutely must get in touch with you.

Recruitment appeals  
We need you! Stay informed of new opportunities to serve.

Team leader update  
Information for Coordinators who lead volunteer teams. Volunteers will not need to opt-in to this message type.

Volunteer group update  
Information for volunteer group leaders. Individual volunteers will not need to opt-in to this type of message.

Messages can be sent just by email, by email with text notification, or you can select not to receive a certain type of message at all by selecting *None*. If *None* is selected for every message type, you will be opted-out of messaging.

When *Email with Text Notification* is selected, if the message is small enough that the entire message can be sent by text, you will only receive the text. However, if the message is too large for a text, you will receive the actual message by email (or on the Mail tab of VicNet) and a text to alert you that you received a message.

**Please Note:** Because text message delivery is often faster than email message delivery, you may receive the text notice that you have an email message before the actual email message is delivered. If the email message does not appear when you check the first time, please wait and try again later.

### 5. Select the time range for when you'd like your automated messages delivered

Use the *Time Zone* dropdown to select the location you're in and then select the start and end times for message delivery.

3. When would you like to receive *automated* messages, such as schedule reminders?

Between these hours:  and

Your time zone:

The system will attempt to deliver your automated messages (Schedule and Checklist reminders) as close to the beginning time as possible. However, conditions such as the number of messages being sent, the load at the wireless carrier, and the geographic region you're in may cause the messages to arrive later in the time period or not at all.

**Please Note:** These settings only control the automated messages sent by the system. Custom messages from the account holders are processed as soon as they are sent so they may be delivered outside of the time range selected.

#### 6. Agree to the Terms and Conditions set by Volgistics

Check the box to indicate you agree to the Terms and Conditions Volgistics requires to participate in text messaging.

 4.  I agree to the Volgistics Terms and Conditions.  
[Click to view the full Terms & Conditions and Privacy Policy.](#)

You can click the link to view the Terms and Conditions, or view them here.

**Please Note:** Depending on your mobile plan, you may be charged for text messages. By opting-in to text messaging you agree that any charges for text messaging or data use, caused by messages received as a participant are not the responsibility of Volgistics or the organization you serve with.

#### 7. Agree to any additional Terms and Conditions set by the organization you serve at

The organization you serve with may have additional Terms and Conditions they require for texting. In this case, you must check the box to indicate you agree to the additional Terms and Conditions set by your organization.

 5.  I agree to the Terms and Conditions below, established by Great Lakes Volunteers.  
By participating in the texting program you agree not to receive or send texts while operating a vehicle. You also agree not to receive or send texts while working in locations in the facility designated as "No Texting" zones.

#### 8. Click the Save button

Click the **Save** button at the bottom of the page to keep your settings.

#### 9. Confirm that you have read the alert box

A pop-up window will appear reminding you that the next step of responding **Yes** to the opt-in text message is required to complete the opt-in process. Click the **OK** button to indicate you read this message.

The page at <https://www.volgistics.com> says:

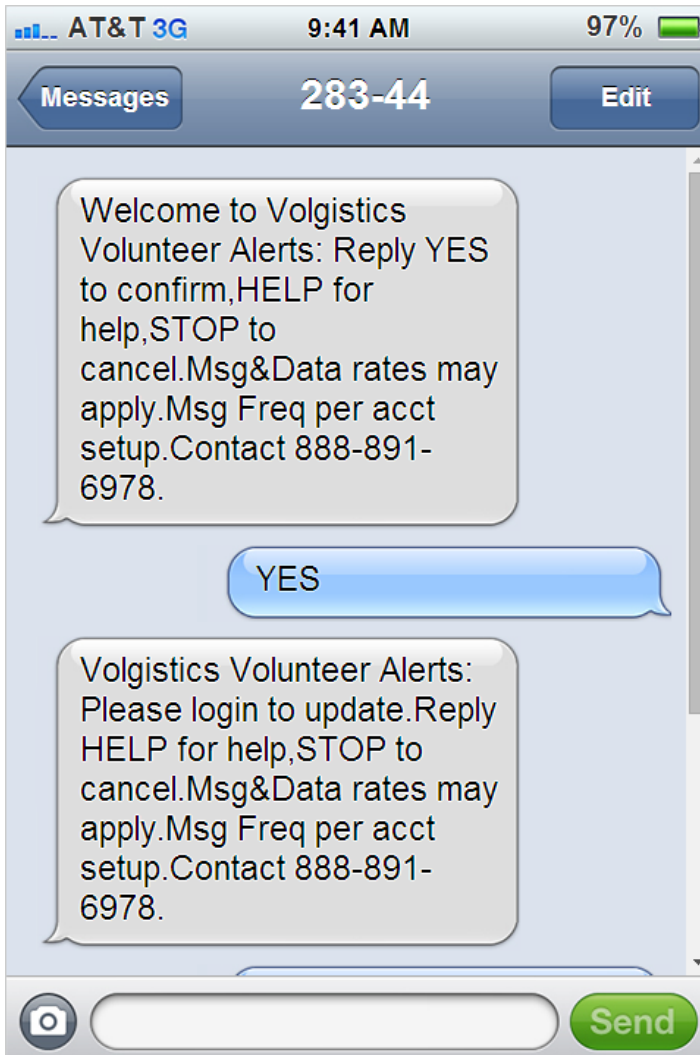

To complete the opt-in process,  
you must reply 'YES' in the message  
being sent to your phone.

OK

#### 10. Respond to the opt-in text message

You will receive a text message on your mobile phone shortly after you finish step 9. You must respond **YES** to this text message to finish the opt-in process.

## Opt-out Process & Changing Message Preferences

You are free to opt-out of the text messaging or change your message preferences at any time. Your organization does not have a way to change your messages preferences or the settings for the times you receive the automatic messages. You will need to follow the steps shown if you want to change these settings.

Follow these steps to opt-out of text messaging or change your message preferences through the VicNet module:

### **1. Sign-in to VicNet**

Most organizations place a link to VicNet somewhere on their web site. The login screen for the portal will look something like this:

Enter the email address the organization has on file for you along with your VicNet password. If you forgot your password, you can find assistance here.

If you are unable to sign-in, please contact the volunteer office at the organization where you serve.

### **2. Go to the Account tab**

Once you have signed-in, select the Account tab.

Some organizations may customize VicNet and/or the tabs so your account may look different and the tab may not be called *Account*. However, the tab you need will always be on the far right side.

### **3. Check the *Opt-out of text messages (SMS)?* checkbox or change your preferences**

If you wish to opt-out, check the box in front of *Opt-out of text messages (SMS)?*

**Volunteer information for Jennifer Tutone**

Home Mail My Profile My Schedule My Service History Time Sheet Account

**Message Preferences (Email / Text Messaging)**  
Use this section to change preferences or opt-out of text messaging (also known as "SMS").

**Opt-out of text messages (SMS)?** You are currently opted-in.

1. How do you prefer to receive these types of messages?

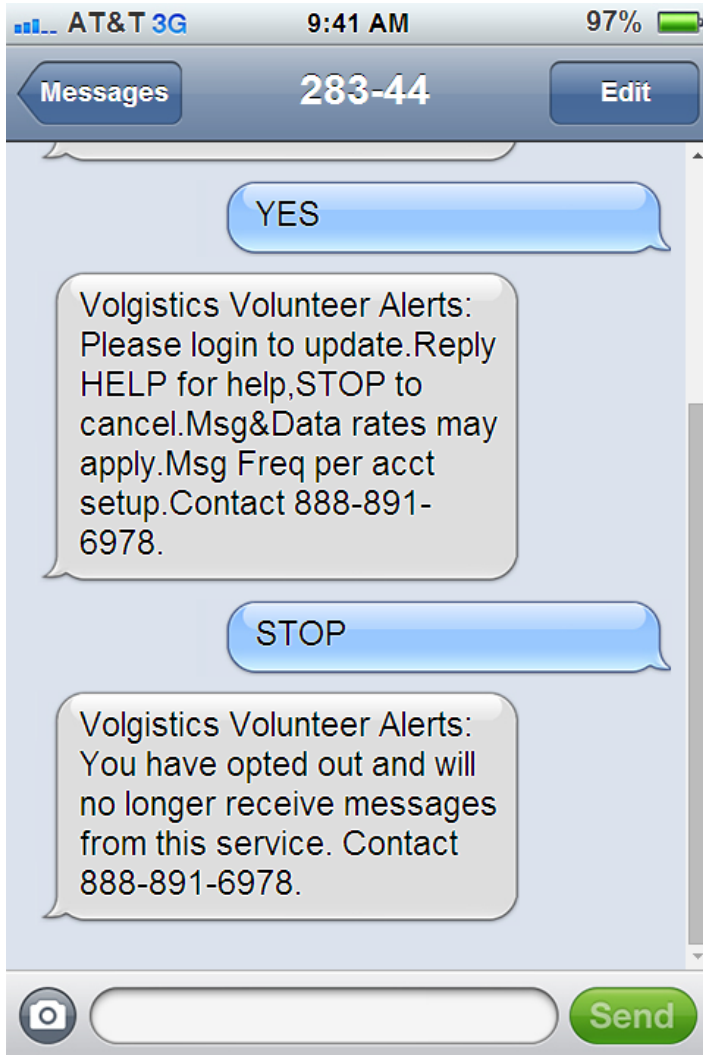

If you want to change your preferences for how you receive text messages instead of opting-out, adjust the settings for the types of message you prefer to receive and/or the times you wish to receive the automatic messages. Then proceed to step 4.

**4. Click the Save button**

Click the **Save** button at the bottom of the page to keep your settings.

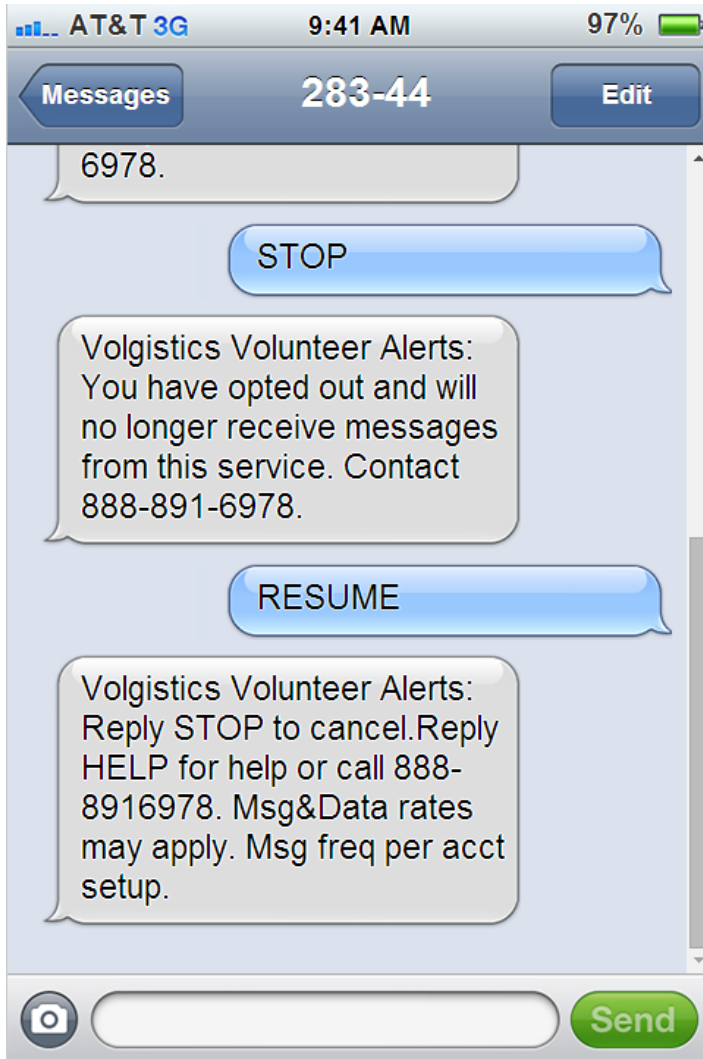

[Opt-out of text messaging without signing-in to VicNet](#)

You can also opt-out of texting without signing-in to VicNet. To do this, simply text **STOP** as a reply to a message you have received. In the United States, you can also text **STOP** to 28344.

### **Resume Opt-in**

If after opting-out you decide you want to opt back in, you can either follow the directions in the Opt-in Process section of this help topic, or simply text **RESUME** in response to a message you have received. In the United States, you can also text **RESUME** to 28344.

### **If Your Phone Number Changes**

Your organization does not have a way to update your phone number. If your mobile (cell) number changes, you will need to follow these steps if you need to change your number.

#### **1. Opt-out of text messaging at your old number**

Follow the steps shown in the Opt-out Process section of this help topic to opt-out of text messaging at your old number.

#### **2. Opt-in to text messaging at your new number**

Follow the steps shown in the Opt-in Process section of this help topic to opt-in to text messaging at your new number.

## How System Operators Opt-in & Opt-out of Text Messaging

Help topic 1293

Added or revised 07-08-2014

*This help topic is designed to show System Operators how to opt-in and opt-out of text messaging so they can receive text messages. If you need information on how System Operators can send text messages, please see help topic 1295*

You can click on a section of the help topic in the *Content* box below to go directly to that section.

### Contents

- Opt-in Process
- Opt-out Process & Changing Message Preferences
- Resume Opt-in
- If Your Phone Number Changes
- Enable Application Alerts
- Receive Self-Scheduling Alerts

### Opt-in Process

Follow the steps below to start receiving text message alerts as a System Operator.

1. If you are not logged-in to your account, Login at [www.volgistics.com](http://www.volgistics.com). The first page you see will be the Welcome page. If you are already logged in, just select Welcome from the menu.
2. Click the link for the text message opt-in, opt-out and preferences.

The screenshot shows the Volgistics user interface. On the left is a vertical navigation menu with items: Volunteers, Assignments, Coordinators, Schedule, Tickler, Post, Tags, Sets, Print, Mailbox, Who's Here, Setup, Welcome (highlighted in orange), Help, and Exit. The main content area is titled 'Welcome Alexandra Call' and contains several sections: 'Account Statistics' (Volunteer records: 175, Archived volunteer records: 3, Cumulative hours of service: 15,641), 'Birthdays' (This week, Sara Johnston, Jun 20), 'Mail' (Your mailbox has: Pending applications: 7), 'Volgistics Webinar Scheduled' (January 30, 2014 at 4pm Eastern Time), and 'Tip of the Week January 20, 2014' (New Travel Time Merit Hours Feature). At the bottom of the page, a red arrow points to the link 'Text message (SMS) operator opt-in, opt-out, preferences'.

System Operators with access to Setup on the menu can also get to this page by selecting *Setup* from the menu, expanding the *Messages* link, and then selecting *Text message (SMS) operator opt-in, opt-out, preferences*.

3. Enter your mobile phone number and select your country.

Type your mobile (cell) phone number into the *Enter a mobile phone number* field. There is not a need to enter a "1" or a country code in front of the number.

### 1. Please Enter Your Mobile Device Number:

Volgistics Volunteer Alerts sends reminders, alerts, and custom messages from System Operators over SMS. Please tell us where we can send messages:

Enter a mobile phone number

123-456-7890

*This is a required field.*

Your country

United States ▼

*If outside U.S., this will help us determine which Country Code & format to use.*

**Supported Carriers:** AT&T, Sprint, Nextel, Boost, Verizon Wireless, U.S. Cellular®, T-Mobile®, Cellular One Dobson, Cincinnati Bell, Alltel, Virgin Mobile USA, Cellular South, Unicel, Centennial and Ntelos.

Use the *Your country* dropdown list to select the country your phone plan (or phone number) originates from.

The *Supported Carriers* list may not include the specific provider you use if you are outside of the United States. However, you should still be able to receive text messages.

4. Select the time range you'd like your text messages delivered between.

Use the dropdown lists to select the times you'd like to receive alerts between. The time settings will use the time zone recorded on the System Operator page for your record.

### 2. When would you like to receive *automated* messages?

Between these hours: 8:00 am ▼ and 6:00 pm ▼

The system will deliver the alerts as they occur as long as they happen between the hours selected. If alerts occur outside of the time range, the system will attempt to deliver the alerts as close to the beginning time as possible. However, conditions such as the number of messages being sent, the load at the wireless carrier, and the geographic region you're in may cause the messages to arrive later in the time period or not at all.

### 5. Agree to the Terms and Conditions set by Volgistics

Check the box to indicate you agree to the Terms and Conditions Volgistics requires to participate in text messaging.

3.  I agree to the Volgistics Terms and Conditions.

[Click to view the full Terms & Conditions and Privacy Policy.](#)

You can click the link to view the Terms and Conditions, or view them here.

**Please Note:** Depending on your mobile plan, you may be charged for text messages. By opting-in to text messaging you agree that any charges for text messages received as a participant are not the responsibility of Volgistics or the organization you serve with.

#### **6. Agree to any additional Terms and Conditions set by the organization you serve at**

The organization you serve with may have additional Terms and Conditions they require for texting. In this case, you must check the box to indicate you agree to the additional Terms and Conditions set by your organization.

#### **4. I agree to the Great Lakes Volunteers Terms and Conditions.**

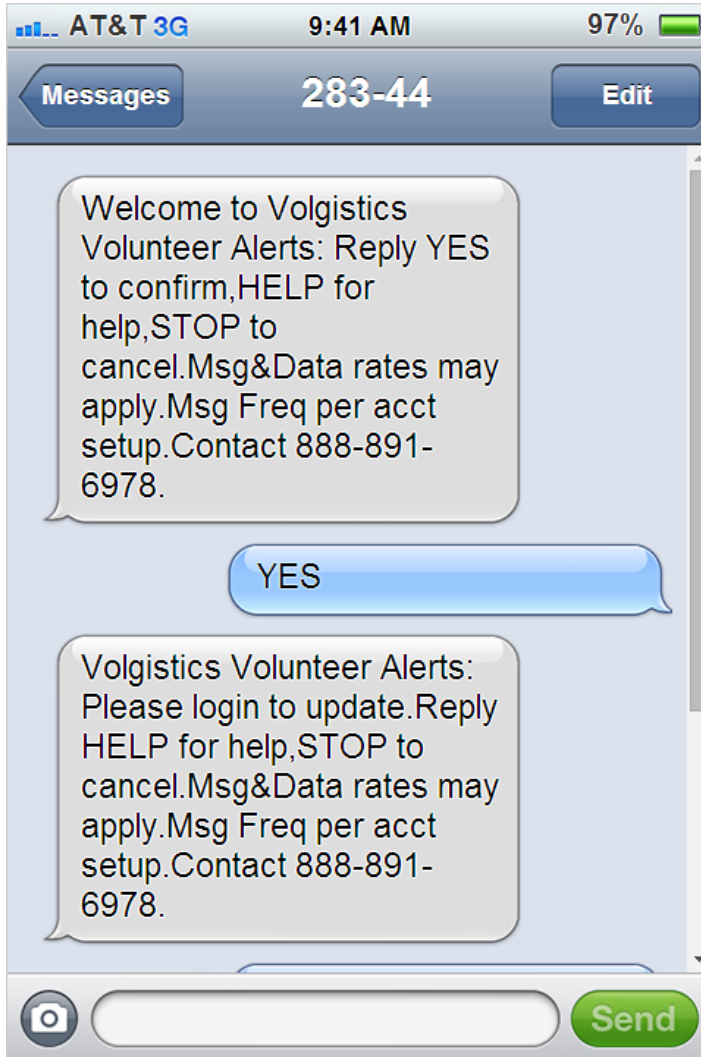

By participating in the texting program you agree not to receive or send texts while operating a vehicle. You also agree not to receive or send texts while working in locations in the facility designated as "No Texting" zones.

#### **7. Click the Submit button**

Click the **Submit** button at the bottom of the page to keep your settings.

#### **8. Respond to the opt-in text message**

You will receive a text message on your mobile phone shortly after you finish step 7. You must respond **YES** to this text message to finish the opt-in process.

### **Opt-out Process & Changing Message Preferences**

You are free to opt-out of the text messaging or change your message preferences at any time.

Follow these steps to opt-out of text messaging or change your message preferences through your account:

1. If you are not logged-in to your account, Login at [www.volgistics.com](http://www.volgistics.com). The first page you see will be the Welcome page. If you are already logged in, just select Welcome from the menu.
2. Click the link for the text message opt-in, opt-out and preferences.

 You can find tips from previous weeks in our [blog](#).

[Change your Volgistics password](#)  
[Text message \(SMS\) operator opt-in, opt-out, preferences](#)

System Operators with access to Setup on the menu can also get to this page by selecting *Setup* from the menu, expanding the *Messages* link, and then selecting *Text message (SMS) operator opt-in, opt-out, preferences*.

3. To opt-out, check the box at the top of the page. Otherwise, change your time preferences.

**You are already opted-in**, would you like to opt-out (no longer receive text messages)?

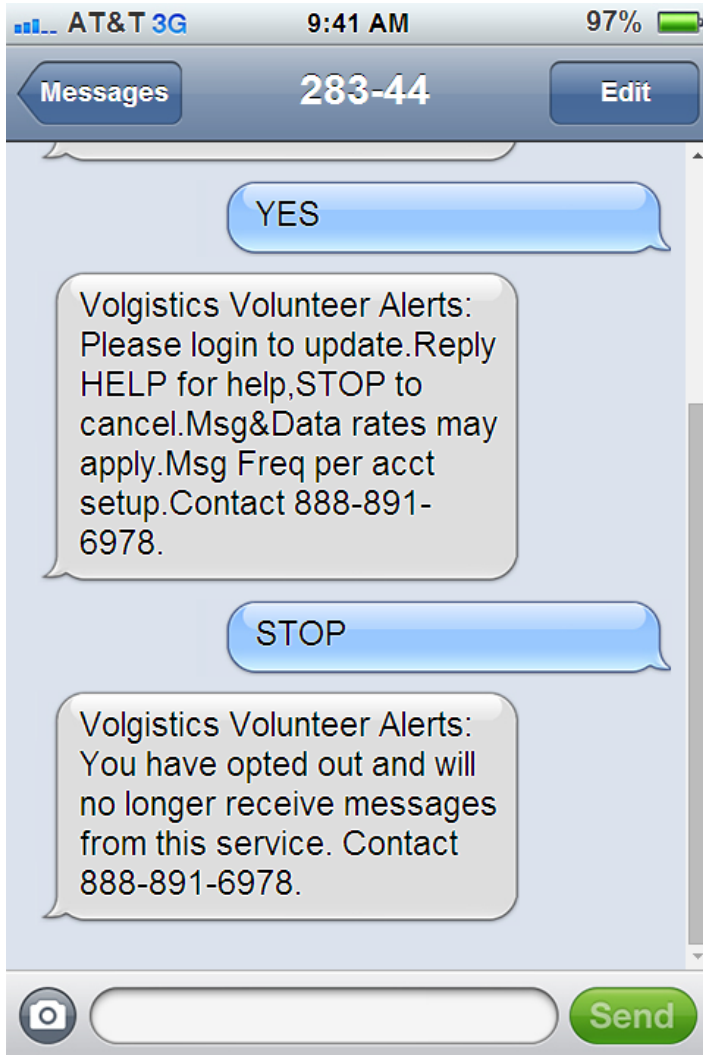

**1. Please Enter Your Mobile Device Number:**

Volgistics Volunteer Alerts sends reminders, alerts, and custom messages from

4. Click the **Submit** button at the bottom of the page.

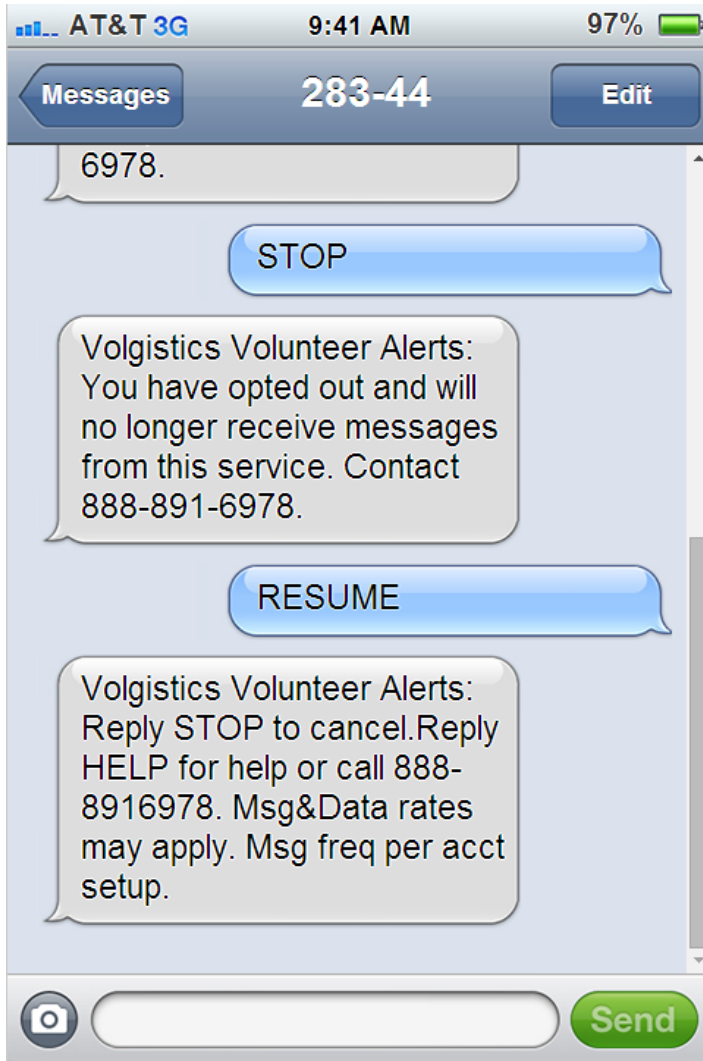

Opt-out of text messaging without signing-in to your account

You can also opt-out of texting without signing-in to your Volgistics account. To do this, simply text **STOP** as a reply to a message you have received. In the United States, you can also text **STOP** to 28344.

### **Resume Opt-in**

If after opting-out you decide you want to opt back in, you can either follow the directions in the Opt-in Process section of this help topic, or simply text **RESUME** in response to a message you have received. In the United States, you can also text **RESUME** to 28344.

### **If Your Phone Number Changes**

If your mobile (cell) number changes, you will need to follow these steps if you need to change your number.

1. Opt-out of text messaging at your old number

Follow the steps shown in the Opt-out Process section of this help topic to opt-out of text messaging at your old number.

2. Opt-in to text messaging at your new number

Follow the steps shown in the Opt-in Process section of this help topic to opt-in to text messaging at your new number.

### **Enable Application Alerts**

At this time, the only alerts that System Operators can receive by text are the alerts that an application has been submitted. If you'd like to enable these alerts:

1. Select Setup from the menu.
2. Expand the *Online forms* link.
3. Select *Volunteer application forms*.
4. Select the name of a form you'd like the alerts sent for.
5. Scroll down to the *Alerts* heading, make sure your name is selected from the dropdown list, and check the box by the option to send the alerts by text message. You can optionally receive the alerts on the In Box tab of the Volgistics mailbox or by email to the email address listed on your System Operator record.

**Alerts**  
Whenever an application form is submitted send an alert to:

Call, Alexandra

Send the alert...

To the Volgistics mailbox

By email

By text message

**Application auditing**  
By default, new applications do not go directly into your Volgistics database. Instead, they are initially staged

6. Click the **Save** button at the bottom or top of the page to keep your changes.

### **Receive Self-Scheduling Alerts**

While there is not a way to receive text messages as a System Operator other than the ones sent when an application form is submitted, you can receive text alerts when volunteers add or remove themselves from an assignment's schedule through VicNet or VicTouch. To do this, you will need to give yourself a Coordinator record as well as a System Operator record. Because your account's service fee is not based on the number of Coordinator records, you do not need to worry about this increasing your expenses.

Here is what you will need to do:

1. Setup a Coordinator record in the account for yourself. Help topic 1111 shows how to do this. Be sure to choose the assignments you want to receive the schedule alerts for on the *Assignments* tab of the record.
2. Set a temporary password for the record on the Vic tab as shown in the *Set temporary password* section of help topic 2234.
3. Sign-in to the VicNet portal for your organization with the temporary password and choose a permanent password for the record. You can find directions on how to do this here.
4. Opt-in to text messaging as shown in help topic 1291. Please note that if you do not want to receive other messages for the Coordinator record (such as Schedule Reminders or custom message types), you can opt-out of these when you are enabling text messaging for the Coordinator.

Custom Text Messages

Types of Automatic Text Messages

Content for Automatic Text Messages

Outgoing Messages Only

### Custom Text Messages

The texting feature provides a great new way to communicate with your volunteers. Younger volunteers may prefer to receive messages by text instead of email. You may also have times when you want to communicate with your volunteers while they are serving. For example, if you need to see a volunteer who is serving before he or she leaves. Help topic 1295 shows how to send a custom text message from your account.

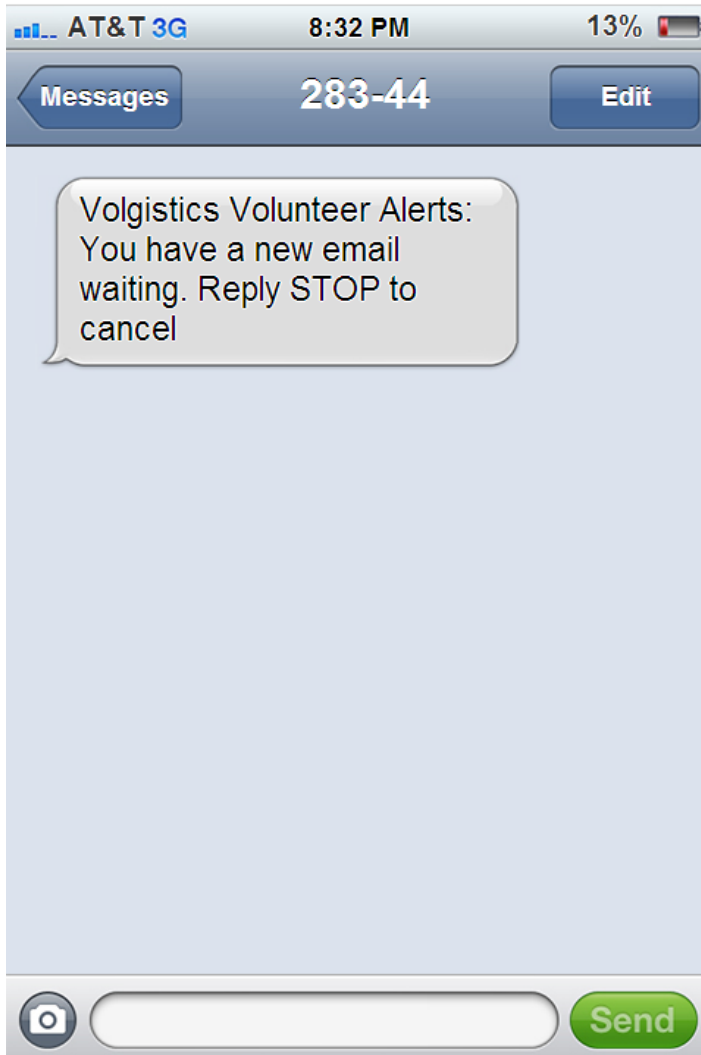

Here is an example of what a volunteer would receive if you sent a message asking her to stop by your office while she is working:

Cell phone service providers require us to include identification and certain instructions with each message sent. This extra text can take up to 50 of the 160 characters available for text messaging so only 110 characters are available for custom messages. Some carriers outside of the United States limit text messages to less than 160 characters. Recipients using these providers may not receive the entire message even if it is 110 characters or less.

If your text message field exceeds the maximum character length allowed, the message will be sent by email (when available) and the recipient will receive a text like the one below alerting them that an email has been sent. **Please note:** Because text messages are delivered much faster than email messages, the recipient may not see the email if they look for it right after receiving the text alert.

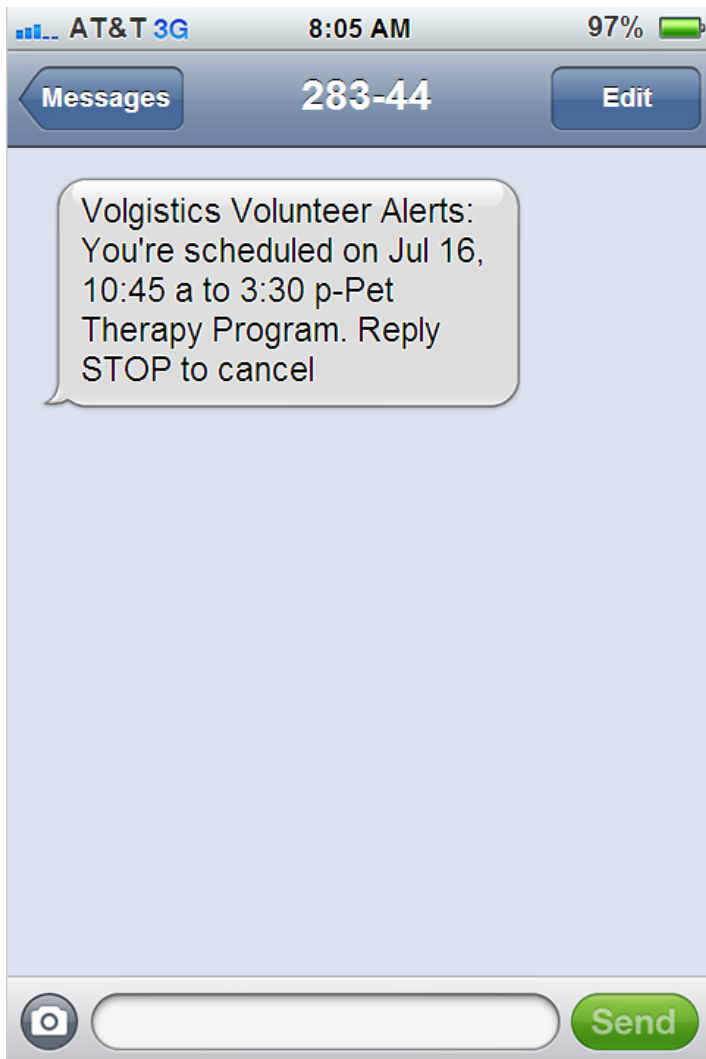

### **Types of Automatic Text Messages**

Your volunteers and Coordinators can also receive automatic messages. Depending on your account's settings, and who has opted-in, the following automatic text messages can be sent from your account:

- Daily and/or monthly schedule reminder messages for volunteers.
- Daily and/or monthly schedule reminder messages for Coordinators.
- On-demand schedule reminders for volunteers.
- Schedule reminder messages to tagged volunteers sent from the Tags menu.
- Monthly volunteer schedules initiated by the volunteer from the Schedule page in VicTouch.
- Reminders to volunteers that a periodic or annual Checklist item will need to be renewed soon.
- Password messages to volunteers and Coordinators. These can be sent if the user clicks the Forget your password? link, a System Operator sends the password message from the Vic tab of the record, or a System Operator sends the password message by tagging the volunteer records.
- Self-scheduling alerts to Coordinators that a volunteer added or removed him or herself from the schedule.
- Application received alerts for System Operators that an online application form was submitted.

### **Content for Automatic Text Messages**

Text messages have a limited number of characters available, and cell phone service providers require us to include identification and certain instructions with each message sent so there are only 110 characters available for the message content. Because of this, the content of the automatic messages is determined by the system. There is not a way to customize the content for automatic messages. In most cases, the important information from the automatic message can be communicated without any problem using the limited number of characters. For example, in the daily schedule reminder shown below, the volunteer receives the date, times, and assignment he or she is serving in. Here is how this would look for a volunteer scheduled from 10:45 am to 3:30 pm on July 16 in an assignment called *Pet Therapy Program*:

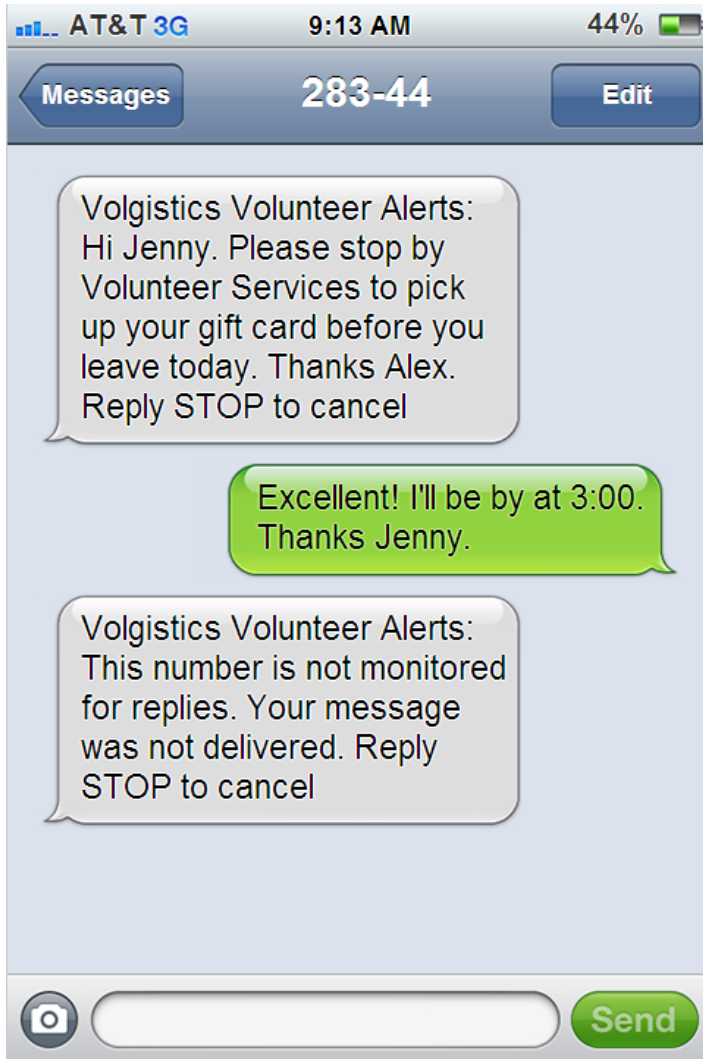

In other cases there is not a way to communicate all the information so if the recipient needs to know more, he or she will need to sign-in to see the additional information in VicNet. For example, the monthly schedule reminders do not have room to include the times and assignments the recipient is scheduled in because they contain a whole month's worth of information. Here is how the monthly schedule reminder message would appear for July 2014 for a volunteer scheduled on Monday through Friday:

### **Outgoing Messages Only**

Text messages sent from Volgistics are forwarded to an SMS gateway to be delivered to the recipient's phone. This process does not provide a way to link the response back to the Volgistics account that it originated from. Because of this, there is not a way for volunteers and Coordinators to respond directly to a text sent to them. So if you want the recipients to reply, you should arrange this beforehand, or include directions in your text.

If a volunteer or Coordinator does respond to a text you send, they will receive a message back that their message was not delivered. Here is how this would look if the volunteer who received the text message from the example in the Custom Text Messages section above sent a reply:

---

## Getting Started with Text Messaging

Help topic 1301

Added or revised 12-01-2015

---

*Volgistics is pleased to offer text messaging as a feature to help you communicate with your volunteers and Coordinators. This help topic is designed to help you get started with using the text message feature in your account.*

You can click on a link in the *Content* box below to be taken directly to a section of the help topic.

### Contents

1. Requirements & Background Information
2. Enable Text Messaging for Your Account
3. Communicate that Text Messaging is Available
4. Send Text Messages to Volunteers & Coordinators
5. Opt-in as a System Operator
6. How Text Messaging Changes Your Account

## **1. Requirements & Background Information**

Before you begin using the text message feature, please read the following information regarding account requirements and background information:

- VicNet Required. There is not a charge for the text messaging feature. However, it does require accounts to include the VicNet module in their service level. VicNet is necessary because it provides a way for volunteers and Coordinators to opt-in and out of text messaging, plus manage their text preferences. If VicNet is not currently part of your account's service level, you can add it by following the steps shown in help topic 2007.
- Outgoing Messages Only. Your text messages will originate from the Volgistics system before being forwarded to an SMS gateway. This process does not provide a way for incoming messages to be received back at the account the original message was sent from. This means there will not be a way for volunteers and Coordinators who receive your messages to respond directly to them. However, you can include your phone number in your text message so volunteers can use it to respond back with a text. If volunteers or Coordinators respond to a message (with something other than a keyword such as *HELP*, *YES*, or *RESUME*), they will receive a reply that their text was not delivered.
- Limited Message Length. Cell phone service providers require us to include identifying information and other instructions with each message sent. This extra text can take up to 50 of the 160 characters available for text messaging so only 110 characters are available for custom messages. Some carriers outside of the United States limit text messages to less than 160 characters. Recipients using these providers may not receive the entire message you sent.

## **2. Enable Text Messaging for Your Account**

To get started with text messaging, an Administrator for your account will need to enable text messaging. You can find directions on how to do this in help topic 1290.

## **3. Communicate that Text Messaging is Available**

You could introduce text messaging to volunteers and Coordinators at orientations and trainings. But to get started initially, most likely sending an email message from your Volgistics account is the easiest way to let everyone know that text messaging is available. To make this easier, Volgistics comes with a built-in way to send an email message.

After text messaging is enabled, the Messages Ground Rules page will have a section at the bottom where a default message appears. The default message reads:

Hello,

We are now able to send text messages! This will allow us to communicate with you faster, while offering you a more convenient way to receive messages. This option will allow us to send custom messages to keep you up-to-date, and you can also receive automated messages such as schedule reminders by text.

Text messages you receive from us will appear as "Volgistics Volunteer Alerts." You will not be able to respond to the text messages so if you need to reply please contact the volunteer office by email or phone.

To begin receiving text messages, you will need to opt-in with your mobile phone number. Your normal text and data rates will apply so please take this into consideration. Please click the following link to learn how to opt-in to text messaging. If the URL does not appear as a clickable link, please copy and paste the address into your web browser.

<https://www.volgistics.com/ex/Help.dll?ACT=21&HID+&TOPIC=1291>

Thank you for opting-in to text messaging. We appreciate your service and look forward to communicating with you more efficiently.

Thank you,

Volunteer Services

To edit this message, or send the message to all Coordinators, select Setup from the menu, expand the Messages link, and then select *Ground rules*. Scroll down to the *Text Message Opt-in Email* section.

If you edit the message's content or subject line, be sure to click the **Save** button before you send the message. To send the message to all of your Coordinators, click the **Send to all coordinators** button at the bottom of the page. If the Coordinator has already opted-in to text messaging, the email will not be sent to them.

In order to send the message to volunteers, you need to tag the records that you want to receive the email. Then select *Tags* from the menu and press the **Go** button beside the option to send the opt-in message. Volunteers who have already opted-in to text messaging will not receive the email even if they are in the group of records you tagged. You can learn more about sending the email to tagged records in the Send the text messaging opt-in email to the tagged records section of help topic 2137.

#### **4. Send Text Messages to Volunteers & Coordinators**

After your account has text messaging enabled, and volunteers and Coordinators have opted-in, you can begin sending text messages. It is not necessary for a System Operator to opt-in to text messaging to send messages to volunteers and Coordinators. Any operator who has operator rights to send messages can send text messages.

Sending a custom text message to your volunteers and Coordinators is very similar to sending an email message. To start the process, select *Mailbox* from the menu, click on the Out Box tab, and click the **Send a message** button to start your message. You can find in-depth directions on sending text messages in help topic 1295. You may also find help topic 1299 useful because it shows hints on how to send email and text messages based on the volunteer's preferences. Automatic messages from the system will be sent by text to volunteers and Coordinators as long as they opt-in to text messaging and select to have that type of message sent by text. You do not need to do anything else to enable this as long as the automatic messages are already setup in your account. The content and wording of the automatic text messages is standardized to make sure the message meets the character requirements for text messages. You can find a list of the different kinds of automatic text messages that can be sent in the *Types of Automatic Text Messages* section of help topic 1300.

#### **5. Opt-in as a System Operator**

Currently the only text messages System Operators can receive if they opt-in to texting are alerts that an online application form has been submitted. If you would like to receive these alerts by text message, you will need to opt-in as shown in help topic 1293.

If you are a System Operator and you'd like to receive alerts when volunteers add or remove themselves from the schedule, you can do this by setting up a Coordinator record in the account in addition to your System Operator record. Your account's service fee is not based on the number of Coordinator records so you do not need to worry about this increasing your expenses. You can find directions on how to do this in the *Receive Self-Scheduling Alerts* section of help topic 1293. There is not a need to opt-in as a System Operator if you only want to receive the self-scheduling alerts.

## 6. How Text Messaging Changes Your Account

Once you have text messaging setup in your account, you will see some changes. The first thing you may notice is that there are new fields on the Core tab of volunteer records and on the Coordinator tab of Coordinator records:

**Core** Profile Service Schedule History Contacts Notes Vic

Save Cancel Archive Delete Combine New Previous Next

Tagged Copy

**Name**

Last name:  Number:  ⓘ

First name:  Status:  ⓘ

Middle name:  Title:  Type:  ⓘ

Nickname:  Kind:  Individual  Group ⓘ

**Address**

Street 1:  Home:   Ok to call

Street 2:  Work:   Ok to call

Street 3:  Cell:   Ok to call

City:  Text:   ⓘ

State:  Zip:  Fax:   Ok to call

Messaging:  No postal mail  No email  
 No text message Pager:   Ok to call

Email:   Other:   Ok to call

Web Site:  Visit

After you enable text messaging, a *Text* field will appear where the other phone numbers show on volunteer records. This field is "read only" because regulations do not allow you to change a volunteer's or Coordinator's number as it affects their opt-in rights. If a volunteer or Coordinator needs to change the number they use for texting, they will need to opt-out of texting at the old number and then opt-in with the new number. The *If Your Phone Number Changes* section of help topic 1291 shows how to do this.

To the right of the *Text* field you will find a *Text Validity* field. This field is helpful to determine if the volunteer's text number is receiving messages because the field's color will change based on the number's validity. Help topic 1292 has more information on this.

There is also a *No text message* checkbox that can be used to block a volunteer or Coordinator from receiving text messages without requiring them to opt-out of texting. One use for this would be a situation where a volunteer is asked to leave your organization so you do not want him or her to receive texts, but you still need to keep his or her record for reports.

You will also see a new column in the Messages box on the History tab of the volunteer records. This column will show which text messages the volunteer has received and whether or not they were successfully received. Help topic 2064 explains more about how this works.

**Messages**

Recent Archived

Sent	Subject	Sent to			
07-14-2014	Marincy, Arizona	(555) 867-5309			
07-14-2014	Happy Birthday, Anyway	(555) 867-5309			
06-09-2014	.lennv .lennv	tommv.tutone.2@mailinator.com			

You may also want to add the *Text* and *Text message validity icon* fields to the Volunteers page so you can see who has opted in. Remember that you can sort the Volunteers page by any of the column headings (except *Tag*) by clicking on the column's title. This makes it easy if you want to Tag volunteer records to send them a text message. You can just sort the page by the *Text* column and then tag the records. You can find information on how to change which fields appear on the Volunteers page in help topic 1202.

## Volunteers

There are also two new Set rules to help you find volunteers who have opted-in, or volunteers based on their text number validity. Help topic 1297 explains more about the Set rule for finding volunteers who have, or do not have, a text number. Help topic 1298 explains more about the rule for finding volunteers who have, or do not have, a valid text number. Help topic 1296 shows how to use this Set rule to find volunteers with an invalid text number.

---

## Forget your password? (Volunteers and Coordinators)

Help topic 1307

Added or revised 03-23-2017

---

*This help topic is designed to show volunteers and Coordinators how to reset the password they need to login to VicNet.*

### 1. Click the *Forget your password?* link

If you have forgotten the password you use to login to your organization's VicNet portal, start by clicking the *Forget your password?* link on the login page. This will look something like the image below depending on how your organization has setup the account:

**Your Logo Here**

**Login**

Enter your email address and your volunteer information center password, and then click the Go button.

Login name:

Password:

[Forget your password?](#) [Help](#)  
[Need a password?](#)

**Go**

**Secure Login**

Account number:

Email address:

Password:

Remember my credentials at this computer

Login

## 2. Enter your email address and click the Go button

Enter the email address you use to login to the VicNet portal in the *Email address* field and click the **Go** button. The email address entered must match the email address on your volunteer or Coordinator record in order for the password to be sent. The system will send a link you can use to set a new password to your email address. **Please note:** The link will only remain active for 24 hours after it is sent. If you click the link and it says it expired, simply go back and click the *Forget your password?* link again.

**Your Logo Here**

**Login**

Forget your password?

Enter your email address and then click the **Go** button. We will send a **reset link** to you by email.

Email address:

**Go** **Cancel**

If you continue to experience difficulty accessing your information, please contact the volunteer office for further assistance.

If you have more than one record in the system that uses the same email address (for example if you have a volunteer and Coordinator record, or family members share an email address), you will see a screen similar to the one shown below. In this case, check the box next to the record (or records) you want to reset the password for and then click the **Go** button.

**Your Logo Here**

**Login**

Select Record(s)

There is more than one volunteer or coordinator record with the given email address (EmilyTate@mailinator.com). Please select from the list and click the **Go** button to **reset** the password(s) you would like. We will send you a password reset link via email.

Emily Tate (coordinator)

Emily Tate (volunteer)

**Go** **Cancel**

If you receive a message that the email address you entered does not have an account, it means the system could not find any records with access to Volgistics. The three most common reasons for this are: 1) A typo in the address you entered, or the address on file for your record, 2) There is no record in the system for the address entered, or 3) There is a record, but the access is not approved. Double check that you typed the address correctly. If the address was entered correctly, you will need to contact the volunteer office at the organization you serve with for further assistance.

### 3. Sign-in to your email account to set your password

Go to the email account that the password was sent to, sign-in, and check for new messages. You should receive the temporary password message within a few minutes. However, some email systems and ISPs may delay the delivery of email messages.

If you do not see the message in a few minutes and your email program uses a spam filter, check the junk mail or spam folder for the message.

When you receive the message, click the link in the message to set your password. If for some reason you cannot click the link, highlight the URL address beginning with *https://...* Once the complete address is highlighted, copy it and then paste it into a new web browser window.

You will see a screen that looks similar to the one below:

Enter a new password into both the *New Password* and the *Confirm Password* fields, and then click the **Go** button. The new password you enter must be different than your previous password, *and* it must meet any password strength rules set by your organization.

Remember the new password you enter because this is what you will use to login to Volgistics the next time you access your account.

## Mailbox Out Box Tab

Help topic 1991

Added or revised 04-28-2014

The Mailbox's Out Box tab provides a way to send messages to your volunteers and Coordinators. It is also used to view and manage your history of sent messages. If you are not already on the Out Box tab, you can get there by selecting Mailbox from the menu, and then clicking the Out Box tab.

The Out Box tab is divided into three sub-tabs for organizing your messages. These are the Recent, Archived and Deleted sub-tabs.

This help topic covers how the Out Box tab works in your Volgistics account.

## Contents

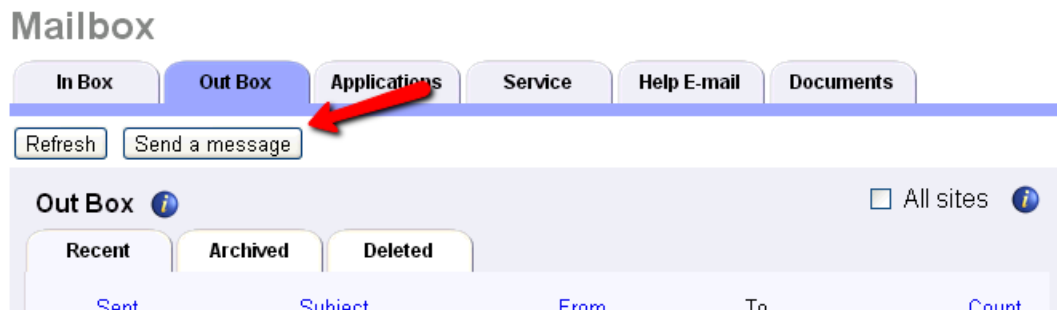

Refreshing the Out Box Tab  
Sending Messages from the Out Box Tab  
Site Level Access and the Out Box Tab  
Sorting the Out Box Tab  
Recent Sub-Tab  
Archived Sub-Tab  
Deleted Sub-Tab  
Viewing Stored Messages  
Recipient List on Stored Messages

## Refreshing the Out Box Tab

The Out Box tab will show an up-to-date view each time you select Mailbox on the Volgistics menu and then return to the Out Box tab. If you're on the Out Box tab and you want to update the view without leaving the tab, click the **Refresh** button in the top left corner of the Out Box tab.

## Sending Messages from the Out Box Tab

You can send Vic Mail, email messages and text messages to your volunteers and Coordinators from the Out Box tab. To start a message, click the **Send a message** button at the top of the tab.

Refer to the following help topics for details on sending each type of message:

- Email Messages- Help topic 2195
- Text Messages - Help topic 1295
- Vic Mail Messages - Help topic 1127

## Site Level Access and the Out Box Tab

If your organization uses Site Level Access and a System Operator is logged in as a Headquarters-level operator, the Out Box tab will have a checkbox for *All Sites* in the upper right corner. If this box is checked, the operator will view messages generated by Headquarters as well as messages generated by Site-level Operators. If the *All Sites* box is un-checked, only messages generated by Headquarters will be displayed on a Headquarters-level operator's Out Box tab.

Users logged in as Site-level Operators will not see the *All Sites* checkbox on the Out Box tab. With Site Level Access, the Out Box tab will only display messages generated at their Site.

## Sorting the Out Box Tab

By default, all of the sub-tabs are sorted by the Sent column with the most recent items at the top. In the case of the Recent and Deleted sub-tabs, *Saved to send later* messages appear above sent messages. As your Out Box tab grows to contain more messages, it may become difficult to find an item you're looking for. To help you with this, Volgistics allows you to sort the sub-tabs by the Sent, Subject, From and Count columns. Just click on the column heading to sort the messages on the sub-tab based on that column's information.

The screenshot shows the 'Out Box' interface with three sub-tabs: 'Recent', 'Archived', and 'Deleted'. The 'Recent' sub-tab is active. Below the sub-tabs, there are four column headers: 'Sent', 'Subject', 'From', and 'Count'. Red arrows point to each of these headers. The 'To' column is also visible. Below the headers, there are two rows of messages. The first row has a checkbox, 'Saved to send later', 'Additional Volunteers Needed', 'Brenda Samuelson', and '0'. The second row has a checkbox, '10-09-2013 3:22 p', 'Construction Entrance', 'Brenda', 'All Active', and '15'.

	Sent	Subject	From	To	Count
<input type="checkbox"/>	Saved to send later	<a href="#">Additional Volunteers Needed</a>	Brenda Samuelson		0
<input type="checkbox"/>	10-09-2013 3:22 p	<a href="#">Construction Entrance</a>	Brenda	All Active	15

## Recent Sub-Tab

The Recent sub-tab shows messages that were *Saved to send later* when they were created, along with sent messages that are less than 180 days old. If a sent message remains on the Recent sub-tab after 180 days, it is automatically sent to the Archived sub-tab. *Saved to send later* messages cannot be moved to the Archived sub-tab.

If a volunteer was the recipient of a message that was sent, the subject and date of the message on the Recent sub-tab will also appear in the message history kept on the Recent sub-tab in the Messages section of the volunteer's History tab. You can find more information on this in help topic 2064.

Sent messages can be moved from the Recent sub-tab to the Archived sub-tab by checking the box next to the message and then clicking the **Archive** button. You can check all of the boxes by messages at once by clicking the **Check all** button. Clicking the **Un-check all** button reverses this action. If *Saved to send later* messages are included when you click the **Archive** button, you will get a message that these messages cannot be moved to the Archived sub-tab.

Sent messages and *Saved to send later* messages can be moved from the Recent sub-tab to the Deleted sub-tab by checking the box next to the message and then clicking the **Delete** button. You can check all of the boxes by messages at once by clicking the **Check all** button. Clicking the **Un-check all** button reverses this action.

Please see the Viewing Stored Messages section of this help topic for information on viewing a stored message.

## Archived Sub-Tab

The Archived sub-tab shows messages that have been manually archived as well as sent messages that were automatically moved to the Archived sub-tab from the Recent sub-tab after 180 days have passed. Messages in this section will remain indefinitely unless they are deleted. There is not a way to send a message from the Archived sub-tab back to the Recent sub-tab because there are not any actions that can be taken on the Recent sub-tab that cannot also be taken from the Archived sub-tab.

If a volunteer was the recipient of a message stored on the Archived sub-tab, the subject and date of the message will appear on the Archived sub-tab in the Messages section of the volunteer's History tab. You can find more information on this in help topic 2064.

The messages on the Archived sub-tab can be moved from the Archived sub-tab to the Deleted sub-tab by checking the box next to the message and then clicking the **Delete** button. You can check all of the boxes by messages at once by clicking the **Check all** button. Clicking the **Un-check all** button reverses this action.

Please see the Viewing Stored Messages section of this help topic for information on viewing a stored message.

### **Deleted Sub-Tab**

The Deleted sub-tab shows messages that have been deleted from the Recent or Archived sub-tabs. Messages sent to this tab remain for seven (7) days after they are deleted to allow you to recover them if they were accidentally deleted. If they are not recovered within seven days, they are permanently deleted from the system.

If a volunteer was the recipient of a message that appears on the Deleted sub-tab, the subject and date of the message will continue to appear in the message history in the Messages section of the volunteer's History tab until it is permanently deleted from the system. Once the message is permanently deleted, the subject and date will be removed from the volunteer's message history. If you complete the action to permanently delete the message yourself, you may see the subject and date for a brief time still on the volunteer's record. This is because the process to remove the date and time from the volunteer's record is performed during the overnight maintenance cycle. You can find more information on this in help topic 2064.

The messages on the Deleted sub-tab can be restored to the tab they were received from by checking the box next to the message and then clicking the **Restore** button. You can check all of the boxes by messages at once by clicking the **Check all** button. Clicking the **Un-check all** button reverses this action.

The messages on the Deleted sub-tab can be permanently deleted before the seven (7) day waiting period by checking the box next to the message and then clicking the **Delete** button. You can check all of the boxes by messages at once by clicking the **Check all** button. Clicking the **Un-check all** button reverses this action. Once a record is permanently deleted, there is not a way to recover it.

Please see the Viewing Stored Messages section of this help topic for information on viewing a stored message.

### **Viewing Stored Messages**

To see details about any message on a sub-tab, just click on the subject of the message. When you do this you can view information such as how the message was sent, the volunteers it was sent to and the content of the message. The message's content box will vary in appearance depending on the web browser you use. For example, some browsers do not allow you to scroll to see all of the information in the content box. With most browsers you can highlight and copy the message's content even if it appears to be grayed out.

The controls available on the message differ depending on which sub-tab you're on. The Recent sub-tab has **Archive** and **Delete** buttons, the Archived sub-tab only has a **Delete** button, and the Deleted sub-tab has **Restore** and **Delete** buttons on sent messages. *Saved to send later* messages on the Delete sub-tab will have the same options available as they do on the Recent sub-tab. If you send a *Saved to send later* from the Deleted sub-tab, it will automatically be moved to the Recent sub-tab.

### **Recipient List on Stored Messages**

When you view a sent messages as shown in the Viewing Stored Messages section of this help topic, you will see a list of volunteers and Coordinators who the message was sent to. On the Archived sub-tab, this list is collapsed initially so you need to click the **Show recipients** button to see this list. When a message was sent to both volunteers and Coordinators, the volunteer names will appear first and then the Coordinator names will be listed at the end.

In order to be on the recipient list, the volunteer's record needs to be in the non-archived section of your database. Records that have been deleted, or archived, will no longer appear on the recipient list.

---

## Finding Volunteer Records

Help topic 2023

Added or revised 04-17-2017

---

Once you've started adding new volunteer records to your database, you'll eventually want to go back and open individual volunteer records to look-up information or add more data. This help topic explains how to find and open records.

Click on a link in the Content window below to be taken directly to that section of the Help topic.

### **Content**

- Controlling Records Shown
- Using the Alphabetical Index
- Viewing All Volunteers
- Using Include Options
- Find by Last Name
- Find by First Name
- Find by Number
- Find by Email Address
- Find by Group Name
- Using Wildcard Search Features
- Sort & Search Records

**Controlling Records Shown**

When you use one of the methods shown in this help topic to bring up your volunteer records, the Volunteers page may not load all of your records initially if you have a large number of records. If the search results contain more records than the dropdown is set to, the entry count will indicate that not all of the records are shown.

Armstrong, Marv F	<input type="checkbox"/>		4985 Malow Court	Casc

### Using the Alphabetical Index

One way to locate a volunteer record is to use the alphabetical name index located at the very top of the Volunteers screen.

1. Choose Volunteers from the menu.

2. Across the top of the Volunteers screen you'll see the letters of the alphabet. Click on the first letter of the volunteer's last name. For example, if you're looking for *George Bailey*, click the "B" link to see the volunteers whose last names begin with the letter B.

3. Volgistics displays an alphabetized list of the volunteers whose last names start with the letter you selected. If necessary, scroll down this list until you find the volunteer you're looking for. When you see the volunteer you're looking for, click on his or her name to open the record.

### Viewing All Volunteers

To view a list of all volunteer records:

1. Choose Volunteers from the menu.
2. Click the "All" link next to the letter "Z" in the alphabetical index.

### Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

You'll see a list of all volunteers.

### Using Include Options

You might want to limit your search to just certain volunteers, such those with an Active Status or just a certain Flag or Type. You can use the fields under the *Include* heading to do this. Available fields include Status, Type, Flag, Site, Set, Tags and Kind. The fields you see on the Volunteer page may not include all of these options depending on your account's setup.

Here is how to use the *Include* options:

1. Choose Volunteers from the menu.
2. Locate the *Include* section.
3. Use the fields to limit your search to just records with the desired *Status, Type, Flag, Site, Set, Tags* and/or *Kind*. For example, to search for just records with the Active Status, select "Active" from the Status dropdown list and leave the other fields set to "Any."

### Include

Status:    

Type:   

Flag:   

Site:   

Set:   

Tags:   

Kind:   

 [Clear](#)

4. Click on a letter of the alphabet or the All link to see records that have the selection you made in the *Include* field.

You can also use more than one *Include* field at a time for more advanced searches. For example, if you wanted to find only volunteers with the Active Status who also have the "Approved Driver" Flag on their record, select "Active" from the Status dropdown and "Approved Driver" from the Flag dropdown and then complete your search.

## Include

Status:  Active  

Type:  Any 

Flag:  Approved Driver  

Site:  Any 

Set:  Any 

Tags:  Any 

Kind:  Any 

 [Clear](#)

Selections in the *Include* fields will stay in place during your session unless they are changed. You can either reset the field's dropdown to "Any," or click the "Clear" link underneath the fields to reset them. The fields will reset to "Any" automatically when your session ends.

You can also fine tune your searches even more by clicking the **Advanced options** button that appears under the fields. This page allows you to do things such as selecting multiple options for a field, or excluding certain options for a field. For example, to find all records with the Active and Applicant Statuses you would set the Status field as shown below and then click the "All" link.

---

### Status

- Any  
 Only these  
 Not these
- |  |   |                                   |
|--|---|-----------------------------------|
| <input checked="" type="checkbox"/> Active | <input checked="" type="checkbox"/> Applicant | <input type="checkbox"/> Inactive |
| <input type="checkbox"/> Leave of Absence  | <input type="checkbox"/> Prospect             |                                   |
- 

Or if you wanted to find all records with either the "CPR Certified" or the "Certified Life Guard" Flags, you'd set the Flag field as shown below and then click the "All" link.

---

### Flag

- Any  
 Any of these  
 All of these  
 None of these
- |   |   |  |
|---|---|--|
| <input type="checkbox"/> Approved Driver          | <input type="checkbox"/> Auxiliary              | <input checked="" type="checkbox"/> Certified Life Guard |
| <input checked="" type="checkbox"/> CPR Certified | <input type="checkbox"/> Emergency Availability | <input type="checkbox"/> RSVP                            |
| <input type="checkbox"/> ServSafe Certified       |   |  |
-

The "Any of these" setting functions like an *or*. It would bring up volunteers if they have either of the Flags. The "All of these" setting functions like an *and*. Volunteers would need both Flags on their records in order to be included in the results if this were selected.

Click the **Basic options** button to return to first page when you're done using the advanced search features.

Selections you make on the *Advanced options* page will not remain selected when you leave the page.

### Find by Last Name

You can also find volunteer records by last name. To find the record for an individual volunteer by the volunteer's last name:

1. Choose Volunteers from the menu.
2. Enter the volunteer's last name in the *Last Name* field and then click the **Go** button located just to the right. If you're unsure of the spelling of the volunteer's name, see the Using Wildcard Search Features section of this help topic.

### Find

Find from within all volunteer records

Last Name:	<input type="text" value="Bailey"/>	<input type="button" value="Go"/>
First Name:	<input type="text"/>	<input type="button" value="Go"/>
Number:	<input type="text"/>	<input type="button" value="Go"/>
Email:	<input type="text"/>	<input type="button" value="Go"/>
Group Name:	<input type="text"/>	<input type="button" value="Go"/>

3. Volgistics displays an alphabetized list of volunteers whose last names match the name you entered. Locate the exact volunteer you're looking for and click on his or her name to open the record. If the record does not appear on the list, you might find Help topic 2291 useful.

### Find by First Name

There may be times when you remember a volunteer's first name, but not their last. You can look-up volunteer records using the volunteer's first name, too. To find the records for volunteers with a certain first name:

1. Choose Volunteers from the menu.
2. Enter the volunteer's first name in the *First Name* field and then click the **Go** button located just to the right. If you're unsure of the spelling of the volunteer's name, see the Using Wildcard Search Features section of this help topic.
3. Volgistics displays an alphabetized list of the volunteers whose first names match the name you entered. Locate the exact volunteer you're looking for, and then click on his or her name to open the record. If the record does not appear on the list, you might find Help topic 2291 useful.

### Find by Number

Some volunteer leaders use numbers to identify volunteers. If you assign numbers to your volunteers, you can locate a volunteer by their number by:

1. Choose Volunteers from the menu.
2. Enter the volunteer's number in the *Number* field and then click the **Go** button located just to the right. If you only know part of the volunteer's number, see the Using Wildcard Search Features section of this help topic.
3. If there is one, Volgistics displays the name of volunteer that has the number you entered. Click on the volunteer's name to open their record. If the record does not appear on the list, you might find Help topic 2291 useful.

### **Find by Email Address**

To find the record for a volunteer using their email address:

1. Choose Volunteers from the menu.
2. Enter the volunteer's email address in the *Email* field and then click the **Go** button located just to the right. If you only know part of the address, see the Using Wildcard Search Features section of this help topic.
3. Volgistics displays an alphabetized list of the volunteers whose email addresses match the email address you entered. Locate the volunteer you're looking for and then click on his or her name to open the record. If the record does not appear on the list, you might find Help topic 2291 useful.

Of course the volunteer's email address must have been recorded in their record in order for Volgistics to be able to locate the record by email address. You enter volunteer email addresses on the Core tab.

### **Find by Group Name**

You can also find a group record by searching for the name of the group by:

1. Choose Volunteers from the menu.
2. Enter the group's name in the *Group Name* field and then click the **Go** button located just to the right. If you only know part of the name, see the Using Wildcard Search Features section of this help topic.
3. Volgistics displays an alphabetized list of the records that match the name you entered. Locate the record you're looking for and then click on the link to open it. If the record does not appear on the list, you might find Help topic 2291 useful.

### **Using Wildcard Search Features**

If you only know part of the information for the record you're trying to locate, or are unsure of the spelling for a search field, you can also use wildcard searches in the fields under the *Find* heading. Here is the way these work:

- You can enter just the first part of the information in the field. For example, if you're looking for a volunteer named "George Bailey" you can enter "Ba" in the *Last Name* field. This will bring up all records where the last name starts with "Ba" such as Bailey, Baker, Barber, Barclay, etc. This option will work for the *Last Name*, *First Name*, *Email*, and *Group Name* fields. However, it will not work for the *Number* field.
- You can use the asterisk character (\*) in place of the information you do not know. This can be used at the start, end or in the middle of the information you do know. For example, to look for a volunteer with the last name of "Bailey," you could use "Bai\*" or "\*ley" or "Ba\*ey". This feature will work in any of the fields including the *Number* field. For example, to search for a volunteer with the number of "1234567" you could enter "123\*" or "\*567" or "12\*67" in the *Number* field. Here is an example of how this could be used to find all volunteers with a Yahoo email domain:

## Find

Find from within all volunteer records

Last Name:	<input type="text"/>	<input type="button" value="Go"/>
First Name:	<input type="text"/>	<input type="button" value="Go"/>
Number:	<input type="text"/>	<input type="button" value="Go"/>
Email:	<input type="text" value="*@yahoo.com"/>	<input type="button" value="Go"/>
Group Name:	<input type="text"/>	<input type="button" value="Go"/>

Only one asterisk character (\*) will work as a replacement for information in the wildcard searches. For example, "\*\*ile\*" in the *Last Name* would not work to find a record with the last name of "Bailey." Also, only the asterisk is a valid wildcard character for the *Find* fields. Other characters such as a question mark (?) are not valid in this location. However, the column headings shown in the Sort & Search Records section below do support other wildcard characters.

## Sort & Search Records

### Sorting Records

When the Volunteers page shows more than one record, the page is initially sorted alphabetically according to the volunteer's last name. To help you find certain records, you can click on a column heading to re-sort the page according to that column's information.

Showing 1 to 166 of 166 entries

Name	Tag	Number	Status	Type	Last Activity	
<input type="text" value="Search"/>		<input type="text" value="Search"/>	<input type="text"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>	S
Armstrong, Mary	<input type="checkbox"/>	816	Applicant	Adult	06-11-2013	
Baccus, Lydia	<input type="checkbox"/>	774	Active	Adult	12-18-2014	08-
Bailey, Victor	<input type="checkbox"/>	1155	Applicant	Adult	06-11-2013	
Bargas, Jessica	<input type="checkbox"/>	830	Applicant	Adult	06-11-2013	
Barker, Geraldine	<input type="checkbox"/>	910	Active	Adult	12-17-2014	03-

For example, if the volunteer's Date of Last Activity is included on this page, you can sort the page from the earliest to the most recent date by clicking the *Last Activity* heading. Click the heading again to sort the page to display the most recent dates at the top and the earliest dates at the bottom.

You can even sort the page based on the information in multiple columns. For example, you can sort the page according to the volunteer's Status first by clicking on the heading of the *Status* column. You can then sort the records again according to the volunteer's Type by holding down the *SHIFT* key on your keyboard while clicking on the heading of the *Type* column. The original sorting by Status will be maintained and then the records will be sorted by Type.

**Please note:** It is not possible to sort columns with icons or checkboxes such as the Tag column, or the email validity or text number validity indicator columns.

### Searching for Records

There are various ways you can search for just certain records in Volgistics.

One way is to create a Set to query the database based on certain conditions such as how much service a volunteer has recorded. Sets can be created based on any of the rules shown in help topic 2177. After you create the Set, you can see the volunteers the Set contains by selecting the Set from the dropdown as shown in the Using Include Options section above.

Another way you can find certain records without creating a Set is to use the *search* options on the Volunteers page. Once you have a group of records showing on the page, you can search for certain records in two different ways. One is to use the *Search* box that appears in the top right corner to search the entire page.

 Search:

Previous 1 Next

Status	Type	Email	Last Activity	Start
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Applicant	Adult	maryearmstrong@pookmail.com	06-11-2013	
Active	Adult	lydiarbaccus@mailinator.com	12-18-2014	08-08-2012
Applicant	Adult	victorbailey@dodgit.com	06-11-2013	
Applicant	Adult	iessicarharnas@dodgit.com	06-11-2013	

The other is to use the search fields that appear at the top of each column. The search function looks for your input from left to right in the field. So, for example, if you need to find a volunteer with a certain last name and you can only remember that it starts with "Fr," enter "Fr" in the search field in the *Name* column to bring up all volunteers whose last names begin with "Fr."

Showing 1 to 3 of 3 entries (filtered from 166 total entries)

Name	Tag	Number	Status	Type	Email
<input type="text" value="Fr"/>	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Freitas, Elaine	<input type="checkbox"/>	1108	Active	College	elainejfreitas@pookm
French, Robert	<input type="checkbox"/>	1205	Active	Adult	robertjrench@spamb
Fryer, Bobbie	<input type="checkbox"/>	1227	Active	Adult	bobbiewfryer@dodgit

The more characters you type in, the more refined your search will be. To return to the un-filtered view. Just remove the characters you entered into the search field using the delete or backspace keys on your keyboard.

You can narrow your search still further by searching for information in multiple columns. Using the example we started above, you could narrow your search for volunteers with last names beginning with "Fr" to just those who have the *College*Type. To do this you would enter "Co" (or more characters if you wish) in the search field at the top of the Type column.

Showing 1 to 1 of 1 entries (filtered from 166 total entries)

Name	Tag	Number	Status	Type	Email
<input type="text" value="Fr"/>	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text" value="Co"/>	<input type="text"/>
Freitas, Elaine	<input type="checkbox"/>	1108	Active	College	elainejfreitas@pookm

If you need to skip information, or look for just certain information anywhere in the field, the search will allow you to use some regular expressions. If you are unfamiliar with these, you may need to use a web search or find another source of information on how to perform more advanced searches.

Here's an example of a simple way regular expressions could be used on the page. Let's say you have a cleanup event at neighborhood park on a street called Cherry Ridge Drive. You want to find the volunteers on Cherry Ridge regardless of their house number. In this case, you could use the escape (\) or wildcard (\*) characters in front of "Che" in the Street column to bring up records for your volunteers on Cherry Ridge Drive.

Showing 1 to 3 of 3 entries (filtered from 168 total entries)

Name	Tag	Street	City	State
<input type="text" value="Search"/>		<input type="text" value="*Che"/>	<input type="text" value="Search"/>	<input type="text" value="Search"/>
Baccus, Lydia	<input type="checkbox"/>	4632 Cherry Ridge Drive	Wyoming	MI
Ford, Louise	<input type="checkbox"/>	1548 Cherry Ridge Drive	Wyoming	MI
Swindale, William	<input type="checkbox"/>	3022 Cherry Ridge Drive	Wyoming	MI

Here is another example of using regular expressions to filter the page. Let's say you've included the volunteers' Date of Last Activity on the Volunteers page. (Help topic 1202 shows how you can control which fields appear on the Volunteers page.) You may want to filter the page to show just the volunteers who have a blank in the field (in other words, they do not have any service information recorded). To do this, enter the regular expression ^\$ into the Search field. The page will filter to show just the volunteers who do not have a date recorded in the Date of Last Activity field. Or, if you want to do the opposite and filter the page to just show volunteers *with* a date entered, enter the regular expression \d into the Search field. Now the page will be filtered so that volunteers with a blank in the field are not shown.

### Status Field Search

Because each volunteer record can only have one Status, the Status search field is a dropdown list that contains all the options for Statuses in your account instead of a text field.

## How to Delete Schedule Openings

Help topic 2030

Added or revised 10-18-2016

---

After creating a schedule you may decide you want to remove, delete or otherwise change the way you have setup your schedule openings. This help topic explains how to reduce or remove openings. If you'd like to make changes to the opening, see help topic 2132.

Because working with openings can have a dramatic impact on your entire schedule very quickly, we **strongly** recommend reviewing the information in the Tips for Working with Openings section before proceeding to other sections. The sections of the help topics are arranged according to how much impact they will have on your schedule. The top section will have the *least* impact on your overall schedule, and the bottom section will have the *most* impact on your overall schedule.

You can click on a link in the *Contents* box below to go directly to a section of the help topic.

Delete an Ongoing Opening Completely

### Tips for Working with Openings

In Volgistics, openings are used to show the shifts or times when you will need volunteers to perform an assignment (a job or task) for your organization. You can learn how to create openings for an assignment in help topic 2158.

Here are some things to keep in mind when you're working with openings.

1. One opening can have multiple slots based on the number you enter in the *Volunteers needed* field when you create the opening. On the daily view of the schedule pictured below, there are two openings. One opening from 8:00 am to 11:30 am with 3 slots, and one opening from 12:00 pm to 3:30 pm with 2 slots.

From	To	Tag	Volunteer	Reg	Sub	Note	Opening
<input type="checkbox"/>	8:00 a	11:30 a					Fill Close Edit Delete
<input type="checkbox"/>	8:00 a	11:30 a					Fill Close Edit Delete
<input checked="" type="checkbox"/>	8:00 a	11:30 a	<input type="checkbox"/>	Fryer, Bobbie		✓	Edit Remove Edit Delete
<input type="checkbox"/>	12:00 p	3:30 p					Fill Close Edit Delete
<input checked="" type="checkbox"/>	12:00 p	3:30 p	<input type="checkbox"/>	Griffin, Deidre			Edit Remove Edit Delete

2 volunteers scheduled, 3 unfilled openings [Remove all](#)

*When you're working with openings, keep in mind that deleting the opening will remove all slots related to that opening.*

2. Openings can be setup to take place on one day only (one time), or they can be setup to repeat in a pattern (ongoing). An example of an ongoing opening is one that repeats every Monday, Tuesday, and Wednesday. On the monthly view of the schedule pictured below, the 8:00 am to 11:30 am opening repeats on Mondays, Tuesdays, and Wednesdays, and the 12:00 pm to 3:30 pm opening repeats on Mondays and Tuesdays.

Mon	Tue	Wed
<b>Mar 28</b>	<b>Mar 29</b>	<b>Mar 30</b>
<b>4</b> <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input checked="" type="checkbox"/> 8:00 a - 11:30 a Bobbie Fryer <input type="checkbox"/> 12:00 p - 3:30 p <input checked="" type="checkbox"/> 12:00 p - 3:30 p Deidre Griffin	<b>5</b> <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 12:00 p - 3:30 p <input type="checkbox"/> 12:00 p - 3:30 p	<b>6</b> <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input checked="" type="checkbox"/> 8:00 a - 11:30 a Bobbie Fryer
<b>11</b> <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input checked="" type="checkbox"/> 8:00 a - 11:30 a Bobbie Fryer <input type="checkbox"/> 12:00 p - 3:30 p <input type="checkbox"/> 12:00 p - 3:30 p	<b>12</b> <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 12:00 p - 3:30 p <input type="checkbox"/> 12:00 p - 3:30 p	<b>13</b> <input type="checkbox"/> 8:00 a - 11:30 a <input type="checkbox"/> 8:00 a - 11:30 a <input checked="" type="checkbox"/> 8:00 a - 11:30 a Bobbie Fryer
<b>18</b>	<b>19</b>	<b>20</b>

Keep in mind that deleting an opening will remove it from every day of the week the opening occurs. This will be for all dates in the past as well as all dates in the future.

3. Volunteers can be scheduled to fill an opening for one day only, or on a repeating basis such as every Monday and Wednesday. If a volunteer is scheduled on an ongoing (repeating) basis, the daily schedule will indicate this with a checkmark in the *Reg* column. In the example pictured below, Bobbie Fryer is scheduled on a repeating basis, and Deidre Griffin is only scheduled for one day.

From	To	Tag	Volunteer	Reg	Sub	Note	Opening			
<input type="checkbox"/> 8:00 a	11:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/> 8:00 a	11:30 a						Fill	Close	Edit	Delete
<input checked="" type="checkbox"/> 8:00 a	11:30 a	<input type="checkbox"/>	Fryer, Bobbie	✓			Edit	Remove	Edit	Delete
<input type="checkbox"/> 12:00 p	3:30 p						Fill	Close	Edit	Delete
<input checked="" type="checkbox"/> 12:00 p	3:30 p	<input type="checkbox"/>	Griffin, Deidre				Edit	Remove	Edit	Delete

2 volunteers scheduled, 3 unfilled openings Remove all

When you're working with openings, keep in mind that deleting an opening, **and** selecting to remove the volunteers scheduled for the opening, will remove volunteers scheduled on an ongoing (regular) basis on every date they're scheduled (both past and future).

4. Openings are not the same as schedule entries. You can think of an opening slot as a container that can hold a schedule entry, but the opening and the schedule entry are still independent of each other. Volunteers can be placed on the schedule without filling an opening slot, they can be placed on the schedule as filling an opening but with different start and/or stop times than the opening, or they can be placed on the schedule as filling the opening with the same start and stop times as the opening.

In the example shown below, Victoria Perry has been placed on the schedule without filling an opening. This creates a schedule entry for Victoria that is not associated with an opening. It's easy to tell she's not filling an opening because the schedule icon shows a figure without a box around it.

Deidre Griffin has been placed on the schedule as filling an opening. By default, her schedule entry had the same start and stop times as the opening. However, her schedule entry was edited to have different start and stop times than the opening. The schedule entry is still associated with the opening though. It's easy to tell because the schedule icon shows a figure with a box around it.

Opening	From	To	Tag	Volunteer	Reg	Sub	Note	Fill	Close	Edit	Delete
	11:30 a	11:30 a		Flyer, Debbie						Edit	Remove
	12:00 p	3:30 p		Perry, Victoria				Edit	Remove		
	12:00 p	3:30 p						Fill	Close	Edit	Delete
	12:00 p	3:30 p		Griffin, Deidre (12:30 p to 4:00 p)				Edit	Remove	Edit	Delete

3 volunteers scheduled, 3 unfillable openings Remove all

When you're working with openings, keep in mind that schedule entries are independent of openings. A volunteer can be filling an opening, but not be scheduled for the same start and stop times as the opening. Also, if you delete an opening you can choose to leave volunteers on the schedule. In this case, they will on the schedule but not as filling the opening like Victoria Perry in the example above.

### Reduce the Number of Volunteers Needed on Just One Day

One opening can have multiple opening slots as noted in the Tips for Working with Openings section above. You may want to reduce the number of slots for the opening on just one day. For example, if you anticipate that fewer volunteers will be needed on that day. Here are the steps to take if you need to do this:

1. Choose Assignments from the menu.
2. Click on the Assignment where you want to reduce the number of volunteers needed.
3. Click on the Schedule tab.
4. If you are on the monthly calendar view, click on the date the opening is on. If you're in the daily view, use the date dropdown at the top to select the date and then click the **Go** button.
5. If volunteers are scheduled to fill the opening slot, you will need to remove the volunteer from the schedule first. To do this, click the *Remove* link in the row that shows the volunteer you need to remove.

Opening	From	To	Tag	Volunteer	Reg	Sub	Note	Fill	Close	Edit	Delete
	8:30 a	11:30 a						Fill	Close	Edit	Delete
	8:30 a	11:30 a						Fill	Close	Edit	Delete
	8:30 a	11:30 a		Griffin, Deidre				Edit	Remove	Edit	Delete
	8:30 a	11:30 a		Perry, Victoria	<input checked="" type="checkbox"/>			Edit	Remove	Edit	Delete

2 volunteers scheduled, 2 unfillable openings Remove all

If the volunteer is a regularly scheduled volunteer (shown with a check in the *Reg* column), select to remove them from one day only or from all days they are scheduled for. If you remove them from one day only, you will see their name grayed out on the schedule with (*removed*) behind it.

6. Click the *Close* link in the row for the opening slot you no longer need.

	From	To	Tag	Volunteer	Reg	Sub	Note	Opening			
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	8:30 a	11:30 a		(closed)				Open		Edit	Delete
	8:30 a	11:30 a	<input type="checkbox"/>	Pery, Victoria (removed)		✓		Return			
0 volunteers scheduled, 3 unfilled openings									Return all		

The opening slot will appear grayed out, and there will be an *Open* link to click if you want to make the opening slot available again.

7. Repeat these steps for each opening slot you need to close.

### Reduce the Number of Volunteers Needed on Multiple Days

As noted in the Tips for Working with Openings section above, an opening can be setup to repeat in a pattern such as on every Monday, Tuesday, and Wednesday. You may want to reduce the number of slots for the opening on every day it occurs. For example, if you found you routinely only need two volunteers to do a job instead of four. This section shows the steps you'll need to take to reduce the number of volunteers needed on every day that the opening occurs.

#### Please Note!

There is not a way to reduce the number of opening slots for just one day of the week. For example, if the opening repeats every Monday, Tuesday, and Wednesday with four slots on each day, there is not a way to change just Tuesdays to have two slots but leave four slots on Mondays and Wednesdays.

If you only need to make this change for a few Tuesdays, just follow the steps in the Reduce the Number of Volunteers Needed on Just One Day section above to reduce the number of opening slots on those days. If you need to make a permanent change for all Tuesdays, you will need to edit the original opening to take place on just Mondays and Wednesdays. Then, make a new opening that repeats every Tuesday with just two slots. If you do this, any volunteers scheduled on Tuesdays will be left on the schedule, but not as filling an opening slot. You will need to go back and remove them from the schedule, and then place them back on as filling an opening slot. Here are the steps to take to reduce the opening slots on every day that the opening occurs:

1. Choose Assignments from the menu.
2. Click on the Assignment where you want to reduce the number of volunteer needed.
3. Click on the Schedule tab.
4. If you are on the monthly calendar view, click any date the opening occurs on. If you're in the daily view, use the date dropdown at the top to select a date the opening occurs on, and then click the **Go** button.

5. Click the *Edit* link in the Opening column for any row of the opening's slots. If a volunteer is scheduled to fill the opening slot, this will be the *Edit* link on the right.

	From	To	Tag	Volunteer	Reg	Sub	Note	Opening			
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
	8:30 a	11:30 a	<input type="checkbox"/>	Griffin, Deidre				Edit	Remove	Edit	Delete
	8:30 a	11:30 a	<input type="checkbox"/>	Perry, Victoria		✓		Edit	Remove	Edit	Delete
2 volunteers scheduled, 2 unfilled openings										Remove all	

6. In the *Edit an opening* box, change the number in the *Volunteers needed* field to be the number of opening slots you want the opening to have now.

7. Click the **Save** button.

**Please Note!**

Following the steps above could leave volunteers on the schedule but not as filling an opening slot. For example, if you reduced the number of opening slots from four to two, and there is a date where three volunteers were scheduled to fill opening slots, there will now be two volunteers filling opening slots and one volunteer on the schedule who is not filling an opening slot.

**Delete a One-Time Opening Completely**

There may be times when you need to completely eliminate an opening that occurs on one date. For example, if a board meeting was switched to a different date. If you are sure you want to delete all slots for a one-time opening on the date it occurs, follow these steps:

1. Choose Assignments from the menu.
2. Click on the Assignment where you want to delete an opening.
3. Click on the Schedule tab.
4. If you are on the monthly calendar view, click on the date the opening is on. If you're in the daily view, use the date dropdown at the top to select the date and then click the **Go** button.
5. You may wish to verify that the opening is a one-time opening instead of an ongoing opening. If you want to do this, click the *Edit* link in any row for the opening you wish to delete. If a volunteer is scheduled to fill the opening slot, this will be the *Edit* link on the right side.

	From	To	Tag	Volunteer	Reg	Sub	Note	Opening			
<input type="checkbox"/>	7:00 a	10:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	7:00 a	10:30 a						Fill	Close	Edit	Delete
	7:00 a	10:30 a	<input type="checkbox"/>	Landers, Sandra				Edit	Remove	Edit	Delete

Check in the *Edit an opening* box to see if the opening is setup as *For one day only* or *Ongoing*. If it is setup as *Ongoing* see the *Delete an Ongoing Opening Completely* section of this help topic.

6. Once you verify that the opening is a one-time opening and you are sure you wish to delete it, click the *Delete* link in one of the rows for the opening's slots.

7. If no volunteers are scheduled to fill any of the opening's slots, the opening will be deleted.

If there are volunteers with a schedule entry associated with the opening, a *Delete Opening?* box will appear. Select to either delete the opening *and* the volunteers scheduled to fill the opening, or to delete the opening but leave scheduled volunteers on the schedule as not filling an opening.

8. Click the **Continue** button if you made a selection in step 7 and wish to proceed with deleting the opening. Click the **Cancel** button if you no longer wish to delete the opening.

### Delete an Ongoing Opening but Leave past Schedule

There may be times when you want to end an ongoing opening, but leave the past schedule for the opening intact. For example, if a shift will occur at new times it is sometimes easier to end the old opening and enter a new opening with the new times. *Following these steps can have an impact on your overall schedule. Please review the information in the **Please Note!** box below before proceeding.*

If you'd like to end an ongoing opening, but leave the past schedule intact, follow these steps:

1. Choose Assignments from the menu.
2. Click on the Assignment where you want to delete an opening.
3. Click on the Schedule tab.
4. If you are on the monthly calendar view, click on the date you want to end the opening on. If you're in the daily view, use the date dropdown at the top to select the date and then click the **Go** button.
5. Click the *Edit* link in any row for the opening you wish to end. If a volunteer is scheduled to fill the opening slot, this will be the *Edit* link on the right side.

	From	To	Tag	Volunteer	Req	Sold	Note	Opening			
<input type="checkbox"/>	7:00 a	10:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	7:00 a	10:30 a						Fill	Close	Edit	Delete
<input checked="" type="checkbox"/>	7:00 a	10:30 a		Landers, Sandra				Edit	Remove	Edit	Delete

6. In the *Edit an opening* box, change the setting under the *Starting* date field from *Ongoing* to *Ending*. Select the date you want the opening to end from the dropdown lists.

7. Click the **Save** button.

### Please Note!

1. Following these steps will remove all future instances of the opening, but it will not remove volunteers who are scheduled to fill the opening in the future. You will need to remove these volunteers individually if you do not want them on the schedule.
2. If you want to remove volunteers from the future schedule, but leave their past schedule intact, you will need to edit their schedule entry and put in an ending date.
3. If you want to remove the volunteers from the schedule completely (for the past and future), simply remove them from the schedule.
4. This section of the help topic can be used to preserve the past schedule for volunteers, but this does *not* mean the past schedule is recorded as volunteer service. Service hours must be entered using one of the methods shown here.
5. Volgistics does not maintain schedule information indefinitely. The schedules for past years drop from the system. If you want a permanent record of when volunteers served, you must enter service hours.

### Delete an Ongoing Opening Completely

There may be times when you want to completely delete an ongoing opening. Remember to review the information in the Tips for Working with Openings section above before taking this action! *Deleting an ongoing opening will delete **all** instances of the opening on dates in the past as well as in the future. Also, deleting the opening will remove **all** opening slots for the opening on **every** date the opening occurs.*

If you are sure you want to delete all slots for an ongoing opening on each date it occurs (past and future), follow these steps:

1. Choose Assignments from the menu.
2. Click on the Assignment where you want to delete an opening.
3. Click on the Schedule tab.
4. If you are on the monthly calendar view, click on the date the opening is on. If you're in the daily view, use the date dropdown at the top to select the date and then click the **Go** button.
5. Click the *Delete* link in one of the rows for the opening's slots.

	From	To	Tag	Volunteer	Reg	Sub	Note	Opening			
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
<input type="checkbox"/>	8:30 a	11:30 a						Fill	Close	Edit	Delete
	8:30 a	11:30 a	<input type="checkbox"/>	Griffin, Deidre	✓			Edit	Remove	Edit	Delete
	8:30 a	11:30 a	<input type="checkbox"/>	Perry, Victoria	✓			Edit	Remove	Edit	Delete
2 volunteers scheduled, 2 unfilled openings										Remove all	

6. In the *Delete Opening?* box, select to either delete the opening *and* the volunteers scheduled to fill the opening, or to delete the opening but leave scheduled volunteers on the schedule as not filling an opening.

*Remember that if you choose to delete the volunteers scheduled to fill the opening, that the past and future date the volunteers were scheduled will be deleted.*

7. Click the **Continue** button if you made a selection in step 7 and wish to proceed with deleting the opening. Click the **Cancel** button if you no longer wish to delete the opening.

---

## Working with Tags

Help topic 2137

Added or revised 04-19-2017

---

Once you've tagged one or more volunteer records, there are a variety of useful things you can do for the entire group of tagged records. Please keep in mind that tags are cumulative for your session unless they are cleared. For example, if you tag 8 records and perform a task, and then tag 5 more records without clearing your tags, the next task you perform for tagged records will be made on 13 records. See the Clear Tags section of this help topic for information on how to clear tags between tasks.

Click on a link in the *Contents* box below to be taken directly to that section of this help topic.

### Contents

- View the tagged volunteers
- Print a report for the tagged volunteers
- Send email, VIC mail, or text messages to the tagged volunteers
- Change the Status for all of the tagged records
- Add a Type or Flag entry to the tagged records
- Delete the tagged records
- Archive the tagged records
- Send a VicNet password link to the tagged records
- Set temporary VicNet passwords for all tagged volunteers
- Send the text messaging opt-in email to the tagged records
- Add a Site to the tagged records
- Insert Date records for the tagged volunteers
- Add an Assignment to all of the tagged records
- Add a Mandate to all of the tagged records
- Send a schedule reminder to all of the tagged volunteers
- View the tagged volunteers**
- Clear tags**

You can view a list of the volunteer records that are currently tagged (or un-tagged).

1. From the menu, choose Volunteers.
2. Under the Include section, click the Clear link to clear any previous include settings.
3. Under the Include section, select *Tagged* from the Tags field (or *Not tagged* to see the list of un-tagged volunteers).

## Volunteers

### Print a report for the tagged volunteers

Most reports provide a way for you to print the report for just the tagged records. For example, you can tag a group of volunteers and then print mailing labels for them. For more information on stock reports, please see help topic 2104. For more information on custom reports, please see help topic 2223.

1. From the menu, choose Print.
2. Choose the kind of report you would like to print, for example Address labels.
3. Click on the name of the report you want to print.
4. Click the **Print it** button.
5. On the Include page, check *Tagged volunteers* and uncheck *These volunteers*, as shown here:

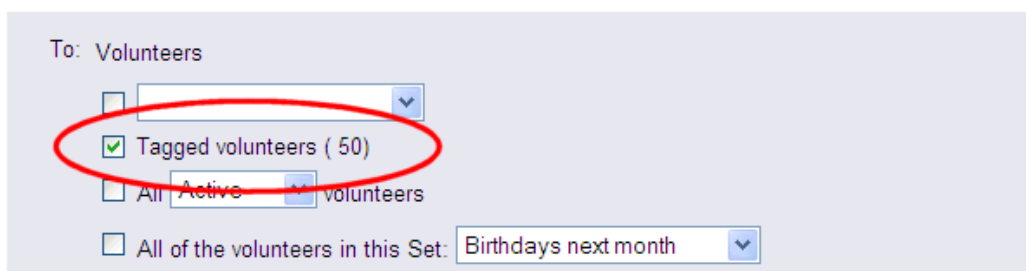

Not all reports are driven by volunteer records. Those that are not, do not offer the *Tagged volunteers* checkbox on the Include page.

6. Click the **Start printing** button.  
**Send email, VIC mail, or text messages to the tagged volunteers**

It's easy to send an email, VIC mail, or text message to a group of tagged volunteers.

1. From the menu, choose Mailbox.
2. Select the Out Box tab, and then click the **Send a message** button.
3. In the *To* section, check *Tagged volunteers*.

4. Compose and then send your message.  
**Change the Status for all of the tagged records**

To change the volunteer Status for multiple volunteers at one time, take these steps:

1. From the menu, choose Tags.

2. Next to *Change the **Status** of all tagged volunteer records to*, select the Status you would like to switch your tagged volunteers to from the dropdown list.

3. Click the **Go** button.

### **Add a Type or Flag entry to the tagged records**

There may be occasions when you want to add the same Type or Flag entry to a lot of volunteer records. You can add these all at once using tags.

If the Type or Flag entry you want to make does not already appear as a Type or Flag option on the Core tab, you should start by creating it (you can skip this step if the Type or Flag entry you want to add already exists in your database):

1. From the menu, select Setup.
2. Click *Field options*, and then select *Core tab* (the Core tab is where the Flag and Type fields are found).
3. Select Types or Flags, as appropriate.
4. Enter the new Type or Flag in the *Add a new item* field, and then click the **Save** button.

Once the Type or Flag value you want to add exists in your database, it's easy to insert it into all of the tagged records:

1. From the menu, choose Tags.
2. If you want to add a Type entry to all of the tagged records, use the *Change the **Type** of all of the tagged volunteers to* field to choose the Type you want to add.

If you want to add a Flag entry to all of the tagged records, use the *Add this **Flag** to all of the tagged records* field to choose the Flag you want to add.

3. Click the **Go** button.

Volgistics inserts the Type or Flag entry into all of the tagged records.

### **Delete the tagged records**

You can delete multiple volunteer records at once by using the tags feature. Because deleting a record can have a permanent impact on your volunteer recordkeeping, *we recommend reading the Important Considerations Before Deleting Records* section of help topic 2309 before proceeding.

After you have tagged the volunteer records you want to delete, follow these steps to delete the records:

1. From the menu, choose Tags.
2. Click the **Go** button located next to *Delete the tagged volunteer records*.
3. Because deleting records permanently removes them from the account, a confirmation box will appear where you must verify that you want to delete the records.

If your account has the VicDocs feature enabled, the confirmation box will also include an option to save or delete the documents associated with the records. If you select to save the documents, they will be available on the In Box in your mailbox for 5 days. If you do not save the documents locally during these 5 days, there will not be a way to recover them.

### **Operator Rights and Deleting Tagged Records**

If you do not see the **Delete the tagged volunteer records** option on the Tags menu, your Volgistics System Operator rights do not permit you to delete volunteer records. Your System Operator rights are set by your organization's Volgistics Administrator.

#### **Archive the tagged records**

Archiving volunteer records allows you to move records for volunteers who are not actively serving to a separate section of your database. If you are not familiar with how this affects volunteer records, we recommend reviewing help topic 1999 "Archived Versus Non-archived Records" before proceeding.

If you want to archive a group of volunteer records, you can tag those volunteers and then archive all of their records in one step:

1. From the menu, choose Tags.
2. Click the **Go** button located next to **Archive the tagged volunteer records**.

Volgistics will archive all of the tagged records.

### **Operator Rights and Archiving Tagged Records**

If you do not see the **Archive the tagged volunteer records** option on the Tags menu, your Volgistics System Operator rights do not permit you to archive volunteer records. Your System Operator rights are set by your organization's Volgistics Administrator.

#### **Send a VicNet password link to the tagged records**

If you want to provide a number of volunteers with their VicNet password at once, using tags will allow you to do so more efficiently than sending password messages from each individual volunteer's Vic tab. Volunteers who have opted-in to text messaging will receive the password by text and by email. Volunteers who have not opted-in to text messaging will only receive the password by email.

You can customize the content of the email message volunteers receive with the link. The *Send a Message with Login Information* section of help topic 1158 has more information on how to do this. You can find this section of the help topic here.

To send all tagged volunteers a message containing a VicNet password link:

1. Choose Tags from the menu.
  2. Click the **Go** button located next to **Send a VicNet password link to the tagged volunteers**.
- #### **Set temporary VicNet passwords for all tagged volunteers**

There may be times when you want to set a temporary password that volunteers use to login to VicNet for the first time. For example, if you have volunteer orientations where you will train groups of volunteers all at once, you can set the same temporary password for the entire group and tell them the temporary password. Or, you may give out packets to new volunteers where you have instructions on how to login, and you give the temporary password in the instructions. When volunteers login with the temporary password the first time, they will be prompted to select a permanent password.

To assign a temporary password to all tagged volunteers:

1. Choose Tags from the menu.

2. Enter the temporary password in the field located next to *Set **temporary VicNet passwords** for all tagged volunteers*. This password does not need to meet any password strength rules you have set for volunteers because volunteers are required to set a permanent password the first time they login.

3. Click the **Go** button.

### **Send the text messaging opt-in email to the tagged records**

If you have enabled text messaging for your account, you will see an option to send volunteers an email message asking them to opt-in to text messaging. To send this email message:

1. Choose Tags from the menu.

2. Click the **Go** button located next to *Send the **text message opt-in email** message to the tagged volunteer records*.

The system will send the default message from the Messages Ground Rules page to all of the tagged records except for the ones where the volunteer has already opted-in to text messaging. You can find more information on how to edit the default message in the *Communicate that Text Messaging is Available* section of help topic 1301.

### **Add a Site to the tagged records**

If you use Site Level Access, you can use tags to add a Site to the Core tabs of a group of volunteers in a single step. To do this:

1. From the menu, choose Tags.

2. Select the name of the Site you would like to add from the dropdown list next to *Add this **Site** to the tagged volunteer records*.

3. Click the **Go** button.

### **Insert Date records for the tagged volunteers**

There may be times when you want to add the same Date record for many volunteers. For example, you might want to enter the same Training Date record for all of the volunteers who attended a particular orientation session. Start by tagging the volunteers, who attended the session, then:

1. From the menu, choose Tags.

2. In the *Add this **Date** to all of the tagged volunteer records* section, enter the date record information you want to add to all of the tagged records. **Please note:** If you're adding a Checklist date and the Checklist item recurs on an annual or periodic basis, you will need to manually calculate the next due date and enter this in the Expires field. The system will *not* automatically calculate and insert an expiration date when the date is added from the Tags menu.

3. Click the **Go** button.

Volgistics inserts the Date record into all of the tagged records.

### **Add an Assignment to all of the tagged records**

If you would like to add the same Assignment to the Service tab of multiple volunteers at once, you can do this by:

1. From the menu, choose Tags.

2. In the *Add this **Assignment** to all of the tagged volunteer records* section, choose the name of the Assignment to be added from the dropdown list.
3. Select the Role that tagged volunteers should be given in the chosen Assignment.
4. Enter an Assignment "From" date and "To" date, if applicable.
5. Click **Go**.

#### **Add a Mandate to all of the tagged records**

If your organization uses Volgistics' Mandatory Service features to track volunteer progress toward service goals or requirements, there might be a need to add a service mandate to numerous records at once. You can do this by:

1. From the menu, choose Tags.
2. In the *Add this **Mandate** to all of the tagged volunteer records* section, select the applicable Mandatory Service program from the dropdown list.
3. Choose a Starting date for the service mandate, if applicable.
4. Enter a Due by date for the service mandate, if applicable.
5. Enter the number of Hours and/or Service Measures required.
6. Click the **Go** button.

#### **Send a schedule reminder to all of the tagged volunteers**

If you use Volgistics' on-demand schedule reminders feature, you can send schedule reminders for a range of dates you specify. When you send schedule reminders through the *Monthly & on-demand volunteer reminders* setup page, they are sent to every volunteer who has an email address and/or text number on their record, is scheduled during the selected date range in any of the assignments for which the *Schedule reminders* checkbox is checked, and has not declined schedule reminder messages.

There may be a situation, however, when an organization wants to send schedule reminders only to a specific sub-group of those who would normally receive the reminders. In this case, they should take the following steps to send schedule reminders for specific dates to tagged volunteers:

1. From the menu, choose Tags.
2. Next to *Send a **schedule reminder** to all of the tagged volunteers for these dates*, choose the dates for which the schedule reminder should be sent.
3. Click the **Go** button.

The message will be sent by email or text depending on if the volunteer has opted-in to text messaging and his or her message preferences.

#### **Clear Tags**

It's a good idea to clear the tags whenever you finish using them to perform a particular task. You can always clear tags from individual records by un-checking the Tags checkbox. You can also clear tags from all records at once by:

1. From the menu, choose Tags.
2. Click the **Clear all tags** button.

If the button appears grayed out, there are not any tagged records to clear.

## **Schedule Rules**

Help topic 2172

Added or revised 09-19-2016

---

Every Assignment you track in Volgistics may optionally include a volunteer schedule.

You can tailor the way each Assignment's schedule works, depending on the needs of the Assignment. For example, you can have some Assignments for which volunteers must serve only on specific dates at specific times (these are called openings), while other Assignments may permit scheduling on any dates or times.

The Rules tab in the Assignment record is where you specify how you want the schedule to work for a specific Assignment. If you're not already on the Rules tab you can get there like this:

1. Choose Assignments from the menu.
2. Select the Assignment for which you want to set up a schedule.
3. Click on the Rules tab.

(If you do not see the Rules tab, your Volgistics System Operator rights do not provide access to this area. If you have questions about your operator rights, contact your organization's Volgistics Administrator.)

You can click on a section of the help topic in the *Content* box below to go directly to that section.

### **Contents**

Who can sign-up for this schedule?

Allow scheduling for

The *Help Wanted* Icons Do Not Appear on the Calendar

Self-scheduling alerts

Other options

Make this the default setup

**Who can sign-up for this schedule?**

If you use the self-scheduling features, you can use the controls in this section to specify which volunteers are allowed to schedule themselves or be scheduled by a Coordinator for this Assignment. For example, you may have some Assignments that only 'Adult' volunteers may perform; or you may want volunteers to schedule

themselves or be scheduled by coordinators only for the Assignments to which they are specifically assigned (on their Service tab).

#### Volunteers cannot schedule themselves or be scheduled by coordinators

If you choose this option, no volunteers can be scheduled for this Assignment with the volunteer information center self-scheduling features. That is, volunteers are unable to schedule themselves for this Assignment, and Coordinators are also unable to schedule any volunteers in this Assignment. With this option selected, the only way volunteers will be scheduled in this Assignment is if you, or another Volgistics System Operator, specifically schedules them from within Volgistics.

#### Volunteers can schedule themselves or be scheduled by a coordinator if their record has...

Choose this option if you want certain (but not all) volunteers to be able to schedule themselves for this Assignment and you want Coordinators to be able to schedule some (but not all) of their volunteers for this Assignment. When you choose this option, you must use the following controls to specify which volunteers can be scheduled with the volunteer information center self-scheduling features:

- One of these volunteer Statuses:

Select the volunteer Status(es) that volunteers must have in order to be able to schedule themselves or be scheduled by Coordinators for this Assignment. For instance, check only 'Active' if you only want volunteers whose status is 'Active' to be able to schedule themselves. Each volunteer's Status is shown on their Core tab.

You may check any combination of Statuses.

If you want volunteers to be able to schedule themselves for this Assignment and Coordinators to be able to schedule their volunteers for this Assignment no matter what their Status is, check all of the Statuses. **You must select at least one Status in order for self scheduling to work.**

- One of these Roles in this assignment:

Use the checkboxes in this section if you only want volunteers to be able to schedule themselves or be scheduled by Coordinators if they have this Assignment (if this Assignment appears on the Service tab in their record). In this case, check the Role(s) that the volunteers must have in this Assignment in order for them to be able to schedule themselves or be scheduled by a Coordinator.

For example, if you only want to allow volunteers to schedule themselves or be scheduled by a Coordinator for this Assignment if their Role in the Assignment is 'Assigned,' then check the *Assigned* checkbox.

You may check any combination of Roles.

If you want volunteers to be able to schedule themselves or be scheduled by Coordinators for this Assignment even if they do not have this Assignment on their Assignment tab, do not check any of the Roles in this section.

- Include matched volunteers

If you use volunteer and Assignment matching, you can allow volunteers to schedule themselves or be scheduled by Coordinators for this Assignment if they are matched to the Assignment, regardless of their Role(s). If you have disabled the matching features, this checkbox will not appear.

- This Flag:

If you want volunteers to be able to schedule themselves or be scheduled by a Coordinator for this Assignment only if they have a particular Flag on their Core tab, select that Flag here.

For example, if you have a Flag for 'Red Team,' and only Red Team volunteers should be allowed to schedule themselves or be scheduled by a Coordinator for this Assignment, select the 'Red Team' Flag here.

- This Type:

If you want volunteers to be able to schedule themselves or be scheduled by Coordinators for this Assignment only if they have a particular Type on their Core tab, select that Type here.

For example, if you have a Type called 'Adult' and only Adult volunteers should be allowed to schedule themselves or be scheduled by Coordinators for this Assignment, select the 'Adult' Type here.

### Example

In the example configuration shown below for an Assignment called 'Tutor', volunteers can schedule themselves or be scheduled by a coordinator if they are 'Active' volunteers, and they are assigned to the Tutor Assignment with the Role of either 'Assigned,' 'Trainee,' or 'Substitute.'

#### Schedule openings & setup

**Who can sign-up for this schedule?**

Volunteers cannot schedule themselves or be scheduled by coordinators

Volunteers can schedule themselves or be scheduled by a coordinator if their record has...

One of these volunteer Statuses:

<input checked="" type="checkbox"/> Active	<input type="checkbox"/> Applicant	<input type="checkbox"/> Inactive
<input type="checkbox"/> LOA	<input type="checkbox"/> Prospect	<input type="checkbox"/> Sick
<input type="checkbox"/> Vacation		

One of these Roles in this assignment:

<input checked="" type="checkbox"/> Assigned	<input type="checkbox"/> Former	<input type="checkbox"/> Inactive
<input type="checkbox"/> Preference	<input type="checkbox"/> Referral	<input checked="" type="checkbox"/> Substitute
<input checked="" type="checkbox"/> Trainee		

Their Match is:

<input type="checkbox"/> Good	<input type="checkbox"/> Fair	<input type="checkbox"/> Marginal
-------------------------------	-------------------------------	-----------------------------------

This Flag:

This Type:

Any volunteer can schedule themselves or be scheduled by a coordinator

A volunteer with the Status and Assignment entries shown below would be able to schedule themselves or be scheduled by a Coordinator for the Tutor Assignment because their Status is 'Active' and they are assigned to the Tutor Assignment with one of the three required Roles (Substitute). If they did not have the Status 'Active,' or if they were not assigned to the Tutor Assignment with the role of 'Assigned,' 'Trainee,' or 'Substitute,' they would not be able to schedule themselves or be scheduled by a Coordinator for the Tutor Assignment in this example.

**Assignments**

Assignment	Role	From	To	
Tutor [Client Services]	Substitute			Edit Delete

Any volunteer can schedule themselves or be scheduled by a coordinator

Choose this option if you want *any* volunteers to be able to schedule themselves or be scheduled by a Coordinator for this Assignment.

**Allow scheduling for...**

Use this option to control the way volunteers may be scheduled for this assignment.

This option affects the way Volgistics System Operators may schedule volunteers for this Assignment on the Schedule tab of the volunteer record. If you use self-scheduling, this option also affects the way volunteers may schedule themselves as well as how Coordinators may schedule their volunteers for this Assignment.

Openings only

Select this option if you want to schedule volunteers in this Assignment only for specific days and times. This is the best option for Assignments where structured schedules are important; and when you need to have a specific number of volunteers scheduled.

When you select this option you must add one or more openings to the schedule.

When you select this option, and scheduling is done from the Schedule tab of the volunteer's record, System Operators can only add volunteers to this Assignment's schedule for the days and times for which there are openings. Once all of the openings are filled on a given date, no additional volunteers may be scheduled (unless you add more openings).

If you select this option and you use self scheduling, volunteers will only be able to schedule themselves in this Assignment for the days and times of your openings. Once all of the openings on a given date are filled, volunteers can no longer schedule themselves for that date (unless you add more openings).

### Any times on these days

Select this option if it is OK to schedule volunteers in this Assignment with any start and stop time, on any day or on specific days of the week. This is the best option for Assignments where structured schedules are not needed, such as self-paced or self-directed service; and when the number of volunteers scheduled for any day or time is not important.

When you select this option volunteers can be added to this schedule for any times on any of the days you mark here.

If you select this option and you use self-scheduling, volunteers will be able to sign themselves up for this Assignment on any day(s) you have indicated here, for any times they choose. Note that Coordinators are not able to schedule volunteers for 'any times,' so even when this option is selected Coordinators are only able to schedule their volunteers in existing schedule openings.

When you choose 'Any times,' the times volunteers may be scheduled are bound by the Hours of operation you set on the Scheduling Ground Rules page in Setup. For example, if you set your hours of operation to 7:00 a.m. through 10:00 p.m., volunteers may be scheduled for any times, but only between 7:00 a.m. and 10:00 p.m.

### **The Help Wanted Icons Do Not Appear on the Calendar**

The Volgistics Support Team often answers help inquires about why volunteers are not seeing the Help Wanted icons on the calendar. Here are four common reasons a volunteer will not see the icons:

1. There are not any opportunities to serve created in your account. If the Rules tab of the Assignment is configured for *Openings only*, there must be unfilled openings on the Assignment's schedule. If the Rules tab is configured for *Any times on these days*, there must be days of the week checked.
2. The volunteer must meet *all* of the requirements set on the Rules tab of the Assignment. For example, if the Rules tab is set to require the volunteer to have an Active Status, a Role of Assigned or Substitute, and a *CPR Certified*Flag, only volunteers who meet *all three* requirements will see the Help Wanted icons.
3. The opportunities to serve are outside of the date range settings on the VIC Self Scheduling setup page. For example, let's say you allow volunteers to schedule themselves one month in advance. If a volunteer views the schedule on September 3rd, openings on October 18th will not show because they are more than one month away.
4. If your organization uses Site Level Access, volunteers must have the Site the Assignment appears under listed on the Core tab of their record in order to see the Help Wanted icons for the Assignment. You can learn [how to add Sites to the Core tab of a volunteer record in help topic 2037](#).

### **Self-scheduling alerts**

If you use the VicNet or VicTouch modules, and you allow volunteers to add or remove themselves from schedules, you can send alerts to a specific Volgistics System Operator – and/or the Assignment's Coordinators – each time volunteers add or remove themselves from the schedule for the selected Assignment.

This capability aids in keeping staff and supervisors aware of any schedule changes, and it allows them the most time possible to reassess their service needs.

### **If a volunteer schedules themselves for this assignment**

Use this section if you want to send alerts when volunteers choose to *add* themselves to the schedule for this Assignment.

Send an alert to the Volgistics mailbox for this Volgistics operator

Marking this checkbox will cause an automatic alert to be sent to the In Box tab of the Volgistics Mailbox whenever volunteers *add* themselves to this Assignment's schedule. The alert will be visible to all operators who share the mailbox, but will show as being *To* the System Operator you choose from the dropdown list.

**Hint:** If there are multiple Volgistics System Operators who want to receive the alerts, or if the System Operators want to receive the alerts by email or text message, you can make each of these System Operators Coordinators for this Assignment. Then select the option below to send alerts to the Assignment's Coordinators.

Send an alert to this assignment's Coordinators

Marking this checkbox will cause an automatic alert to be sent to the Coordinators for this Assignment each time volunteers *add* themselves to the schedule for this Assignment. If your account has enabled text messaging, and the Coordinator has opted-in to text messaging, then the alert will be sent as a text message. Otherwise, the Coordinator will receive the alert by email.

If the Assignment has more than one Coordinator, the alerts will go to each of them. If a Coordinator does not have an email address in their Coordinator record, the alerts cannot be sent to them.

Send these alerts for

If you want to send these automatic alerts for all volunteers who add themselves to this schedule, select "Any volunteer who schedules themselves."

Alternatively, you may want to send these automatic alerts only when certain types of volunteers add themselves to this schedule. For example, you may only want to send these alerts for "Junior" volunteers and not "Adults." In this case, choose "Only volunteers who have," and then select a Flag, Type, or Kind value that identifies the type of volunteers for whom these alerts are to be sent. When you choose the "Only for volunteers who have" option, automatic alerts will not be sent when volunteers who do not have the selected Flag, Type or Kind add themselves to this Assignment's schedule.

**If a volunteer removes themselves from this assignment's schedule**

Use this section if you want to send alerts when volunteers choose to *remove* themselves from the schedule for this Assignment.

Send an alert to the Volgistics mailbox for this Volgistics operator

Marking this checkbox will cause an automatic alert to be sent to the In Box tab of the Volgistics Mailbox whenever volunteers *remove* themselves from this Assignment's schedule. The alert will be visible to all operators who share the mailbox, but will show as being *To* the System Operator you choose from the dropdown list.

**Hint:** If there are multiple Volgistics System Operators who want to receive the alerts, or if the System Operators want to receive the alerts by email or text message, you can make each of these System Operators Coordinators for this Assignment. Then select the option below to send alerts to the Assignment's Coordinators.

Send an alert to this assignment's Coordinators

Marking this checkbox will cause an automatic alert to be sent to the Coordinators for this Assignment each time volunteers *remove* themselves from the schedule for this Assignment. If your account has enabled text messaging, and the Coordinator has opted-in to text messaging, then the alert will be sent as a text message. Otherwise, the Coordinator will receive the alert by email.

If the Assignment has more than one Coordinator, the alerts will go to each of them. If a Coordinator does not have an email address in their Coordinator record, the alerts cannot be sent to them.

#### Send these alerts for

If you want to send these automatic alerts for all volunteers who remove themselves from this schedule, select "Any volunteer who removes themselves from the schedule."

Alternatively, you may want to send these automatic alerts only when certain types of volunteers remove themselves from the schedule. For example, you may only want to send these alerts for "Junior" volunteers and not "Adults." In this case, choose "Only volunteers who have," and then select a Flag, Type, or Kind value that identifies the type of volunteers for whom these alerts are to be sent. When you choose the "Only for volunteers who have" option, automatic alerts will not be sent when volunteers who do not have the selected Flag, Type or Kind remove themselves from the Assignment's schedule.

#### **Other options**

##### Never include this schedule on online volunteer application forms

If you use online volunteer application forms, you can optionally let new applicants indicate their schedule preference(s) when they apply. Check this box if you do not want schedule openings for this Assignment to appear on the application form.

##### Display volunteer schedule preferences for this assignment

If you collect online application forms that allow applicants to choose the schedule openings they want to serve in, you can optionally display their selections on the schedule for this Assignment as shown in help topic 2134 "Working with Schedule Preferences."

Check this option if you're still scheduling for this Assignment, and you want to see which volunteers have a preference for a schedule opening in this Assignment. You can then easily schedule volunteers based on their preference simply by clicking the *Add to schedule* link that appears on each schedule preference entry.

Leave this option un-checked if you do not want to see volunteer schedule preferences for this Assignment.

#### **Make this the default setup**

Click this button if you want all of the *new* Assignment records you add in the future to have the same Schedule Setup settings as the Assignment record you're working on. The current record's Schedule Setup will become the default for any Assignment records you add in the future.

Clicking this button *will not* change the Schedule Setup settings for any Assignment records you have already created.

This button will not appear if your organization uses Site Level Access and you are a Site-Level Operator. If your organization uses Site Level Access and you are not a Site Level Operator, clicking this button changes the default Schedule Setup settings for new Assignments created at **all** Sites.

Help Topic 1180 - Scheduling Overview

Help Topic 2099 - Tracking Assignments

Help Topic 2170 - VIC Self-Scheduling

## **Sending All Volunteers Their VicNet Passwords in One Step**

Help topic 2233

Added or revised 04-27-2016

---

You can send volunteers a link to set their VicNet password either individually, or to an entire group at once.

For example, if you're just getting started with VicNet, you may want to send all of your volunteers (or perhaps just all of your volunteers with the Active Status) the VicNet password link in a single step. Or, if you've just approved a new group of applicants, you may want to send the password link to all of the new applicants at once. This help topic describes how to do this.

Click on a section of the help topic in the *Contents* box below to jump directly to that section.

### **Contents**

Password Email Message

Tag the Records To Send VicNet Passwords To

Send the Password Email To the Tagged Volunteers

### **Password Email Message**

Volgistics has a template for the VicNet password email message. The same template is used for three purposes: 1) when the message is sent by a System Operator to volunteers, 2) when the message is sent by a System Operator to Coordinators, and 3) when the message is sent because volunteers or Coordinators request a password on the VicNet login page.

When the password email message is sent to a volunteer or Coordinator, the system automatically inserts the person's login name and the password link into the message. Here is how the default password email message appears for a volunteer with the email address of "greentree@hatmail.com."

Below is the password information you requested. Use the login name, and link to set your password, that appear below to access your information at the volunteer information center.

Your login name is: greentree@hatmail.com

Follow the URL to reset your password:

[https://www.volgistics.com/ex/core.dll/process?reset=%3DILM1rHHidoZ8c3\\*^D95oM5P4f](https://www.volgistics.com/ex/core.dll/process?reset=%3DILM1rHHidoZ8c3*^D95oM5P4f)

If you continue to have trouble accessing the volunteer information center with the credentials provided, please contact the volunteer office.

We recommend customizing the contents of the password email message to fit your organization's needs. For example, it is often useful to include instructions to the web page on your organization's website where you've placed the link to the VicNet portal.

Here is how you can customize this message for your account:

1. Select Setup from the menu.

2. Expand the *VicNet* link.
3. Select *Ground rules*.
4. Under *Password email*, enter what you want the email message to say.
5. Click the **Save** button after you are done customizing the password email's content.

Because the same email message is used for all three purposes mentioned at the beginning of this section, you will want to keep the message generic enough to apply to all three purposes while still educating the person on how to log-in. You can see a sample what you could enter as the message's content below:

Expire every  days

### Password email

Volunteers and Coordinators can receive a link to set their password by email. You can customize the content of this message below. Volgistics inserts the person's login name (email address), and the password link, between the Top and Bottom parts

Top part:

Thank you for serving at "My organization." You can find login information for the Volunteer Information Center (VicNet) below. Click on the link to set your password. After you have successfully set a password, you will be directed to the login page.

Bottom part:

To login to VicNet in the future:

1. Go to our website ([www.organization.org](http://www.organization.org))
2. Select the Volunteer page.
3. Click on the "Volunteer portal" link.
4. Enter your email address and password.

We appreciate your service! Please contact Jessica in Volunteer Services (555-444-3333) if you have trouble logging-in.

What should the subject line be for VicNet password emails?

Volunteer Information Center Password

**Heading**

Please keep in mind that the text fields for customizing your password email message will only take plain text. So if you do not place a link to the VicNet portal on your web site, and choose to give the URL address for the portal in your message, the URL address may not always appear as a clickable link when the volunteer or Coordinator receives the email. This will depend on how the recipient's email system treats URL addresses sent in plain text. To help with this, it may be beneficial to put text such as "If this does not appear as a clickable link, please copy and paste this address into your web browser" in your message.

### Password Message and Text Messaging

Please note that if your account has enabled text messaging and a volunteer has opted-in to text messaging, they will receive their password link by text as well as email. However, due to the limited length of text messages they will not receive the content of the message setup in the Password Email Message section of this help topic. They will only receive the password link in the text message.

## Tag the Records To Send VicNet Passwords To

You use the Tags feature to send VicNet passwords to multiple volunteers in a single step. There is not a way to tag Coordinator records so you will need to send passwords to them individually.

These instructions include an example of how to tag all of the volunteers with an Active Status. However, you can tag any group of volunteers you want to send VicNet passwords to. Help topic 2139 shows different ways you can tag groups of volunteer records.

To tag all of the volunteers with an Active Status:

1. Select *Volunteers* from the menu.
2. Under the Include section, click the *Clear* link (this clears any Include settings you may have previously set).
3. Under the Include section, select *Active* from the Status dropdown.
4. Click the *All* link near the top of the Volunteers page.

### Volunteers

[A](#) [B](#) [C](#) [D](#) [E](#) [F](#) [G](#) [H](#) [I](#) [J](#) [K](#) [L](#) [M](#) [N](#) [O](#) [P](#) [Q](#) [R](#) [S](#) [T](#) [U](#) [V](#) [W](#) [X](#) [Y](#) [Z](#) [All](#)

A list of all records with the Active Status appears.

5. Click the **Tag** button in the top left corner. If more records are in your results than the page displays, a pop-up window will appear asking which records to tag. Select to tag all of the records.

All of your "Active" volunteer records are now tagged.

## Send the Password Message To the Tagged Volunteers

Now you're ready to send all of the tagged volunteers an email with a password link. If your account has enabled text messaging, and the volunteer has opted-in to text messaging, the password will be sent by text and email. However, the content of the message you setup in the Password Email Message section of this help topic will not be sent by text due to the limited number of characters text messages can contain.

1. Select Tags from the menu.
2. Click the **Go** button beside *Send a VicNet password link to the tagged volunteers*.

### Please Note

For security, the link in the password email only stays active for 24 hours after it is sent. If volunteers report they click the link and it says that it expired, simply ask them to click the *Forget your password?* or *Need a password?* link on the VicNet login page. This will send them a new link that they can use to get their password.

---

# Delete Volunteer Records

Help topic 2309

Added or revised 12-11-2015

---

If your Volgistics System Operator rights permit, you can delete volunteer records from Volgistics whenever necessary. You can click on a link in the *Contents* box below to go directly to a particular section of this help topic.

## Contents

Important Considerations Before Deleting Records

To Delete a Single Volunteer Record

To Delete Multiple Volunteer Records

Site-Level Operators and Deleting Records

Remove a Deleted Record Before the 5 Day Hold Period Ends

### Important Considerations Before Deleting Records

- **Deleted volunteer records can only be restored for 5 calendar days after they are deleted.** If 5 days pass and the record has not been restored, it will be permanently deleted from the system. There is not a way to "un-do" the deletion at this point. You can find information on how to restore a deleted record during the 5 day hold period in help topic 2311. *Please note that there is not a way to restore the schedule for a deleted record that has been restored.*
- There may be instances where you need to permanently delete a record before the 5 calendar day hold period ends. If you need to do this, see the Remove a Deleted Record Before the 5 Day Hold Period Ends section at the bottom of this help topic.
- Any service records associated with the record you delete are also deleted. This means that any volunteer service performed by the volunteer whose record you delete will no longer appear on any service reports, or in the cumulative hour total for your account. The service information not appearing on reports may not matter to you if the volunteer service associated with the record you delete has already been reported on prior year service reports, and you no longer need a record of their service detail. For example, if the record you're deleting only has service records through 2013, and you have already printed 2013 year end reports, deleting service entries from 2013 or earlier may not affect future reporting. However if the record you want to delete includes service records for the current fiscal or calendar year, you should not delete the record until after you print any year end service reports you need (consider archiving the record until then).
- If you want to remove a record from your database but you don't want to delete it, you can archive it instead. Volunteer service associated with archived volunteer records *will* always appear on service reports, and in the cumulative hour total for your account, even while the volunteer's record is in the archives. Help topic 1997 has more information on this.
- If you discover that you have two (or more) volunteer records for the same volunteer, you can use the **Combine** button on the Core tab to combine the records rather than deleting one of them. *Records deleted through combining cannot be restored.*

### To Delete a Single Volunteer Record

1. Choose *Volunteers* from the menu.
2. Locate the volunteer record you want to delete, and then open it to the Core tab.
3. Click the **Delete** button near the top of the Core tab.

## Thomas, Jill

The screenshot shows a user interface for a record titled "Thomas, Jill". At the top, there are several tabs: "Core", "Profile", "Service", "Schedule", "History", "Contacts", "Notes", and "Vic". A red arrow points to the "Delete" button in the "Service" tab. Below the tabs, there are buttons for "Save", "Cancel", "Archive", "Delete", and "Combine". To the right, there are buttons for "New", "Previous", and "Next". Below these buttons, there is a "Tagged" checkbox and a "Copy" icon. The "Name" section contains a "Last name" field with "Thomas" and a "Number" field with "305".

### Operator Rights and Deleting Records

If you do not see a **Delete** button on the Core tab, your Volgistics System Operator rights do not permit you to delete volunteer records. Your System Operator rights are set by your organization's Volgistics Administrator.

4. A dialog box will appear to confirm that you would like to delete the record. If the volunteer has VicDocs documents stored, the box will have an option to download the documents when you delete the record. When you choose this option, the volunteer's VicDocs will be placed in a zip file and sent to the In Box of your Volgistics mailbox. *You must save the zip file to your local computer within 5 days.* The document download is deleted automatically when the volunteer's record is permanently deleted.

5. If you'd like to proceed with deleting the record, click the **OK** button in the dialog box. Otherwise, click the **Cancel** button to close the dialog box without deleting the volunteer.

### To Delete Multiple Volunteer Records

You will use the Tags feature to delete multiple volunteer records. Because tags are cumulative during your session, we recommend **always** clearing your tags before deleting multiple records. This will reduce the chance that records are unintentionally deleted. To clear all records currently tagged for your session, select **Tags** from the menu and click the **Clear all tags** button. If the button appears grayed out, there are not any tagged records to clear.

To delete multiple volunteer records:

1. Tag the volunteer records you need to delete.
2. Select **Tags** from the menu.
3. Click the **Go** button beside **Delete the tagged volunteer records**.

The screenshot shows a dialog box with several options for managing tagged records. The options are:

- Change the **Status** of all tagged volunteer records to: [dropdown] [Go]
- Change the **Type** of all of the tagged volunteer records to: [dropdown] [Go]
- Add this **Flag** to all of the tagged volunteer records: [dropdown] [Go]
- Delete** the tagged volunteer records: [Go] (This option is highlighted with a red box)
- Archive** the tagged volunteer records: [Go]
- Reset and send the temporary **VicNet password message** to the tagged volunteer records:
  - Auto generate
  - Set as PIN
  - Set to: [text field][Go]

## Operator Rights and Deleting Records

If you do not see the **Delete the tagged volunteer records** option on the Tags menu, your Volgistics System Operator rights do not permit you to delete volunteer records. Your System Operator rights are set by your organization's Volgistics Administrator.

4. A dialog box will appear to confirm that you would like to delete the tagged records. If any of the tagged volunteers have VicDocs documents stored, the box will have an option to download the documents when you delete the record. When you choose this option, the volunteers' VicDocs will be placed in a zip file and sent to the In Box of your Volgistics mailbox. *You must save the zip file to your local computer within 5 days.* The document download is deleted automatically when the volunteer records are permanently deleted.

5. If you'd like to proceed with deleting the tagged records, click the **OK** button in the dialog box. Otherwise, click the **Cancel** button to close the dialog box without deleting the volunteers.

## Site-Level Operators and Deleting Records

*If you use the Site Level Access feature in your account, you should note how this affects volunteer record deletions.*

If a Site-Level Operator is allowed to delete volunteer records, and they choose to delete a volunteer record for a volunteer that serves *only* at their own Site, the volunteer record is deleted.

If a Site-Level Operator is allowed to delete volunteer records and they choose to delete a volunteer record for a volunteer that serves at multiple Sites, the volunteer record will no longer be associated with the Site where they have been deleted (and therefore appear to have been deleted from that Site's database). However, the record remains in the database and it is still accessible to Site-Level Operators from the other Site(s), as well as to headquarters level operators.

Headquarters level operators (operators with access to "All Sites") are not subject to these restrictions even if their account uses Site Level Access. When a headquarters level operator deletes a record, it is removed from the database regardless of what Site(s) the record is associated with.

## Remove a Deleted Record Before the 5 Day Hold Period Ends

You can permanently remove a volunteer record from the database before the end of the 5 calendar day hold period if needed. Please remember that there will *not* be a way to recover the record from the system if you do this. All information associated with the record (with the exception of the zip file of downloaded VicDocs documents) will be removed from the system.

The downloaded zip file of VicDocs will still be available for 5 days from the date the record was deleted even if you permanently delete the record before this time. If you wish to permanently delete the zip file before 5 days, follow the directions in the Deleting In Box Items section of help topic 1110.

To remove a record before the end of the 5 day hold period:

1. Choose Volunteers from the menu. The initial Volunteers screen appears.
2. If the Advanced Include options are not already displayed, click the **Advanced options** button.

# How to Setup Volgistics - Basic

Help topic 2323

Added or revised 06-21-2013

---

Volgistics includes a variety of setup and customization options you can use to adapt the system to best suit your own needs for tracking and coordinating volunteers.

This help topic includes a plan you can follow to initially setup the basic aspects of Volgistics for your organization. It lists each of the key setup tasks with links to other help topics that have instructions on how to complete each task. If you already have the basics of your account setup, you can view a help topic on setting up more advanced aspects by clicking the **Next** arrow.

## Contents

1. Complete the *Getting Started* Interview
2. Add System Operators
3. Customize Fields
4. Add Types and Flags
5. Add Statuses
6. Start and Stop Date Rules
7. Add Volunteer Records
8. Add Assignments
9. Add Roles
10. Add Roles to Volunteers
11. Build Schedules
12. Add Holidays

### **1. Complete the *Getting Started* Interview**

When you first start your Volgistics account, you complete a *Getting Started* interview online. Volgistics uses the answers to these questions to initially configure system setup options to best suit your organization's needs.

If you have already started your Volgistics account (or if someone else in your organization did), this step has already been completed and you can continue with the next step.

If you have not started a Volgistics account yet, you will have an opportunity to complete the *Getting Started* interview the first time you login to your account. Help topic 2060 explains more about the *Getting Started* interview.

You can change any of the setup options initially configured in the *Getting Started* interview as you learn more about Volgistics, or as your needs change. They are not "set in stone" so you don't need to worry about not being able to change your choices later.

If you've already completed the *Getting Started* interview, there is usually no need to complete it again. However, if you want to run the *Getting Started* interview again, you can clear your account and select to clear your account setup. Help topic 2112 explains how to do this. The first time you login after you clear your account you'll be asked to complete the *Getting Started* interview again. *Please remember if you choose to clear your account that any volunteer records or setup options you've already entered will be erased! So you should only clear your account if you want to erase all of your information and start from scratch.*

If you choose to clear your account so you can complete the Getting Started interview again, be sure to uncheck these options on the Clear Account page:

- Keep account setup
- Keep reports

### **IMPORTANT!**

If you are converting volunteer data into Volgistics from another program using the Import Utility, VolunteerWorks, or the Jump-Start service, do not proceed beyond this point until your data conversion is complete.

The data conversion process may set some options to match your existing data. The data conversion may also insert Assignments, Checklist item names, and Award names from your old data. Therefore you should not setup your account until after the data conversion is finished.

You can learn more about data conversion options in Help topic 2299, or by visiting [www.volgistics.com](http://www.volgistics.com), hovering over Support on the menu at the top of the page, and selecting Conversions.

## **2. Add System Operators**

Volgistics System Operators are the people in your organization who you want to be able to use Volgistics. Volgistics is a multi-user system. This means different people in your organization can use the system at the same time as long as they have each been setup as a separate System Operator.

Every Volgistics account starts with space for two System Operators. You can create additional System Operators beyond two if your account's service level permits. See Help topic 2166 if you want to add more System Operators than you currently have space for. You create your first System Operator record during the sign-up process when you start a free trial account.

If you want to add additional System Operators to your account now, follow the step-by-step instructions in Help topic 2026.

You can always add more System Operators, or change your System Operator profiles later, if you want to complete the account setup before giving other people access.

## **3. Customize Fields**

Volgistics allows you to customize many of the fields in your account. In most cases you can change the name of the field and hide it if you will not need it. In some cases you can also change the formatting required for the field. The exception to this is system fields that cannot be changed.

There are also spare fields that can be setup for your organization's needs. These fields are located in the following locations:

### Profile tab on volunteer records

- 6 Spare Dropdown
- 6 Spare Fields\*
- 6 Spare Checkbox

There are also Characteristic fields that can be created.

Service tab on volunteer records

1 Spare Date  
1 Spare Dropdown  
1 Spare Checkbox

History tab on volunteer records

1 Spare Date  
1 Spare Dropdown  
1 Spare Checkbox  
1 Spare Text

Contacts tab on volunteer records

1 Spare Date  
1 Spare Text

Site tab on a Site record

6 Spare Dropdown  
6 Spare Fields\*  
6 Spare Checkbox

Place tab on a Place record

6 Spare Dropdown  
6 Spare Fields\*  
6 Spare Checkbox

Assignment tab on an Assignment record

6 Spare Dropdown  
6 Spare Fields\*  
6 Spare Checkbox

Coordinator tab on a Coordinator record

1 Spare Dropdown  
2 Spare Date

Assignments tab on a Coordinator record

1 Spare Dropdown  
1 Spare Checkbox  
1 Spare Date

\*These fields can be given text, date, whole number, decimal (1 or 2 places), currency, or social security number format.

You can find a listing of all the fields available in Volgistics in Help topic 1174. You can find directions and more information on how to customize fields in Help topic 2017.

## Important things to consider when customizing fields

1. If you used one of the conversion methods (Import Utility, VolunteerWorks, or Jump-Start) to move volunteer and other information into Volgistics, you may find that some of the spare fields have been created for you already. In this case, you can edit the fields if they do not appear as you'd like. If the field is a dropdown list, or look-up table, Help topic 2018 has information on how to edit the field.

2. If you're using the spare fields on the Profile tab of volunteer records to collect information from an application form, there is not a way to set the order the fields appear in within each section of the form. The order the fields appear in is determined by the type of field first (dropdown, general, checkbox) and then by the order the fields were created in. For example, if you create the following fields with the following names:

Association member (spare checkbox 1)

Ethnicity (spare dropdown 2)

Gender (spare dropdown 3)

Other last names (spare field 2)

Parking permit number (spare field 1)

Referral source (spare dropdown 1)

These fields would appear in the following order if they were all included on the same section of the application form:

Referral source (spare dropdown 1)

Ethnicity (spare dropdown 2)

Gender (spare dropdown 3)

Parking permit number (spare field 1)

Other last names (spare field 2)

Association member (spare checkbox 1)

If controlling the field order is important on your application form, you should make sure you create the fields with the order you want them to appear within application form sections in mind.

3. If the spare fields offered on the Profile tab of volunteer records are not sufficient, you may be able to use the Characteristic and/or Preference fields on this tab to collect additional information.

## 4. Add Types and Flags

Types and Flags offer ways to categorize volunteer records in Volgistics. You can use them to control how you view volunteer records, run reports, apply Checklist and awards, send email messages, and other things. You may have setup some Types and Flags in your account during the Getting Started interview.

If you want to delete, add, or make new Types or Flags now, please see Help topic 2263.

## 5. Add Statuses

Volgistics tracks a volunteer's overall relationship with your organization by using the Status field. Each account can have up to eight different Status categories. By default, the categories are setup as Active, Applicant, Inactive and Prospect. All of these except the Active Status can be modified to be something else.

You can add, delete, modify, or setup a default Status for new records. Help topic 2014 has information on how to do this.

## 6. Start and Stop Date Rules

By default, Volgistics records a volunteer's Start date as the first date they have an Active Status and their Stop date as the first date they have an Inactive Status. You can learn more about this in help topic 2315.

You can modify the rules used to determine a volunteer's Start and Stop dates to be based on different and/or additional Statuses. Help topic 2314 shows how to do this.

## 7. Add Volunteer Records

If you used one of the conversion methods discussed in the Getting Started section of this help topic, you may already have volunteer records in your account. If you didn't use a conversion method, or you need to add additional records, Help topic 2298 shows how to manually enter records in your account.

Please note, in some cases (such as special events), you may want to use application forms to enter volunteers. In this case, you can skip this step and add volunteer records later.

## 8. Add Assignments

The next step is to begin adding the names of your volunteer *Assignments* to the system. Assignments are what your volunteers do for your organization. Every organization that has volunteers has at least one volunteer Assignment (or else your volunteers would have nothing to do!).

Assignment information is a key part of your database. Your Assignment list makes it possible for you to keep track of which Assignments volunteers are qualified to perform, which they are interested in or scheduled for, and so forth. It will enable you to print volunteer service reports broken-out by assignment, and view lists of volunteers according to Assignment.

At this point all you need for each Assignment you want to track is an Assignment *name*. Below are some examples of volunteer Assignment names taken from a variety of different kinds of organizations. Of course these are only examples. You should use your own Assignment names, which may be whatever you'd like (up to 72 characters long).

Assignment names can be changed later so you don't need to worry if you're unsure of what to call an Assignment.

Docent	Book cart	Driver
Ticket taker	Usher	Records
Exhibit explainer	Phone bank	Public speaker
Donor recruiter	Receptionist	Tutor
Math tutor, 6-12	Trail maintenance	Circulation desk
Reading room	Client advocate	Ambassador
Greeter	Tour guide	Gift shop cashier
Radiology	Campaign phone bank	EMT
Emergency response trainer	Counselor	Hot line counselor
Water station	Front desk	Curb greeter
Legal advocate	Waiting room	Office assistant

In addition to storing the name of each Assignment, Volgistics can also help you organize, publish, and track other kinds of Assignment information too. For example, you can also enter things such as a job description, age requirement, the location where the Assignment is performed, the supervisor's name and contact information, and more. You can enter this additional information now as you're getting started, or you can return to each Assignment record later to add additional Assignment information.

Follow the step-by-step instructions in Help topic 2215 to learn how to add an Assignment record.

You can enter your volunteer Assignments under one or more Sites and Places. This gives you a way to organize your Assignments according to geographic, program, or department divisions your organization might have. Help topic 2099 explains more about this capability.

If you're not sure if you need to organize your Assignment list according to any kind of geographic, program, or departmental structure (or if you don't know what that structure is), you can simply add your new Assignments to the default *Volunteer Services* Place. If you choose to, you can easily reorganize your Assignment list according to Places (or Sites and Places) later.

If you converted data from another program, some (or all) of your Assignments may already be in Volgistics. You can find out if your database already has any Assignments entered by choosing Assignments from the menu.

It's okay if you don't enter all of your Assignments right now. You can always add more Assignments later as you go.

## **9. Add Roles**

Volgistics uses Roles as a way to show a volunteer's relationship to an Assignment. The default Roles are Assigned, Former, Preference, Substitute and Trainee. One volunteer can have multiple Roles in an Assignment. For example, a volunteer may regularly serve in an Assignment, plus be available as a substitute. So this volunteer could have Roles of Assigned and Substitute in the same Assignment.

You can customize the Roles used to relate volunteers to Assignments, and learn more about how this feature works, in help topic 2173.

## **10. Add Roles to Volunteers**

If you converted data from another program, some of your volunteer records may already have Roles recorded for Assignments. If not, and you know that some of your volunteers will serve in, or prefer, certain Assignments, you can give them a Role in these Assignments now. Help topic 2399 shows how to do this. If you're unsure of which Assignments volunteers should have Roles in, these can always be assigned later.

You may also want to setup your account to automatically give volunteers a Role of Assigned in an Assignment if they are scheduled for, or have service hours recorded for, the Assignment. Help topic 2265 shows how to set this up. Using automatic Assignment tracking can eliminate the need to assign volunteers a Role in Assignments now if you will schedule them later.

## **11. Build Schedules**

In most organizations, volunteer schedules can be built in two different ways. There are Assignments such as *Trail Maintenance* or *Kennel Cleaner* where volunteers come in to complete a task that does not need to be performed at a specific time of day. Volgistics refers to these Assignments as "any time" Assignments. There are also Assignments such as *Tour Guide* or *Circulation Desk* where coverage is needed during specific shifts on specific days of the week. Volgistics refers to these Assignments as "openings only" Assignments. Your organization may have one, or both, of these types of Assignments.

For "any time" Assignments, you will schedule volunteers (or volunteers will schedule themselves) once your account setup is complete. So there is not much to do for these Assignments at this point. However, for "openings only" Assignments you may want to setup the shifts, or times, volunteers are needed now. Help topic 2158 shows how to do this. Of course, if you're unsure of when your volunteers will be needed, you can always add (or modify) Assignment openings later.

Regardless of whether your Assignments are "any time" or "openings only" Assignments, you should also review help topic 1180 to get an overview of how the scheduling features work in Volgistics. This help topic also has links to other help topics to help you setup the ground rules for scheduling in your account.

## **12. Add Holidays**

Your organization may have days when volunteers are not needed, or you operate with just a skeleton staff of volunteers. In this case, you can mark these days as holidays in your account. Doing this will remove any regularly scheduled volunteers, and recurring unfilled openings, from your schedule on these days. If you still need volunteers to come in, you can schedule them specifically for that date or create one day only openings on the date. Help topic 1022 explains more about how this feature works and how to setup the holiday dates.

Depending on how much of the year has passed, you may want to setup the holidays in your account for the remainder of the present year and/or for the following year at this time. You can always mark your office calendar, or set a reminder, to update holidays for the future years during the time of year that works best for you.

---

## **Service Tracking Ground Rules Setup Page**

Help topic 2488

Added or revised 10-07-2016

---

Setup\Service tracking

You can use the Service Tracking Ground Rules Setup page to configure the basic service tracking operations for your account. To get to the Service Tracking Ground Rules page, choose Setup from the menu, click on Service tracking, and then choose Ground rules.

### **Hour entry display format**

Hours:minutes (e.g. 123:30)

Choose this option to display hour values in Volgistics in the hours:minutes format.

Decimal (e.g. 123.5)

Choose this option to display hours values in Volgistics in the decimal format.

### **Manual volunteer service entries**

If you post volunteer service information manually in Volgistics, there are several options pertaining to the display of this service information.

Choose one of the following options for posting volunteer service manually

*We always make manual service entries for one month at a time.*

This option will allow you to enter a total number of hours in one lump sum for the entire month, as shown below.

**Add**

Assignment:

Month:

Apply to:

Hours:

*We always make manual service entries for one day at a time, and we do NOT want to enter the volunteer's start and stop times.*

When this option is chosen, service entries will have room for one date and a number of hours and minutes, as seen below.

**Add**

Assignment:

Date:  

Apply to:

Hours:

*We always make manual service entries for one day at a time, and we DO want to enter the volunteer's start and stop times.*

Choosing this option will allow you to enter a specific date and the times a volunteer began and ended their service. The "Hours" field will be filled in automatically once the "From" and "To" times have been entered.

**Add**

Assignment:

Date:   From time:

To time:

Apply to:

Hours:

*We want to make manual service entries with a beginning and an ending date, and we do NOT want to enter the volunteer's start and stop times.*

Choosing this option will permit service entries with a lump sum of hours that span multiple days.

### Add

Assignment:

From date:  

To date:  

Apply to:

Hours:

We want to make manual service entries with a beginning and an ending date, and we DO want to enter the volunteer's start and stop times.

Finally, choose this option if you would like your service entries to include multiple days and list the "To" and "From" times for the service. This option is particularly useful when recording service performed overnight.

### Add

Assignment:

From date:   From time:

To date:   To time:

Apply to:

Hours:

### Full time equivalent

Use this section to enter the number of hours that should be considered a full time equivalent in Volgistics reports.

---

## Volgistics A - Z: A Glossary of Volgistics Terminology

Help topic 2500

Added or revised 11-18-2016

---

Volgistics uses specific terminology regarding the different aspects of your account. It can sometimes be confusing if you do not know what the terms mean. This help topic defines each term and can be a helpful resource when you are using the system.

You can click a letter in the *Index* box to go directly to a section of this help topic.

### Index

**A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z**

**Account** - When the Volgistics team refers to an *account* they mean the entire database of records for your organization. Each Volgistics account has only a single account number and service level. The support team often gets help inquiries where *account* is used to refer to different things in the system such as volunteer, Coordinator, or System Operator records. Or sometimes even the Site, Place, or Assignment records. Volgistics generally refers to these items by name instead of as an *account*.

**Accounting Access Code** - This code allows people who are not setup as System Operators (or System Operators who have the Basic User or Power User operator levels) to gain access to the Volgistics Store for your account. You can find more information here.

**Accounting Operator** - This term is used to describe any person who can access the Volgistics Store for your account using the Accounting Access Code. This person may, or may not, be the Billing Contact on file for your account. The Accounting Operator does not count as a System Operator in your account's service level.

**Active Status** - This is a default Status in Volgistics that cannot be modified. The Active Status is generally used to describe a volunteer who has completed the induction process to volunteer with your organization and is now contributing. Please see Status in this glossary for more information.

**Activity** - Please see Assignment in this glossary for more information.

**Address Label Reports** - These reports make PDF files that put names and addresses for volunteers, contacts for volunteers, and/or Coordinators in common formats for sheet fed laser or ink jet printer labels. You can find more information here.

**Administrator** - Also referred to as *Volgistics Administrator*. Please see Volgistics Administrator in this glossary for more information.

**Alerts** - Notifications sent to System Operators or Coordinators when events occur such as receiving an application, self-scheduling, or email opt-outs by a volunteer.

**Anniversary Cards** - Please see Greeting Cards in this glossary for more information.

**Any Times** - A term used to describe Assignments or schedule entries that do not require volunteers to serve specific times. You can setup the Rules tab of an Assignment to allow self-scheduling for *any times* in Assignments that do not require volunteers to serve a certain shift. Please see Schedule in this glossary for more information.

**Applicant Status** - A default Status in Volgistics generally used to describe people who have begun the process of becoming a volunteer by filling out an application form. Please see Status in this glossary for more information.

**Application Forms** - Online forms people interested in serving with your organization can complete. Information from these forms is automatically used to create volunteer records in your account. You can find more information here.

**Applications Tab** - A tab in the Volgistics mailbox used to receive new application forms and records converted (imported) into your account. You can learn more about how to receive records from the Applications tab here.

**Archive** - A section of your database used to store inactive, or un-needed, volunteer records, or the act of sending these records to the archived section. Please note this is separate from Status. Archived and non-archived records can have any Status in your account regardless of the section they are in. Because archived records have more limited functionality than non-archived records, they cost less on a record-by-record basis. You can find more information here.

**Assigned Role** - Roles in Volgistics are used to show the volunteer's relationship, or standing, in a specific Assignment. The Assigned Role is a default Role generally used to show that the volunteer is currently serving in the Assignment. Please see Role in this glossary for more information.

**Assignment** - The task, or work, the volunteers actually perform at your organization. Some organizations may refer to these as *events, jobs, opportunities, work area, projects, or positions*. Creating Assignments is important because it gives you more options for scheduling and recording service. You can find more information here.

**Assignment Cluster** - A Volgistics feature that allows you to group or organize similar Assignments together even if they are not listed under the same Site or Place in the account's Site, Place, and Assignment hierarchy. When this feature is enabled, many reports can be organized by Cluster. You can learn more about how to enable this feature here.

**Assignment Preference Field** - A preference field that applicants and volunteers can use to express that they are interested in serving in an assignment. You can learn more about setting up this field here. You can learn more about using this field on application forms here.

**Assignment Profile Reports** - These reports create PDF files with information about Assignments in your account. You can find more information [here](#).

**Attachment** - A PDF or Microsoft Word document that is sent out with an email message. You can find more information [here](#).

**Audit** - Each account's Administrator(s) can configure the account so that System Operators can review service records for accuracy. You can find information on how this works [here](#).

**Automatic Messages** - Email or text messages automatically sent to volunteers and Coordinators by Volgistics. These can include schedule reminders, Checklist reminders, password messages, or self-scheduling alerts.

**Automatic Payment** - A payment option for paying your Volgistics service fee with automatic monthly payments charged to your credit card. You can find more information [here](#).

**Awards** - A recognition program for tracking volunteer milestones such as a certain number of years or hours served. You can also setup recognition for things not based on a milestone, such as a *Volunteer of the Month* award. You can find more information [here](#).

**Awards Reports** - Stock reports designed to help you manage your Award program. You can find more information [here](#).

*[Back to Index](#)*

**Back-up** - Storing data for future reference. Volgistics does a system-wide back-up of all accounts nightly, but these can only be used to restore the entire system in the case of a catastrophic emergency. You may also want to make a local back-up of your volunteer information using an Excel report. You can find more information [here](#).

**Basic User** - A user level that controls the amount of access the System Operator has in the account. To customize the access, Administrators setup the Field Rights and Tab Rights for the Basic User operators.

**Batch Reports** - A report listing all service entries in a batch of service recorded with the Post feature. You can see an example of this report [here](#) and find more information about the report [here](#).

**Billing Contact** - The person you select to receive automatic email messages concerning your account's status. This person may be the account's Administrator or another System Operator. Or it may be a person from a department in your organization that handles payments. You can find information on how to update the email address on file for the billing contact [here](#).

**Birthday Cards** - Please see Greeting Cards in this glossary for more information.

**Birthday List** - You can setup Volgistics to display a list of volunteers who have upcoming or recent birthdays on the Welcome page that System Operators see when they login. The list can be configured to update automatically on a daily, weekly, or monthly basis. You can find more information [here](#).

*[Back to Index](#)*

**Calendar Year** - The standard calendar year running from January 1st to December 31st. Your reports for volunteer service can be organized by calendar year, or fiscal year.

**Cards** - Please see Greeting Cards in this glossary for more information.

**Characteristic Field** - These customizable fields provide checkboxes for collecting information about your volunteers. They are ideal for recording things such as skills, interests, languages spoken, memberships, certifications, and more. You can find more information [here](#).

**Checklist Item** - Checklists provide a tool for tracking the completion of actions volunteers must fulfill in order to serve. They can be one time requirements (such as reference checks, orientations, or confidentiality agreements) or recurring requirements (such as flu shots or background checks). You can find more information [here](#).

**Checklist Reminders** - Automatic messages that are sent to volunteers to let them know that a recurring Checklist item is due.

**Cluster** - See Assignment Cluster for information.

**Comment Fields** - A field that can be added to volunteer application forms to collect narrative information. When the application form creates the volunteer's record, information entered in the Comment field is directed to the Notes tab of the record. You can find more information on how to add Comment fields to application forms [here](#).

**Contacts** - The information for a volunteer's or group's contacts found on the Contacts tab of their record. Typical contacts include Emergency Contacts, References, and Employers. Other kinds of contacts can be customized. Contact fields can also be added to application forms. You can find more information on how to do this here.

**Contacts Tab** - A tab on the volunteer record where the Contacts for the record are stored. You can find more information on volunteer record organization here.

**Conversion** - The process of importing, or transferring, volunteer information from a previous database or file into your Volgistics account. You can find more information about the options for creating volunteer records here.

**Coordinator** - A Volgistics user who can access basic volunteer information and schedules through the VicNet module. These users do not have the same degree of access to the account as System Operators. Many organizations refer to their volunteer department's leaders as *coordinators*; however, these people may have *System Operator* records in your account. You can find more information about Coordinator records here.

**Core Tab**- This is a tab on the volunteer record where the basic information for the volunteer or group is stored. You can find more information on the Core tab here.

**Count** - The number of records in your account. You can find totals for the number of records used by selecting Setup from the menu, expanding the *Account management* link, and selecting *Account status*. You can also find numbers for volunteers with just certain characteristics. You can find more information on how to do this here. If you want to find the number of volunteers with service during a certain time period, use the Unduplicated Volunteer Count.

**Credentials** - The information used by a System Operator to access Volgistics. This includes their account number, plus the email address and password on file for them on their System Operator record. You can find more information about how to use credentials to login here.

**Custom Reports** - Volgistics contains Stock Reports that are pre-made reports designed to meet a variety of common volunteer tracking needs. You can also create *custom reports* where you select the organization, format, and fields for the report. You can find more information on creating custom reports here.

*Back to Index*

**Daily Availability** - A field used to track when volunteers are available to serve as well as when volunteers are needed for an assignment. This field appears on the Profile tab of volunteer and assignment records.

**Date Entered** - The date a volunteer record was added to your database. This date is recorded on the History tab of the volunteer record and is available in Sets and reports. You can find information on how records are added to your database here.

**Date of Last Activity (DOLA)** - Date of Last Activity is sometimes abbreviated as DOLA. The Date of Last Activity is the date of the last service entry made on a volunteer record. This date appears in the Statistics box on the volunteer record and is available in Sets and reports. You can find more information here.

**Department** - Volgistics does not have a term, or item, called *department*; however, many accounts use this term to refer to a Site, Place, or Assignment in their account's assignment structure. You can find more information here.

**Display Graphic** - This is an image uploaded to Volgistics so that it appears on the online forms used in your account. Please see Logo Graphic in this glossary for more information.

**Docs Tab** - This is a tab on records for electronic document storage. The Docs tab always appears on volunteer records (learn more here). If the VicDocs module is included in your account's service level, there will also be a Docs tab on Coordinator records (learn more here) as well as Site, Place, and Assignment records (learn more here).

**Documents Tab** - A tab on the Volgistics Mailbox designed to help you manage your documents. The Documents tab will always have sub-tabs for attachment and volunteer documents. If the VicDocs module is included in your account's service level, there will also be sub-tabs for Coordinator, Site, Place, and Assignment documents. You can learn more about the Documents tab here.

**DOLA** - Please see Date of Last Activity (DOLA) in this glossary for information.

*Back to Index*

**Email Messages** - Communication sent to your volunteers and/or Coordinators via email. You can find more information on how to send email messages here.

**Email Codes** - Codes that can be inserted into the body of your email message to personalize the message with your volunteer's information. You can find more information here.

**Email Opt-out** - Please see Opt-out in this glossary for information.

**Email Preferences** - Part of the Opt-out feature that allows volunteers and Coordinators to select the types of email messages they wish to receive. You can find more information here.

**Email Types** - Categories of email messages volunteers use to select their Email Preferences. You can find more information here.

**Event** - Volgistics does not use the term *event* for anything but the actions, or tasks, a System Operator performs. However, many organizations use the term *event* to refer to a function where their volunteers will serve, or to the actual jobs or tasks the volunteers will perform at the event. In Volgistics, you will typically use Site or Place records for the overall event, and Assignment records for the jobs or tasks volunteers perform at the event.

**Event Log** - The Event Log is a record of key actions for your account. Quite often these are related to actions performed by a System Operator, but they can also be events the system initiates. Only key actions are tracked because logging every single action is not practical due to the additional processing and storage requirements this would introduce. You can find more information here.

**Excel** - A Microsoft application used for spreadsheet data. Volgistics does not supply the Excel program, but it can produce reports in Excel format. You can find more information in the Excel Spreadsheet Report entry.

**Excel Spreadsheet Reports** - Reports produced by Volgistics in spreadsheet format using the Excel file extension (.xlsx). There is a specific Excel report type here, and many other stock and custom reports can also be produced in Excel format.

*Back to Index*

**Field Rights** - Administrator(s) can restrict System Operator access to certain fields according to the operator's User Level. Fields can be hidden from view for a user level, or set to *View only* so the user can see the information but not change it. You can find more information here. You may also want to see Tab Rights in this glossary for more information.

**Fields** - Fields in Volgistics refer to locations where you can store information. Fields can have different types or formats such as text, date, dropdown list, or checkbox. You can find more information about the fields available in Volgistics here.

**Fill Link** - The Fill link is a link that appears beside an unfilled opening on your account's schedule. Clicking this link opens the *Fill an opening* box so that you can schedule a volunteer to fill the opening slot. Please see Opening in this glossary for more information on schedule openings.

**Filled Opening** - A filled opening slot means a volunteer is scheduled to serve in the shift that the opening represents. Please note that one opening can have multiple slots (for instance if 5 volunteers are needed for the shift). So even if a volunteer is filling one of the slots, there may still be unfilled opening slots available for the same opening. You can use the schedule icons as a visual indicator to see if an opening slot is filled or unfilled.

**Fiscal Year** - A 12-month period used to calculate annual financial statements. This is sometimes also called a *financial year* or *budget year*. You can setup Volgistics to figure year-to-date (YTD) totals and reports based on your organization's fiscal year. You can find more information on this here.

**Flags** - Flags provide a way to identify and categorize volunteer records. Flags differ from Types because a volunteer can have multiple Flags but only one Type. You can find more information here.

**Floating Subtotal** - Two customizable floating subtotal fields are available to help you track service over a certain range of months. The floating subtotal fields are available on most reports and in the Statistics box on the Core tab of the volunteer record. You can find more information here.

**Former Role** - Roles in Volgistics are used to show the volunteer's relationship, or standing, in a specific Assignment. The Former Role is a default Role generally used to show that the volunteer previously served in an Assignment, but is not serving in the Assignment at the current time. Please see Role in this glossary for more information.

**Frequency** - The *Frequency* field is a field that is used for schedule entries to show how often the entry will occur. It can be set to One time for assignments that will take place on just one date, or Regular if the entry will repeat on certain weekdays.

**FTE** - Please see Full-Time Equivalent (FTE) in this glossary for information.

**Full-Time Equivalent (FTE)** - Full-time equivalent (FTE) refers to a unit used to indicate a workload, or count, for hourly resources. Volgistics can assist volunteer leaders by calculating a FTE for volunteer service. You can find more information here.

*Back to Index*

**Getting Started Interview** - The *Getting Started Interview* takes place the first time someone logs-in to a new trial account. It is used to setup some basic options for the account, which can be changed later if necessary.

You can find more information on what the interview covers here.

**Graphic** - In software, this generally refers to a picture or image file. There are two locations in Volgistics where graphic files can be used. Please see Logo Graphic and Vic Graphic in this glossary for more information.

**Greeting Cards** - Birthday, start date anniversary, and holiday cards that can be setup to appear when volunteers sign-in to the VicTouch module. You can find more information here.

**Group** - Volunteer records designed to be used when you have a group of volunteers (such as a school service group, or a group of volunteers from a business or social club). Group records are designed to be used when you do not need to track service, contact, and other information for each individual that serves as part of the group. You can find more information here.

*Back to Index*

**Headquarters Operator** - When an account has the Site Level Access feature enabled, a *headquarters operator* is an operator assigned to all Sites instead of one particular Site.

**Help E-mail Tab** - A tab in the Volgistics Mailbox used to submit and receive help inquiries.

**Help Inquiry** - Volgistics offers free, unlimited online support. A *help inquiry* refers to a question that has been submitted to our support team. You can find information on the recommended method of submitting questions from your Volgistics account here.

**History Tab** - This is a tab on the volunteer record where date records and the message history for the volunteer are stored. Date records are kept for things like when a Status was given, when a Checklist item was completed, or when an Award was received. The message history tracks when messages were sent to the volunteer as shown here. You can find more information about the tab structure of volunteer records here.

**Holiday Cards** - Please see Greeting Cards in this glossary for information.

**Holidays** - If your organization closes or keeps a reduced staff on certain days, you can clear the ongoing schedule for the date by using the *Holidays* feature. You can find more information on how this works here.

**Hours** - Please see Service Entry in this glossary for information.

**Hours of Operation** - The opening and closing times for when you will use volunteers. The *Hours of Operation* control the beginning and ending times for when volunteers can be scheduled. You can find more information here.

*Back to Index*

**Import** - Please see Conversion in this glossary for information.

**In Box Tab** - A tab in the Volgistics Mailbox used to receive Reports and Alerts. You can find more information on the In Box tab here.

**Inactive Status** - A default Status in Volgistics generally used to describe people who are no longer volunteering with your organization. Please see Status in this glossary for more information.

**Include** - *Include* refers to selecting which volunteers appear on a list, report or tab. Two spots where Include settings appear are the Volunteers Page, and the Volunteers Tab. In addition, each report has an Include tab that controls which volunteers appear on the report. You can learn more about the Include tab on reports here.

**Individual** - Individual records in Volgistics represent one volunteer. You can learn more about the tabs and information that can be stored on records here. Volgistics also offers group records. Please see Group in this glossary for more information on group records.

**Invoice** - Please see Order-Invoice in this glossary for information.

*Back to Index*

**Job(s)** - Please see Assignment in this glossary for information.

*Back to Index*

**Kiosk** - *Kiosk* can refer to the furniture or structure used to hold a computer. In Volgistics, we generally use the term *kiosk* to refer to your account's VicTouch Sign-in Station.

**Kiosk Mode** - A method of launching the VicTouch module that causes the display to fill the entire monitor or screen. This gives the most secure and reliable experience because it removes the web browser controls from view so only people with a special code can shut down VicTouch. You can learn more about how to configure your web browser to launch VicTouch in kiosk mode here.

*Back to Index*

**Labels Reports** - Volgistics has reports designed to produce PDF files that can be used with sheet fed labels such as file labels. You can find more information here.

**Leave of Absence Status** - Please see LOA Status in this glossary for information.

**Life Hours** - The grand total of all service hours entered for a volunteer. This figure is available on the volunteer's Service tab, and can be added to the Statistics box on the Core tab of the volunteer's record. The figure is also available on the Fields tab of most reports, and can be used as a benchmark when configuring Volgistics to determine who is available for awards.

**LOA Status** - A custom Status Administrator(s) can create in the Volgistics account. It is generally used to describe people who are on a Leave of Absence (LOA) from volunteering, but will likely return to an Active Status. Please see Status in this glossary for more information.

**Local Back-up** - Please see Back-up in this glossary for information.

**Login** - Entering your credentials and starting a Volgistics session. The account's System Operators can find more information here. Volunteers and Coordinators can find more information by watching the training videos at [www.volgistics.com/volunteer-training-videos](http://www.volgistics.com/volunteer-training-videos)

**Logo Graphic** - Image files uploaded to your account that contain your organization's logo. Separate graphics can be uploaded for your Display Graphic, Print Graphic, and Mobile VicNet Graphic. You can find more information on uploading graphics here. Your account may also have Vic Graphics. Please see Vic Graphic in this glossary for more information.

*Back to Index*

**Mail Merge** - Using a source document that contains information such as volunteer names, addresses, etc. to copy this information into a template letter, or other document. The mail merge is performed using word processing or similar software to individualize each copy of the finished document with the information from the source document. You can find information on making a source document in Volgistics here. Volgistics also allows you to personalize email messages with email codes.

**Mailbox** - The communications center in Volgistics. The mailbox view is the same for all System Operators unless an account has Site Level Access enabled. In this case, operators only see information for their Site. The mailbox has In Box, Out Box, Applications, Service, Help E-mail, and Documents tabs.

**Mandate** - See Mandatory Service in this glossary for information.

**Mandatory Service** - A goal for volunteers to perform a certain amount of service for your organization within a specified date range. You can find more information here.

**Menu** - The items along the left side of your Volgistics account that direct you to certain areas of the program. You can find more information here.

**Merit Hours** - A way to adjust service hours recorded for volunteers automatically. Regular hours can be augmented for situations such as serving on a weekend, taking an overnight shift, or serving in a hard to staff Assignment. Or regular hours can be decreased to account for lunches or breaks. You can find more information here.

**Mobile VicNet Logo** - This is an image uploaded to Volgistics so that it appears on the mobile friendly view of VicNet. Please see Logo Graphic in this glossary for more information.

**Month-to-date (MTD)** - The month-to-date (MTD) total is the sum of all service hours entered for a volunteer from the first of the month to the current date in the month. For example, if it is March 22nd, the figure will represent a sum of service entries from March 1st to March 22nd for the volunteer. This figure can be added to the Statistics box on the Core tab of the volunteer's record, and is available on the Fields tab of most reports.

**MTD** - Please see Month-to-date (MTD) in this glossary for information.

*Back to Index*

**Non-Archived** - A section of your database used to store volunteer records for your volunteers who are actively serving. Please note this is separate from a volunteer's Status. Non-archived and archived records can have any Status in your account regardless of the section of your database they are in. You can find more information on the differences between non-archived and archived records here.

**Notes Tab** - A tab on the volunteer record where you can add narrative text information about the volunteer. Information from Comment Fields on volunteer application forms is placed on the Notes tab. You can find more information on the Notes tab here.

**Notifications** - Please see Alerts in this glossary for information.

**Number** - A unique identification number found on the Core tab of the volunteer record. This number is used as the PIN when volunteers sign-in to the VicTouch module. If you'd like to send volunteers their PIN in an email message, you can do this with an email code. You can find more information about system settings for volunteer numbers here.

*Back to Index*

**On-Demand** - In Volgistics, *On-Demand* refers to schedule reminder messages that are sent because a System Operator triggered the action. In most cases, schedule reminders are sent automatically by the system. You can find more information regarding On-Demand reminder messages here.

**One Day Only** - This refers to an opening or schedule entry that only takes place on one, specific date. It does not repeat on an ongoing basis. Please see Schedule in this glossary for more information.

**Ongoing** - This refers to an opening or schedule entry that takes place on a recurring, or repeated, basis. For example, a schedule entry that takes place on every Monday and Wednesday is said to take place on an *ongoing* basis. Please see Schedule in this glossary for more information.

**Online Forms** - Volgistics features that allow volunteers and potential volunteers to interact with your organization via the Internet. These include the Opportunity Directory, application forms, and the VicNet module.

**Opening** - Openings are used to create shifts, or pre-set times, when volunteers will serve. Openings can be setup to take place on just one specific date. Or, they can be setup to recur on an ongoing basis. One opening can be setup to take place on multiple days and require multiple volunteers. For example, a single opening may take place every Monday, Wednesday and Friday and have 5 slots, or volunteers needed, on each of those days. You can find more information on creating openings here.

**Openings Only** - A term used to describe Assignments or schedule entries that require volunteers to serve specific times. You can setup the Rules tab of an Assignment to allow self-scheduling for *openings only* in Assignments that require volunteers to serve a certain shift. Please see Schedule in this glossary for more information.

**Opportunity** - Please see Assignment in this glossary for information.

**Opportunity Directory** - An online form that lists your Assignments and descriptions. You can find more information on this here.

**Opt-out** - To ensure the integrity of Volgistics email messages, we require that opt-out choices be sent with all email messages sent to more than one volunteer or Coordinator. You can find information on why this is important here. The recipient selects what email types they would like to receive. These choices are used to setup the volunteer or Coordinator's email preferences.

**Order-Invoice** - A bill used with the pre-payment method to start the payment process. Volgistics does not send Order-Invoices because each account holder selects the number of months (1 – 18) they'd like to pre-pay for as well as the service level they'd like. Volgistics automatically sends email notices that the renewal date is approaching to the account's Billing Contact at regular intervals starting 60 days from the paid through date. You can find information on how to create an Order-Invoice here.

**Out Box Tab** - A tab on your Volgistics mailbox where you can send messages, and view saved and sent messages. Automatic messages that have been sent do not appear on your Out Box tab. You can learn more about the Out Box tab here.

*Back to Index*

**Password** - Part of the credentials that System Operators use to login to the Volgistics system, and volunteers and Coordinators use to login to VicNet. The passwords are not the same as the PIN volunteers use to sign-in to VicTouch. System Operator passwords are initially created by the Administrator who creates the record. The initial volunteer and Coordinator passwords can be created in a variety of ways. You can learn more about volunteer and Coordinator passwords here.

**PDF** - A file format for Volgistics reports. PDF files can be opened with Adobe's Acrobat Reader DC program, the built-in PDF viewer in many web browsers, and outside programs designed to open this type of file. You can learn more about PDF files here.

**Photo** - System Operators can optionally upload photos of volunteers to the Profile tab of the volunteer record. The photos can also be uploaded by volunteers and Coordinators through the VicNet module. You can learn more about the photo feature here.

**Picture** - Please see Photo in this glossary for information.

**PIN** - Please see Number in this glossary for information.

**Place** - The middle tier, or level, in the Site, Place, and Assignment hierarchy used to organize your assignment records. You can learn more about this structure here.

**PO** - Please see Purchase Order in this glossary for information.

**Position** - Please see Assignment in this glossary for information.

**Post** - For some, *post* may mean a job, task, or station that a volunteer serves at. In this case, see Assignment in this glossary for more information. In Volgistics, *post* means to add service information to volunteer records. You can learn more about this in the Service Entry definition in this glossary.

**Power User** - A user level that controls the amount of access the System Operator has in the account. To customize the access, the account's Administrator(s) setup the Field Rights and Tab Rights for the Power User operators.

**Preference Field** - Fields used to allow applicants or volunteers to express an interest in serving at certain Sites or Places, or in certain Assignments. Preferences can also be setup for other things as well such as an Assignment Cluster, state or province, or one of the spare fields on the Assignment record. You can learn more about Preference Fields here.

**Preference Role** - Roles in Volgistics are used to show the volunteer's relationship, or standing, in a specific Assignment. The Preference Role is a default Role generally used to show that the volunteer has an interest in serving in an Assignment, but is not scheduled in the Assignment yet. If the Assignment Preference field is setup to automatically give a Role in an Assignment, it is commonly the Preference Role. Please see Role in this glossary for more information.

**Pre-payment** - A payment option for paying your Volgistics Service Fee by creating an Order-Invoice and then either mailing a check for payment, or paying the invoice by credit card. You can find more information here.

**Print** - Please see Reports in this glossary for information.

**Print Graphic** - This is an image uploaded to Volgistics so that it appears on PDF versions of reports that you generate. Please see Logo Graphic in this glossary for more information.

**Prior Year Comparison** - A field you can add to Service Summary reports to show hours served in the previous year for the time period listed in the report. The report automatically calculates the percentage of loss or gain between the two years. You can learn more about this here.

**Profile Tab** - This is a tab on volunteer and assignment records. For volunteers (not assignments), the tab contains information such as their Date of Birth, photo, spare fields, and preference fields. For volunteers *and* assignments, the tab can contain information such as the Daily Availability and Characteristic fields. You can find more information about the tabs on volunteer records here.

**Project** - Please see Assignment in this glossary for information.

**Prospect Status** - A default Status in Volgistics generally used to describe people who you have collected basic information from, but who have not started the steps to start volunteering (such as filling out an Application Form) yet. For example, if you have an open house you may collect the names and email addresses of guests and enter them as a volunteer in your database with the *Prospect* Status. This would allow you to send them invitations to apply to volunteer, while keeping them separate from your volunteers with the Active Status who are actively serving. Please see Status in this glossary for more information.

**Public Account Identifier** - A unique identification number for Volgistics accounts that is used to associate their VicNet or VicTouch access points with their account.

**Purchase Order (PO)** - A purchase order (or PO) is document used by the Accounts Payable departments of some organizations to indicate that they will be purchasing a product. Volgistics does not accept purchase orders as payment for service fees. If your organization requires you to use purchase orders as part of the payment process, you will need to wait for the check to be generated for the purchase order and then send the check to us. If it helps the payment process, you can add a purchase order number to an Order-Invoice. You can learn more about how to do this here.

*Back to Index*

.

*No entries under Q*

*Back to Index*

.

**Receipt** - A document showing that an Order-Invoice for Volgistics service fees has been paid. You can view, print, or save Receipts in the Volgistics Store for your account. You can learn how to do this here.

**Recognition** - Please see Awards in this glossary for information.

**Registration** - Please see Application Forms in this glossary for information.

**Regex** - Please see Regular Expressions in this glossary for information.

**Regular** - System Operators and Coordinators can put volunteers on the schedule on a repeating, or recurring, basis such as every Monday or every other Friday. Volgistics refers to a person who is scheduled like this as a *Regularly* scheduled volunteer.

**Regular Expressions** - Regular Expressions (or Regex for short) are not unique to the Volgistics system, but the *Search* fields on the column headings of the Volunteer Page support some Regular Expressions to help you search for records. You can find many resources to learn more about Regular Expressions on the Internet. One resource is RegexOne.

**Reports** - Volgistics includes reporting features you can use to retrieve information from your account. Reports can be generated in PDF or Microsoft Excel formatted files. Completed report files are sent to the In Box tab of your Volgistics Mailbox. They can be saved locally, or opened, from there. You can learn about the stock, or pre-made, reports in Volgistics here. You can learn about how to make custom reports here.

**Role** - The Role in Volgistics shows a volunteer's relationship to an Assignment. Having a Role in an assignment does not necessarily mean that the volunteer is scheduled in the assignment, or has service recorded in the assignment, although this is quite often the case. You can find more information about Roles here.

**Roster** - *Roster* is not a term that is used by Volgistics. Depending on where you are from geographically, *roster* can mean various things. If you use it to mean people who are scheduled, see *Schedule* in this glossary for more information. If you use *roster* to describe a list, roll, count, etc., you may need to contact the support team and describe what you're looking for. The support team will gladly assist you with details on how to get the information you need.

**Rules Tab** - The Rules tab is located on Assignment records. It is used for things such as controlling which volunteers can self-schedule for the assignment, or whether volunteers can schedule for any times or for openings only. You can also setup self-scheduling alerts on the Rules tab. You can learn more about the Rules tab here.

*Back to Index*

**Schedule** - In Volgistics, the schedule is used to record information about when you expect volunteers to serve in the future. Because of this, the schedule for past years is not available indefinitely so you should not depend on the schedule to show historical information about when volunteers served in the past. Instead, we recommend using service entries to record information about when volunteers served in the past. Please note that service entries are not automatically created from the schedule--service must be put into the system using one of the methods shown here. You can find more information about the schedule feature in Volgistics here.

**Schedule Tab** - A tab on volunteer, Coordinator, Site, Place, or Assignment records that shows the schedule for that particular record. For example, a volunteer's Schedule tab will only show that volunteer's schedule, a Coordinator's Schedule tab will show the schedule for all assignments the Coordinator oversees, a Site's Schedule tab will show the schedule for all assignments that fall under the Site, etc.

**Schedule Entry** - The registration or recording of details for a volunteer's schedule. Schedule entries record the assignment, times or shift, date(s), and any special notes about when the volunteer is expected to serve.

Schedule entries can be for one date only, or for a repeating (ongoing) pattern of dates such as every 2nd and 4th Tuesday of the month. Schedule entries can simply place the volunteer on the schedule, or they can place the volunteer on the schedule as filling an opening slot.

**Schedule Icons** - Schedule icons provide a quick visual way to see if an opening slot is filled by an individual volunteer or a group member, or if it is still an unfilled opening slot. You can learn more about schedule icons here.

**Schedule Reminders** - Reminder messages sent by Email or text to volunteers and Coordinators. In most cases reminders are setup to be sent automatically by the system, but they can also be sent on-demand by System Operators. You can find more information on Schedule Reminder messages here.

**Schedule Reports** - These reports create PDF files with information about schedules in your account. You can find more information here.

**Secured-socket layer (SSL)** - An online encryption method Volgistics uses to scramble your account's information as it travels over the Internet. You can learn more about this here.

**Security Block** - A built-in security feature used to help safeguard your information. This feature automatically stops login attempt to your account if too many invalid login attempts have been made from the same IP address. You can learn more about this here.

**Self-Scheduling** - An account's Administrator(s) can configure the Volgistics account to allow volunteers to place themselves on the schedule as long as either the VicNet or VicTouch module is included in the organization's service level. You can find more information on how to enable and configure self-scheduling here.

**Self-Scheduling Alerts** - A type of alert sent to System Operators and/or Coordinators to notify them that a volunteer has added or removed herself from the schedule. The alerts can be configured to be sent for just specific assignments. You can learn how to enable self-scheduling alerts in the *Self-scheduling alerts* section of help topic 2172 here.

**Sender ID** - An email authentication protocol designed to combat spam. Volgistics offers two different Sender ID settings depending on how your organization handles Sender ID. You can learn more about this here.

**Service** - Please see Service Entry in this glossary for information.

**Service Detail Reports** - Reports designed to show service information in your account. The reports can be run in Excel or PDF format. You can find more information on Service Detail reports here.

**Service Directive** - See Mandatory Service in this glossary for information.

**Service Entry** - The registration or recording of details for a volunteer's past service with your organization. *Service entries* always record a date (or date range), and they can optionally record hours served, times served, the assignment the volunteer served in, and additional Service Measures that are setup.

The system will automatically calculate Merit Hours for the service entry if you have setup a rule that applies to the entry. In addition, service entries can be applied toward a Mandatory Service goal for the volunteer.

Service entries need to be created through one of the methods shown in help topic 1166 here. Service is not automatically entered based on the schedule. You can find more information about how service shows on a volunteer record here.

**Service Fee** - The payment required to use the Volgistics service at the service level you select for your account. Service fees are calculated by month, and you can select to make automatic monthly payments or pre-pay in advance for 1 to 18 months of service. You can learn more about Volgistics service fees here.

**Service Hours** - Please see Service Entry in this glossary for information.

**Service Level** - The maximums you choose for the number of non-archived volunteer records, archived volunteer records, and System Operators you can have in your account. Your *service level* also determines if your account has access to the optional VicNet, VicTouch, and VicDocs modules. You can find more information on this here.

**Service Mandate** - See Mandatory Service in this glossary for information.

**Service Measures** - Optional numerical fields you can setup to collect additional service information for things such as tours given, mileage driven, phone calls made, absences, visits, etc. You can find more information on Service Measures here.

**Service Summary Reports** - Reports designed to show service information in your account. The reports can be run in Excel or PDF format. You can find more information on Service Summary reports here.

**Service Tab (Mailbox)** - There is a Service tab on volunteer records and a Service tab on your Volgistics mailbox. This glossary item is for the mailbox. If you need information regarding the Service tab on volunteer records, see the Service Tab (Volunteer Record) item below.

The purpose of the Service tab on the mailbox is to allow System Operators review, edit, or delete service entries sent to be audited.

**Service Tab (Volunteer Record)** - There is a Service tab on volunteer records and a Service tab on your Volgistics mailbox. This glossary item is for the volunteer records. If you need information on the mailbox, see the Service Tab (Mailbox) item above.

The Service tab on volunteer records has three purposes. The top of the tab is where the Roles a volunteer has in assignments are recorded. There is more information on this here. The middle of the tab is where the volunteer's service information is recorded. You can find more information on this here. The bottom of the tab is where Mandatory Service for the volunteer is configured.

**Service Values** - You can assign a monetary value to be associated with service information. For example, Independent Sector (a Washington, D.C. based advocacy coalition) announced the U.S. average for volunteer service value was \$23.56 per hour in 2015. The group also releases averages for each State and you can learn more at [https://www.independentsector.org/volunteer\\_time](https://www.independentsector.org/volunteer_time). You can learn more about setting service values in Volgistics here.

**Session** - A Volgistics session starts when a System Operator correctly enters her or his credentials from the Login link at [www.volgistics.com](http://www.volgistics.com). Each operator can only have one active session at a time. So if one person is logged-in, and another person uses the same credentials to login, the first person's session will end. Sessions will also expire automatically when the system does not sense any activity by the operator for an extended period of time. You can learn more about this here.

**Set** - A Set is a way to query your account to identify certain volunteers. After a Set has been created, you can do various things with it such as view the volunteers in the Set, send a message to the volunteers in the Set, or run a report that only includes the volunteers in the Set. You can learn more about the Sets feature here.

**Set Rule** - A *Set Rule* is any aspect of the Volgistics system that can be used to build a Set to query your volunteer records. You can find a complete list of the *Set Rules* that are available here.

**Setup** - The menu option that allows System Operators to configure their account. Access to the Setup menu is usually only given to Volgistics Administrator level operators, but access can optionally be given to Power and Basic User level operators also. You can learn more here.

**Shifts** - See Opening in this glossary for information.

**Sign-in Station** - See VicTouch Sign-in Station in this glossary for information.

**Site** - The top tier, or level, in the Site, Place, and Assignment hierarchy used to organize an account's assignment records. You can learn more about this structure here.

**Site Level Access** - A Volgistics feature that allows System Operators to be restricted to a single Site. When this is in place, the operator will only see Places and Assignments that are underneath their Site. The operator will also only see volunteer records associated with their Site. You can learn more about this feature here.

**Site Level Operator** - A System Operator who is assigned to one particular Site when the account uses Site Level Access.

**Slot** - See Opening in this glossary for information.

**Spare Fields** - Fields that the account's Administrator(s) can customize to meet the organization's needs. You can learn more about what types of spare fields are available, what records they are available on, and more here

**SSL** - See Secured-socket layer (SSL) for information.

**Start Date** - The date a volunteer starts actively serving with your organization. By default this is the first Active Status date recorded for the volunteer, but the account's Administrator(s) can configure the account to use different Statuses for this date. You can find more information on this here.

**Statistics Box** - A box on the bottom of the Core tab of volunteer records that shows service information about the volunteer. Administrator(s) can configure the *Statistics box* to show the volunteer's Date of Last Activity and Years of Service, along with lifetime, year-to-date, and month-to-date service hours. Administrator(s) can also select to add two floating subtotals for customizable date ranges. You can learn more about how to configure the Statistics Box here.

**Statistics Reports** - Reports designed to summarize volunteer information such as demographics and retention for your entire account. You can learn more about these reports here.

**Status** - A volunteer's *Status* in Volgistics shows their current relationship with your organization. For example, an Applicant Status generally means that the volunteer has completed an application, but is not approved to serve yet. While an Active Status generally means that the volunteer has completed any vetting you require and is now actively serving. You can learn more about Statuses and how they are used here.

**Stock Reports** - These are pre-made, ready-to-run reports designed to meet many common needs volunteer organizations have for reporting. In addition to *stock reports*, you can also create custom reports if you cannot find a stock report that meets your needs. You can learn more about the stock reports available in Volgistics here

**Stop Date** - The date a volunteer stops actively serving with your organization. By default this is the first Inactive Status date recorded for the volunteer, but Administrator(s) can configure the account to use different Statuses for this date. You can find more information on this here.

**Store** - Please see Volgistics Store in this glossary for information.

**Substitute Role** - Roles in Volgistics are used to show the volunteer's relationship, or standing, in a specific Assignment. The Substitute Role is a default Role generally used to show that the volunteer is available to fill in for other volunteers who cannot serve as scheduled. Please see Role in this glossary for more information.

**System Operator** - A person who logs into the Volgistics account by using the *Login* button at [www.volgistics.com](http://www.volgistics.com). These are generally the leaders of the volunteer department. Operators have three different levels that are configured by the account's Administrator(s). These are Volgistics Administrator, Power User, and Basic User. You can find more information on System Operators here.

**System Operator Page** - The page where the account's Administrator(s) add, delete, and configure System Operator records for the account. Administrators control the user's credentials, as well as the operator's user level, the menu items the operator can access, the tasks or jobs the operator can perform, and whether the operator is a site level operator. You can find more information on the fields and settings on the System Operator Page here.

*Back to Index*

**Tab Rights** - Tab rights give you the ability to hide certain tabs on volunteer records from System Operators with a certain user level. You can find more information on tab rights here. You may also want to see Field Rights in this glossary for more information.

**Tags** - Tags are a temporary way to identify a volunteer record (or a group of volunteer records). Once records are tagged, there are a variety of actions you can take. For example, you can change the Status of all the tagged records at once, or run a report for just the tagged volunteers. You can learn more about the Tags feature here.

**Tasks** - Tasks can mean a variety of things, but in most cases it is what the volunteers do to provide volunteer service. If this is the meaning you're using, please see Assignment in this glossary for more information.

**Text Messages** - Communication sent to your volunteers and/or Coordinators via text. You can find more information on text messages here.

**Tickler** - Tickler is an item on the Volgistics menu that provides a tool for System Operators to use to find volunteers who are need to complete a Checklist item or who are eligible to receive an Award. The term *Tickler* was used because it refers to a file or other aid used to remind someone of an upcoming event.

**Trainee Role** - Roles in Volgistics are used to show the volunteer's relationship, or standing, in a specific Assignment. The Trainee Role is a default Role generally used to show that the volunteer is learning to serve in an Assignment. Please see Role in this glossary for more information.

**Types** - Types provide a way to identify and categorize volunteer records. Types differ from Flags because a volunteer can only have one Type, but they can have multiple Flags. You can find more information here.

*Back to Index*

**Unduplicated Volunteer Count** - A count available on Service Detail and Service Summary reports that shows how many volunteers have service information recorded during the time period the report covers. The count is *unduplicated* because it factors out situations such as one volunteer who has service recorded in two different Assignments under the same Place. You can learn more here.

**Unfiled Opening** - An unfiled opening slot means that a volunteer is still needed to serve in the shift the opening represents. Please note that one opening can have multiple slots (for instance if 5 volunteers are needed for the shift). So one opening may have unfiled slots even if volunteers are scheduled to fill other slots for the opening. You can use the schedule icons as a visual indicator of if the opening slot is filled or unfiled.

**User Level** - The amount of access that System Operators have to the system. The three user levels are Volgistics Administrator, Power User, and Basic User. By default, the user levels have about the same amount of access to the system. The Volgistics Administrator(s) customizes how much access each user level has by setting tab rights and field rights for the user level.

*Back to Index*

**Values** - Please see Service Values in this glossary for information.

**Vic** - Vic stands for Volunteer Information Center. When Volgistics references *Vic* it means the item relates to one of the three optional modules (VicNet, VicTouch, or VicDocs), or a feature available in these modules such as Vic Mail.

**Vic Graphic** - Graphics or images used to represent things such as the tabs or buttons shown in the VicNet module. You can customize these to "brand" or personalize your account. You can find more information here.

Your account may also have logo graphics. Please see Logo Graphic in this glossary for more information.

**Vic Mail** - Messages sent to volunteers through the VicNet or VicTouch modules. You can find more information here

**Vic Self-Scheduling** - Please see Self-Scheduling in this glossary for information.

**Vic Tab** - A tab on the volunteer record where you can review a volunteer's access to the VicNet and VicTouch modules. You can find more information on the Vic tab here.

**VicDocs** - An optional module that you can add to your account's service level if you want to store electronic documents such as a photo release form a volunteer has signed. You can learn more about the VicDocs feature here.

**VicNet** - An optional module that you can add to your account's service level to allow volunteers to sign-in over the Internet to do things like update their contact information, view messages, see their current schedule, add or remove themselves from the schedule, view their past service, or enter new service information. You can learn more about this module [here](#).

**VicNet Mobile** - A mobile friendly view of the VicNet module for volunteers who access VicNet on cell phones or tablets. You can learn how to enable and customize the mobile view [here](#). You can find a guide to teach volunteers how to use VicNet mobile [here](#).

**VicTouch** - An optional module that you can add to your account's service level to allow volunteers to clock-in and clock-out when they arrive and depart from your facility. The system automatically creates a service entry on the Service tab of the volunteer record when the volunteer signs-out. You can learn more about this module [here](#).

**VicTouch Sign-in Station** - A computer or tablet that is setup to launch the VicTouch module. When VicTouch is included in your account's service level, you can set up as many sign-in stations as you need without impacting your monthly service fees. You can learn how to configure a computer to use as a sign-in station [here](#).

**Volgistics Administrator** - A System Operator who generally has access to all aspects of the account. By default, the person who creates the account is the account's *Administrator* and this person can then create other operator records at any of the three levels: *Volgistics Administrator*, Power User, or Basic User. You can learn more about *Volgistics Administrator* level operators [here](#).

**Volgistics Store** - Each account has a *Volgistics Store* that is used to arrange for payment of the account's service fees. The Store can only be accessed by Administrators for the account, or people who have the Accounting Access Code for the account. To get to the Store, go to [www.volgistics.com](http://www.volgistics.com), hover over *Try or Buy* on the menu, and select *Store*.

**Volunteer and Assignment Matching** - An optional feature that an account's Administrator(s) can enable that will help find volunteers who are a good fit to serve in an Assignment. You can learn more about this feature [here](#).

**Volunteer Count** - Information about the number of volunteers in your account. *Count* can mean different things depending on the criteria you use to determine if a record qualifies. For example, Administrators can find the total number of *records* in the account by going to Setup, then *Account management*, and then *Account status*. Operators can also get counts for just records that meet certain criteria as shown [here](#). Please note that group records will only count as *one* record for these two methods even though the group may represent many volunteers. Operators can also pull counts for volunteers who have service recorded in a specified date range with an unduplicated volunteer count. With this method, groups will show with the number of volunteers who performed the service, but there is not a way to factor out if the same volunteers from the group gave service [more than once](#).

**Volunteer List** - Please see Volunteer Page in this glossary for information.

**Volunteer List Reports** - Reports designed to show information about volunteer records in your account. These reports are laid out in a table format and you can setup the report to be sorted in different ways such as by the volunteer's number, Start Date, Date of Last Activity, or lifetime service hours. The reports can be run in Excel or PDF format. You can find more information on Volunteer List reports [here](#).

**Volunteer Number** - Please see Number in this glossary for more information.

**Volunteer Page** - This is also known as the *volunteer list*. This is the page you see when you select *Volunteers* from the top of the menu. You can find information about how to control which fields appear as columns on the volunteer page [here](#). You can find information about how to search for specific records on the volunteer page [here](#).

**Volunteer Profile Reports** - Reports designed to show information about the volunteer records in your account in a directory type format. These reports are only available in PDF format and they are the only reports that can contain volunteer photos. You can find more information on Volunteer Profile reports [here](#).

**Volunteer Records** - Your volunteer records are accessed from the *Volunteer* page in your account. Volunteer records can be in the archived or non-archived section of your account. You can find information on how to find archived records [here](#). You can find information on how to find non-archived records [here](#).

A volunteer record can represent one person (individual records) or multiple volunteers (group records). Group records only count as one record toward the cap set for your account's service level even though they represent multiple volunteers. Volunteer records can be created in a variety of ways as shown [here](#). You can learn more about the tabs and fields on volunteer records [here](#).

**VolunteerWorks** - VolunteerWorks is Volgistics' legacy software. Support for this product ended in 2008 but we offer free conversions to Volgistics for organizations who are still using VolunteerWorks. You can learn more about this at <https://www.volgistics.com/VolunteerWorks-conversion.htm>.

**Volunteers Tab** - The Volunteers tab is a tab on Site, Place, Assignment, or Coordinator records. The purpose of the tab is to show volunteers associated with Assignments through a Role in the Assignment. If you use the optional Volunteer and Assignment Matching feature, the Volunteers tab on Assignment records can also show volunteers who match the Assignment's criteria. You can learn more about the Volunteers tab on a Site record here. To learn about the tab on a Place record, click here. And, to learn more about the tab on an Assignment record, click here.

*[Back to Index](#)*

.

**Web Browser** - A web browser is an app or software you have on your computer or device that allows you to access the Internet. Approved web browsers for Volgistics include Chrome, Firefox, Internet Explorer (9 or higher), and Safari. You can learn more about web browsers and other system requirements for Volgistics here.

**Welcome Page** - The Welcome Page or screen is the first page System Operators see after they Login to Volgistics. Operators also see the page if *Welcome* is selected from the Volgistics menu. The Welcome page shows announcements from the Volgistics Team, account status information, and a *Tip of the Week* highlighting aspects of Volgistics that System Operators may be unaware of. Additionally, Administrators can setup the Welcome page to show statistics about the account and a list of volunteer birthdays. You can learn more about the statistics box here and the birthday list here.

**Who's Here** - The Who's Here page or screen is displayed if System Operators select *Who's Here* from the Volgistics menu. The main purpose of the page is to show which volunteers are currently signed-in to the VicTouch module. The page can also be setup to show volunteers who were signed-in previously during the day, volunteers scheduled for the day, or unfilled opening slots. You can learn more about the Who's Here page here.

.

*No entries under X*

*[Back to Index](#)*

.

**Year-to-date (YTD)** - The year-to-date (YTD) total is the sum of all service hours entered for a volunteer from the first of the year to the current date in the year. *Please note that "year" can mean either the calendar year or the fiscal year depending on how you have your account configured.* For example, if the current date is September 15th and your account does not have a fiscal year set, the YTD figure will be all hours given from January 1st to September 15th. However, if the current date is September 15th and your account is set to have a fiscal year that starts June 1st, the YTD figure will be all hours given from June 1st to September 15th. The YTD figure can be added to the Statistics box on the Core tab of the volunteer's record, and is available on the Fields tab of most reports.

**Years of Service** - Years of service is the amount of time volunteers have been with your organization. In Volgistics, the system automatically calculates this total based on the volunteer's Status dates. By default, only time in the Active Status is counted, but account holders can configure different Statuses to count toward the total as well. You can find more information on this here.

**YTD** - Please see Year-to-date (YTD) in this glossary for information.
